of the city. Castaños owed this reception to the victory he had gained; but Morla, who had not been near the field of battle, was associated in the triumph *to prevent jealousy*. This last feeling had great dominion over the hearts of most of the Spanish officers; and it was in part through jealousy that Morla not very long afterwards turned traitor to the cause. From the first, Morla maintained that the convention with Dupont could not be executed and ought to be disregarded. He was known to be the author of rather an able paper, industriously circulated, recommending the breaking of the convention. Castaños, on the other hand, as a man of honour, and as especially pledged to the fulfilment of engagements which he himself had made, warmly opposed any such measure. The two generals were for some hours closeted with the junta, where the debates are said to have been hot and passionate, as debates always are when they occur among Spaniards and the other nations of the south. "At last," says Sir Hew Dalrymple, with whom Captain Whittaker and Major Cox corresponded from Seville, "the junta, being strongly inclined, if not fully resolved, from the first to break the treaty, sanctioned by the popular clamour which Morla had contributed to excite, and utterly regardless of the public faith and the national character, adopted Morla's opinion, and broke the capitulation." * We have here a sufficiently strong expression of the feeling of Sir Hew Dalrymple, who, however, was not immediately concerned in the transaction, and who wrote his memoir years after the fact. It has been said that Morla made a *vain* attempt to involve both Sir Hew Dalrymple and Admiral Lord Collingwood in the transaction.† Sir Hew was certainly not involved in the transaction, nor are we disposed to believe that that high-minded and most honourable man, Collingwood, was involved in any dishonour, although he indisputably agreed with Morla that the conditions of the convention were highly injudicious and could not possibly be executed, and although he actually informed Morla that he could not permit so great a body of French troops to pass on the sea until he received instructions from England for that purpose. These instructions to allow so considerable a French army to be conveyed with their arms and equipments to Rochefort were never sent by our government. It is not very clearly defined in all cases how far an allied power is bound to recognise and conform to a convention, or other treaty, contracted without its consent or knowledge by its ally; in some cases the recognition has been given, and in others it has been withheld; advantage or convenience seems to have been the rule which has governed assent or dissent; but at this moment, though aiding and assisting the Spanish people in the war against their invaders and the common enemy, Great Britain was not bound to Spain by a treaty of alliance or by any treaty whatsoever. There was not as yet in Spain any fixed governing power with which our government could treat. Everything, as yet, was unsettled, changeable, irregular; and in this state of our relations it was scarcely to be expected that our government, in a case highly disadvantageous to ourselves, would consider itself bound by the stiff regularities of the ordinary law of war and nations, or consent to, and carry out, arrangements which had been made by the folly and timidity of Spanish generals. And unless we consented to carry out these arrangements—unless we furnished ships of our own, or fitted out for the purpose Spanish ships—there was not the possibility of conveying by sea 18,000 or 19,000 French soldiers and officers. Lord Collingwood's opinions are clearly and decidedly expressed in his own correspondence. He calls the capitulation of Baylen an extraordinary arrangement—so extraordinary that he cannot divest himself of the idea of a French trick, and that more is meant than yet appears. He says the divisions of Dupont were in circumstances in which they had no resource but an unconditional surrender; that the French general knew as well as Castaños that the Spaniards had not the means of sending the army back to France by sea. In a letter to Lord Castlereagh he says: "On application to me for assistance to enable them to perform this service, I have told them that all aid shall be given in fitting out their transport-ships; but, as the conveying so large a body of troops, with their arms, is a measure which may have in the end such important consequences, I cannot allow them to pass on the sea till I receive instructions from his majesty's ministers. *This objection seems to give satisfaction, as it puts a stop to their going, without any breach of treaty on the part of the Spaniards.* I have, moreover, observed that, as they have not the means of sending these people to Rochefort, the obligation ceases; *for an engagement to do that which is impossible dissolves itself.*" And in a letter to Sir Hew Dalrymple, Collingwood repeats that the Spaniards have made "an arrangement which they cannot perform, and which, if they could, would be attended with the worst consequences to Spain;" and that, from all the information which he has on the subject, he considers the capitulation of Baylen "quite a trick" of the French, who have "obtained by art what they never could have won by the sword." In the same letter he calls the convention a departure from the principle on which a war like this should be carried on. "No treaty," says he, "should be made with an invader short of his unconditional surrender. . . . . The French probably knew then, what is known to the Spaniards now—that there was no retreat for them upon Madrid. Had Dupont been compelled to surrender without terms, they could have been confined in twenty-four hours; and the Spanish army would have been at liberty to pursue their service. What is the case now? They have got the French army, who are entitled to their arms when they

* Memoir of proceedings as connected with the affairs of Spain and the commencement of the Peninsular War.
† Napier, Hist. of the War in the Peninsula.

embark, and the Spanish army must stay to take care of them. But their embarking is altogether out of the question: one objection is, that they have not ships to put them in; another, that the people will not permit them to embark; and a third, as I have informed the governor (Morla), that I cannot permit so great a body of troops to pass on the sea until I receive instructions." * Morla's able and widely circulated paper against the convention may have contributed to the excitement of those who could read or hear it read; but there can be little doubt that the rage of the Spanish mobs against the French would have been just as great if the paper had never been written. It was with extreme difficulty that the Spanish regulars and officers prevented a general massacre of the prisoners. On the 13th of August, when General Dupont and some of his officers were brought to Port Santa Maria, for the purpose of embarking in one of the Spanish ships of war for their security, the mob attacked them, and took from them their baggage, *in which were found church plate, sacred vases, and other valuable plunder.*† Now, all such plunder (the existence of which the general and his officers had denied) they were bound by the fifteenth article to restore; and, therefore, we can feel neither much surprise nor much regret at the fact of the marauding, pilfering Dupont getting his head broken by some of the furious mob before he could get on board ship. Our veteran martial historian of the Peninsular War‡ has so extensive and exclusive a sympathy for his profession, by whomsoever exercised, so much feeling for the sufferings of the military of every nation, if they be but *regulars*, that he seems to have little sympathy or feeling for any other class; and, in narrating the violence and cruelty of the Spanish people, he almost invariably overlooks the provocation and the cruelty on the other side. He has much to say upon the shameful breaking of the capitulation and the barbarous treatment of the French prisoners; but he breathes not a word about Dupont and his officers breaking the articles, and attempting to carry off the church plate, which they had vowed they had not stolen themselves, and which they had promised to restore. We trust we loathe cruelty as much as this gallant historian can loathe it; but it appears to us to be a strange intellectual obliquity to be eternally looking at the excesses of the infuriated invaded people, without ever glancing at the barbarity of the invaders, and the mad ambition and cold-blooded cruelty of the ruler that threw them into that terrible warfare, with the antecedent declaration that he would persevere in it though it cost him 200,000 lives! The French would have known none of this Spanish ferocity if they had not gone into Spain to seek it, and provoke it by deeds calculated to render even a gentle people ferocious. Our historian treats the Spanish people as if they had sought this quarrel, as if they were waging war in France, or in some middle territory not their own. The war of a people struggling for their independence, for their native king, for their altars, their hearths, for the honour of their wives and daughters, for that which supports life, and for all that in their eyes made life desirable, is considered by our military historian as a mere scientific game, which is to be played according to the most approved rules and precedents, where success is to be the reward of military skill or genius, and where the defeated party ought neither to attempt the renewal of the game, nor so much as complain of their bad luck. It is well to have such a book —many of the military details are admirably written, and could have been written only by a good and experienced officer, and an accomplished and nervous writer; but heaven forefend that Napier's 'History of the Peninsular War' should be our only one, or should ever' be taken as decisive authority on the moral right and wrong of the great question!

We have said that Collingwood received no instructions from his government to let the French prisoners pass to Rochefort—to be thence conveyed, armed and appointed, to some other point where they might best annoy England or the few allies that were left her—to be marched into Portugal or to be sent back into Spain;—for, so inconsiderate or so ignorant had been the Spanish generals who signed the capitulation of Baylen that the ordinary clause binding the capitulating troops not to serve against them or against their allies for a fixed period, or for all the rest of the war, was not inserted in the treaty, or alluded to in any of its articles. Towards the end of August or the beginning of September, when Lord Collingwood returned to watch the French fleet in Toulon, he left Rear-Admiral Purvis at Cadiz with a few ships to protect the British trade, and to prevent the French prisoners from being sent away until the instructions of his majesty's government on that head should be received: and, writing to Lord Castlereagh, he said, "I have reason to believe that allowing them to depart would make this province (Andalusia) very unpopular in Spain, and that my interference to stop them has given universal satisfaction."* It is thus very clear that Admiral Lord Collingwood was involved with Morla in the convention transaction; but what we must still continue to doubt is, whether he in the slightest degree committed his own honour or the honour of his country, or departed a line's breadth from his obligations as a belligerent. If there was blame, his government certainly shared it with him, for it emphatically approved and sanctioned all that he had done, and ordered Rear-Admiral Purvis to prevent the departure of Dupont's and Vedel's army. After a time Dupont was permitted to return to France with all his general officers except one, who was said to have urged Dupont to fall upon Reding while the capitulation was negotiating,

and cut his way through to the mountains. Bitter and pitiable, no doubt, were the sufferings of the French soldiery, cooped up, under a burning sun, in close foul hulks, and badly supplied with the necessaries of life—for the Spaniards, who very often had not provisions to give to their own troops, were not likely to be either very liberal or very punctual in the distribution of rations to their prisoners. Two years afterwards, when their countrymen were besieging Cadiz, some of these French prisoners made a desperate attempt to regain their liberty: while a gale of wind was blowing right upon a lee shore, they cut the cables of their prison ship, and drifted on the rocks at the head of the bay; some were drowned, but a few hundreds escaped and joined the besieging army, with a hatred and fury against the Spaniards which blood seemed not sufficient to allay. The rest of the captives were then transported to the rocky barren island of Cabrera, one of the Balearic group, lying about ten miles from the southernmost point of Majorca, uninhabited, and frequented only by fishermen.* It is said that not very many of them remained alive at the end of the war. But this was only one of the many mighty holocausts which Bonaparte sacrificed on the altar of Spain.

The news of the battle of Baylen and of Dupont's surrender flew like lightning to the Spanish capital, diffusing a joy and triumph which was not to be repressed by the presence and the oppressions of the French. At first King Joseph and his friends were altogether incredulous, thinking it impossible that French generals and a French army could be beaten and enveloped by Spanish troops and peasants; next, they fancied that, though some trifling reverse might have been sustained, the Spaniards must have greatly exaggerated their victory; and so completely were the means of communication and correspondence cut off, that Joseph was obliged to send two divisions into La Mancha to endeavour to open the communication. On their march towards the Sierra Morena these two divisions met the French general Villoutray, who, with a Spanish escort, a division of Castaños's army, was collecting the French detachments that had been left in La Mancha, and that were all to be sent in as prisoners. Villoutray's position and occupation left no doubt as to the extent of the calamity: the two divisions hastily retraced their steps to Madrid; Joseph instantly called a council of war, and then and there it was determined to abandon Madrid, to retire behind the Ebro, and to establish court and headquarters in the city of Vitoria, which lay at a convenient short distance from the French frontier.

Joseph Bonaparte.

Joseph had not been a fortnight in his new capital when he was thus compelled to fly from it. The resolution was kept secret till the evening, and the intrusive king, trembling for his life, though in the midst of numerous French squadrons, took his departure by night. Several of the Spaniards who had accepted office under him remained behind at Madrid, or posted off for Seville to offer their excuses and their services to the junta; such of the Spanish grandees and functionaries as followed him (because they could not stay behind without the certainty of being assassinated by the people) got the names of "Josephinos," and "Infrancesados," and the stigma was quite equivalent to a sentence of outlawry—for, wherever the insurgents could catch them afterwards, they were treated as men who were put out of the protection of law, and whose destruction by sword or knife was allowable and commendable. The number of this French party—composed entirely of persons of the upper classes—was never considerable, and the steadiness of their attachment was little else than a despair of ever being able to obtain forgiveness from their exasperated countrymen. The retreat from Madrid began on the 1st of August; but General Grouchy remained some few days longer in the city; and the strong corps d'armée of Marshal Bessières, posted at Mayorga, covered the movements of Joseph and his court until they reached Burgos, when Bessières fell back himself.* On the 3rd of August a dispatch arrived at Seville,

* Napier, Hist. of the War in the Peninsula.

* Cabrera is about four miles long and three broad. During the war many more French prisoners, taken in Catalonia and other parts of eastern Spain, were confined there. The place was wretched enough, though in many respects preferable to a walled prison or the hulks. The prisoners were left to themselves, and had the whole range of the island, from which they could not escape. An allowance of bread was sent to them in an armed vessel from Majorca, but at times, in consequence of bad weather, they were in danger of being starved. During several years they received no clothing, and consequently were almost naked; they had but one axe and one saw among them all. The Spaniards left them one donkey for their use. There appears to have been no building of any sort on the desolate isle: some lived in dry cisterns or in caves in the rocks, others in rude huts made of loose stones. They, however, made the best of the matter: they formed little gardens; they set up schools in which dancing and music and fencing were not forgotten, and they even established a theatre in a large cistern. But for the occasional scarcity, the constant absence of the fairer sex, and their rather frequent quarrels and duels, they might have whiled away the time pretty well. But at the worst their condition was not worse than that of their countrymen serving and fighting in Spain.—*Adventures of a French Sergeant, London*, 1826, *as cited in Penny Cyclopædia.*

addressed to General Castaños from Grouchy, as French commandant in Madrid. The French general merely stated that, as the troops under his command were destined for another service, he could wish that General Castaños would detach part of his army to occupy the capital in order to insure its tranquillity, protect the French sick left in the hospitals, and also the French families established in Madrid. Grouchy, however, added that, whatever Castaños's determination in this respect might be, he must request him to send immediately a Spanish officer to Madrid to treat of matters which would probably be of advantage to both nations. Castaños forthwith dispatched Moreno, his quartermaster-general, to the capital, which was shortly afterwards evacuated by Grouchy and the remainder of the French. Castaños did not enter Madrid until the 23rd of August.*

Among the many important results of the affair of Baylen and the flight of King Joseph, was the raising of the siege of Zaragoza. This ancient capital of the kingdom of Aragon, situated on the right bank of the Ebro, with a suburb on the left bank connected with it by a stone bridge, contained a population estimated at about 60,000. Its immediate neighbourhood was flat, and on one side marshy. A small river, a confluent of the Ebro, runs close to the walls of the town. These walls of themselves were not of much consequence, being old, low, built of brick, and in many places ruinous. They appear to have been constructed merely to facilitate the levying of the octroi duties on the produce and articles brought into the town for sale. Very few guns in a serviceable state were mounted on these walls. There were no fewer than nine gates of the most simple construction: and the line between them was in some places preserved by a mud wall, and in others by the remains of an old Moorish wall, which had a slight parapet, but without any platform even for musketry. But the streets of the town were very narrow and crooked; and the houses, two or three stories high, were strongly constructed, each story being vaulted so as to be almost fire-proof. Moreover the numerous convents which were scattered round the town, and in the centre of it, were as strong as castles, and Spanish garrisons never fought so well as when they were intermixed with and headed by monks. The inhabitants of Zaragoza were among the first of the Spaniards that rose to repel the French. On the 25th of May, in answer to a manifesto of Murat, dated on the 20th, they flew to arms, and were joined by the peasantry of the surrounding country, who flocked into the town, shouting, "Long live Ferdinand the Seventh!" The captain-general of Aragon had betrayed, or was suspected of, an inclination to submit to the French, and recognise King Joseph. The people seized him, threw him into prison, killed some of those who were about him, and with one voice gave his high command to Don José Palafox, the youngest of three brothers, of one of the most ancient families in the country.* As in other towns, a local

* Palafox had escaped from Bayonne, and on his arrival at Zaragoza he had excited the people by developing the real intentions of

ZARAGOZA

junta was formed. On his sudden accession to the captain-generalship of Aragon, Palafox found that the regular troops quartered in Zaragoza did not exceed 220 men, and that the public treasury did not contain more than a sum about equal to 20*l.* 16*s.* 8*d.* The contiguous provinces of Navarre and Catalonia were occupied by the French; the passes of the Pyrenees leading directly into Aragon were opened; and Murat and the main body of the French were at Madrid. But neither Palafox nor the junta despaired of success, and in every effort they were nobly seconded by the people, and aided by the clergy and the monastic bodies. The richer orders, who felt that their all was at stake, gave money; the mendicant orders, the Franciscan, Capuchin, and other friars, who sprung from the lowest classes of the people, and who possessed the greatest influence with the people, spread themselves over the country to animate the peasantry, and bring in recruits to Palafox. That chief, on the 31st of May, put forth a proclamation, in which, after thanking Providence for having preserved in Aragon a good quantity of muskets, ammunition, and artillery, and for having inspired the people in all the provinces of Spain with the unanimous resolution to shake off the yoke attempted to be imposed upon them by means the most base and infamous, he formally declared war against the emperor of the French, and held that emperor, all the individuals of his family, and all his generals and officers, personally responsible for the safety of King Ferdinand VII., and for the safety of his brothers and his uncle. On the 16th of June, General Lefebvre-Desnouettes, after driving in Palafox's outposts, began to invest the town with 8000 infantry and 900 horse. These troops were not new levies or conscripts, but veterans who had fought in Germany and in Poland (there were two or three fine Polish regiments among them), and they were abundantly furnished with artillery. Their approach had been so rapid that the people in Zaragoza were but ill prepared to receive them. Some of the French penetrated without difficulty through one of the gates; but the narrowness and crookedness of the streets, and the strength of the buildings, made them pause, and they ran back more hastily than they had run in. The inhabitants, aided by the peasantry, who had thrown themselves into the threatened town, now worked right vigorously in casting up defences, making barricades, cutting loop-holes in the walls of the houses, and making ramparts with sacks and bags filled with sand. Within twenty-four hours the place was put in a condition to withstand an assault. General Lefebvre established strong posts in front of the several gates, and waited for reinforcements. But, before these posts were established, Palafox and Tio Jorge (uncle or goodman George), one of the popular leaders, had issued out of the town, and had crossed the Ebro with some infantry, and two or three squadrons of dragoons. Beyond the Ebro Palafox effected a junction with the Spanish General Versage, and then with 7000 or 8000 men, mostly volunteers and fresh levies, he threw himself in the rear of the French, and rashly attempted to relieve Zaragoza by a battle in the open country. His troops, unable to form any order of battle, were defeated with terrible loss: some of them rallied under Versage, who marched away in search of fresh levies, and the remainder of such as could be collected again followed Palafox, who easily found his way back into Zaragoza, as Lefebvre had confined his operations to the right bank of the Ebro, leaving unguarded the suburb on the left bank, which was connected with the city by the bridge. By the same road a Spanish regiment from Estremadura, some small parties of artillerymen with some artillery, and 200 or 300 militia men from Logrono, entered the city. In the last days of June great loss and consternation were occasioned by the accidental blowing up of a powder magazine in the heart of the city; and the French took by assault Monte Torrero, a hill outside of the town, where 1200 Spaniards were intrenched. Immediately after this success, Lefebvre was joined by so many reinforcements under General Verdier, that he found himself at the head of from 12,000 to 13,000 men, with a very strong battering train. On the 2nd of July he made an assault on the strong convent of San José: his first attack failed completely, but a second was attended with success. Some other buildings beyond the walls of the town were abandoned, and set fire to by the Spaniards. A bridge was constructed 200 yards above the town, breaching batteries were established on both banks of the Ebro, and the suburb and the city were assailed at one and the same time by a destructive fire from cannon, mortars, and howitzers. The sand-bag battery which the Spaniards had thrown up in front of one of their gates was several times destroyed, and as often reconstructed under the fire of the enemy. The women laboured with the men in this perilous work; and here it is said that the fair Augustina, the far-famed maid of Zaragoza, first showed herself on the batteries, and, stepping over the wounded and dead, seized a match and fired a gun at the French. Bonaparte, who was directing all his generals from the distant walls of Bayonne, and who could not conceive that so large a force was necessary for reducing a town without regular fortifications, and almost without regular troops, ordered Lefebvre-Desnouettes to join Marshal Bessières with a part of the forces collected round Zaragoza. General Verdier was left to prosecute the siege with about 10,000 men. The besieged were partially relieved by bodies of armed peasants, and by some regiments of a more regular description, who collected in the neighbouring country with the intention of surrounding Verdier's camp, and cutting off all his communications. This forced Verdier to send out frequent detachments. These detachments scoured the country, captured

the French. The traitorous or timid captain-general ordered him to quit the city; but this order only led to his own captivity, to the murder of some of his friends, and to the readier breaking out of the insurrection.

and plundered several small towns, and defeated the Spaniards in more than one encounter; but during their absence the siege went on but languidly, and the French soldiers began to droop under their toils and the heat of the dog-days. But on the other side the Spaniards in the town began to feel the want of provisions, and the equally serious want of ammunition. There was, however, no whisper or thought of surrender; the monks betook themselves to the manufacturing of gunpowder, all the sulphur existing in any shape in the town was put into immediate requisition, the dirt of the streets and other foul materials were carefully washed in order to procure saltpetre, and charcoal was made by burning the stalks of hemp, which in that part of Spain grow to a large size. One desperate effort was made to regain possession of the important post of Monte Torrero, where the French had erected a battery, which kept up a murderous plunging fire on the town; but the sortie failed, and from that time they kept themselves wholly within their walls. Verdier made several assaults on those crumbling walls and miserable gates, but he was repulsed in all. He was reinforced at the end of July by some veteran French regiments, which raised the besieging army to 14,000 or 15,000 men. On the 3rd or 4th of August the French opened a tremendous battery on the quarter of the city called Santa Engracia: under the fire the mud wall and the Moorish rampart vanished in dust, the splendid convent of Santa Engracia was rent and enveloped in flames, a broad entrance was made, and the storm columns rushed through it into the very heart of the city, and took possession of some of the strong houses on one side of the Cozo. General Verdier, thinking the town more than half taken, sent a note to Palafox containing merely its date, his name, and the two words "*La capitulation.*" The Spanish commander replied with the like brevity, "*Guerra al cuchillo!*"—war to the knife! One side of the Cozo was now occupied by the French, the other by the Spaniards, who, confident in the strength of their houses, were converting every one of them into a garrisoned fortress. Other bands of patriots came down by the streets which opened upon the Cozo, and planted their cannon immediately opposite to, and only at a few yards' distance from, the French artillery. One of the French columns, in looking for a road to the stone bridge over the Ebro which led to the suburb, got entangled in one of the longest, narrowest, and most crooked of the streets, and was there assailed so hotly from windows, doorways, and loopholes, and by some Spaniards who had rushed over the bridge from the suburb, that it got beaten, and fearfully thinned, and driven back to the Cozo. Some other portions of the French soldiery began to plunder the houses from which the Spaniards had been driven, instead of attacking the houses where the Spaniards remained fighting. A convent of which the assailants had obtained possession was set on fire, and, while many of them perished in the flames, the position of the rest of the army was weakened by the loss and conflagration of that strong edifice. There were many scenes of horror; but the most horrible of all was this: "The public hospital being set on fire, the madmen confined there issued forth among the combatants, muttering, shouting, singing, and moping, each according to the character of his disorder; while drivelling idiots mixed their unmeaning cries with the shouts of contending soldiers."* The Spaniards could not drive Verdier from the opposite side of the Cozo; but they saw that, though one-half of the town was lost, they could very well defend the other half. On the morning of the 5th of August, as the French were preparing to renew their attack, the brave Aragonese, who had consumed an enormous quantity of powder on the preceding day, found that their ammunition was beginning to fail; but Verdier, whose loss had been very severe, suspended his attack, as soon as he had carried two or three houses; and in the dusk of the evening Don Francisco Palafox, brother of the captain-general, found his way into the city, not only with a convoy of provisions and ammunition, but also with a reinforcement of 2000 or 3000 men, partly Spanish guards and steady Swiss veterans. On the 6th and 7th of August there was street-fighting of the most murderous kind; the Spaniards endeavouring to regain the streets and the houses they had lost, and the French fighting hard and firing hard to dispossess them of what they retained. On the 8th Palafox called a council of war. Such councils are seldom called except when there is a predetermination to cease fighting, and ask for a capitulation. But such was not the intention of the council which met in the heroic Zaragoza. The brave men composing it unanimously resolved that those quarters of the city in which the Aragonese yet maintained themselves should continue to be defended—that, should the enemy at last prevail, the people should retire by the bridge over the Ebro into the suburb, and, having destroyed the bridge, defend the suburb till they perished. The people of the town, who were incessantly re-echoing Palafox's war-cry, "*Guerra al cuchillo*," welcomed these resolutions with enthusiastic acclamations—and thus the strange war went on, house being defended after house, room after room. It was now a war where stratagetical skill and military discipline were of no use: on those house-tops, at those gateways, doorways, windows, and loopholes, the townspeople and the rude peasantry from the hills were worth as much as the highest disciplined troops in the world, and not a friar or burgher among them but was as good as Verdier, that approved commander. During the whole siege no man more distinguished himself than Father Santiago Sass, the curate of one of the parishes.† The loss of the

* Napier.

† Of this bold and indefatigable churchman Southey says: "He was always to be seen in the streets, sometimes fighting with the most determined bravery against the enemies, not of his country alone but of freedom, and of all virtuous principles, wherever they were to be found; at other times administering the sacrament to the dying, and confirming, with the authority of faith, that hope which gives to death, under such circumstances, the joy, the exultation, the triumph, and the spirit of martyrdom. Palafox reposed the utmost confidence in

French was dreadful, and they were disheartened by a succession of bad news—the surrender of Dupont, the failure of Moncey before Valencia, and the report that the junta of that province had sent 6000 men into Aragon, to join the levies there, and co-operate for the relief of the Zaragozans. After maintaining this murderous contest for eleven days and nights—fighting more by night than by day—they ceased attacking, abandoned many of the houses and churches they had stormed and taken, and concentrated in a corner. They had possessed one half of the city, but the space they now occupied was reduced to about one-eighth part. The streets which they abandoned were literally strewed with dead—French and Spaniards in many places lying intermixed or heaped one upon the other. The bodies festered and putrified under the heat of the August sun, and while the combat was raging one of the greatest of Palafox's difficulties was the removing of these sad remains of mortality, from which the Spaniards apprehended a pestilence. The method adopted was to tie ropes to the French prisoners, and push them forward among the dead and dying, and to make them, in the mouth of the French artillery and musquetry, remove the bodies, and bring them away for interment. At sight of their countrymen the French combatants on the other side of the street or square generally suspended their fire; but no Spaniard could appear in the middle of the street, even for this sad office, without the certainty of being either killed or wounded. Although they could not avoid feeling that the struggle was utterly hopeless, and the prolonging of it a wanton waste of life, the French, during the night of the 13th of August, from the angle of the town they yet occupied, kept up a fierce and destructive fire, and blew up the splendid church of Santa Engracia, within whose vaults were piled the bones of Spanish saints, martyrs, and patriots—Christian heroes who had perished in the ancient wars with the Moors. The Spaniards thought that the terrible explosion and cannonade of the night would be followed by another assault in the morning; but when the morning came they saw, to their surprise, that the French had evacuated the town, and were in full retreat over the plain, by the road which leads to Pamplona.* Verdier had received orders from Joseph Bonaparte to raise the siege, and retire to Logrono, but without any such order the French general must have retreated; his army was fearfully thinned and *demoralized* (in the only way in which the French now understood the word); the Valencians and Aragonese were approaching; the spirit of the surviving population of the town was unbroken; and, in a few days, if he had stayed, he must have been surrounded and forced to lay down his arms, as Dupont had done. As soon as the dead were removed, and the ruins sufficiently cleared, Ferdinand VII. was proclaimed with all the usual solemnities in the plaza or square of Zaragoza. Loyalty had not often had so sad a temple, so dismal an altar: all around was shattered by artillery, or blackened by gunpowder, or stained with blood; and of the denizens of the town who would have swelled the shouts of "*Viva Fernando*," one-third at least were in their bloody graves, or were lying maimed and mutilated, or shrieking under the anguish of their wounds. On the 25th of August solemn obsequies were performed in the churches for the Spaniards who had fallen, and their funeral oration was pronounced from the pulpit. Such was the first siege of Zaragoza, and shame attend the endeavours of all those who would obscure its glory, and call in question the high moral effect it produced on the Spanish mind, and throughout Europe!*

About the same time that Lefebvre-Desnouettes had been first sent against Zaragoza, Duhesme, who commanded the French army in Catalonia, was directed to reduce Gerona. The people of Gerona and the Catalans generally were as brave and as steady, and fought as well behind walls, as the Zaragozans and Aragonese. They had, too, this advantage—Gerona had regular fortifications, and was exceedingly strong by nature as well as by art. In an attempt to take the place by storm Duhesme failed, and lost a great number of his men. Another attempt made on the same day was not more successful, although the Neapolitan colonel Ambrosio, and a French engineer, gained for a moment the top of the ramparts. On the day after these reverses the French general tried to negotiate, or to obtain by fraud what he could

this brave priest, and selected him whenever anything peculiarly difficult or hazardous was to be done. At the head of forty chosen men, he succeeded in introducing a supply of powder into the town, so essentially necessary for its defence."—*History of the Peninsular War.*

* Narrative of the Siege of Zaragoza, by Charles Richard Vaughan, M.B., Fellow of All Souls, Oxford, and one of Dr. Radcliffe's travelling Fellows from that University.

Mr. Vaughan visited Zaragoza a very short time after the siege, and remained there for several weeks, living with Palafox, and taking great pains to inquire into every particular. His warm sympathy for the cause, his admiration of the bravery and resoluteness of the Spaniards, may have led him into some trifling military inaccuracies; but better these inaccuracies than a cold rigid military accuracy which excludes all sympathy for the poor Zaragozans, and delights to dwell on the unskilfulness of the patriot leaders, and the superior genius of their cruel invaders and oppressors! One of the principal aims of Colonel Napier appears to be to hold up to contempt Palafox, Tio Jorge, and the other plebeian leaders who acted with the high-born captain-general. He admits, indeed, that both Lefebvre-Desnouettes and Verdier committed mistakes; but then, as if grieving to cast any censure on French generals who had risen out of the Revolution, and who had been regularly trained and long exercised in the art of war, he says that Lefebvre and Verdier, and especially the latter, displayed *both vigour and talent.*

* From our preceding note it will be understood that we mean to include in this censure the always able and sometimes eloquent military historian of the war in the Peninsula. Colonel Napier maintains that Zaragoza owed her safety to accident, and that the desperate resistance of the inhabitants was more the result of chance than of any peculiar virtue or valour. Yet the only accident we can discover was that of the French getting entangled in the long crooked street, while in search of the bridge over the Ebro; and we can see nothing like *chance* in the mode in which the Zaragozans flew to arms and braved their invaders, with an ample knowledge of their power and ability, or in the way in which they protracted their defence, rejected the offer to capitulate, and fought for eleven days and nights when the French were in possession of one-half of the city. Few historical facts are better authenticated than the heroism of the maid of Zaragoza; the mingled piety, charity, and heroism of the Countess Burita, a young and beautiful woman, who, with other women of all ranks, attended the wounded, and carried water, wine, and provisions to those who defended the gates, not flinching from the duty even in the midst of shot and shells; and the bravery of women and boys during the whole siege. When the dead were gathered together and counted, a large proportion of them were found to be females and boys; yet Colonel Napier sneers at what he calls the current romantic tales of female heroism, and begs to be allowed to doubt of their truth.

not gain by force; but there was no traitor to his country in Gerona, and Duhesme was obliged to retreat by forced marches upon Barcelona. This retreat was little else than a running-fight, for the Catalans gathered on their hill-sides and in their mountain passes. Duhesme savagely burned the towns and villages through which he passed, but this only added to the fury of men who had already determined to give no quarter to the French. The insurrection spread through the whole province; and Admiral Lord Collingwood sent in some succour to the patriots, and, by concluding a treaty with the captain-general of the Balearic Isles, his lordship rendered the Spanish ships and troops in Minorca, Majorca, and Iviça disposable for the service of the Catalans. Forthwith 1300 men were conveyed to reinforce the garrison of Gerona; and 4000 other Spaniards and a good train of artillery were landed at Tarragona. But the French army of Catalonia being strongly reinforced by the movable columns of General Reille, who had been watching the passes of the eastern Pyrenees, Duhesme turned back to lay regular siege to Gerona, first detaching Reille with two or three Italian regiments to invest Rosas. Reille was very unfortunate; the whole country rose in his rear, Captain Otway of the 'Montague' landed with some English marines, and thus this French general was compelled to retire from before Rosas with a loss of 200 men. Nor was Duhesme more successful in his siege of Gerona than he had been in his attempt to storm that place: before he could reach it he lost many of his carriages; when he invested the place he found it well garrisoned, and, turn his eyes where he would, he could see nothing but armed bands of peasantry and British ships of war, which ran along the coast cutting off all supplies by sea, and occasionally firing upon his advancing columns or into his works. In vain Reille came to his assistance, in vain he employed 12,000 infantry, 1000 cavalry, and 25 battering cannon; he could make no impression on the walls of Gerona, or on the stern hearts of its inhabitants; his communications were all cut off, his convoys were seized, his very lines were broken, and after losing many men he broke up the siege and fled for Barcelona, leaving both artillery and stores behind him. He could not retreat by the coasts on account of the English frigates that would have raked his columns, and he could not get through the mountains without another murderous running-fight with the peasants. Choosing, however, the latter course as the safer of the two, he fled over the high lands which back the coast, destroying his ammunition, and throwing what remained of his artillery over the rocks. And before Duhesme could get back to Barcelona, one of the richest and most populous cities in Spain, the real basis of his operations, that port was blockaded by two British frigates under the command of Lord Cochrane, who landed his marines, drove the French from some of their positions, and blew up their works at Mongat. In several encounters weak French detachments were beaten by the armed peasantry and the regular troops which had been brought over from the Balearic Isles, and, when the ferocious Duhesme reached Barcelona, he came flying before the Spanish general Caldagues, with an army disorganised and deprived of almost everything that rendered it formidable.

Almost equally unsuccessful and fatal were the operations of Marshal Moncey in Valencia. As the marshal advanced into the province in the month of June, he found that all the villages were deserted, and that, "either from fear or hatred, every living person fled before his footsteps." * As he advanced still farther, he saw the rocks covered with armed peasantry, some Spanish regulars and some Swiss troops, and, although he dislodged them and took some of their cannon, ammunition, and baggage, he found other foes hanging on his flanks and on his rear on the morrow. At last, on the 27th of June, he arrived before the strong and ancient walls of the city of Valencia. On the 28th and 29th he fired upon the town with his field-pieces, having no battering train with him. The Spaniards replied with heavy guns which overpowered his fire. Many of his people were wounded, and among them his general of engineers. He had expected to find a party in the town favourable to the French, but the Valencians had massacred all the French residents, and could expect only a bloody retaliation if he should gain an entrance into their city. There was not a man that would communicate with him, all were determined to resist to the last, and their courage was kept up by the visible effect of their own fire, by the trifling effect produced by Moncey's field-pieces, and by the exhortations and example of a friar who ran through the streets with a cross in one hand and a sword in the other. On the evening of the 29th Marshal Moncey relinquished the attack and began a hasty retreat. He had been promised assistance from the French army in Catalonia, but Duhesme was not in a condition to send him any aid. The Spanish general Serbelloni, imprudently risking a battle in the open field with badly disciplined troops, sustained a complete defeat. But a detachment which Moncey had left in the Cuença was surprised, beaten, and cut to pieces; and General Frère, who had been sent from Madrid to reinforce Moncey, mistook his road, was embarrassed by orders issued from head-quarters without any accurate knowledge of the state of the country or of the place where he was to seek the marshal, and, after making many useless marches in the heat of summer, he joined Moncey with sickly, wearied, worn-out, disheartened troops. Savary sent his colleague in kidnapping, Caulaincourt, to quell the insurrection in the Cuença. On the 3rd of July an atrocious butchery was committed, the town of Cuença was pillaged, and Caulaincourt wrote to his superior, Savary, that he had performed his mis-

* Napier.

sion, and quenched the flames of insurrection. But the blood which had been shed—the blood of men, women, and children, of aged priests, of monks and friars—instead of quenching these flames, made them rage the higher. Insurgent bands gathered all round Marshal Moncey and Frère, cutting off their stragglers, and killing every Frenchman they could surprise. Moncey, however, after reorganising his forces and preparing artillery, was thinking, or was said to be thinking, of returning to Valencia to make a second attempt on that strong and well-defended city, when he received from Savary a positive order to hasten back to Madrid and protect his gracious majesty King Joseph. These details will be sufficient to convey a notion of the manner in which the war was carried on by the Spaniards so long as they were left to act in the field by themselves. Notwithstanding the affair of Baylen, which raised their self-confidence to a giddy and dangerous elevation, and some other encounters in which, mainly through the advantages of ground and other local circumstances, they had a decided advantage, it was on the whole very clearly demonstrated that there was very little military genius among the Spanish commanders, that a Spanish army could not yet contend in the open field with veteran French troops, and that all the Spaniards fought best when covered by walls and strong stone houses. But by this time British bayonets were glittering on the shores of the Peninsula, and General Sir Arthur Wellesley was preparing to enter upon a career far greater and more glorious than his Indian one had been.

As soon as the first popular insurrection at Madrid was known at the frontier town of Badajoz, an anonymous proclamation from that city was circulated on the Portuguese border; and a lieutenant of the King of Spain's Walloon guards was sent on to Lisbon to consult secretly with the Spanish general Caraffa upon the means of withdrawing the Spanish troops which had marched into Portugal with Junot. Caraffa, an Italian by birth, would not declare himself at that time, but he concealed from Junot the object of the lieutenant's secret mission; and many of the men under his command began to desert. At first these Spaniards, who had come into Portugal to help the French to subjugate the country, fled in small parties; but these parties gradually became larger, and at last a whole regiment marched off for Spain in a body in defiance of its colonel. Junot sent a detachment of 600 French to intercept this Spanish regiment; the late allies met as mortal enemies, the Spaniards, with their homes in their eye and heart, proved victorious, and the French detachment lost nearly half of its original number in killed and wounded. The Spaniards were assisted by the Portuguese peasantry. Sundry ingenious attempts were made by the French to revive the jealousies and animosities which had so long raged between the two neighbouring nations, but they were attended with no success. Their ingenuity was defeated by their rapacity and violence, which were sufficient to make the Portuguese forswear for the present all enmities except against the French. Junot plundered remorselessly at Lisbon, and Kellermann and his other generals closely followed his example in other parts of the country. At the same time the common soldiery carried on a trade of their own, and insulted the priests and outraged the women. The great city of Oporto was in possession of the Spanish general Bellesta, who had occupied it by virtue of that infamous secret treaty of Fontainebleau, which was to give to Spain a portion of the subdued and partitioned kingdom of Portugal. Junot had placed a French general over the head of Bellesta, to guide him and watch him; but General Quesnel had only 70 dragoons and a few other Frenchmen with him, and, when news arrived of the turn affairs were taking in all parts of Spain, Bellesta obeyed the voice of his country, put the French and their general under arrest, and convoked the military, judicial, and civil authorities of Oporto. To the Portuguese functionaries the Spanish general expressed a hope that Junot would be seized in Lisbon as Quesnel had been in Oporto, and that the Portuguese would everywhere rise against the French as the Spaniards were doing. The more timid said that they had no means of resisting so terrible an enemy as the French; and that it would be better to wait till they could learn what had happened at Lisbon. But higher feelings prevailed; the resolution was adopted to raise the standard of the house of Braganza at once, and a Portuguese officer went straight from the place of meeting to the fortress of S. Joam da Foz, at the mouth of the Douro, and bound the garrison by a formal deed and solemn oath to act for their lawful prince against the French. Without delay, Bellesta and his Spanish troops marched away for Coruña, taking with them General Quesnel and their other French prisoners. But, almost as soon as the Spaniards had evacuated the city, the Portuguese governor declared for the Emperor Napoleon and the French, and succeeded in putting down the patriotic insurrection. On learning these hurried occurrences at Oporto, Junot, by stratagem, succeeded in disarming and seizing about 1200 Spanish troops that were quartered in the capital, and about 3000 more that were quartered in Mafra and other places. In all about 4500 Spaniards were made prisoners in ships and hulks upon the Tagus. Bonaparte's lieutenant then addressed proclamations to the Portuguese people, and to the Portuguese army. In the vain hope of attaching that army, he promised regular and increased pay, promotion, glory, every advantage and every hope that was possessed by the Invincibles of the Grand Army, the favourites of Fortune, and of the Emperor Napoleon. But by this time the French had everywhere rendered themselves odious and suspected. During a religious procession the cry was got up, by combination or by accident, that the English fleet was crossing the bar, and ascending

the Tagus to bombard Lisbon: the French troops formed as if expecting some massacre like that of the Sicilian Vespers, the Portuguese fled as if expecting to be immediately massacred by the French. Edicts were issued commanding all persons to deliver up their fire-arms, swords, and other weapons, prohibiting the kindling of bonfires and any use of gunpowder, making parents answerable for their children, schoolmasters for their boys, masters for their servants, &c.; and every possible exertion was made to place Lisbon and its castles in a state of defence, and to put down insurrection in the neighbouring country. All this served only to hasten the universal rising. As in Spain, the priests and monks put themselves in the front of the insurrection. At Braga the archbishop unveiled the royal arms of Braganza, and recited the prohibited prayer for the prince-regent and fugitive royal family. The flags, the arms, the symbols of the displaced dynasty were displayed in one town after another, and the tricolor of the intruders was cast to the earth, and torn to pieces. In the city of Braganza an abbot read aloud the news of the first insurrection at Oporto, and the governor of the province declared openly against the French. Here, as in other towns, there were some timid, calculating men, who wished to remain quiet, and who doubted whether the Portuguese could ever resist the French army of Junot, and the mighty masses which the Emperor Napoleon might send to back them. The old governor took a party of this class of politicians, who had waited upon him to know the meaning of all this stir, to a window, and showed them the streets swarming with people, who were all excited to the utmost, and shouting, "The royal House of Braganza for ever! down with the French!" "There," said he, "you hear what is the meaning; and you may attempt to quiet that multitude if you dare!" The old governor illuminated his house, which was the signal for a general illumination: he collected all the arms that were in the city, he sent to Chaves for more; he called upon all reduced Portuguese officers to come forward; and he issued orders to all the chief authorities under him in the province to proclaim their lawful prince, and enrol the peasantry. A grand mass was celebrated next day in the cathedral, and all who were present mounted the national cockade, the clergy wearing it upon the breast.* This national joy was damped by the intelligence received from Lisbon and from Oporto; but in a very few days Oporto became the scene of another insurrection, which was not destined to be put down by the caution or timidity of any Portuguese governor. News was spread there by some of the patriots that a Spanish army was in full march for Portugal, that the French were flying from Spain, that an English fleet was coming with arms and money. The people of the town rose to a man, the Portuguese soldiery joined them; the flag of Braganza was again displayed, the arsenal was thrown open, arms and cartridges were distributed to all who applied for them; the monks rang their bells, the soldiers swore on their swords to fight and die for their country, their religion, and their king; and the Bishop of Oporto came forth from his palace, kissed the national banner, put himself at the head of the insurrection, and led the enthusiastic multitude to the cathedral, there to implore the divine assistance in their meritorious undertaking. In imitation of the Spaniards, a provisional junta of supreme government was then appointed, and the bishop was placed at the head of it with the title of president-governor. The bishop, by name Antonio de S. José e Castro, forthwith published a manifesto, declaring that the French government was abolished and exterminated, and the royal authority restored, to be exercised plenarily and independently by the provisional junta of Oporto, till the government instituted by his royal highness the prince-regent should be re-established. The junta gave orders to proclaim the prince in all parts of the kingdom, and everywhere to uncover and display as heretofore the royal arms of Braganza; and they called upon all constituted authorities to attend to the summons of patriotism, and obey the provisional government. One messenger was instantly dispatched to the patriotic old governor of Braganza, and another of a higher rank was sent off to a British brig-of-war which was hovering off the coast, in order to open a direct communication with England, and to solicit protection and succour. Voluntary contributions were liberally made by the citizens of Oporto, and the poor pay of the Portuguese soldiers was immediately raised. There was much suspicion and some rioting; but, although the number of traitors or of French partizans appears to have been greater in Portugal than it was in Spain, there was much less assassination. Two deputies were soon sent to England, and an alliance was concluded with the junta of Galicia, the nearest of the provisional governments in Spain; Galicia engaging to assist in liberating Portugal, and Portugal engaging to co-operate, after her own deliverance, in expelling the French from every part of Spain. As in the latter country, many juntas began to raise their heads; but they had much less anxiety for a separate dominion: several of them readily submitted to the superiority that was claimed by Oporto, and the authority of the bishop and his junta was soon acknowledged throughout the north of Portugal. The whole of Tras os Montes, and of the province between the Douro and the Minho, declared at once against the French. The insurrection rapidly spread southward into Beira and Algarve. The people and the students of Coimbra enthusiastically joined the national cause, submitting to the junta of Oporto as the legitimate government: the people of Alemtejo followed the example of the people of Algarve, and both were supported by a body of Spanish troops which crossed the frontiers at an opportune moment. The town of Evora became

* Southey.

the centre of the insurrection in this quarter. The French general Loison, who had been sent to repress the insurgents in the north, was quickly recalled by the bewildered Junot, and sent into Alemtejo. After a desperate resistance on the part of the inhabitants, Loison forced his way into Evora, and the unhappy town was then given up to indiscriminate massacre, the fury of the French soldiery being increased by the losses they had sustained in their march, and in their attack on the place. General Margaron executed like vengeance at Leyria, an ancient Lusitanian city, situated in a beautiful country about 100 miles from Lisbon. The people of the town and the peasantry who collected there had had little time for preparation, when they heard that the French were approaching: the town was open on all sides, and they had not a single piece of cannon. The magistrates and the higher orders withdrew secretly during the night which preceded the attack, and fled to the mountains. But the poorer patriots staid and fought. They were butchered in heaps; the open city was entered on all sides, and neither age nor sex was spared; the old and young, the women and children, the babe suckling at the mother's breast, were slaughtered, in order to strike terror into the hearts of the rest of the insurgents. It was this practice of carrying out Danton's and Marat's doctrine, *faire peur*, that rendered the wars in Calabria, in Spain, and in Portugal so ruthless and terrible, and that converted the armed population into the most merciless of foes. When the slaughter in the streets had ceased, the French hunted for prisoners in the houses and churches, and fusilladed them in an open space in front of the chapel of S. Bartholomew. And when this was over they plundered the houses, and the churches, and the monasteries, and tore open the very graves in a mad search after hidden treasure. Scenes equally atrocious took place at Guarda in the north, and at Beja and Villaviçosa in the south. In these butcheries, however, the French were also losing their own men daily; the peasantry were always hovering about their line of march, cutting off stragglers, and intercepting their communications; and the necessary rapidity of their marches, the heat of the climate, and the scarcity or badness of provisions induced disease and death. Rarely did the peasantry show any mercy to the prisoners they took: the French had treated them like wild beasts, and like savages they acted towards the French. After plundering Evora, Elvas, and Portalegre, and shooting several Spanish and Portuguese gentlemen, Loison seized some individuals as hostages, and marched away for Abrantes, having received dispatches from Junot, who ordered him to hasten his return to Lisbon by that route, it being now certain that an English expedition was off the coast.

The Spanish deputies who had gone to England from the Asturias and Galicia had requested the employment of an auxiliary force, to effect a diversion, by landing on some point of the coast of Portugal, in which kingdom the insurrection had not then begun. Their native provinces, the mountainous regions of the Asturias and Galicia, were as yet untouched by the French; they formed, or were thought to form, the main strength of the Spanish patriots in the north; and the deputies, for their own immediate use, asked only for arms and money. Some doubts were reasonably entertained by the British government whether the Asturians and Galicians would make the best use of these succours, and whether Spanish armies, and irregular tumultuary levies, could drive the French out of the Peninsula, without the assistance of a disciplined English army. In the month of June Sir Arthur Wellesley, who had been promoted to the rank of lieutenant-general in April, was appointed to the command of a force, consisting of about 9000 infantry and one regiment of light dragoons. This force was intended for the Peninsula, but at the time of its departure, and for some time after, it was not decided whether it should be landed in Spain or in Portugal. Much was left to the discretion of Sir Arthur; and never before had our government had so much discretion and wisdom to trust to. The general was promised an additional force of 10,000 men, to follow in a short time. The force actually ready, and collected at Cork, had been assembled by the "All Talents'" ministry, for the purpose of making permanent conquests in Spanish South America! On the 12th of July Sir Arthur sailed with them from the Cove of Cork for the Peninsula. On the 20th of July, having quitted the fleet containing the troops under his command as soon as it was clear of the coast of Ireland, Sir Arthur arrived at Coruña, and immediately held conferences with the junta of Galicia. He found those Spaniards full of confidence: although the battle of Rio Seco had been lost, and the battle of Baylen not yet won, they asked for nothing but arms and money; they declined the assistance of a British auxiliary force, but they advised General Wellesley to land in Portugal, to rescue that kingdom from the French, and thus open a regular communication between the north and south of Spain. He was assured that in many places detachments of the French had been defeated by the Spanish people, and that whole armies of them would soon be annihilated. Some money which he brought with him, and gave them, elated the members of the junta still more: he could not see either in them or in the inhabitants of the town any symptom of alarm, or any doubt of their final success. The junta said that they could put any number of men into the field, if they were only amply provided with money and arms. His quick eye saw at a glance that a great deal more was wanting than arms and money; and that the disinclination to receive the assistance of British troops was founded in a great degree on Spanish pride, and on the objection to give the command of their own troops to British officers, although it was but too apparent that they had few or no capable Spanish officers. It was this objection, this pride, which led to

many subsequent reverses and disgraces in the field, and which rendered the Spanish armies for a long time of little or no avail. The Portuguese showed less pride and more docility, and thereby rapidly became excellent troops in the hands of British officers, and under the command of the great British general. Sir Arthur thought that Bonaparte would now carry on his operations by means of large armies, and would make every effort to gain possession of the northern provinces of Spain, which could be done only by the invasion and possession of the Asturias; and that, therefore, our government ought to direct its attention more particularly to that important point, and endeavour to prevail upon the Asturians to receive a body of our troops. No chance or contingency escaped him: he thought it possible that, if Bonaparte found it impracticable to penetrate by land, he would make some sudden effort to reach the Asturias by sea; and he therefore recommended the reinforcing of the English squadron on that coast. He suggested also to the junta at Coruña to fit out the Spanish ships at Ferrol for this service; but they said that it would divert their attention and their means from other more important objects; and that they would prefer relying for naval defence on Great Britain. He saw all the difficulties of the case in their true light, and at once told our ministers, who were far too sanguine, and who appear to have believed that the Spaniards had far more resources than they possessed, that they must assist *all* the Spanish provinces with money, arms, and ammunition. He referred to the great division of political power caused by the establishment of so many juntas; but he was not quite certain that each of the kingdoms of Spain should not be governed by its own junta, and he was convinced that the general zeal and exertions of each were greater at present than they would be if the whole kingdom were under the direction of one body.* The junta strongly recommended him not to land at Lisbon, or in the neighbourhood of the French army, urging as an objection that he would thereby lose the advantage of the co-operation of the Spanish and Portuguese forces that were collecting at Oporto, and that would not be able to approach Lisbon till they had heard that he had disembarked. They recommended him to effect a landing at Vigo, or at Oporto, and thence carry the allies, whose strength they exaggerated, with him to Lisbon. His own views, and his general instructions, were in favour of a landing in Portugal; but he determined not to fix upon the spot until he obtained more accurate information. On the night of the 21st of July he set sail from Coruña, to look after the transports and the fleet that were conveying his army. The fleet joined him the next day at sea, and he then sailed instantly for Oporto, where he arrived on the 24th. By this time Oporto and the neighbourhood was in full insurrection; and he found that the warlike bishop had gathered together about 3000 men, full of ardour, but badly armed and equipped. He also learned from the bishop that about 5000 Portuguese regular troops were stationed at Coimbra, on the Mondego river, and that there were about 12,000 peasants who only wanted arming, clothing, and disciplining. Some of the more regular levies had gotten a thousand muskets from the English fleet, but others of the same class had no fire-arms except fowling-pieces. Of the corps of Spanish infantry, which ought to have been at Oporto, he could hear nothing, except that it had been stopped on the frontier, and that whether it would come at all was doubtful. Having made arrangements with the Bishop of Oporto for a supply of mules and horses, General Wellesley sailed to the south as far as the Tagus, to get fresh and correcter information as to the strength and position of the French troops in and near Lisbon. Nothing was left to hazard, or to that second and third hand information which had so often misled inferior commanders. When he had obtained ample knowledge of the strength and disposition of Junot's forces, he fixed upon Mondego Bay as his proper landing-place. The small town and fort of Figueira, on the southern bank of the Mondego, had been carried by the Portuguese insurgents, and were now occupied by 300 marines belonging to the English fleet, and higher up the river at Coimbra were posted the 5000 Portuguese regulars. On the 30th of July General Wellesley anchored in the bay, and on the 1st of August the troops were landed near the town of Figueira, according to orders and rules most precisely laid down by the general. Their spirits were raised by the intelligence they received of Castaños's victory over Dupont. The surf on the whole coast of Portugal is great; the disembarkation presented many difficulties, but, with the exception of a few casualties, the infantry and the handful of cavalry were safely landed. On the 5th of August General Spencer joined from Cadiz, with about 4000 men, thus raising the entire force under Sir Arthur's command to 13,000 foot and 400 or 500 cavalry; but 150 of the 20th light dragoons were dismounted.

The French forces at this time in Portugal consisted of from 16,000 to 18,000 men; but, deducting the garrisons of Elvas, Peniche, Setubal, and other places, there remained only about 14,000 men for the defence of Lisbon and its approaches. Their communications were cut off from their countrymen in Spain, for, since the surrender of Dupont, the Spanish patriots were masters of Andalusia and Estremadura, and in Old Castile the French corps under Bessières had not advanced farther than Benavente, being observed by the Spanish army of Galicia. About the same time the French corps at Madrid were abandoning that capital, and retiring hastily to the Ebro. A clear stage was therefore left for the contest in Portugal between Wellesley and Junot, whose respective disposable forces were nearly equal, except that the French had the advantage of a considerable body of cavalry, an arm in which the English were

* Dispatches to Viscount Castlereagh, in Colonel Gurwood's Wellington Dispatches.

almost entirely wanting.* On the 9th of August the English began their march southward towards Lisbon. The advanced guard entered the town of Leyria, where it found the Portuguese force of 5000 men under General Freire, who had moved from Coimbra, and who had appropriated to the wants of his own people the stores which, by an agreement between the bishop and junta of Oporto, and Sir Arthur, were to remain for the use of the English troops. This was an awkward beginning of the connexion between the two allied armies; but what followed was rather worse: General Freire demanded that his corps should henceforward be furnished with provisions by the English commissariat, which had scarcely provisions enough to supply the newly-landed English troops. The preposterous demand of Freire is to be excused only by the poverty of his country, and by the fact that the French had seized and removed nearly everything that could be carried off; but Sir Arthur Wellesley and his commissariat stand in need of no excuse for refusing to accede to the demand of the Portuguese general; they had nothing to spare, and their army must mainly depend for support—at least for the present, and until cargoes could arrive from Great Britain—on such provisions as they had landed, and on such as the country they had come to deliver from the invaders could afford to sell for money. Junot had raised his supplies at the point of the bayonet; Wellesley offered hard dollars for his. Freire, however, was so unreasonable as to feel injured and insulted: he absolutely refused to advance with the English; he remained behind at Leyria; and was with difficulty prevailed upon to allow 1600 of his men to join Sir Arthur.† On the 14th the English came in sight of the ancient and magnificent abbey of Alcobaça, and entered the town of that name. On the 15th they were at Caldas, following the road to Torres Vedras, which runs parallel to the sea-coast, and is nowhere distant from the sea. It was near Roliça, at that time a large and beautiful village, about ten or twelve English miles beyond Caldas, that the first engagement between the English and the French took place.

Junot, on the first news of the landing of the English, determined to abandon the provinces, to evacuate all the fortresses except Elvas and Almeida, and to concentrate his forces in the neighbourhood of Lisbon. He sent a division of about 5000 men, under General Delaborde, towards Leyria, to keep Wellesley in check; and he ordered Loison, who had returned from his bloody expedition into Alemtejo, and had crossed the Tagus by the bridge of boats at Abrantes, to push forward and join Delaborde at Leyria. But the rapid advance of the English obliged Delaborde to fall back before Loison could reach him. On the 16th Wellesley's rifles drove in Delaborde's piquets and took possession of the village of Obidos, situated upon an insulated hill between Caldas and Roliça. Delaborde, however, resolved to make a stand in the favourable position of Roliça, expecting every moment to see Loison appear on his right. In his front were ravines and precipices, and steep hills overgrown with underwood and briars, and roughened by fragments of rock. But Sir Arthur was informed of Loison's approach, and therefore hastened to attack Delaborde before he should arrive. Accordingly he formed his army into three columns:—the right, consisting of Portuguese, was to make a demonstration on Delaborde's left; the left was sent to ascend the steep hills on the enemy's right, and to watch the approach of Loison, who was coming in that quarter; and the centre, which was the column of attack, marched along the valley and up the ravines to the front of Delaborde's position. In all three directions the difficulties of the ground were great, but they were greatest to the central or attacking column. In some places the way would not admit more than three or four men abreast; the French had posted an ambush of riflemen among the coppices of myrtle and arbutus, and here it was that Colonel Lake, the brave son of a brave father, fell with many of his men of the 29th regiment. When the central column reached the summit of the heights, they were exposed to a fire from the vineyards, and for some time they could not form a front to return it. But the bayonets of the British grenadiers cleared some ground, and then the column formed and fired, and drove back the French. Delaborde rallied his men, and brought them thrice back to charge, or attempt to charge; but each time they were brought to a pause by the sturdy immoveable mass before them; and, instead of driving the English back down the steep break-neck hills, they fell back themselves to higher ground in the rear. They had been told that the English troops were nought, and that their general, Sir Arthur Wellesley, was but a sepoy-general, who might beat Indian sultans and rajahs, but who was altogether incapable of contending with French commanders who had risen out of the Revolution, and who had been trained under the Emperor Napoleon; but the precision of movement, the unflinching steadiness, the regularity, and the quickness of their firing, undeceived them, and showed them the real qualities of British infantry, while all those who understood anything of the business of war saw a high directing mind, and felt that the sepoy-general was a great master in the art of war. The French officers had made good use of the time allowed them since their first arrival in the country in drilling and disciplining

* A. Vieusseux.—Military Life of the Duke of Wellington.

† "General Freire," says Sir Arthur, "has been apprised of the state of my resources, and yet he perseveres in his plan; and I acknowledge that I can attribute it only to his apprehensions, which, however, he has never hinted to me,—that we are not sufficiently strong for the enemy. I am convinced that he can have no personal motive for his conduct, as I have been always on the most cordial good terms with him. I have supplied him with arms, ammunition, and flints, and have done everything in my power for his army; and, only on the day before he communicated to me the alteration of his plan for the march of his army, he voluntarily placed himself and his troops under my command."—*Letter to Viscount Castlereagh in Gurwood, Wellington Dispatches.*

Before landing in Mondego Bay Sir Arthur had sent the Portuguese 5000 muskets.

their men; but still these French troops were no veterans, and were very far from being the *élite* of Bonaparte's armies. On equal ground, and with an equality of artillery (our central column had scarcely been able to get a single 6-pounder up the ravines), they would not have stood one quarter of an hour before the men opposed to them. As matters were, they continued the contest for nearly two hours, when the apparition of our two other columns on their right and left forced them to make a hasty retreat into the hamlet of Azambugeira. They left above 600 killed and wounded, and three pieces of artillery behind them. The loss of the British was about 480. From Azambugeira Delaborde retreated in good order to Torres Vedras, where he was joined by Loison. On the 18th General Wellesley followed him, and, still keeping near the sea-coast, advanced to Lourinha. On the 19th he moved on to Vimeiro, where he was joined on the 20th by Generals Anstruther and Acland, with two brigades just arrived from England. This raised his force to about 17,000 British, besides 1600 Portuguese. But Junot, by calling in his garrisons, had now a force numerically equal, or nearly equal, to this; he retained his superiority in cavalry as also in artillery, and, what was of more consequence than all, just at this critical moment Sir Arthur Wellesley was superseded in the chief command by a very inferior personage, Lieutenant-General Sir Harry Burrard, who arrived from England with fresh instructions from the government, or with different notions and plans of campaign of his own. They had put more spirit into the war than the Grey and Grenville administration had done; but the present Tory cabinet had not yet attained to any consistency of system, had not yet cast off old prejudices and influences, and they now went well nigh to mar a war which had been most ably begun, and which, for the first time, offered a fair and promising field on the Continent of Europe to our national land forces. Ministers themselves were sensible of the propitious appearance of affairs in the Peninsula, and were fully determined to increase the army employed in Portugal; but upon these very grounds they also determined to entrust the chief command to some officer higher or more ancient in the service than Sir Arthur Wellesley. This was according to the wheel of routine, which had gone far to grind down all genius and spirit in the superior classes of the officers of the British army. In India, at Copenhagen, even in this incipient Portuguese campaign, Wellesley had given proof of superior military genius; but there were generals in the service much more ancient than he, and, as if seniority were of more value than ability, his genius must be prostrated before another man's antiquity. It might have happened that this active, indefatigable man, whose physical powers were, in their kind, as perfect as his intellectual qualities, should have been superseded by a worn-out old man, incapable of bearing the heat of the climate, or of sitting three hours consecutively on horseback. And this, by our unaltered regulations, and the miserable routine seniority system, might, and probably will, happen again, when we are engaged in another war. Until some more loopholes are made through which ability and genius may pass over the heads of mere rotation and antiquity, the superior command of our forces must run deadly chances of being placed in inferior hands.

As soon as it was resolved at home to raise the British army in the Peninsula to 30,000 men, ministers gave the chief command of the army to Lieutenant-General Sir Hew Dalrymple, who, as acting governor of Gibraltar, had so promptly aided Castaños and the Spanish army of Andalusia; and they appointed Sir Harry Burrard to be Sir Hew's second in command, leaving Lieutenant-General Sir John Moore, who had just returned from a fruitless expedition to the Baltic, and who was now on his way to the Peninsula, and Lieutenant-Generals Sir Arthur Wellesley, the Honourable John Hope, Lord Paget, and Mackenzie Frazer, to command respective divisions of the army. Wellesley was thus reduced from first to fourth. Sir Hew Dalrymple and Sir John Moore were both officers of great merit, and generous, high-minded men; but quite so much could not be said of Sir Harry Burrard; and the very best of the three—Moore—was immeasurably inferior to Wellesley. Accidents, and the order in which the new-appointed generals arrived, made a bad scheme worse. Sir Harry Burrard arrived first; on the evening of the 26th he came to Maceira Bay, near Vimeiro. Sir Arthur immediately went on board, and reported to Sir Harry the situation of the army, and his own intended plan of operations, which was, to continue marching along the coast-road as far as Mafra, thus turning the strong position which Delaborde and Loison had taken at Torres Vedras, and by this means obliging the French either to give battle or retreat to Lisbon under great disadvantages. No plan could have been better; no reinforcements were wanting, the British, without counting either the Portuguese regulars or the insurgent peasantry for anything, being rather superior in number to the French in front of them, and elated by the success they had obtained at Roliça. There was probably not a man or an officer in the army but was anxious to advance. Sir Harry Burrard, however, thought differently, being of opinion that no farther advance ought to be made till the arrival of the reinforcements under Sir John Moore. But the enemy in the meantime was bringing the question to a speedy issue. Having posted his army in excellent positions in the village of Vimeiro, and on the hills round the village, General Wellesley was retiring to rest, when, at the hour of midnight, a German officer of dragoons galloped into the camp and reported that Junot was coming on to the attack at the head of 20,000 men, and was only one hour's march distant. Undisturbed by this inflated report, General Wellesley merely sent

out patroles and warned the piquets to be on the alert. But before day-break he had all his troops under arms. The sun rose, all eyes were directed in the direction of Torres Vedras, which is only nine miles from Vimeiro, with a hilly rugged country between; but no enemy appeared. At about seven o'clock, however, a cloud of dust rose behind the hills nearest to the British positions; and at eight o'clock some French cavalry were seen crowding the heights to the southward, and sending forward scouts in every direction. This was rapidly followed by the apparition of a mass of French infantry, preceded by other cavalry; and then, column after column followed in order of battle. Some changes of position were made in the British army with admirable order and celerity. And, at ten o'clock on the morning of the not inglorious 21st of August, the battle began with a hot fire of French artillery. The principal attacks were made upon the British centre and left, with the view, according to a favourite French expression in those times, of driving the English into the sea, which was there rolling close in their rear. The attack was made with great bravery and impetuosity, but it was as gallantly repulsed by the British. But for Wellesley's deficiency in cavalry the battle would have been finished then, for Colonel Taylor, galloping among the confused, retreating French, with the very few horsemen he commanded, scattered them with great execution. But Margaron's formidable squadrons of horse came down upon Taylor, killed him, and cut half of his feeble squadron to pieces. General Kellermann, taking advantage of this check, threw part of his reserve into a pine-wood which flanked the line of retreat, and sent the rest of the reserve to reinforce the divisions that were repeating the attack. But again the assailants were repulsed at all points; General Solignac made a capital mistake, General Brennier was wounded and made prisoner; the British separated the French brigades from each other, and, pressing forward with the bayonet, they broke and scattered the enemy, who retreated in confusion, leaving many prisoners, and fourteen cannon, with ammunition, &c., behind them. The loss of the French in killed and wounded, in the battle of Vimeiro, was estimated at about 1800, that of the British being exactly 720. Only about one-half of the British force was actually engaged. Except the part of the reserve which Kellermann had thrown into the pine-wood, the whole of Junot's force was brought into action; but Junot's army, instead of being 20,000 strong as reported by the German officer, was rather less than 15,000. It was only twelve o'clock when the affair was decided. The 4th and 8th British brigades had suffered very little; the Portuguese, the 5th and the 1st British brigades, had not fired a shot, and the latter was two miles nearer to Torres Vedras than was any part of the French army, and the whole of that army, moreover, was in the greatest confusion. There was abundant time, and an admirable opportunity, to annihilate Junot; but Sir Harry Burrard had landed, and had brought with him the depressing nightmare-like influences of senility and irresolution. Sir Harry had been present on the field during part of the engagement, but he had declined assuming the command, or any way interfering with Sir Arthur Wellesley's disposition till the enemy was repulsed. But then, when the French were running off, almost in a *sauve qui peut* disorder, when Major General Ronald Ferguson on the left was close upon them, when General Hill was ready to spring forward by a shorter road than the French could take upon Torres Vedras (which must have cut them off from Lisbon, and perhaps have obliged them to lay down their arms), and when General Wellesley would have followed up his victory by a general and rapid movement forward, Sir Harry Burrard demurred, thought it unwise to hazard the fortune of the day upon what he considered a perilous throw—thought it advisable not to move any farther, especially on account of the superiority of the French cavalry—thought it best of all to suspend offensive operations, and to wait in the position of Vimeiro until the arrival of Sir John Moore. Accordingly General Ferguson was ordered to desist from pursuit, General Hill was called in; and the French officers, to their great astonishment, were allowed to rally their men, and make good their retreat to the always admirable position of Torres Vedras.* On the next day, the 22nd, Sir Hew Dalrymple arriving in a frigate from Gibraltar, landed in Maceira Bay, and superseded Sir Harry Burrard, as Sir Harry had superseded Sir Arthur Wellesley. Thus, owing to the unwise arrangements of our own government, and to chances which they ought to have foreseen, the army, within twenty-four hours, had successively three commanders-in-chief!† The time for prosecuting the victory was gone before Sir Hew Dalrymple came ashore; and popular clamour was guilty of great injustice towards Sir Hew both with regard to the battle of Vimeiro and the convention which followed it.

In the course of the 22nd General Kellermann appeared at the British head-quarters, with a flag of truce, to propose in the name of Junot an armistice, preparatory to a convention for the entire

* In a letter addressed to the Duke of York the day after the battle of Vimeiro, Sir Arthur Wellesley says, with rare coolness—"I think, if General Hill's brigade and the advanced guard had moved forward, the enemy would have been cut off from Torres Vedras and we should have been at Lisbon before him; if, indeed, any French army had remained in Portugal. But Sir Harry Burrard, who was at this time upon the ground, still thought it advisable not to move from Vimeiro; and the enemy made good their retreat to Torres Vedras. Sir Hew Dalrymple arrived this morning, and has taken the command of the army." Sir Arthur was much warmer in speaking of the merits of the men and officers who had served under him. He says to the Duke of York—"I cannot say too much in favour of the troops: their gallantry and their discipline were equally conspicuous; and I must add that *this is the only action that I have ever been in, in which everything passed as it was directed, and no mistake was made by any of the officers charged with its conduct.*"

† The Report of the Court of Inquiry afterwards said—"Considering the extraordinary circumstances under which two new commanding generals arrived from the ocean, and joined the army (the one during, and the other immediately after, a battle, and those successively superseding each other, and both the original commander within the space of twenty-four hours), it is not surprising that the army was not carried forward until the second day after the action."

evacuation of Portugal by the French, with their arms and baggage. The terms were discussed between Kellermann and Sir Hew Dalrymple; Sir Harry Burrard and Sir Arthur Wellesley both being present. In the end the suspension of arms was agreed upon, to terminate at forty-eight hours' notice; and Sir Hew directed General Wellesley to sign this agreement. The basis of the proposed treaty of evacuation was also settled, but not to be considered as in force without the concurrence of Admiral Sir Charles Cotton, who had his eye on Siniavin and the Russian ships of the line in the Tagus.* Sir Hew says he was quite determined to conclude no definitive convention to which the British admiral was not a party as well as himself. But he had forgotten the Portuguese general Freire, who now sent an aide-de-camp to ask his commands. Sir Hew says, that there was a Portuguese force *somewhere* he had probably heard; that in the forenoon he had seen a Portuguese detachment marching to occupy the post assigned it in the position, but, as neither General Freire nor his army had been mentioned to him during the recent discussions with Kellermann, or spoken of as having had any share in the battle of the 21st, he was not prepared to find them so near at hand; and that, therefore, he could only desire the aide-de-camp to give his respects to General Freire, and tell him he should be glad of the honour of seeing him next day at Ramalhal, whither he intended to advance his head-quarters. On the 23rd Sir Hew and the army made a forward movement, from Vimeiro to Ramalhal, near Torres Vedras, but within the boundary stipulated by the armistice which he had ordered Sir Arthur Wellesley to sign. In the course of this day he was visited by General Friere, who, in very bad humour, entered upon the subject of the proposed treaty with Junot, and upon all the proceedings of the day before, with which he seemed to be much offended; particularly, as he thought that he himself, and the *government* of Portugal (as he called the junta of Oporto), had been treated with disrespectful neglect.† It is true that Freire, who might have done a good deal, had done little or nothing; it is true that the junta of Oporto was but a provisional and very irregular government, whose authority was only partially acknowledged in the country; but still it appears that the Portuguese general, if not the junta, ought to have been consulted before the armistice was concluded, and the basis of the proposed treaty of evacuation settled. If any Portuguese had been present at the discussions, they might have looked after their own property, or the property of their countrymen, and have more nicely limited and defined the baggage that the French were to be allowed to carry off with them. Sir Hew Dalrymple assured Freire that no disrespect was meant; and he furnished him with a copy of the armistice, provisional as it was and subject to the British admiral's approval, in order that he might receive such observations as Freire might think it necessary to make, assuring the Portuguese general that his observations would all be considered during the negotiation of the treaty. Sir Hew, however, declared that he could not consider the junta of Oporto as the government of Portugal, and the legitimate representative of its prince; and this declaration, which he subsequently repeated many times, raised against him the fierce and rather unscrupulous animosity of the Bishop of Oporto.* General Freire refused to take any part in the arrangements made or making with the French, reserving to himself the right or the opportunity of reprobating the convention when it should be concluded by the British.

Most unluckily, in sketching the terms of the convention on the 22nd, an article had been heedlessly admitted which prejudiced the clauses of the final convention, by stipulating that the French army should not "in any case" be considered as prisoners of war; that "all the individuals composing it should be carried to France with arms and baggage, and their private property of every description, from which nothing should be detained!" This of course would include the church plate and other public and private property which the French had taken at Lisbon, or in the various towns which they had sacked in consequence of the insurrection, and which plate and property they had divided among themselves, and packed up in

* Sir Hew Dalrymple, Memoir of his Proceedings, &c. Sir Hew says:—Lieutenant-Generals Sir Harry Burrard and Sir Arthur Wellesley assisted in the discussions which took place on this occasion; and I need urge no other reason for my assenting to the measure proposed than that it *was recommended by Sir Arthur Wellesley, whose opinion, as being the most competent judge of the relative situations of the two armies at this point of time, I should have thought it my duty to follow, even if his judgment had not been so particularly recommended to my attention by the secretary of state. Sir Arthur recommended the measure of allowing the French to evacuate Portugal, with their arms and baggage,*" and that every facility for this purpose should be afforded to them, from the relative state of the armies on the evening of the 22d, considering that the French had then resumed a formidable position (Torres Vedras) between us and Lisbon; that they had the means of retiring from that position to others in front of Lisbon; and, finally, of crossing the Tagus into Alemtejo, with a view to the occupation in strength of Elvas (a strongly fortified town), and eventually of Almeida (another regular fortress)." And Sir Hew quotes a passage out of a letter from Sir A. Wellesley to Lord Castlereagh, in which Sir A. distinctly says, "As Sir John Moore's corps had been diverted from the occupation at Santarem, which had been proposed for them, there were no means to prevent, and no increase of numbers could have prevented, the French army from effecting these objects."

† Sir Hew Dalrymple, Memoir.

* "Pains were taken by the Bishop of Oporto, his partizans and adherents, to misrepresent and raise a clamour against the convention, not only in Portugal, but in England also. In the former their misrepresentations were soon contradicted by the evidence of facts; not so in England; they were there so powerfully seconded by the language held by ministers, and the measures they pursued, that the erroneous impression thus made upon the public mind was confirmed and perpetuated. . . . . Both this officer (one Sousa, whom Freire had asked leave to attach to Dalrymple's head-quarters, while the definitive convention was negotiating) and his general (Freire himself) were deaf to my requests that they should state their observations in writing, and in an official shape, when every possible attention would be paid to their representations. When, however, the treaty was ratified, and the question was decided, both these officers began to write, and their correspondence abounded in animadversions upon the provisions of an instrument which it was now my duty to abide by. Although the letters of both these officers, a memorial from the general, a remonstrance and a protest were directed to me, they were, in fact, addressed to the passions and the prejudices of the people. I was, therefore, aware of the necessity of replying to these vexatious addresses with civility and temper, as it was evident the correspondence would be immediately submitted to the public: but when, in his memorial and protest, General Freire indulged in false and injurious animadversions upon the general character of the British nation and government, I thought it time to put an end to this sort of correspondence."—*Id.*

Unfortunately, however, people continued to be found in England more ready to give credit to the venomous animadversions of Freire than to the plain facts of Sir Hew Dalrymple.

their respective baggages. Sir Arthur Wellesley says, "Although I signed these conditions, I beg that you will not believe that I entirely approve of the manner in which the instrument is worded."* He had been ordered to sign by his superior in command; but, as the armistice was made subject to the approbation of Admiral Sir Charles Cotton, and, as one article of it stipulated that the Russian fleet in the Tagus should enjoy all the advantages of a neutral port—that is to say, that, when the British army or fleet should be in possession of the city and port, the said Russian fleet was not to be troubled during its stay, nor stopped when it should wish to go away, nor pursued when it should be gone, without the grace-time, or delay, fixed by maritime law—the British admiral objected to that article, saying that he had no objection to join Sir Hew Dalrymple in negotiating with Junot upon all the remaining articles, and that with respect to the Russian fleet he was ready himself to enter into a separate agreement with Admiral Siniavin. As Sir Charles Cotton had thus declined to sanction the Russian article in the basis, Sir Hew, who did not receive Sir Charles's answer until the 24th at night, concluded the armistice to be at an end, and on the morning of the 25th he sent the quarter-master general, Lieutenant-Colonel George Murray, to Lisbon, with a letter informing Junot of the British admiral's decision: but at the same time Colonel Murray was to acquaint Junot that, if he would waive the Russian article, Sir Hew was ready to negotiate on the remaining articles, and to conclude a convention upon the terms specified in a paper of memoranda which Sir Arthur Wellesley had previously drawn up. Colonel Murray was further empowered to prolong the suspension of hostilities for a *definite period*, should the negotiation be entered into by Junot. In the paper of memoranda which Sir Arthur had drawn up, it was said emphatically and unceremoniously, "Some mode must be devised to make the French generals disgorge the church plate which they have stolen."

Junot endeavoured to gain time; he affected to consider that the cessation of hostilities was to be for an indefinite and unlimited period, and to depend upon the continuation of Sir Charles Cotton's negotiation with Admiral Siniavin; but on the morning of the 27th Sir Hew sent Colonel Murray instructions, which were drawn up by Sir Arthur, to break off the negotiation, and come away at once, if Junot should be found obstinate; and to tell him that the armistice in no case would be prolonged for a more extended period than 24 hours. This, with the arrival of Sir John Moore and his 20,000 men in Maceira Bay,† startled Junot, who at one moment had thought of defending the position of Torres Vedras, and at another of crossing the Tagus, and throwing his forces into Elvas. On the morning of the 29th, a draft of the proposed convention, signed by General Kellermann, was brought to Sir Hew's head-quarters; and, being laid before a meeting of general officers, at which Sir Harry Burrard, Sir John Moore, the Honourable John Hope, Mackenzie Fraser, and Sir Arthur Wellesley were present, it was read article by article, and the objections and proposed alterations were minuted down by Sir Arthur. A copy of these minutes was then sent to Colonel G. Murray for his guidance; but it should appear, from the complaints which Sir Arthur subsequently raised, that he considered that all the objections and alterations he had made or suggested were not sufficiently attended to, by those who finally concluded and ratified the treaty. On the same day (the 29th of August), at the hour of noon, the term for the suspension of hostilities having expired, Sir Hew moved his head-quarters forward to Torres Vedras, from which the French had withdrawn. On the 30th Junot at last signed the definitive treaty, with the omission of several of the alterations which had been proposed; and in form the convention was ratified by Sir Hew Dalrymple, at Torres Vedras, on the 31st. In his defence Sir Hew says that some of the articles of the treaty which had been objected to by the British were altered, and that some other good alterations were inserted which had not before been suggested (and thus much was afterwards allowed in the report of the board of inquiry); that, at all events, the season for negotiation was passed; that he therefore immediately convened the lieutenant-generals he could assemble, Sir Harry Burrard, Sir John Moore, Hope, and Mackenzie Frazer—and, in their presence, and with their approbation, ratified the Definitive Convention. Sir Arthur Wellesley was not present at this final ratification, having moved to the left very early in the morning, and being now at Sobral with his division. We have his own words, in various forms, for the assurance of the fact, that, after the fatal orders of Sir Harry Burrard on the field of Vimeiro (orders with which Dalrymple had nothing to do, as he was many miles off, at sea in his frigate), he approved of a convention allowing the French to evacuate Portugal; that he felt that the favourable moment for pushing upon the French had been lost; that, if they could not be brought to evacuate the country by sea, they might either defend themselves desperately within Lisbon, or cross to Elvas and Almeida, which, being places regularly fortified, would have required regular and long sieges, during which the British army could not have been made available in Spain, where the presence of a part of it was earnestly desired by some of the Spaniards, and whither the British government was very eager that some corps should go as quickly as possible.* It was not against the con-

* Letter to Captain Pulteney Malcolm, in Colonel Gurwood, Wellington Dispatches.

† Sir John Moore disembarked his troops as fast as the state of the weather and the dangerous surf would allow. Two regiments of infantry, two brigades of artillery, and some German cavalry, landed on the 26th, but the last division did not land until the 29th of August; and the disembarkation was not effected without great difficulty and latterly some loss.—*Sir Hew Dalrymple, Memoir.*

* See Colonel Gurwood, Wellington Dispatches. "I do not know," says Sir Arthur, writing from Sobral, on the 1st of September, "what Sir Hew Dalrymple proposes to do, or is instructed to do; but if I were in his situation I would have 20,000 men at Madrid in less than a month from this time."—*Letter to Charles Stewart, Esq. ibid.*

vention itself, but against the monstrous folly which made it necessary, and against some particular clauses of, and omissions in, the definitive treaty, that he was indignant. He wrote to Lord Castlereagh that the treaty had been altered, but not as he thought it ought to have been; that ten days after the battle of Vimeiro the army was not farther advanced than it should and ought to have been on the night of the 21st; that matters were not prospering; that he felt an earnest desire to quit the army; that he had been too successful with this army ever to serve with it in a subordinate situation. To a more private friend, he declared that he approved of the principal point in the convention, the evacuation of Portugal by the French; and he stated, at great length, his reasons for thinking that the commander-in-chief had done right in allowing them to evacuate that country by sea. "Admitting," he says, "that the army which will evacuate Lisbon will be immediately carried to the frontiers of Spain, I conceive it better to have that army in that situation, and our army acting in Spain, in co-operation with the Spanish troops, than to have the French troops occupying strong places in Portugal, and our army occupied in the siege or blockade of them."*

Because Sir Hew Dalrymple's dispatches, enclosing a copy of the treaty, were dated from Cintra, between Torres Vedras and Lisbon, the convention unluckily got the name of "The Convention of Cintra," a name which was long made to figure, ludicrously and infamously, both in prose and verse; and which induced uninformed people to believe that it was actually negotiated and concluded in that village, and after the British had obtained possession of the formidable position of Torres Vedras, the key to the capital.† This was making bad worse; the formidable position was obtained through the negotiation; and the convention was arranged at Lisbon by Colonel G. Murray and Kellermann, and was finally ratified at Torres Vedras, about thirteen miles from Cintra, and twenty-five from the capital. The most objectionable article was the fifth, which allowed the French, under the names of property of the army, private property, and baggage, to carry off much of the plunder of Portugal. Junot had no more morality than Dupont: the French officers and soldiery who capitulated in Portugal were not less rapacious or less eager to preserve their spoil than those who had capitulated at Baylen; if they had been bound by a more rigid article to a restitution of the stolen property, they would have concealed it, even as Dupont and his people had done. Some limits, however, were put to the abuse of the fifth article by the appointing of a commission, with General Beresford at its head, to superintend the execution of the terms of the convention. Through the exertions of General Beresford and his commissioners, the spoils of the Museum and Royal Library were restored, and some of the church plate, nicely packed up as private property, was seized, unpacked, and sent back to the churches. Still, however, the French did not disgorge so much as they ought to have been made to do. With regard to the Russian fleet—a rather important object, as it still counted nine sail of the line and one frigate—it was agreed, in a separate convention between Admiral Sir Charles Cotton and Admiral Siniavin, that it should be placed in deposit in the hands of his Britannic majesty, to be held until six months after the conclusion of peace; and that the Russian admiral, his officers, seamen, and marines, without any condition or stipulation whatever, should be conveyed to Russia at the expense of Great Britain.*

The forts on the Tagus were taken possession of, on the 2nd of September, by the British troops, and the port of Lisbon was then opened to our shipping. On the 5th, the army had its right at St. Julian, and its left on the heights of Bellas. On the 8th or 9th, a British corps marched into Lisbon, in the midst of popular acclamations and rejoicings, to secure the tranquillity of that city, during the embarkation of the enemy. Transports being collected, the French presently began to embark: and, except their last division, purposely detained by orders from England, they were all sent off before the end of September, and part of the British army was then actually on its route to the Spanish frontier.† Great pains were taken by the vindictive Freire, by Sousa, by the martial and irate Bishop of Oporto, and by their partisans and creatures, to raise a clamour in Portugal against the convention, and to persuade the people that they might have dislodged Junot, have captured and destroyed his whole army, have recaptured all the property of which they had been plundered, and have enriched themselves with all the property the French had brought into the country, if it had not been for Sir Hew Dalrymple and the English: but when the convention became more generally known, and its effects felt, the people of Lisbon and of the country expressed their gratitude and thanks for the benefit attending it.‡ It was no small benefit to have the country entirely freed from the French. On all the forts of which we took possession the flag of Braganza was immediately hoisted; Lisbon was occupied in the name and on the behalf of the Prince Regent of Portugal; and a council of regency, and a more regular provisional government, was established forthwith. As the energetic Bishop of Oporto, who had done so much for the cause, was admitted into the council of regency, and allowed to take a foremost part in it, his ill-humour was charmed away

* For the other reasons, which are all of the greatest weight, and which ought to be attentively studied by those who would form a correct notion of this much debated convention, see letter to Charles Stewart, Esq. in Colonel Gurwood, Wellington Dispatches.

† The readers of Lord Byron's Childe Harold will remember the lines beginning—

Behold the hall where chiefs were late convened!
Oh dome displeasing unto British eye!

His lordship, who travelled in Portugal only a year after the event, takes up and repeats the mistake of the Convention *of Cintra* having been signed in the palace of the Marques Marialva in that place.

for the present; but great was the trouble caused in the sequel by this turbulent and ambitious churchman, and by the crafty, intriguing men that gathered around him.

Both long and loud was the popular vociferation in England against the whole of the convention, miscalled of Cintra. No measure, indeed, was ever more universally reprobated, or less understood or inquired into. Nor was this a merely popular outcry: soldiers, and statesmen, and secretaries of state, shared in the violence, and both court and cabinet swelled the chorus. At first, all were blamed, and no exception was made in favour of Sir Arthur Wellesley. The government appointed a board of inquiry, consisting of four generals and three lieutenant-generals.* Sir Hew Dalrymple and Sir Harry Burrard were recalled in order to be examined by this board, and Sir Arthur Wellesley, who had already asked and obtained leave to return home, was also examined at his own desire.† The Court of Inquiry assembled in the great hall of Chelsea College on Monday the 14th of November, and continued sitting with adjournments until the 27th of December. In the end they agreed upon a report, which exonerated all the generals, which even bestowed praise upon all, but which made little or no distinction between Sir Arthur Wellesley, Sir Harry Burrard, and Sir Hew Dalrymple. The report stated that it appeared that the Convention *of Cintra* (this blunder continued to be retained when and where there ought to have been no blundering), in its progress and conclusion, or at least the principal articles of it, had not been objected to by the five distinguished lieutenant-generals of that army; and that other general officers who had been on that service, and who had been examined by the board, had also concurred in the great advantages that were immediately gained to the country of Portugal, to the British army and navy, and to the general service, by the conclusion of the convention at that time. Sir Harry Burrard, and his conduct in stopping the pursuit at Vimeiro (the real and sole cause of all that went wrong afterwards), were treated with rare leniency and delicacy. The commissioners took no notice whatever of the fifth article of the convention which had been so much complained of, no notice of the eleven days' delay which had been permitted to Junot, no notice of anything for which Sir Hew Dalrymple could be held really and solely responsible. They said, in concluding their report—"We most humbly submit our opinion that no further military proceeding is necessary on the subject; because, however some of us may differ in our sentiments respecting the fitness of the convention in the relative situation of the two armies, it is our unanimous declaration that unquestionable zeal and firmness appear throughout to have been exhibited by Lieutenant-Generals Sir Hew Dalrymple, Sir Harry Burrard, and Sir Arthur Wellesley, as well as that the ardour and gallantry of the rest of the officers and soldiers on every occasion during this expedition have done honour to the troops, and reflected lustre on your majesty's arms."

But neither the ministry nor the court, neither the parliament nor the people, assented to the very inconclusive award of the board of inquiry. All, or nearly all, now agreed as to the honour that was due to Sir Arthur Wellesley, and in the opinion that, if Sir Harry Burrard had not interfered with him on the field of Vimeiro, there would have been no convention, but an unconditional surrender on the part of Junot. But there was much less fairness in allotting the dishonour or the blame. We know not to what prejudices or influences in high quarters it was owing that an undue portion of censure and severity fell upon Sir Hew Dalrymple; we only know the facts that Lord Castlereagh and the king both declared themselves strongly against him, that ministers turned him out as a scapegoat, and that a very severe censure was addressed to him in his majesty's name. Sir Harry Burrard, who was a hundred fold more censurable, immediately resumed the military command of the London district, which he had held before he was sent to Portugal; but Sir Hew was never permitted to resume the command at Gibraltar, which he had been instructed *to entrust during his absence* to another general officer. No consideration was allowed for the good he had done to the Spanish cause while commanding on the Rock, for the ready aid he had given, for the timely assistance he had procured to the Spanish cause—important aid, invaluable assistance, which mainly had enabled General Castaños

* Of this 'Board of Inquiry,' General Sir David Dundas was president. The other members were—Generals the Earl of Moira, Peter Craig, Francis Lord Heathfield; Lieut.-Generals George Earl of Pembroke, K.G., Sir George Nugent, Bart., Oliver Nicholls.

† The officers who had served under Sir Arthur in the short Portuguese campaign showed, very unequivocally, that they appreciated his merits, and did not for a single moment confound his reputation with that of the inferior men who had been placed above him. On the 3rd of September, three weeks before he quitted his command, all the general officers who had first landed with him and the troops at the Mondego, wrote him a most flattering letter, acquainting him that they had clubbed together, and had directed a piece of plate, value 1000 guineas, to be prepared and presented to him, with an inscription stating that they offered this gift to their leader "in testimony of the high respect and esteem they feel for him *as a man, and the unbounded confidence they place in him as an officer.*"

This praise came from proved and applauded men: the honour was awarded by officers who had already a high reputation, who soon obtained a still loftier renown, and whose names will not soon be forgotten in the military annals of their country: they were—Major-Generals B. Spencer, R. Hill, R. Ferguson; Brigadier-Generals M. Nightingall, B. F. Bowes, H. Fane, J. Catlin Crautard.

The contribution to that testimonial was afterwards augmented by the subscriptions of Generals Anstruther and Acland, and of all the field-officers of the army who served under the orders of Sir Arthur at the battle of Vimeiro.

The dispatches and letters written by General Wellesley immediately after the convention, and his own double superseding, are a remarkable proof of his ability, foresight, and turn for business of all kinds, as also of his public spirit, which urged him to give advice, which, although not called for, was assuredly much wanted. He drew up an admirable plan for the future operations of the army: he pointed out to Sir Hew Dalrymple the best means of obtaining provisions, horses for the artillery, everything that the army needed: he showed him the expediency of arming a number of Spaniards who were found at Lisbon, and of sending them back to Spain: he recommended Sir Hew to send proper persons to treat with all the local juntas in Spain, and to obtain accurate information as to the real state and prospect of affairs in that country; the commissariat, the movements of the army, the policy to be adopted, were all dwelt upon with admirable sagacity. An inferior man would have brooded over the wrongs which had been done him, and would have done nothing after being superseded.

The reader should attentively peruse the documents in the 4th volume of Colonel Gurwood's edition of the Wellington Dispatches from page 112 to page 163.

to take the field, and environ Dupont at Baylen. Nor were the representations Sir Hew made to Lord Liverpool, when his lordship succeeded to the war department, in the smallest degree attended to. But, after a time, as in other cases, a reluctant half-measure of justice was dealt out to him. In the year 1814, when peace was supposed to be established, he addressed an earnest letter to Lord Castlereagh, requesting to be set right in the estimation of his country, wishing for some public testimony of the royal approbation of his services, and reminding his lordship how successfully he had cherished and promoted the first rising enthusiasm of the Spanish people. An interview followed the letter; and a short time afterwards Lord Castlereagh took Sir Hew aside at a levee of the Prince Regent, and told him his "*business was settled.*" "And in fact," adds Sir Hew, "very soon afterwards my name was placed at the head of a list of baronets; and, as a mark that the honour was conferred as a reward for public services, it was especially provided, in the patent, that it was given free from all the usual charges, which became an item in the public accounts laid before parliament. This circumstance gave a value to the honour conferred, in comparison of which the cost, whatever it may have been, sank into utter insignificance."*

After the sitting of the court of inquiry, Sir Arthur Wellesley, whose sharp, concise answers before the board showed the clearness of his head and the firmness of his heart, resumed the duties of his office as chief secretary for Ireland, seeming determined to devote himself entirely to home politics and administration. He went over to Ireland in December; and when parliament assembled in January he returned and took his seat. But most men felt that his properer place would be at the seat of war, and the disastrous occurrences in the Peninsula soon strengthened this conviction.

There was one advantage derivable from the convention with Junot which has generally escaped notice: his men had witnessed the skilful manœuvres of Wellesley, and the excellent way in which his generals of divisions had brought their corps into action, and had seen and felt how the British infantry fought at Roliça and Vimeiro; and the information they carried away with them on these points was calculated to depress that buoyant self-confidence which had been the secret and the spring of so many French victories. To these people the Egyptian campaign seemed already a remote tradition; the brilliant affair of Maida, where only a few thousand men were engaged, had taken place in a remote corner of Italy, and Regnier and the remnant of that army remained isolated at the end of that peninsula; it was still the universal fashion among the French to speak contemptuously of the skill of English generals, and to deny nearly every military merit to British land troops; but now, from 17,000 to 18,000 Frenchmen were sent back to France to convey correcter notions on these matters.

Junot's force had been found somewhat more considerable than was expected. Fearful, however, had been his losses during the few months he occupied Portugal. He had entered that country at the end of November, 1807, with 30,000 men; he had received some, though slight, reinforcements; so that from 12,000 to 13,000 men had perished by fatigue, of disease, in the popular insurrection, or in the field where the English had met them.

A few days after the battle of Vimeiro dispatches arrived from Lord Castlereagh containing the appointment of Sir John Moore to the chief command of the British troops to be employed in Spain. Sir Arthur Wellesley had strongly expressed the opinion that Moore was better fitted for this command than any of the superior general officers then in the Peninsula. On the 6th of October Sir John Moore received more explicit instructions, the secretary at war informing him that his army of 20,000 men was to be employed in the northern provinces of Spain "to co-operate with the Spanish armies in the expulsion of the French from that kingdom." Lord Castlereagh also intimated that an additional corps of 10,000 men, under Sir David Baird, was about to sail for Coruña. Sir John was directed to send forward his cavalry by land; but it was left to his discretion whether to march the infantry by land also or to transport them by sea to Coruña. Sir John instantly decided against the sea voyage, for the season was far advanced, the coast was dangerous, and he knew that so large an army could not obtain at Coruña

* Memoir written by General Sir Hew Dalrymple, Bart. &c.—This narrative was originally written by Sir Hew as a family record; but the publication of Southey's 'History of the Peninsular War,' and of the works of Napier and the Marquess of Londonderry, induced him to adopt the resolution of printing it, which his last illness alone prevented him from doing. It was published in 1830, by his son, who thereby has done great good to his father's memory. In the copious Appendix, which contains many valuable documents, there are two letters, written by distinguished officers on the spot, and both approving of the convention, and of the policy of allowing the French to evacuate Portugal with their arms and baggage. One of these letters, dated Almeida, 21st November, 1808, is written by Brigadier General Anstruther, who complains of "the extent and violence of the frenzy that has seized John Bull on the subject of the convention for the evacuation of Portugal." The other, dated Madrid, the 18th of October, 1808, is from Lord William Bentinck, who gives the unsolicited offer of his opinion and evidence, out of a sense of justice, and of that duty which exists between man and man; who declares that in the convention he had no concern, and with Dalrymple no friendship which might give a bias to his feelings. His lordship goes on to say—"Of the principally obnoxious article, which allows the return of the French to France, my opinion at the time was that it was highly advantageous; it seemed to me that, if this was not granted to them, the French could not avoid defending themselves to the last. A resolution to this effect, though it might, ultimately, have ended in their unconditional surrender, would, in the mean time, have occupied our army for a great length of time, *and might have exposed it to great distress, from the uncertainty of the communication with the fleet, and from the non-existence of any magazines or preparations for a campaign ashore. An inevitable consequence must have been that the efficacy and numbers of the army for future operations would have been materially impaired.* Believing, also, as was then supposed, that the enemy's force did not amount to more than 16,000 men, the disadvantage of the distant junction of this reinforcement to the French army in Spain, bore no comparison, in my judgment, to the advantages of the more immediate union of double the number of highly-disciplined British troops to the newly-recruited Spanish armies. Such were the reasons, at the time, which made me approve this article. I have since been in Spain, and am better enabled to judge of the value of this reasoning; and my decided opinion now is that the speediest union of the largest British army that can be collected with that of Spain is indispensable to the welfare of the common cause. The Spanish government have now pressed, in the strongest manner, the arrival of our army; and, let it be observed, that the necessity that has occasioned these urgent demands, while it has no connexion with the objection to this article of the convention, entirely supports the reason for which it was made. With respect to the other articles, I must, with the same truth, declare that I do not approve of some of them; but, as they are of minor consequence, and do not seem to be much objected to, I need not advert to them."

equipments to enable them to advance into the rough and naked interior of Spain. The delay afterwards experienced by Sir David Baird at Coruña, for want of means to convey the baggage of his corps, proved the propriety of Sir John Moore's decision. But, even at Lisbon, the difficulties of procuring tolerable equipments for 20,000 men were very great, and were enhanced by the inexperience of the English commissariats, who, as yet, had every thing to learn. It was found impossible to procure conveyance for a sufficient quantity of provisions and stores, and therefore the baggage was necessarily curtailed to such a degree as excited some discontents in the army. Moreover, the indolence and the ignorance of the Portuguese of the geography of their own country were so great, that no correct information could be obtained about the roads and passages towards the north. Many of the soldiers were newly levied, and, unluckily, few of Sir John Moore's officers had ever served a regular campaign in the field remote from a fleet to supply their wants. By an inveterate evil practice a multitude of women and children had been allowed to join this army. Foreseeing the evil consequences Sir John issued an order stating his desire that, as, in the course of the long march which the army was about to undertake, and where no carts could be allowed, the women would unavoidably be exposed to the greatest hardship and distress, commanding officers should use their endeavours to prevent as many as possible, particularly those having young children, or such as were not stout, or equal to fatigue, from following the army. Unhappily, universal obedience was not paid to this humane injunction by the regimental officers, and numbers of women, some with infants in their arms, surreptitiously accompanied or followed the troops. Orders were issued to the troops to avoid intemperance, to accommodate themselves to the manners and character of the Spaniards—a people sober, grave, and orderly, but warm in their tempers, and very susceptible of insult or disrespect; and it was intimated that upon entering Spain, as a compliment to the nation, the English soldiers should wear the red cockade of Ferdinand VII. in addition to their own. The scantiness of subsistence in a country so exhausted as Portugal rendered it necessary that different routes should be taken, and that divisions of the army should follow at intervals. Most of the roads were found in a wretched state; the weather was bad and rainy; the fatigue was immense, for in many places the men had to drag the artillery through muddy ways and deep sloughs. On the 4th of November, Sir John reached Castello Branco, in the midst of a dreary and inhospitable country. All the way between Castello Branco and the frontier the rain fell in torrents and drenched the soldiers, who, however, moved on with good heart. It was on the 11th of November that Sir John Moore crossed the boundary between Portugal and Spain, and arrived with the advanced guard at Ciudad Rodrigo, where he was received with salutes of cannon and the acclamations of the people. Notwithstanding this gratifying reception Sir John stopped only one night in the town; and next day pursued his march to Salamanca, where he arrived on the 13th of November. Through the lamentable ignorance about the roads and passes, which, we should think, might have been remedied by the timely employment of a few intelligent staff-officers, a great part of the ordnance, consisting of twenty-four pieces, was left far away, guarded by 3000 foot and 1000 horse under the command of General Sir John Hope, who had been ordered to take the round-about road by Elvas, which, as the Portuguese authorities affirmed, was the only road by which heavy cannon could be transported.

In the mean time Sir David Baird, with his 10,000 men, had reached the northern coast of Spain. Sir David had anchored at Coruña on the 13th of October; but, to his great surprise, the supreme junta of Galicia refused to allow his troops to be landed; and he was informed that the assent of the central government, or junta now sitting at Madrid, must be obtained previously. This unfriendly treatment proceeded from Spanish vain-glory and conceit, and from the prevalent notion that their own troops could drive the French beyond the Pyrenees without the assistance of foreign auxiliaries. It took a deal of beating to beat this conceit out of them. For fourteen long days Sir David Baird's 10,000 men were kept cooped up in the transports in the harbour of Coruña. At last a courier arrived from the Dons at Madrid, who, after mature deliberation, thought fit to grant leave to the army to land. Baird had been sent on this expedition without specie, and, although, in nominating him to the command, Lord Castlereagh assured Sir John Moore of his personal assistance in everything respecting the public service, Moore had been supplied with only 25,000*l.* He was, however, under the necessity of transmitting 8,000*l.* to Baird to enable him to move from Coruña.

Before Moore began his march from Coimbra, he was assured that the French, weak in numbers and in organization, were lying behind the river Ebro, menaced by superior Spanish armies, that were all elated with success and quite capable of preventing any advance of the enemy. During his march Sir John opened a correspondence with General Lord William Bentinck, who had gone to Madrid, and who clearly perceived the mistaken notions and the sluggish apathy of the central junta. At this moment the majority of the members of that central government seem to have been averse to the entrance of the British into their country. Lord William strove to remove this objection, to induce them to take better measures, and at least to form magazines and procure waggons and stores on the line of march of Sir John Moore; but his lordship might long have striven in vain, but for an incident which occurred:—a guerilla party lurking on the frontiers interrupted

a French dispatch to Marechal Jourdan, which contained information that reinforcements, exceeding 70,000 men, were about to cross the Pyrenees. The Madrid junta knew not that multitudes of troops had already been poured in through the mountain passes to the country behind the Ebro; but this dispatch dispersed the false hopes they had entertained that the French armies were going to evacuate Spain, and it also aroused them to make some efforts. Nothing, however, could prevail upon the junta to appoint a commander-in-chief, to concentrate their forces, or to adopt any rational plan for meeting the coming storm; they were divided by factions, jealousies, and intrigues, and there was not one commanding intellect among them. Two lines in Dante's 'Hell' describe with sufficient accuracy the leading passions of these junta-men, whether central or provincial:—

"Superbia, invidia, ed avarizia sono
Le tre faville ch' hanno i cori accesi."*

They now wanted the English, yet they did actually nothing to facilitate their march. Unfortunately, our accredited minister at Madrid had not the discrimination, energy, and resolution necessary to deal with such men. Mr. John Hookham Frere seems to have dozed away the greater part of his time at Madrid, and to have left the little that was done to be done by Lord William Bentinck, who, after Frere's arrival, had no diplomatic authority whatever, and could only speak and advise as a British officer and ardent friend of the Spanish cause. As in the field of Vimeiro, so here there had been a superseding and changing just at the critical moment. Mr. Charles Stewart, who had been acting at Madrid as minister or chargé-d'affaires, was alert, active, intelligent, and well acquainted not only with the country but also with the character and habits of the people and the dispositions of the Dons who composed the central junta; but just as Sir John Moore was advancing into Spain, and was standing in need of the most active assistance at Madrid, the arrival of the diplomatist of higher rank put an extinguisher on Mr. Stewart's intelligence and activity, or rendered them of no avail. Mr. Frere's accomplishments, and acquirements, and moral qualities were many, and of a high class, but his absent-mindedness and easy indolence showed that nature had not intended him for a diplomatist in bustling, difficult, perilous times like the present. He might have been an admirable translator of Cervantes in prose, or of Calderon and Lope de Vega in verse; but he could not understand or correctly translate the insane notions and wild language of these Spanish politicians, and he could not see his way clearly through that maze of factions, or,—where each party was blackening all the others, and pretending to an exclusive monopoly of wisdom and virtue—make out which was black and which was white, or who merited confidence and who did not. While trying to make up his mind, he left Sir John Moore without the information and frequent advices which that general had a right to expect from him. Before Sir John entered Spain advices from Lord William Bentinck informed him that reinforcements of 10,000 French troops were believed to have arrived. Having applied to know with whom he was to concert his military operations in Spain, Moore was referred by the Madrid junta to General Castaños, who commanded what was then called the army of the centre. Sir John wrote immediately to Castaños to learn his plans. Some time elapsed before he got an answer, and when the answer came, it was short and unsatisfactory; for the honest Spanish general was already distrusted by the junta, who deprived him of his command shortly after.* The other Spanish armies continued to lie scattered all about, without any plan in common, without combination, without any safe and regular communication with one another. If so many boys, fresh from school, or so many old women, had been in command, they could scarcely have made a worse disposition of the national forces. When his coming into Spain had been urged by the junta of Madrid, Moore had been assured that his advance would be covered by a powerful victorious army; but he found that not a Spanish soldier was in his front, and that the enemy, instead of being behind the Ebro, was actually at hand. On the very day after his arrival at Salamanca he got accounts of the defeat of the Conde de Belveder in front of Burgos; and two nights after this news was brought to him that the Spanish General Blake had risked his army and lost it at Espinosa, on the borders of the Asturias. Thus two of the armies with which he had been ordered to co-operate were already no more; no communication reached him from Castaños; none was transmitted him from the Spanish government at Madrid; and the ingenious author of 'Whistlecraft' seems to have continued his doze on the banks of the Manzanares. Moore, indeed, found at starting that to trust to Spanish armies in the field was to lean against a broken reed.† On the 15th he learned from General Pignatelli, the governor of the province, that the French had taken possession of Valladolid, a city only twenty leagues distant from Salamanca, where he had at the time

* L'Inferno, canto vi.—Pride, envy, and avarice are the three sparks that have set their souls on fire.

* "The junta, jealous of their generals, gave them no power; but kept them at the head of separate armies, each independent of the other. Thus they have prevented any union of action. They took no pains to recruit the armies, or to furnish them with arms and clothing. In short, during the interval that the French were weak, they did nothing either to overpower them before their reinforcements arrived, or to meet them with superior numbers when reinforced.....I am in no correspondence with any of their generals or armies. I know not their plans, or those of the Spanish government. No channels of information have been opened to me; and, as yet a stranger, I have been able to establish no certain ones for myself.... Enthusiasm, and an obstinate determination not to submit to the French yoke, may do much. But even in this case the government has been improvident: arms, ammunition, and other means, are wanting. The probability, therefore, is, that the French will succeed; and, if they do, it will be from *no talent* having sprung up after the first effort, to take advantage of the impulse, and of the enthusiasm which then existed."—*Letter from Sir John Moore to one of his brothers, dated Salamanca, 26th November*, 1808, *in Narrative of the Campaign of the British army in Spain, commanded by his Excellency Lieutenant-General Sir John Moore, K.B., &c. &c., authenticated by official papers and original letters: by James Moore, Esq.*

† Colonel Napier.

only three brigades of British troops; the rest being in a long line of march, many not having passed the frontiers of Portugal. The French, who were only a small body of flying cavalry, retreated from Valladolid the very next day; but they scoured the country, foraged and plundered unopposed, and spread dismay far around. The enthusiasm of the Spanish people seemed paralysed. Every hour rumours reached Salamanca which made Sir John Moore believe that other corps were beaten and scattered, besides those of the Conde de Belveder and Blake; but no stand could be made at Madrid, and no valid co-operation expected either from the Spanish armies or from the dispirited people. Owing to the strange route which he had been made to take unnecessarily, for the roads by Castello Branco and Ciudad Rodrigo were not worse than the roads by Elvas and the eastern frontier, General Hope, with the ordnance and his 4000 men, was now in the neighbourhood of Madrid; while Sir David Baird with his 10,000 men, from the difficulties he had met with at Coruña and on the hungry rugged road, had only reached Astorga. And at Astorga Baird was halting, in consequence of erroneous intelligence received from the defeated Spanish General Blake, that superior forces of the enemy were collected on his left flank. But Sir John Moore, naturally most anxious to unite all his forces, called up Baird with all speed, and sent orders to General Hope to turn aside from Madrid and hasten to Salamanca. The inhabitants of that city were panic-stricken or stupified. To rouse them from a despairing inertness Moore assembled the local junta, and addressed them in an animated and hopeful style. From the junta he also demanded that every assistance they could possibly give him should be afforded; that every car, horse, and mule in the country should be instantly placed at his disposal, for the transport of magazines and necessaries for the army. The junta applauded the harangue, for it contained compliments to Spanish gallantry and patriotism; but, with true Spanish procrastination, they referred the measures to be taken to future consideration, and did next to nothing. This was the more vexatious as, though Sir John had so little money himself, the junta of Galicia had a large sum in hand, for Mr. Frere had brought with him from England to Coruña two millions of dollars for the sole use of the Spaniards in the north.* It is quite evident that the English commander-in-chief was soon filled with disgust and despondency; that he lost whatever hope he had had in the Spaniards; that he was led to underrate the capabilities of the armed peasantry, seeing that in front of him the French cavalry were overrunning the plains and levying contributions, to which the people submitted without resistance; and that he rather too early came to the conclusion that 100,000 disciplined French troops could not be opposed in the north. "These provinces," he said, "are not armed: and, as to enthusiasm, I have seen no marks of it."* A few days later he wrote, in the private journal he kept, "I see my situation as clearly as any one, and that nothing can be worse; for I have no Spanish army to give me the least assistance, only the Marques Romana is endeavouring to assemble the fugitives from Blake's army at Leon. Yet I am determined to form the junction of this army, and to try our fortune. We have no business here as things are; but, being here, it would never do to abandon the Spaniards without a struggle."

Sir John Moore.

While Moore was thus desponding at Salamanca, Bonaparte in person was crossing the Pyrenees. In the month of September the Emperor of the French had repaired to Erfurt to hold conferences with the Emperor of Russia. The subjects of their conferences were carefully concealed; but it was generally understood that the question of Spain and the fate of Turkey were agitated, without reference to any other principle than that of the advantage and aggrandizement of the two emperors. It should also seem that it was understood between them that Alexander should not interfere in the Spanish question, and that Napoleon should allow him in return to encroach on the trans-Danubian provinces of the sultan; for, shortly after this meeting at Erfurt, Russian troops were again poured into Wallachia and Moldavia. The two emperors wrote a joint letter to the King of England, inviting him to a speedy pacification, but laying down no basis for negotiation, and offering no conditions for our allies. To this doubly imperial, but really insignificant, epistle, not George III., but Mr. Canning, his secretary for foreign affairs, replied in two spirited notes, one addressed to the Russian, the other to the French minister for foreign affairs. In the note to the Russian, Mr. Canning said that the proposition for peace would be communicated to our ally the King of Sweden (against whom the Czar was now waging

* By this time the English government had supplied Spain with 200,000 muskets, with ammunition of all kinds in proportion, with clothing, and with sixteen millions of hard dollars!—*Napier, Hist. of the War in the Peninsula.*

* Letter to one of his brothers, in Narrative, &c., by James Moore, already cited.

a fierce and winning war) and to the existing independent government of Spain, which England was determined to protect—that it was necessary his Britannic majesty should receive an immediate assurance that France acknowledged the existing independent government of Spain as a party in the negotiation—that the lively interest manifested by the Emperor Alexander in former times for the welfare and dignity of the Spanish monarch could not leave a doubt of his imperial majesty's intentions with respect to Spain—and that it could not be conceived that the Emperor Alexander had been induced to sanction, by his concurrence or approbation, usurpations, the principles of which were not less unjust than their example was dangerous to all legitimate sovereigns! In his note to Champagny, now Duke of Cadore, and the successor of Talleyrand, Mr. Canning said that the progress of the war had imposed new obligations upon Great Britain, and that Sicily, Portugal, Sweden, and Spain must be admitted to a participation in the negotiations; that treaties existed with the three first of these powers, which bound them and Great Britain together in peace and war; and that, although no formal treaty had yet been executed with Spain, the ties of honour were to the King of England as strong as the most solemn treaties; wherefore, it must be understood, that the central junta or provisional government of Spain must be a party to any negotiation in which his majesty would engage. To have said less than this of the Spanish nation would have been infamous. The Russian minister replied, that, though the emperor his master might readily admit the claims of the *sovereigns*, allies of Great Britain, he would never acknowledge the *insurgents* of Spain as an independent power;—that, moreover, the emperor had recognised Joseph Bonaparte as King of Spain, was united to the Emperor Napoleon for peace and for war, and was resolved not to separate his interests from those of his ally. M. Champagny replied in the same tone, but still more tartly, and wrote some paragraphs about a treaty on the *uti possidetis* principle, which were absolute nonsense. It requires an atrabilarious party spirit, and a blindness to the intention of Bonaparte in dictating the joint imperial letter, to designate the tone of Mr. Canning's note to Champagny as insulting. From Erfurt Bonaparte hastened back to Paris, and there told his senate that he and the Emperor of Russia were irrevocably united in the bond of alliance. This was on the 18th of October. On the 25th he opened the session of the *corps législatif*, and told that soulless body that he was going in person to take charge of the Spanish war, and drive the English out of Portugal. He used a style which he had already worn threadbare, but which he could not use too often;—"The hideous presence of the English leopards contaminates the continent of Spain and Portugal. I go to place myself at the head of my armies, to crown my brother at Madrid, and to plant the French eagles on the ramparts of Lisbon!" Two days after this he set out for the Pyrenees. Troops had been for some time collecting on that frontier; for, still anticipating his vital resources, Bonaparte had called out two conscriptionsr, and, placing 80,000 of these in garrisons in Fance, and disposing of 80,000 of them as a gigantic *corps de reserve*, he had hurried off his veteran troops to Spain. The very *élite* of his immense army was now to engage in this momentous struggle. Before they arrived in the country which was destined to be the grave of most of them, a small army of native Spanish veterans and patriots was wafted to the shores of the Peninsula in English ships. At the time when Spain and her resources were entirely at the disposal of Bonaparte, Manuel Godoy had sent General the Marques de la Romana, with 15,000 men, to serve the French on the shores of the Baltic, or wherever else the conqueror might choose to employ them. These Spanish troops were quartered in Holstein, Sleswig, Jutland, and the islands of Funen, Zealand, and Langeland, when Mr. Mac Kenzie, an agent employed by the English ministers, opened a communication with Romana by means of a Catholic priest. The Spanish general was incensed at the iniquitous proceedings at Bayonne; his soldiers were equally indignant; and all were most heartily sick of their exile in Denmark and those Baltic regions. A plan was ingeniously concerted and most ably executed. The marques, with from 9000 to 10,000 of his men, after being aided by Admiral Sir R. Keats, got safely on board our Baltic fleet, commanded by Sir James Saumarez. Touching at England, where the marques received a most enthusiastic welcome, he proceeded to S. Andero, and there landed his men, who were equipped from the English stores, and were then sent in divisions to join Blake's army in Biscay.

If Joseph Bonaparte's timidity had not been as excessive as the imbecility of the Spanish generals, and of the Madrid junta who directed their movements, the French must have obtained repossession of the capital long before the arrival of his brother: for, while the Spaniards were scattered all about, Joseph had from 50,000 to 60,000 fighting men concentrated behind the Ebro, with 6000 men in moveable columns between him and the Pyrenees, with General Drouet and a strong reserve a little beyond those mountains at Bayonne. But, even as it was, Spanish conceit and rashness led to some fatal reverses before the Emperor of the French arrived with his immense augmentation of force. After waiting until the intrusive king had received considerable supplies and reinforcements — after wasting many precious weeks in idleness and indecision — the Spanish generals foolishly moved forward on different points of the river Ebro, which, in diagonal line, traverses the whole of the Peninsula from the foot of the Asturian mountains and the frontiers of the Biscayan provinces to the Gulf of Ampolla, on the Mediterranean sea, in order to commence offensive operations on the banks of that river or in the country beyond it.

General Blake started on this campaign without magazines, without clothes or shoes for his men, with very little ammunition, without money, and without any plan except that of raising the provinces of Biscay and Guipuzcoa. The millions of hard dollars which England had sent had, in good part, found their way into the pockets of a set of corrupt and rapacious junta men; and the other supplies, liberally furnished from the same quarter, had been wasted, scattered, or deposited in places where they remained useless until captured by the French. The army on the right, commanded by Castaños, was scarcely better provided than the army of the left, under Blake; and the army in the centre, in addition to its wants, had the calamity of being commanded by a rash, ignorant young man, the Conde de Belveder, who was scarcely twenty years old. The three armies were so placed that they could afford no support to each other. The successes they had obtained over Dupont at Baylen had produced a moral drunkenness that was not yet over. Some of the Spaniards at Coruña told Sir David Baird that the Spanish generals were assuredly going to annihilate the French, and to open the way into the heart of France, whither the English might follow them at their leisure. Castaños had more prudence than the rest of these inept Spanish commanders; but he had absolutely no authority over them or their movements; and the cry of the Spanish soldiery was "Forward! forward!" Some of the columns got beyond the line of the Ebro, and other columns staid behind, or, instead of closing, lengthened their lines; and this wide disseverance was the more dangerous, as the Spaniards had scarcely any cavalry, while the French were well provided with that arm, and with first-rate cavalry officers. On the last day of October Blake, far in advance on the left, was attacked by Lefebvre, and, after a long and well-contested action, was driven in, but without losing colours or prisoners. On account of the mountainous nature of the country, the French could not use their formidable artillery. Blake retreated in good order by Bilbao to Nava; but the enemy followed him and entered the important town of Bilboa on the 1st of November. On the 5th, Blake defeated a French division; but his own divisions had got separated during his advance and during his retreat; his people were exhausted by fatigue, hunger, and cold, for they had passed a fortnight among the rugged mountains of Biscay during rainy nights and the most inclement weather, being almost continually in the open air. It is said that there was not a great-coat, nor even a hat, among the men, and that there were very few shoes. Blake therefore retired to Espinosa de los Monteros. Here he intended to rest for some days; but on the 9th his rear-guard was surprised, and he was attacked and defeated with great loss. Spiking his guns, and crossing the river Trueba, Blake then fled back to Reynosa, a strong position, but to secure which no pains had been taken during his rash advance. The forlorn hope of collecting his scattered forces there was soon defeated; a fatal blow had been struck on the army of the Conde de Belveder, which had been intended to support Blake; and now three French corps were rapidly closing round Reynosa. No alternative was left to Blake but to fly towards the port of S. Andero. He, with a few officers and men, reached that port and got safely on board an English ship; but the greater part of his people sought refuge in the mountains of the Asturias; and his army was so entirely dissipated that scarcely a trace of it could be seen anywhere. Such magazines as were at Reynosa fell into the hands of the French, who sent detachments to S. Andero and to other ports on that coast, where they obtained a good booty, consisting principally of arms, ammunition, and stores, which had been forwarded by the English for men who knew not how to use them. On the 8th of November, between Blake's fight at Espinosa, and his flight from Reynosa, Bonaparte arrived at his brother's head-quarters in the city of Vitoria, and took the entire direction of the campaign. It did not require his quick and practised eye to discover the monstrous errors which the Spanish generals had committed, or the facility afforded by the position into which affairs had been brought for preventing their junction and beating them separately. He was not well pleased at Marshal Lefebvre for opening the campaign before his arrival; but Blake's army had been beaten, and he confidently expected to hem in the Conde de Belveder, or Castaños, or both, and reduce them to a capitulation, which should obliterate the disgrace of Baylen. With a force more than double that of the enemy before him, Marshal Soult was hurried across the Ebro, in the direction of Burgos. Instead of retreating or attempting to form a junction with Castaños, the Conde de Belveder—whose army consisted only of 13,000 regular troops, and a few thousand armed peasants, and enthusiastic students, volunteers from Salamanca and Leon—imprudently encamped and waited the attack in an open position at Gamonal, in front of Burgos. Soult's veterans routed him completely, massacred or took prisoners between 3000 and 4000 of his men, and seized all his cannon and baggage. The Conde fled to Lerma, five and twenty miles from the field of battle, where he wrote a dispatch extolling the intrepidity of his soldiers. The armies on his right being thus dispersed, Bonaparte aimed his blows at the army of General Castaños and the army of Aragon, that were now both on his left. He sent column after column to intercept the communication with Madrid, and to get in Castaños's rear; and he dispatched Marshal Lannes with 30,000 men to attack that Spanish general in front. On the approach of the French, Castaños had fallen back from Calahorra on the banks of the Ebro o Tudela. There he was joined by the army of Aragon, under the command of Palafox, who had had the good sense to see the expediency of this junction, and who had effected it by a march of

extraordinary rapidity. United as they were, the armies of Castaños and Palafox were scarcely equal in number to the forces of Lannes in their front, and Ney and Victor were getting in their rear. We count for little or nothing the irregular bands of peasantry that lengthened and weakened the lines of the two armies. Moreover, the regulars were, for the most part, raw levies, miserably armed. A general of the greatest genius might have trembled at the thought of risking a battle with such troops against veteran masses, strong in cavalry and in artillery, and abundantly provided with the best arms and materials. It would be superfluous to give the details of the battle of Tudela, which was fought on the 23rd of November. The Spaniards were quickly thrown into disorder, put to flight and savagely slaughtered by the French cavalry. These Spanish armies, however, had not the habit of capitulating; fragments went off and saved themselves by fleetness of foot, the rest retreated in tolerably good order to Calatayud. It is said that Bonaparte reproached one of his generals for suffering Castaños to escape, having a vindictive desire to hold in captivity the conqueror of Dupont. Plundering the towns through which they passed, and shooting every Spaniard they caught in arms (Bonaparte having given an express and standing order to that effect), some of the French columns marched forward to drive out the central junta and take possession of Madrid.

Having done nothing when they had time to do it, the central junta now precipitated measures in the most hurried and confused manner, issuing a multitude of orders, some of which were not understood, and very few of which were attended to, partly through the despair which seemed to have fallen upon the Spanish people, and partly through the shortness of time that was allowed them. They ordered the formation of a new militia in all towns; they began to collect provisions and to make barricades; they sent some troops to occupy the passes of the Somosierra, the last bulwark between the French and the capital; and 6000 men were entrenched upon the heights of Sepulveda, overlooking the principal pass. But the French came on rapidly, and the dangerous belief was spread throughout the Spanish forces and the people of Madrid, that their generals and leaders were betraying them. Treachery—foul treachery—there was in the capital; but it appears to have been confined to the party of Don T. Morla, who had distinguished himself as a patriot in the government of Cadiz, and who was never suspected until it was too late to prevent the effects of his treason. On the 29th of November Bonaparte had his head quarters at a village upon the outer skirts of Somosierra. On the 30th the principal pass was carried, the 6000 Spaniards intrenched at Sepulveda flying before a charge of Polish lancers. On the morning of the 2nd of December, Bessières, with the French cavalry, came within sight of Madrid, and took possession of the heights; and at noon on the same day, being the anniversary of his coronation, the Emperor of the French arrived. The town was immediately summoned; but such was the fury of the people that the French officer employed would have been torn to pieces but for the interference of the Spanish regulars. The day passed without the possibility of opening any communication with those who wished to save their houses, their property, and their lives by delivering up the city. In the evening Bonaparte's infantry and artillery came up; arrangements were made by moonlight for an assault the next morning, and the Marques de Castelar was exhorted, in a letter from Berthier, not to expose Madrid to the horrors of a storm. "The night was clear and bright, and in the French camp all was silence and watchful, but a tumultuous noise was heard from every quarter of the city, as if some mighty beast was struggling and howling in the toils,"* There were only 6000 regular troops, under the command of Castelar, in the town; but there were more than 60,000 armed men besides these, consisting of the citizens and populace, and the peasantry who had flocked in from the adjoining country; and, if left to their own impulse and fury, these men would have made a most desperate resistance. They had taken up the pavement, they had barricaded the streets and houses, they had massacred the Marques de Perrales, and other persons suspected of favouring the French, and they were shouting "War to the knife!" Unfortunately, Madrid had no bulwarks or outworks; the houses, though strong, were not fire-proof; the artillery had been placed in the worst and most exposed situations; and the opulent classes soon declared against the madness of attempting to defend a large and open capital incapable of defence. Nor can such exploits as had been performed at Zaragoza ever be expected from a capital city, let it be fortified as it may. Before daylight the French stormed some houses in the suburbs, dislodged a garrison which had been thrown into the Buen Retiro palace, and began to throw shells into the town. Early in the morning of the 3rd they took possession of the immense palace of the Duke of Medina Celi, a key to the city on that side. The city was then summoned for the third time; and in the afternoon Don T. Morla, whose cowardice is supposed to have been even greater than his treachery, came out to demand a suspension of arms. Morla was accompanied by another Spanish officer, who was compelled to hear the terrible threats of Bonaparte, mingled with moral declamations and apophthegms, the farcical parts of the tragedy. "Injustice and bad faith," said this precious moralist, "always recoil upon those who are guilty of them!" Morla returned into the city and told the authorities and the people that Madrid must surrender before six o'clock the next morning, or perish and disappear! There were still thousands who would have staid to have perished under the ruins of the houses—and all would not have perished without

* Colonel Napier.

loss and delay to the French; but the central junta had fled already, with indecent haste, towards Badajoz, and the men in authority that remained confessed that there was nothing left to do but to capitulate. The Marques de Castelar nobly determined not to surrender, and succeeded in withdrawing his 6000 regulars and sixteen cannon in safety. During the night, the populace and the peasantry kept firing on the French outposts, and ringing the church and convent bells: but at 8 o'clock on the morning of the 4th of December Morla came forth with a capitulation, and Madrid surrendered. Such of the Spaniards as remained in arms, and as had not fled out of the town to follow Castelar, were disarmed, and the city was filled with French troops, who had received the strictest orders not to exasperate the people by plunder, or by any other excess. Bonaparte fixed his head-quarters at Chamartin, a country house four miles from Madrid; and in a few days the shops were re-opened, the theatres were frequented as usual, and everything wore the outward appearance of tranquillity. A number of imperial decrees, re-organizing the government, and hurling vengeance at those grandees who had declared that they had acted in Bayonne under compulsion, and who had made head against his brother, were issued from Chamartin, and a proclamation was addressed to the Spaniards in the name of Napoleon. The Spanish people were told that further resistance was useless; that at most they could only protract a destructive war on their own soil; that it had cost the emperor only a few marches to defeat their armies; that he would presently drive the English from the Peninsula; that to the rights which had been ceded him by the princes of the last dynasty he had now added the right of conquest, but that his wish was still to be the regenerator of Spain. "But," he added, "should you not merit my confidence, I must treat you as a conquered people, and place my brother Joseph upon another throne. I shall then set the crown of Spain upon my own head, and cause it to be respected by the guilty; *for God has given me power and inclination to surmount all obstacles!*"* Joseph Bonaparte entered Madrid in the tail of the French army; but, though all seemed so quiet and submissive, he dreaded insurrection and assassination; and, while his brother went to look after Sir John Moore and the English, he retired, well guarded, to the royal palace at S. Ildefonso.

Palace of S. Ildefonso.

The situation of the English general was, in the extremest degree, critical. On the 28th of November news reached Sir John Moore at Salamanca, of the unexpected dispersion of all the Spanish armies, and of the rapid advance of Bonaparte with overwhelming forces. It appeared to him that, as there was no longer an army in the north of Spain with which he could combine, and as the southern provinces would quickly be invaded, it was most advisable to lead back his troops to Lisbon; where they would be enabled to join any

* Southey, Hist. of the Peninsular War.

Spanish corps which might rise in the south, or to render essential services by being conveyed by sea to Cadiz. Accordingly, Sir John sent orders to Sir David Baird, who had not got much beyond Astorga, to prepare to retreat to Coruña and sail with his division to the Tagus; and he instructed General Hope, who was still far away, to join him if practicable, or to march to Ciudad Rodrigo, near the Portuguese frontier, where they could unite. It is said that this plan met with the full approbation of Hope and Baird. But at this juncture intelligence was brought to Moore from Madrid, that a very favourable change had taken place in the state of affairs. It was most confidently reported, on the authority of the junta and of Don T. Morla, that San Juan, a Spanish general, had repulsed three attacks of the French at Sepulveda; that Castaños was bringing up the greater part of his force to unite with San Juan; and that Bonaparte was still at Burgos, or a good many marches from Madrid. Of the immense force which the French had now brought to the southward of the Pyrenees and of the Ebro, and of the strong reserves that were ready to follow, Moore apparently received no information. But at the same time a long dispatch from Mr. Frere, dated Aranjuez, November 30th, reached him. The ambassador strongly deprecated a retreat into Portugal; assuring Sir John that the provinces he had seen were the least distinguished of all Spain for a military or patriotic spirit; that the other provinces possessed the most ardent and determined patriotism; and that, as he believed, every individual in the central junta or government was resolved to perish with the country rather than submit. In the common lamentable ignorance of the amount of the French force, and in the fatal reliance on the rhodomontade reports of Spaniards who were fools or traitors, Mr. Frere recommended Moore to collect a force capable of repulsing the French *before* they received their reinforcements, telling him that the covering and protecting Madrid was a point of the greatest moment; that the people of the capital were full of resolution, and determined to defend it to extremity, in spite of its unfavourable situation; and that surely this determination ought to be encouraged by some show of support.* Letters also came from Don T. Morla, imploring Sir John to succour Madrid. Two Spanish generals also arrived at Salamanca with a letter from Don Martin Garay, the war minister: both these generals and the minister's letter spoke in glowing terms of the improved prospect of affairs, assuring Sir John that the Spanish armies were undismayed, were augmenting daily, and were rendering the approach of the French to Madrid utterly impracticable. But, before these two generals and this letter came to hand, the French were undisputed masters of the capital; and the army of San Juan existed nowhere except upon paper, for the troops had fled pusillanimously, and had murdered—at Talavera—their own general, reputed the best officer in the Spanish service. There is every reason for believing that Don T. Morla's letter, which was dated on the 2nd of December, the very day that he actually began negotiating terms for surrendering Madrid, was dictated by some of Bonaparte's people, or was written and sent to serve that conqueror by drawing the English army into a snare. It was utterly impossible that Morla could have been ignorant of the true state of affairs; and yet he told Sir John Moore that Castaños, with 25,000 men, was falling back on Madrid in the greatest haste, to unite with its garrison; and that 10,000 men from the Somosierra were coming for the same purpose to the city, where nearly 40,000 men would join them!

Great pains were taken to continue the unaccountable delusion into which Mr. Frere had fallen, and to conceal from him the submission of Madrid. There was in that city a Frenchman, named Charmilly, who gave himself out as a royalist emigrant and refugee, and who, in that capacity, and as a mortal enemy to Bonaparte, had offered his services to the central junta. This man was afterwards denounced in the British parliament as one who had been an organizer of assassination in San Domingo, and a fraudulent bankrupt in London; and there appears no reason to doubt that he was, and had been, an unprincipled adventurer. As soon as he saw that the French were the strongest he stole out of Madrid and joined them. Bonaparte's skill in these matters was at least as conspicuous as his military genius; and wherever he moved there was a household or camp police composed of men who had been trained by those great masters, Fouché and Savary, and who had been exercised under his own eye. On the 2nd of December, when Don T. Morla first presented himself in the French camp, and evidently before he had written to entrap Sir John Moore, Charmilly had a private interview with that Spanish apostate. Immediately after this conference Charmilly posted after the English ambassador, who was flying with the central junta at, or nearly at, the very moment that Moore was reading his famous Aranjuez dispatch. The Frenchman overtook Mr. Frere at Talavera, and, apparently with little difficulty, convinced that credulous man that the Spanish affairs were prospering; that Madrid was quite capable of holding out for a long time against the *small* army which Bonaparte had brought against it; and, finally, that nothing was wanting to raise the siege and compel the French to a speedy retreat except the approach of the British. Without a single doubt as to the character and reputation of this

* Parliamentary papers.—"Mr. Frere had come out to Spain impressed with false notions of what was passing in that country, and, tenaciously clinging to the pictures of his imagination, he resented the intrusion of reason and spurned at facts. The defeat of the Conde de Belveder at Gamonal, a defeat that broke the centre of the Spanish line, uncovered the flank and rear of Castaños's army, opened a way to Madrid, and rendered the concentration of the British divisions unsafe if not impossible, he curiously called the 'unlucky affair of the 10th at Burgos.' After the battle of Tudela he estimated the whole French army on the side of Burgos and Valladolid at *eleven thousand* men, when they were above *one hundred thousand*; and yet, with information so absurdly defective, he was prompt to interfere with, and eager to control, the military combinations of the General (Sir John Moore), which were founded upon the true and acknowledged principles of the art of war."—*Napier.*

French adventurer, the facetious and accomplished writer in the 'Anti-Jacobin' unbosomed himself, and made him the depository of secrets which might have committed the safety and honour of every British soldier in Spain. Morla, who had sent the Frenchman to catch Frere, had by this time secured to himself his military rank and his fortune—which last must have been chiefly made by appropriating the money which England had so liberally and so carelessly sent out;—and very soon afterwards he was rewarded by high employment under King Joseph. The English ambassador, with his head full of the mendacious intelligence which Charmilly had brought him, sat down and wrote a dispatch to Sir John Moore, commencing by referring to his famous Aranjuez dispatch, in which he had recommended the covering and protecting Madrid; and then referring Sir John to *Colonel* Charmilly, the bearer of the present letter, for the state in which he had left that city. Mr. Frere could not but confess that he and the central junta were flying for Badajoz, "from a situation in which they were exposed to be made prisoners;" yet he still urged Sir John to succour the capital, offering to take upon himself any degree of responsibility;—as if the commander-in-chief of an army could shift his responsibility from his own shoulders to those of a fugitive diplomatist. With this dispatch, and with all Frere's secrets in his possession, Charmilly sped away for Salamanca; but it was neither our ambassador at Talavera or at Badajoz, nor our general at Salamanca, that could tell with whom Charmilly communicated on the road, or what messengers he sent to the French at Madrid. Presenting himself at Sir John Moore's head-quarters, the Frenchman delivered the dispatch and pressed vehemently to see the general. Sir John, who had no love for Frenchmen of any kind, and a great detestation for all spies and secret agents, reluctantly admitted him to his presence, and closely questioned him upon the intelligence he brought. Charmilly, like one used to the trade, positively asserted that Bonaparte's army was not considerable; that nothing could exceed the patriotic zeal of all ranks of Spaniards at Madrid; that clouds of people from the country were rushing in to defend that city; that all classes were at work; that the city was already surrounded with batteries; that every street was barricaded, and that Mr. Frere was most desirous that Sir John should instantly advance and raise the siege of Madrid. All this was said just three days after Madrid had surrendered! Sir John listened without uttering a word which could indicate his thoughts or the course he meant to pursue. The adventurer saw he was suspected; but, cunning as he was, he duped himself into the belief that Moore persisted in his original intention of retreating rapidly to Portugal. Early next morning he again appeared at head-quarters, and presented a second letter from Mr. Frere, which he had suppressed, by that ambassador's directions, at his first interview. This was strange enough, but there was matter in the letter, in this rider to the dispatch, which was still stranger—for it contained a request that, should Sir John continue in his resolution to retreat, "*the bearer might be previously examined before a council of war!*" This was nothing less than attempting to wrest the command of the army out of the general's hands, to appeal from Sir John Moore to the officers serving under him, and to intimate to those officers and the whole army that, in the opinion of the ambassador, Sir John was deficient in zeal, bravery, and ability. A grosser insult was never offered to a brave and high-minded man; and it was the grosser and the bitterer from the character of the agent who delivered it. Moore instantly ordered Charmilly to quit the cantonments of the British army. Whether the Frenchman repaired to Badajoz to condole with Mr. Frere, or went to Madrid to hold him up to the ridicule he merited, we cannot decide; but it should appear that he communicated intelligence to French head-quarters, which, from the mistake he had fallen into, misled Bonaparte, and confirmed him in the belief that the British were in full retreat to Lisbon.

Moore's nature was generous, his temper beautiful: as soon as the odious Frenchman was gone his resentment cooled;* and, calmly weighing Frere's dispatch and the information which Charmilly had brought, and comparing it with the information contained in the letter of Morla, of whose treachery he was wholly ignorant, and with the details given by the two Spanish generals, who had waited upon him at Salamanca, he was induced to believe that Madrid was really standing a siege, that the Spanish generals were concentrating their scattered forces, that the French army was not very considerable, and that the spirit and energy of the country, of which he had scarcely seen a sign, were at last awaking. On the 5th or 6th of December he was joined by the ordnance from General Hope's division, and this tended to raise his spirits. On the 6th he wrote to Sir David Baird, who, after destroying some stores, had retreated as far as Villa Franca, to concentrate his troops and return to Astorga. "I mean," said Moore, "to proceed bridle in hand; for if the bubble bursts *we shall have a run for it.*" He also ordered Hope, who was now near at hand, to join him without delay; and he opened a correspondence with Romana, who had so cleverly brought his Spanish veterans from the Baltic, but the best part of whose forces had been engaged on the Ebro, and beaten and scattered. Romana, who had succeeded to Blake's command, was quartered in the city of Leon; but none except the wildest and falsest intelligence could be ob-

* Writing a few hours afterwards to Frere to express his wish that nothing should disturb the harmony which ought to subsist between them, Moore said—"I shall abstain from any remarks upon the two letters from you, delivered to me last night and this morning by Colonel Charmilly, or on the message which accompanied them. I certainly at first did feel and express much indignation at a person like him being made the channel of a communication of that sort from you to me. Those feelings are at an end, and I dare say they never will be created towards you again."

tained of the strength of his army.* Before flying from Madrid, the central junta had assured Colonel Graham (at present Lord Lynedoch) that Romana's army exceeded 30,000 men. The marques himself is said to have stated to a British officer that he had 22,000 infantry and 300 cavalry; yet now, when he was required to act, he wrote a letter to Sir John Moore, acknowledging that he could only assemble 9000 or 10,000 men, and two days afterwards these dwindled to 7000. Such, invariably, was the sort of official intelligence that Moore received from Spanish generals and ministers: there was never any dependence to be placed in their reports, and it was clear that nothing was to be expected from Romana. Sir John then wrote to Lord Castlereagh, stating that he intended to advance by Valladolid towards Burgos, in conjunction with Sir David Baird, and with or without the army of Romana, for the purpose of threatening the communication of the French. The Somosierra and the Guadarrama were both known to be in possession of the enemy, wherefore no direct movement could be made towards Madrid; but Moore knew that Zaragoza was determined to stand a second siege; he had received from the junta of Toledo a formal assurance of their resolution to bury themselves under the ruins of the town rather than submit; and he was informed that the southern provinces were forwarding crowds of fresh levies. He concluded that Bonaparte would be more anxious to strike a heavy blow against the English than to overrun any particular province; and therefore he resolved to throw himself upon the communications of the French army, hoping, if fortune were favourable, to inflict a severe loss upon the troops which guarded them before aid could arrive. If Bonaparte, suspending his operations against the south, should detach troops largely, Madrid would thereby be relieved: if he did not detach largely, the British could hold their ground. Moore could not but know that a great general like the Emperor of the French would be most likely to unite his whole army, and fall upon the troops which thus ventured to place themselves on his line of operations; but, in order to relieve the Spaniards at a critical moment, and to give time for the southern provinces to organize their defences, he was willing to draw the mass of the enemy upon himself.*

In the meanwhile Sir John had sent forward Colonel Graham to carry a message to Morla, and to endeavour to obtain some correct information of what was passing in Madrid and the country round it. Graham returned to Salamanca on the evening of the 9th, bringing the first intimation of the prompt capitulation of the Spanish capital. He had not been able to penetrate farther than Talavera, where he had met two members of the central junta, who assured him that the French were only from 20,000 to 30,000 strong, and had possessed themselves of nothing more than the Retiro palace; that the people were still in arms; that 30,000 men of the Spanish army of the centre were at Guadalaxara; that 14,000 men were at Almaraz; and that Romana, who was anxious to unite with the English, would soon have 30,000 fighting men. Mortified as he was to find that the capital had held out only one day, and induced as he was by that fact to doubt of the Spanish spirit, and to place less reliance than ever on the reports and assurances he received, Moore would not forego his resolution to advance; for he calculated that a diversion for the southern provinces might still be effected, and that he was bound to prove that England would not abandon the cause even when the Spaniards themselves seemed to be abandoning it. With a full sense of the perilousness of his enterprise, and with the conviction that no faith was to be put on reports from the Spanish authorities, Moore engaged some confidential persons to watch and send him timely notice of the movements of the enemy's columns. On the 11th of December he pushed forward his cavalry towards Toro and Tordesillas, on the river Douro. He himself left Salamanca on the 13th. Preparations for a retreat upon Portugal were, however, continued, and Sir David Baird was ordered to form magazines at Benevente, Astorga, and other places, by which arrangements two lines of operation were secured, and a greater freedom of action obtained. The cavalry had not proceeded far, when Brigadier General C. Stewart (the present Marquess of Londonderry), who was at their head, got notice that the village of Rueda was occupied by a party of French infantry and cavalry. The place was presently surrounded by our dragoons, and almost the whole party, consisting of eighty men, were killed or taken. The prisoners declared that they had no suspicion that the British were advancing—that they believed them to be retreating upon Lisbon. On the evening of the 13th Moore's head-quarters were at Alaejos. There on the 14th an intercepted dispatch from Berthier to Soult was brought to him, and its contents induced him to change the direction of his march. The dispatch described Madrid as perfectly tranquil, and the public amusements going forward as in a time of peace. It directed Soult to take possession of Leon, drive the Spaniards into Galicia, and make himself master of Benevente and Zamora; being assured that no apprehension of the English need be entertained, as everything confirmed the belief that they were in full retreat into Portugal. The fourth corps of the French army was said to be already at Talavera, on the route to Badajoz; and this movement, it was observed, would force the English general to retreat, if, contrary to the emperor's belief, he had not done so already. The fifth corps was on the march to Zaragoza, and the eighth corps to Burgos. Such was the confidence of the French at Madrid, that Berthier had sent this important dispatch (dated December the 10th)

* Colonel Napier, History of the War in the Peninsula.—The historian of the war adds—"Moore felt that, in doing so, he compromised the safety of his own army, that he must glide along the edge of a precipice, that he must cross a gulf on a rotten plank; but he also knew the martial qualities of his soldiers, he had confidence in his own genius, and, the occasion being worthy of a great deed, he dared essay it even against Napoleon."

by a single staff officer, who rode post through the country without an escort, and in perfect safety, until his abusive language to the postmaster of Valdestillos created a tumult, in which he lost his life. Captain Waters, who had been sent out by Moore to obtain intelligence, chanced to arrive at Valdestillos and to hear of the murder; he purchased the French dispatch for twenty dollars: neither money nor patriotism had hitherto induced the Spaniards to bring Moore any intelligence.* It was now certain that Burgos would be strongly protected, and that Baird's line of march would be rendered unsafe if Soult followed Berthier's instructions and advanced. On the other hand, as the French appeared to be ignorant of the British movements, there was some chance of surprising and beating Soult before Bonaparte could come to his succour. Moore therefore ordered Hope to pass the Douro, at Tordesillas, and direct his march upon Villapando; he removed his head-quarters to Toro, and fixed upon Valderas as the point of junction with Baird's division, the head of which was now at Benevente. On the 16th, being at Toro, Moore received two letters, one from the fugitive central junta, who by this time had fled from Badajoz to Truxillo, and the other from Mr. Frere, who had accompanied them in their flight, and who was still giving implicit faith to their sanguine and extravagant or treacherous reports. [Other persons suspected that several members of the junta were in the French interest; but our ambassador never seems to have suspected any thing, except the zeal, the skill, and firmness of our general.] The letter from the junta impudently complained that, when Romana proposed to unite 14,000 picked men to the British army, with a view to a forward movement, his offer had been disregarded, and a retreat determined upon, in spite of his remonstrances; that this retreat was uncalled for, "as the enemy was never so near his ruin as at that moment," &c. The junta still urged Sir John to join Romana, with his 14,000 select men, assuring him that 30,000 recruits would be added to the ranks in the course of—*a month*. Mr. Frere's letter bitterly censured Sir John for having ever thought of a retreat, told him that he had done the utmost possible mischief to the Spanish cause, and that "*upon a supposed military necessity*," he was inflicting final ruin on our ally, and indelible disgrace on his own country! Now, at this moment, Mr. Frere, safe and far away at Truxillo, knew absolutely nothing about the state of Romana's army, or the intentions of that general, or the force and movements of the French corps that were gathering round Moore; and he afterwards acknowledged that the Spanish enthusiasm was extinguished, and that a general panic was commencing at the very moment he was writing this offensive epistle. Romana, with a few thousand miserable soldiers, was at this time retiring into Galicia, although he was fully aware of the advance which Moore had made, and had engaged to support him. Thus the only Spanish force on foot in the north was retreating, while the British were advancing. On the 18th, Moore carried his head-quarters forward to Castro Nuevo, whence he wrote to Romana, acquainting him with his intention to fall upon Soult, and desiring his co-operation: he also requested that the marques, according to his own plan which had been presented to the British minister in London, would reserve the Asturias for his own line, and leave Galicia to the British. Romana halted, and was disposed to do his duty with spirit; but his military genius* was as limited as were the means at his command: his soldiers had been defrauded of their pay —of the money sent out by England—by the profligate Asturian authorities, and were hungry, half naked, and ready at every moment to desert. The British continued in full march. On the 20th of December the whole of the forces of Moore, Baird, and Hope were united at and near Mayorga. Nominally the army was nearly 35,000 strong; but four regiments were still in Portugal, and three regiments had been left at Lugo and Astorga; nearly 1700 men were detached, and about 4000 were in hospital: hence the actual number at present at Mayorga was only about 23,580 men with 60 pieces of artillery. In their advance the cavalry had scoured the country on the side of Valladolid, and had taken a number of prisoners from the French, who could be no longer ignorant of Moore's movements. At Mayorga information was obtained that about 700 French cavalry were lying in the town of Sahagun. To surprise this corps, Lord Paget (now Marquess of Anglesey) marched all night with two regiments of hussars. The surprise failed, but the attack nevertheless succeeded; the French were charged and broken, many were sabred, 157 were taken prisoners, and the rest, whose horses were fresh while the English horses were jaded, escaped by flight. This feat was performed by the 15th, who had only 400 men, for the 10th hussars were not in sight when Paget made his brilliant charge. The English infantry soon advanced, and Sahagun became head-quarters. Romana remained behind at Mancilla, writing encouraging letters, yet showing very plainly that no assistance was to be expected from him. The whole British army was, however, on fire for a general battle; and Moore entertained sanguine hopes that he might still have time to strike a decisive blow at Soult, who was at a short distance, posted behind the river Carion, with from 16,000 to 18,000 men, and with some other corps not far off in his rear. But, having outmarched their supplies, the English troops were obliged to halt at Sahagun until the 23rd. On that day Romana gave notice that the French were in full march from the side of Madrid; and in the night of the 23rd, when the English troops were actually in march for the Carion, with the intention of forcing the bridge over that river and falling upon Soult, Moore received certain reports, from his own confidential

* Napier.

* Lord Wellington said, in 1809, that, though Romana was one of the best of the Spanish generals, he much doubted of his ability to command an army.—*Dispatches.*

agents, that the whole French army was in movement to concentrate, and to crush the British:—the fourth corps had been halted at Talavera, the fifth was at Vitoria, the eighth was fast closing up to reinforce Soult, and Bonaparte in person was marching with his usual rapidity towards the Guadarrama, having expressed his astonishment at the unexpected boldness of the British movement, and having exclaimed that Moore was the only general now fit to contend with him.* The emperor of the French was aiming at the occupation of Benevente, in Moore's rear. No fewer than 100,000 men were hurrying forward by four different routes: the conquest of the south and every other operation was suspended. It was the *mot* not only of Bonaparte, but of Soult and all his generals, that, if they could only beat Moore, there was nothing to be feared from any army that existed in Spain. If Soult would have waited to give battle on the banks of the Carion, Moore could have beaten him with ease; but it was suspected (and the case was really so) that Soult had received orders to fall back on the columns that were hastening to his support, and to draw Moore on towards Burgos, which would have allowed time for the converging corps of the French to envelope him. In his one great object Sir John had fully succeeded: he had tempted Bonaparte from Madrid; he had gained good breathing time for the southern provinces; he had caused the siege of Zaragoza to be delayed; he had gained for the Spaniards an opportunity of uniting in other provinces; and more he could not do, without risking the total destruction of his army and the ignominious fate of Dupont. He therefore immediately countermanded the advance of the army, sending the baggage, with the brigades in his rear, back towards Astorga; and, to cover the retreat and to deceive Soult, he remained a whole day with the reserve, and sent forward squadrons of cavalry to skirmish with the French outposts. He apprized Romana of his intentions, and requested him to leave a strong guard at the bridge of Mancilla, which spans the river Esla. The beginning of the retreat was conducted with the most perfect order; and by the 26th the whole British army was safely behind the Esla. On the same day Bonaparte reached Tordesillas, on the Douro, fully expecting to cut off Moore's retreat; but notwithstanding his amazing speed he found he arrived twelve hours too late. Before getting across the Esla some squadrons of French horse were hanging on the flanks of the English, and an advanced corps of their cavalry occupied a hill near the road. These last were attacked by the 10th hussars, who put many of them to the sword and took about 100 prisoners. During twelve successive days the English cavalry had been engaged more or less; they had been so well headed in every affair or skirmish that they had taken upwards of 500 prisoners in all. The river Esla was fordable in many places, there were several bridges which the Spaniards had neglected to destroy, and little confidence could be placed upon Romana's people, who had undertaken to defend the bridge at Mancilla. Brigadier-general Craufurd blew up one of the bridges at Castro Gonzalo, one half of his men working amidst torrents of rain and snow, and the other half keeping the enemy at bay, for some of the cavalry of the French imperial guard had collected on the heights on the opposite bank. Behind Mancilla stood the town of Leon, inclosed with walls and capable of considerable resistance. Leaving 3,000 of his men, with four pieces of artillery, to defend or destroy the bridge, Romana undertook to hold Leon with the rest of his forces, and with a rabble that had gathered round him. A few French light horse drove the Spaniards from the bridge, captured their guns, and chased them towards Leon. By this easy means Soult, whose single corps now exceeded the British army in number, got possession of an important road and advanced rapidly; and then Romana abandoned Leon without firing a musket, and fled with his dissolving forces to the north. Moore had gained two days' rest at Benevente, but, as he had not the means of removing them, he was obliged to destroy most of his stores.* On the 29th the mass of the British gained Astorga, the cavalry remaining behind at Benevente, with piquets watching the fords of the Esla. General Lefebvre Desnouettes dashed across the river, with 600 horse of the imperial guard. Our piquets retired fighting, and Brigadier-general the Hon. C. Stewart obstinately disputed the ground; but the French kept advancing across the plain, which was then covered with stragglers, baggage waggons, and camp followers. Benevente was filled with tumult and confusion; but Lord Paget mounted the 10th hussars at the edge of the town, rallied and collected the piquets and the 3rd German hussars, and made a charge with the whole. In an instant the scene changed; the French were galloping back towards the river, with the British and Lord Paget close at their heels. Lefebvre Desnouettes was wounded and made prisoner;

* "Sir John Moore had no friendly corps to protect his flanks—no reinforcements to expect. He commanded an army, brilliant in appearance, yet weak in numerical strength; but upon that, and that alone, was dependence to be placed for the successful result of a very bold advance against a superior enemy in his front, a corps nearly as strong as his own upon his right flank, and the whole army of the emperor unoccupied and ready to move against him. In stating that a superior force was in front of the British army, it must not be supposed to apply to the corps d'armée of Marshal Soult alone, but to include that of the Duke of Abrantes (Junot), then between Vitoria and Burgos. . . . The march upon the Carion would undoubtedly have compromised the safety of our army. Not only the most probable, but the most to be desired, result of that movement, namely, the defeat of Marshal Soult, would but have added to its dangers and difficulties. Had Marshal Soult retired when assailed by the British force, it is probable that its general, being yet in ignorance of the rapid movement making against him from Madrid, would have advanced in pursuit, and this must have rendered his situation still more critical. In either case, the time lost could not fail to occasion the destruction or capture of our army."—*Lieutenant-colonel Leith Hay, Narrative of the Peninsular War.*

* "The army was and had been from the first without sufficient means of transport; the general had no money to procure it, and the ill-will of the Spaniards, and the shuffling conduct of the juntas, added infinitely to their difficulties."—*Napier.*

Some money had been sent to Moore since his advance, but not enough. He was obliged to contract debts with the Spaniards, who were not fond of giving credit, and who forgot, all along, that Moore was fighting their battle. This credit system had a very pernicious effect not only on Sir John's campaign, but also on the first campaign of Sir A. Wellesley in Spain. Sir Arthur, however, in the course of 1809, contrived to pay off all these debts.

other officers were captured; and nearly 200 men were killed, wounded, or taken. The British loss amounted to 50 men. Lord Paget maintained his post till the evening of the 29th, and then took the road to Astorga. On the morning of the 30th, Marshal Bessières crossed the Esla with 9000 horse and followed Paget, and on the same day General Franceschi, who had crossed at the bridge of Mancilla, followed Moore by another road. While he was at Astorga, or before he got there, about 5,000 men of Romana's flying army (the only troops that ever appeared to co-operate) rushed into the town, and began to appropriate the provisions and stores which had been collected for the use of the British. The Spaniards had encumbered the road with carts and mules, they took possession of the houses, and when the English soldiers went to seek lodgings, quarrels and scuffles ensued. Nor was this the worst consequence of the contact of the two allied forces: the Spaniards were afflicted with the typhus fever, and they communicated it to the English. Sir John had earnestly solicited the marques to leave this road vacant, and to retire into the Asturias, where, by lying on the flank or rear of the advancing French army, he might have retarded its progress; but the Spaniard had preferred crossing Moore's line of march, and by so doing he did the British army far more injury than the pursuing French could do it. From this moment the discipline of Moore's people was seriously affected. In the terrible disorder which prevailed, the English soldiers helped themselves, as best they could, to provisions, and to spirits and wine. No orders were observed; and when Moore resumed his retreat he was obliged to leave such of the stores as had not been seized and wasted behind him. Having done all the mischief he could, Romana retired with his cavalry and some guns to the valley of the Minho, leaving his ragged infantry and the rest of his artillery to follow their own instinct. Some of these poor Spaniards mixed with the British army, spreading still more the vermin and the disease with which they were infected; but the greater part of them either disbanded, or were taken by the French. On the 28th of December Bonaparte had slept at Villapando, only four leagues from Benevente. On the 1st of January he took possession of Astorga, where 70,000 French infantry, 10,000 cavalry, and 200 pieces of artillery were now united.

A. D. 1809. From the heights behind Astorga the Emperor of the French could discover the now confused rear of the retreating English army; but he was exceedingly wroth that Moore, by his rapid movements, should have escaped him, and circumstances had arisen in a distant part of the world which prevented his enjoying the satisfaction of pursuing the most cordially hated of all his enemies. Dispatches arrived from Paris and from other places, which left no doubt as to the intention of Austria to take the field against him; and therefore, on the 2nd, entrusting the pursuit of Moore to Soult, he turned away from Benevente to Valladolid, whence he travelled with almost incredible speed to his own capital, cursing all the way the efficiency of English policy, alliances, and subsidies, to which solely he attributed the war with which he was now threatened in Germany and Italy.* But even after his emperor's departure Soult had 60,000 men and 91 guns to put in the track of Moore; and he lost no time in precipitating these masses through Galicia. His cavalry was very soon close upon the British rear; and the whole of that army, from excessive privation and suffering, from the murmurs and misconduct of many of the officers, and from the despondency generally induced by such a retreat, was becoming every day more and more demoralized. They had hardly any provisions with them, they could obtain little or nothing, except sour wine, in that famine-stricken country; the roads were wretched, and covered with deep snow; when it did not snow it rained in torrents; the cold on the mountains was intense; and many of the sick, and many of the women and children who had been allowed to follow the army in spite of Sir John's orders, lay down by the road-side and died. Some disgraceful occurrences took place at Bembibre, where there were immense wine-cellars; and similar excesses were committed in Villa Franca. Yet, wherever or whenever the French came up to fight, the English formed in good order and beat them off. The French general Colbert was shot through the heart in one of these encounters, and of the six or eight squadrons of horse that accompanied him the greater number were killed on the spot. In front of Lugo another desperate contest took place, which ended in General the Hon. Sir E. Paget's repulsing a greatly superior force. This was on the 5th of January. On the 7th, Sir John Moore announced his intention of halting and offering battle to his pursuer. "It has been well said," says our military historian, "that a British army may be gleaned in a retreat, but cannot be reaped; whatever may be their misery, the soldiers will always be found clean at review, ready at a fight; and scarcely was this order issued when the line of battle, so attenuated before, was filled with vigorous men, full of confidence and valour."† Moore's positions were well chosen, and the country was rugged and mountainous. Soult formed in order of battle along a ridge fronting the English; but from the nature of the ground he could not discover Moore's force, and, taking it merely for a rear-guard, he attacked rather feebly, and was defeated with the loss of 400 or 500 men. But the French marshal now called up the division of Laborde; and at daybreak on the following morning, he confronted the English general, who had about 16,000 foot, 1800 horse, and 40 pieces of artillery, with 17,000 foot, 4000 horse, and 50 pieces of artillery. But, even with this superiority of force, Soult pre-

* It has been suspected that other causes, besides the attitude of the Austrian emperor, contributed to Bonaparte's hasty departure from his army in Spain; but on this head we can find nothing but conjecture, and the one great cause assigned in the text appears sufficient to account for his return to Paris.

† Colonel Napier.

ferred, waiting for the junction of Marshal Ney to giving battle; and the French remained in line all day without firing a shot. It could not be expected that Moore should move to attack Soult, who might be reinforced at every moment, and it would have been madness to wait where he was: therefore Moore decamped in the night, leaving his fires burning to deceive the French, and continued his retreat towards the coast and the port of Coruña. He had only been able to collect at Lugo bread for one day's consumption; the weather was worse than ever, and the disorganization of the army became more complete. At last, on the 13th of January, Moore got sight of the sea and of Coruña; but his evil star was still predominant; a fleet of transports, in which his army could have been quickly embarked in safety, was not there, but detained by contrary winds at Vigo, and there were only a few small vessels in the harbour. He, however, pressed forward to the town and put his wearied troops into quarters. The town of Coruña was weakly fortified, and commanded on one side by some heights. Some general officers thought that even now the campaign must end in a convention. But such thoughts were far from the mind of Moore, who strengthened the weak side of the town, occupied the citadel, put the worst of his sick on board the few vessels in the harbour, and made the best dispositions to fight the French and secure his embarkation by a general action. In the whole campaign he had had most ample reason to complain of the inertness and stupidity—or worse—of the Spanish authorities; and he now found around him abundant materials for increasing this vexation. He had seen Romana's rabble rout without arms, without ammunition, without clothes; the other Spanish armies he had not seen, because they had made themselves invisible, but from the best information he had received, and from their notorious disasters, he could not but conclude that they were in as bad case as the so-called army of the marques; yet here, absurdly exposed on a hill outside of the town of Coruña, were 4000 barrels of gunpowder, which had been brought from England many months before, and in the town there was a large magazine of English arms—arms and powder having been uselessly kept in store, while the forces in the field were flying like rags in the wind for want of them. To save this immense stock of ammunition from Soult, Sir John removed as many barrels into the town as he could, and blew up all the rest. The explosion was so tremendous that Coruña was shaken as by an earthquake. In the evening of the 14th, the transports from Vigo hove in sight; but it was now impossible to think of embarking without fighting a battle, or abandoning a great portion of the army as a rear-guard, for Soult was crowning the hills, and his light troops were skirmishing close outside the town. In the course of the night and following morning, the remainder of the sick, the dismounted cavalry, the best of the horses, and fifty-two pieces of artillery, were safely embarked, Moore retaining on shore only eight English and four Spanish guns for action.* On the morning of the 15th, the French advanced to the height where the great powder-magazine had been blown up; and our rifle corps skirmished with their light troops. In the evening Colonel Mackenzie of the 5th, commanding the advanced post on the left, made a gallant rush to surprise two of the enemy's cannon; but in crossing a field he was shot, and the attack failed. In the course of the day, Sir John had the satisfaction of receiving a letter from Mr. Frere, who was no longer at Truxillo, but much farther away, at Seville. The ambassador informed the general that, upon learning his advance upon the Carion, which was sure to draw upon him the mass of the French forces, he had written to the Duke of Infantado, who was at Cuença with a Spanish force said to be superior to that which the French had left in Madrid, urging him, in the most pressing manner, to make a forward movement upon that capital, which movement might have had the effect of relieving the British army by recalling to Madrid some of the corps that were pressing against it. But Frere did not write this letter until the 2nd of January, when Bonaparte was beyond the Esla, and close on Moore's rear with 80,000 men, and 200 pieces of artillery; and when he had written the letter he left it with the junta, who apparently did nothing with it—an omission of the less consequence, as the army of the Duke of Infantado was little more than an army upon paper, and as the Duke neither would nor could have marched upon Madrid. French officers said that a third part of the garrison left in the capital would have been more than sufficient to scatter the force of the Spanish duke, if, at any time, he had ventured near enough to be attacked.

During the night of the 15th of January, Soult, with great difficulty, established a battery of eleven heavy guns on some rocks which closed the left of the line he had selected for battle. This great battery was not above 1200 yards from the right of the British line, and midway the little village of Elvina was held by some of our piquets. On the morning of the 16th the French were apparently quiet; no firing was heard; and Moore completed his preparations for embarking his army. About one o'clock in the afternoon the English general mounted his horse in good spirits, and set off to visit his outposts; he had not proceeded far ere he received a report from General Hope that the enemy's line were getting under arms. He expressed the highest satisfaction at this intelligence, only regretting that there would not be daylight enough to profit fully from the advantages he anticipated; and, striking spurs into his horse, he galloped to the field. His advanced piquets were already beginning to fire at the enemy's *light*

* Many of the horses had perished on the road, and many more on arriving at Coruña were completely foundered: these last were reluctantly ordered to be shot.

The ground in front of Coruña, where the battle must be fought, was impracticable for cavalry, and did not allow Sir John to make any great use of artillery.

Corunna.

troops, who were pouring rapidly down on the right wing of the British. Our army was drawn up in the order of battle Moore had planned three days before, when he first arrived at Coruña, and examined the ground: it was 14,500 strong—all foot soldiers, and all full of ardour: cavalry there was none. The force of Soult exceeded 20,000 men; and he had some cavalry which, however, was not of much use in the actual battle. The only advantage on the side of the British, except their native spirit, was this—they had exchanged their battered muskets for new English muskets found in deposit at Coruña, and their ammunition was fresh and good. Distributing his lighter guns along the front of his position, and opening a fire from the heavy battery on his left, Soult, at about two o'clock, descended from the hills with three columns covered by clouds of skirmishers. Moore's piquets were driven back, and the village of Elvina was carried by the first French column, which then made a side movement, and fell upon Moore's right wing which was formed by Sir David Baird's division. The French second column advanced against the English centre, and the third attacked the English left which was under the command of Hope, and posted by the village of Palavia Abaxo. The weight of Soult's guns overmatched the English six-pounders, and his shot swept the position to the centre. But Moore called up General the Hon. Sir E. Paget with the whole of his reserve, and sent him to turn the left of the first French column, which was outflanking Baird's right, and menace the great French battery on the hills. General Fraser's division, which had been left immediately before the gates of Coruña, was then ordered up to support Paget. The regiment forming the right of Baird's division was thrown back, and then Moore opened a heavy fire upon the flank of a part of Soult's first column that were advancing in a valley, and met those that were breaking through Elvina with a deadly fire in front from the 50th and 42nd regiments. The French were driven back with great loss; they attempted to make a stand in the village, but they were followed by the 50th, and were soon driven beyond Elvina. Being reinforced beyond the village, and, through a mistake committed by the 42nd, being followed only by the 50th, the French renewed the fight, and drove the English regiment, whose commanding officer was wounded and taken prisoner, back to Elvina.* Sir John Moore rode up to the 42nd with "Highlanders, remember Egypt!" At these words the 42nd rushed forward, driving the French before them, till they were stopped by a stone wall. In the meanwhile General Paget, with the reserve, had checked the advance of the French on the British right, and a furious action had ensued on the left, and all along the line in the valley and on the hills; and this action seemed everywhere favourable to the British. Early in the fight Sir David Baird had his arm shattered with grape shot, and was forced to quit the field. The French having brought up reserves, and having made a concentrated attack at Elvina, where Sir John was cheering on his men, the battle raged fiercely, particularly at this last point, which the English

* The commanding officer of the 50th was Major Charles Napier, (the present General Sir Charles, who has recently distinguished himself so highly in India), eldest brother of the military historian of the 'Peninsular War.' He was hurt in the leg, and received five other wounds before he was taken. He owed his life to the humanity of a French drummer, who prevented some savage soldiers from finishing him with their bayonets, or the butt end of their muskets, as he lay helpless on the ground.

Major Stanhope, who accompanied Major Napier in his advance, received a mortal wound. The honourable major was second son to Earl Stanhope, and nephew to the late Mr. Pitt. As he and Napier were advancing, Moore, who had recommended them both for the military rank they held, was heard to cry out enthusiastically, "Well done, *my* majors! Well done the 50th!"

general was determined to maintain at all hazards. He had sent Captain Hardinge (at present General Sir Henry Hardinge) to order up the guards to support the 42nd highlanders. Captain Hardinge had just returned, and was reporting to his general that the guards were coming quickly, when Sir John was struck on the shoulder and left breast by a cannon ball. He fell from his horse, and was believed to be dead, but before Hardinge could dismount he had half raised himself, and with a steadfast eye and unchanged countenance, was looking after the 42nd and the other troops engaged in his front. He grasped the hand of Hardinge, and, when that gallant and grieving officer said "They are advancing," his countenance lighted up. Colonel Graham now came to the spot, and, from the composure of the general's features, imagined that he was not much hurt, until he saw blood welling from his wound. Shocked at the sight, Graham galloped off in search of surgeons. The hero would not allow himself to be removed to the rear until he saw that his brave highlanders had gained ground far in front. Hardinge tried in vain to stop the effusion of blood with his sash: then, by the help of some highlanders and some guardsmen, he placed the general upon a blanket. In being lifted his sword got entangled, and the hilt pressed against the wound: Hardinge would have unbuckled the belt, and have taken it off; but the dying soldier said, "It is as well as it is. I had rather it should go out of the field with me." Hardinge again began to hope, and to say that he hoped, the wound would not prove mortal. "No, Hardinge," said Moore, "I feel that to be impossible. You need not go with me; report to General Hope that I am wounded, and carried to the rear." * He was then raised from the ground by a highland sergeant and three highland soldiers, who slowly and tenderly conveyed him towards Coruña. The grieved affectionate highlanders had not carried him far when two surgeons came running to his aid. They had been employed in dressing the shattered arm of Baird; who, upon hearing of his disaster, had ordered them to leave him, and hasten to help Moore. But Moore, who was now bleeding fast, said to the surgeons, that they could be of no use to him; that they had better go to the wounded soldiers, to whom they might be useful; and he ordered his bearers to move on. But as his bearers proceeded, he repeatedly made them halt and turn round in order that he might view the battle, and listen to the firing, the fainter sound of which was now indicating that the French were retiring. A spring waggon, bearing Colonel Wynch, wounded from the battle, came up with the highlanders who were carrying Moore. The colonel asked who was in the blanket; and, being told it was Sir John Moore, he wished him to be placed in the waggon. The general asked one of his highlanders whether he thought that the waggon would be better than the blanket: the soldier answered, that the blanket would not shake him so much, as he and his comrades would keep the step, and carry him easy. Sir John said he thought so too; and so they proceeded with him to his lodgings in Coruña, the soldiers shedding tears as they went.

In the meantime the British army had rapidly gained ground everywhere; the obstinate contest at Elvina had terminated in their favour; Paget and the reserve had completely beaten and driven in their left and had even approached their great battery, and Colonel Nicholls had repulsed and pursued the French right. In fact the whole French line was falling back in confusion, leaving the ground thickly strewed with their killed and wounded. Soult had consumed nearly all the ammunition he had brought with him, and must have been exposed to a still more signal overthrow, for the river Mero in his rear was filled by the rising tide, and there was only one bridge over it by which he could retreat; but General Fraser's division could not be brought up in time, and the dark night was now coming on. The French, too, though beaten and disordered, were still far more numerous than the British, the ground they occupied was exceedingly strong, and it was not known how soon reinforcements might reach them. In these circumstances Sir John Hope, upon whom the command devolved, thought it better to avail himself of the present disorder of Soult, and get his own army on board the transports during the night. And this difficult operation was effected without delay and without confusion. The piquets, lighting many fires, covered the retreat of the columns, and, being themselves withdrawn at daybreak, were embarked under the protection of General Hill's brigade, which was posted near the ramparts of the town. These arrangements for embarkation had all been made by Moore, and they were complete and admirable.*

Before the troops began to embark, their beloved leader was dead. When the surgeons waited upon him in his lodgings they found that his left shoulder was shattered to pieces; that the arm was hanging by a piece of skin; that the ribs over the heart were broken, and the muscles of the breast torn in long strips. His pain was great, and he spoke with difficulty. But, when Colonel Anderson, who had been for one-and-twenty years his friend and companion in arms, entered the room, he knew him immediately, though it was almost dark, and, squeezing him by the hand, said—"Anderson, don't leave me!" At intervals he said, with difficulty, but calmly and distinctly—"Anderson, you know that I have always wished to die this way!—Anderson, are the French beaten? [This question he put to every one that came in.] I hope the people of England will be satisfied! I hope my country will do me justice!—Anderson, you will see my friends as soon as you can. Tell them everything; say to my mother—[Here his

* Colonel Napier, Hist. of the War in the Peninsula.—James C. Moore, Narrative of the Campaign of the British army in Spain commanded by Lieutenant-General Sir John Moore, &c., and his Life of his Brother.

voice quite failed him, and he was, for the first time, excessively agitated.] Hope, Hope!—I have much to say to him, but cannot get it out. Are Colonel Graham and all my aides-de-camp well?" They mercifully concealed from him that Captain Burrard, one of his aides-de-camp, was mortally wounded. When Major Colborne came into the room he spoke most kindly to him, and told Anderson to go to ————, and tell him that it was his request and expectation that he would promote the major, for he had been long with him, and he knew him to be most worthy of promotion. He then asked Major Colborne if the French were well beaten; and on being told that they were, and on every point, he said, "It is a great satisfaction for me to know we have beaten the French. Remember me to General Paget; he is a fine fellow!—I feel myself so strong that I fear I shall be long dying—It is great uneasiness—It is great pain." He thanked the surgeons for their trouble. Two of his aides-de-camp, Captains Percy and Stanhope, now came into the room, and, after speaking kindly to both, he asked again if all his aides-de-camp were well. After some interval he said, "Stanhope, remember me to your sister." * He then pressed Colonel Anderson's hand to his body, and in a few minutes died without a struggle.†

Colonel Anderson said, he had often heard the general declare that, if he were killed in battle, he should like to be buried where he had fallen. General Hope and Colonel Graham acceded to this suggestion, and it was determined that the body should be interred on the ramparts in the old citadel of Coruña. At midnight the mortal remains were carried to the citadel by Colonel Graham, Major Colborne, and the aides-de-camp, and deposited in Colonel Graham's quarters. A grave was dug by a party of the 9th regiment, the aides-de-camp attending by turns. No coffin could be procured, as the Spaniards never use any; so the body was never undressed, but wrapped up by the officers of his staff in blankets and a military cloak.

> "No useless coffin enclosed his breast,
> Not in sheet or in shroud we wound him;
> But he lay like a warrior taking his rest,
> With his martial cloak around him."

Towards eight o'clock on the morning of the 17th some firing was heard in the distance. The simple funeral rites were then hastened, lest a serious attack should be made, which would oblige the officers to quit the body and prevent their paying the last sad duties to their chief. The officers of his own staff bore the body to the grave, which the soldiers had dug on the rampart: the funeral-service was read by the chaplain, and then the earth was thrown in, and the grave closed by the soldiers.

When the morning dawned, the French, discovering that the British line had quitted its position, pushed forward some battalions to the heights of Santa Lucia; and, about noon, they got up some cannon to a rising ground near the harbour, and fired at the transports. Several timid masters of transports cut their cables, and four of these vessels ran aground stupidly; but the troops in the stranded vessels were immediately removed by some men-of-war's boats, the four transports were burned, and the rest of the fleet got out of the harbour without accident. At two o'clock in the afternoon General Hill's protecting brigade embarked under the citadel. During that night and the following morning General Beresford, who kept possession of the citadel, sent off all the sick and wounded, whose condition admitted of their being removed; and about noon on the 18th this rear-guard got into the boats and reached the fleet in safety. The inhabitants had undertaken to maintain the town, but it appears that the French made no effort to attack it, or to interrupt the embarkation. The enemy were no doubt kept in awe by the presence of some English line-of-battle ships. When all were on board, the admiral made the signal for sailing, and the transports, under a strong convoy, sailed for England.

In the battle of Coruña the English lost from 800 to 1000 men, the French from 2000 to 3000. When Marshal Soult took possession of Coruña, which he did without any difficulty as soon as the English were gone, he behaved with much humanity to the few hopeless wounded and sick who were left behind; and, in admiration of the qualities of the soldier and the man, he ordered a monument to be erected to Sir John Moore. The generous intention was not executed; but at a later period a monument was erected by the Marques de la Romana and Moore's own countrymen.

Tomb of Sir John Moore.

* Captain Stanhope was younger brother to Major Stanhope, who had fallen at Elvina, being Earl Stanhope's third son. The sister to whom Moore desired to be remembered, was Lady Hester Stanhope, who afterwards made herself so much noted by her eccentricities.

† Account written by Colonel Anderson the morning after Moore's death, in Narrative of the Campaign, &c. by James C. Moore.

Thus ended the retreat to Coruña and the first campaign (during the present war, for the exploits of Lord Peterborough and General Stanhope in Queen Anne's time must not be forgotten) of the English in Spain. Some errors had been committed in the advance through inexperience in campaigning, through a want of a sufficient number of well-trained staff and regimental officers, and through too great a reliance on the reports of ignorant Portuguese and Spaniards, who knew next to nothing of their own countries, were but little acquainted with any districts beyond their native ones, which they rarely left, and were altogether incapable of judging what roads were proper or not for the passage of an army with artillery; but Moore's misfortunes had chiefly resulted from the misinformation of Mr. Frere, the rapid dissolution of the Spanish armies that were to co-operate with him, the apathy of the population in the northern provinces, and the panic which then seemed to have seized the Spanish people everywhere, the badness of the roads and of the weather, and, though last, very far from least, the ignorance and ineptitude of his commissariat—that department which still wanted an organization and an intellect, and which Wellington himself could not organize and render fully effective until after two or three campaigns in the Peninsula. Our greatest captain has said that he could discover only one error in Moore's campaign—his not sufficiently providing for retreat when he advanced against Soult.* But it should appear that proper preparations for the retreat were ordered, and that Moore's orders were rendered fruitless by the mistakes and delays of those intrusted with their execution, by the fatal movement of Romana's people across his line of march, and by the assault made by those Spaniards upon the stores and provisions collected at Astorga for the use of the British troops. Poets, reviewers, and soldiers upon paper—politicians, who contend for party-purposes—and ministers, who consider themselves bound to defend their diplomatic agent—may condemn the whole of the campaign; but it is not the Duke of Wellington that will ever blame Sir John Moore for not crossing the Carion, and for not putting trust in disorderly fugitive Spanish armies. He has had too ample an experience of those armies, which were nearly always fighting when they ought to have been retreating, and flying when they ought to have been fighting. Even as late as the year 1812, when time and experience, and his victories and example, might have been expected to have vastly improved the Spanish armies, we shall find him compelled to raise a siege and make a disastrous retreat by the blunders, the obstinacy, and the want of spirit of these Spanish armies. Moore has been bitterly censured for not relying more on the spirit of the Spanish peasantry; but, as far as he went, he saw no symptoms of this spirit; and neither insurgent peasants, nor regular Spanish troops provided with artillery, had been able to defend the Somosierra, the Guadarrama, the Sierra Morena, or any one of their truly formidable mountain-passes. Wherever the French had presented themselves, there they had cut their way through and had driven the Spaniards before them like chaff. Until Moore got as far back as Astorga, his flanks were always and completely exposed. From Astorga to Coruña the country had great natural strength, and the road, running over, or along the sides of steep mountains, offered many excellent defensive positions; but there was not one of these positions but might be turned by an enemy so numerous, so active, and intelligent as the French, whose leaders had had great practice in mountain-warfare among Alps, Apennines, and Pyrenees—mountains far more mighty than those which run through the Asturias and Galicia. The Marques de la Romana, whose regular army defended nothing, and was capable of nothing, did indeed talk loudly about the capability of the armed peasantry to destroy any French corps that might be sent, for the purpose of turning Moore's positions, into the defiles of those mountains. Mountains of nonsense! The French had gone through defiles in Spain far more difficult, and guarded by a more numerous population and by regular Spanish troops. The various roads that led up the mountains to Moore's flank, or to his rear, have been described as mere paths, practicable only to goatherds and their goats; but this is poetry rather than fact, and where goatherds can pass infantry can pass, and where infantry can pass artillery and stores can be dragged up after them. Were these Cordilleras more rugged and lofty than Mount St. Bernard? Were the French soldiers weaker now than they were eight years ago, when they crossed over that Alp without a road, and carried forty pieces of artillery with them? If Moore had stopped anywhere between Mayorga and Astorga, he must have been enveloped; if he had staid for any length of time at any of the boasted passes between Astorga and Coruña, his position must infallibly have been turned. Nor had he the means of thus staying for more than a very few days: there were none but temporary magazines nearer than Coruña—there were no carriages of transport—there was nothing to be obtained from the beggared, half-starved inhabitants, who were gazing with about equal indifference at the passage of English and of French columns through their own territories. Had he stopped in any of the vaunted defensive positions, the hour, the day of fighting must have been chosen and fixed not by Moore, but by Soult; and the French general would have remained quiet until his position was turned, or until his army was starved away. The

* The modest words of the great captain are these:—"In Sir John Moore's campaign, I can see but one error: when he advanced to Sahagun he should have considered it as a movement of retreat, and sent officers to the rear to mark and prepare the halting-places for every brigade. But this opinion I have formed after long experience of war, and especially of *the peculiarities of a Spanish war, which must have been seen to be understood*; finally, it is an opinion formed *after* the event."

retreat did not begin an hour too soon, nor was it too precipitate, when it began. The promptitude with which Moore checked the advance of his army when the close approach of the converging columns of Bonaparte rendered that measure indispensable, and the accuracy with which he calculated the exact moment when the retreat ought to be commenced, have been admired as signal proofs of his capacity for command. In its advance and its retreat the army had moved over more than 500 English miles, and had been for a long while exposed to an enemy of immensely superior force; and yet, after all, including those killed in battle, its loss amounted to no more than 4000 men, or a sixth-part of the whole, which is not considered as a very high proportion of loss. There was a want of discipline—there were disgraceful disorders during the retreat; but these chiefly arose from circumstances which Moore could neither foresee nor provide against. The military chest was indeed thrown over the mountain-side for want of mules to drag it on; and the Spanish peasants found a pleasanter employment in seeking the hard dollars in the ravines and under the deep snow than they fancied they could find in fighting in the gorges against the French. A few 3-pounders were also abandoned, and a good deal of baggage was thrown into the ravines after the dollars, and for the same reason;—but nothing was taken by force; and neither Bonaparte nor Soult won a piece of artillery, a standard, or a single military trophy from the retreating British army.

Terrible however was the disappointment of the English government and people, who had been induced by incorrect reports to expect little short of miracles from the Spanish armies acting in conjunction with the small auxiliary army of Sir John Moore. Grief for his death, admiration for the manner in which he had died, and a national pride at the noble result of the battle of Coruña, suppressed the complaints of the more generous, which was the far greater part of the nation; but other men, acting under the circumstances already alluded to, were much less tender of the reputation of the truly gallant and high-minded soldier, and long continued to heap censure and satire over his bloody and foreign grave. Officers, immeasurably his inferiors in the knowledge and practice of the art of war, long delighted to dwell upon the errors he was supposed to have committed, and to show, after the fact, and even after a better knowledge had been obtained of the nature of the country and the people, how easily these errors might have been avoided.*

Parliament assembled on the 19th of January. The royal speech, delivered by commission, stated his majesty's reasons for rejecting the proposals made for a negotiation by Russia and France, and spoke of the perseverance of the Spaniards in the cause of their legitimate monarchy and national independence, which would induce his majesty to support the people of Spain so long as they should prove true to themselves. Satisfaction was expressed at the liberation of Portugal, together with some dissatisfaction at some of the articles of the miscalled Cintra Convention. A continuance of aid and support to the King of Sweden, who was now almost crushed by Russian arms and French intrigues, was strongly recommended; as was also a speedy augmentation of our regular army.

The great whig organ in the north had not waited till now to cast discredit upon the war in the Peninsula and our interference in it; to declare despondingly that after all we must expect to fight the battle with Bonaparte on our own shores; that Ireland must be torn from us, and that even the most unsuccessful war which France could carry on in this commercial country must be attended with the most dreadful of consequences. The same organ or luminary had, at the beginning of the struggle, delivered the discouraging oracle that the Spaniards could not be aided, but must be defeated and for ever subdued by the tremendous power of the French emperor; that it would be madness in the English to think of assisting them, and a wickedness of the worst sort to endeavour to form another coalition against the French; that army after army would be poured through the Pyrenees until all Spain was one field of blood; that nothing could resist the vigour and unity of Bonaparte, and the discipline of his veteran soldiers, &c. &c.* The defeats and errors of the Spaniards, the retreat and death of Moore, and other obvious facts, had prepared many minds for the reception of these dark omens; and a large portion of the parliamentary opposition were disposed not only to censure our management of the war in the Peninsula, but also to maintain that no management or skill whatsoever could enable us either to defend Portugal and Spain, or to inflict any blow by land on our invincible foe. All these parliamentary prophecies may be read, by those

* Sir Arthur Wellesley was never among these detractors, nor was the Duke of York, the commander-in-chief of the British army, and who, though not a great general himself, was capable of appreciating those who were, and of paying a liberal tribute to merit wherever he saw it. On the 1st of February, a day or two after the arrival of the news of the battle of Coruña, and of Moore's death, the duke issued general orders from the Horse Guards, holding up the deceased general as an example and model to the British army, and briefly running over the history of his services in the West Indies, in Holland, and in Egypt, where he had obtained the admiration, friendship, and entire confidence of that illustrious officer Sir Ralph Abercrombie.

"Sir John Moore," said these general orders, "from his youth embraced the profession with the feelings and sentiments of a soldier. He felt that a perfect knowledge and an exact performance of the humble but important duties of a subaltern officer are the best foundation for subsequent military fame; and his ardent mind, while it looked forward to those brilliant achievements for which it was formed, applied itself with energy and exemplary assiduity to the duties of that station. In the school of regimental duty he obtained that correct knowledge of his profession so essential to the proper direction of the gallant spirit of the soldier; and he was enabled to establish a characteristic order and regularity of conduct, because the troops found in their leader a striking example of the discipline which he enforced on others. . . . . Thus Sir John Moore, at an early period, obtained, with general approbation, that conspicuous station in which he gloriously terminated his useful and honourable life. In a military character, obtained amidst the dangers of climate, the privations incident to service, and the sufferings of repeated wounds, it is difficult to select any one point as a preferable subject for praise. It exhibits, however, one feature so particularly characteristic of the man, and so important to the best interests of the service, that the commander-in-chief is pleased to mark it with his peculiar approbation. *The life of Sir John Moore was spent amongst the troops.*"

* See Edinburgh Review, vols. ix. xii. xiii.

MONUMENT TO SIR JOHN MOORE, IN ST. PAUL'S. Voted by Parliament, and executed by Bacon, Jun.

who have the patience to read them, in the debates of the times. We say *times*, for they were not only issued now, but continued to be issued for years, and almost down to the eve of the brilliant day when Wellington drove the last French corps down the French side of the Pyrenees. The majority for ministers who entertained better hopes was found, however, to be considerable. Five days before the meeting of Parliament—on the 14th of January, when Moore's retreat was known, and when Spanish affairs bore so gloomy an aspect—Mr. Canning signed the treaty of amity and alliance with the Spanish insurgents, binding his country, which was not hitherto bound by any treaty, to support the cause to the utmost of its power; and never to acknowledge any other king of Spain than his Catholic majesty Ferdinand VII., his heirs, *or such lawful successor as the Spanish nation itself should acknowledge*. This was a species of political heroism, let the hopes our ministers entertained about the new Austrian war be what they might.

The opposition seem almost to have hoped that the misfortunes in Spain, and the few mistakes in the Portuguese convention, would break up the ministry. A motion made in the Commons, by Lord Henry Petty, for directly censuring the Convention in Portugal, and for attributing the whole blame of it to our government, was negatived by 208 against 158; and a motion made by Mr. Ponsonby for an inquiry into the conduct of our late campaign in Spain was rejected by 220 to 127. To those who urged that we ought on no account to have sent an army into Spain, Lord Castlereagh replied that the Spaniards had chosen the mode of regular warfare, and that it would have ill befitted the character of Great Britain to have shrunk from the contest, and to have said to the Spaniards—We will give you money, we will give you arms and stores, but we will not hazard our blood in your defence! The liberation of Portugal was dwelt upon, and Canning, Castlereagh, and others spoke highly of General Wellesley's abilities, and hopefully of the issue of the contest.

The noble secretary-at-war lost no time in urging the necessity of increasing our military force. By two acts greater activity was given to enlistment into the militia, and that force was carried to its full number; the vacancies left by the bill of last session for allowing the militia soldiers to volunteer into the line were filled up; and from 20,000 to 30,000 regular troops, which had been doing garrison or coast duty, were added to the corps disposable for foreign service. An active system of recruiting for the line was commenced at the same time. Some additions were also made to the navy; and in this year the number of cruising line-of-battle ships in commission was 127, being the maximum during the war. Above 27,000,000*l.* were voted for the army and ordnance, and nearly 19,000,000*l.* for the navy. The total amount of supplies for the year for Great Britain and Ireland was 53,862,000*l.* Among the ways and means it was necessary to raise a loan of 11,000,000*l.* The loan was contracted for at a lower rate of interest than

money had ever before been borrowed at on the public account: ministers quoted this as proof of public credit and prosperity; the oppositionists maintained that it was owing to the stagnation of foreign trade, the interruption of our commerce with the United States, arising out of the Berlin and Milan decrees and our own orders in council; or, in other words, that money was lent to government at a low interest only because capitalists could not now employ it in any other way.

Early in the session a subject was introduced which excited extraordinary interest, and which, for months, caused nearly all other public matters to be forgotten by the people. Mr. Wardle, a Welsh gentleman and colonel of militia, who had married a Welsh lady of considerable fortune, who in earlier days had been distinguished by his high Tory zeal, and by the eagerness with which he offered to carry his Welsh militia-men into Ireland to put down the rebels, had lately changed his political creed, and had cultivated a close acquaintance with Sir Francis Burdett, Lord Folkestone, and other members of the extreme opposition party.* On the 27th of January he affirmed in the House of Commons that everything was wrong and rotten at the Horse-guards; that the Duke of York, the commander-in-chief, suffered himself to be swayed by a low-born mistress, one Mary Anne Clarke, who had been carrying on a traffic in commissions and promotions. In proof he stated that Captain Tonyn had paid Mrs. Clarke 500*l.* and immediately after had been gazetted major; that, for 200*l.* paid to Mrs. Clarke, an exchange had been allowed between Lieutenant-colonel Brooke of the infantry, and Lieutenant-colonel Knight of the cavalry; that for 1000*l.* paid to the same lady Major Shaw had been appointed deputy barrack-master at the Cape of Good Hope; that the duke's mistress had a regular scale of prices, &c. &c. Not satisfied with blaming the easiness of temper of the royal commander-in-chief, he insisted that he was a partaker in the benefit and profit arising from these pecuniary transactions. According to Wardle the duke's mistress had also been enabled to dispose of places both in church and state, and had been courted and bribed by more than one clergyman that longed for bishoprics or some other profitable preferment.† The colonel concluded with moving for the appointment of a committee to investigate the charges. Sir Francis Burdett warmly seconded the motion. Lord Castlereagh rose, but not to oppose the motion, for that, he said, would be contrary to the wishes, and still more so to the interests, of the commander-in-chief. He was glad, he added, that the opportunity was afforded of instituting an effectual inquiry into the grounds of the various calumnies which had of late been so industriously circulated against that illustrious personage. His lordship delivered an eulogium on the generosity and application to business which the Duke of York had displayed, and on the extreme order and regularity which he had introduced into the office of the commander-in-chief. Sir Arthur Wellesley spoke in the same tone, but his words carried more weight with them; particularly when he dwelt upon the immense improvement of the army since his royal highness's appointment. Never, he said, was there an army in a better state, as far as depended on the commander-in-chief, than that under his command last summer; and, if that army had not performed all the service for which it was destined, the blame would have rested with him, and not with the commander-in-chief. Whatever discipline and enthusiasm they felt was the result of the example afforded by the illustrious person at the head of the army. Sir Arthur treated with scorn the notion of the duke's putting a little money in his own pocket by encroaching upon the half-pay fund and by trafficking in commissions. The House, he said, would recollect that this very half-pay fund was first established by his royal highness, out of the money furnished from the produce of commissions, which he might have given away without any sale at all: by the system which the Duke of York had introduced an immense saving was effected to the public, and an immense benefit conferred on the service. The loyal Mr. Yorke, for his part, believed that a conspiracy of the most atrocious and diabolical kind existed against his royal highness, founded on the Jacobinical spirit which appeared at the commencement of the French revolution! With better effect this gentleman pointed to the great and undeniable improvement of our military forces. What, said he, was the state of the army when the Duke of York became commander-in-chief? It scarcely deserved the name of an army; and it was now found by experience to be, in proportion to its number, the best army in the world! No well-informed man in the country, no officer in the army, could deny that for this improvement we were in good part indebted to the Duke of York, who, by the common soldiers, was always called "the soldier's friend." Mr. Yorke suggested that a select committee, with power to examine on oath, would be preferable to a committee of the whole House. Lord Folkestone and some more of Wardle's friends were of the same opinion, because they thought it, they said, better calculated for obtaining the ends of justice. Mr. Wilberforce also preferred a select committee, conceiving that justice would be best obtained by an inquiry private in its progress, but to be public in the result; particularly when he reflected on *the description of persons likely to be examined at the bar of the honourable House!*"* The chancellor of

* It appears that Mr. Wardle really served in Ireland during the rebellion, as Major in Sir Watkin William Wynne's Ancient British Light Dragoons. He had been returned to parliament, for the first time, in 1807, for the rotten borough of Oakhampton. He was now living in very splendid style, and spending his wife's fortune with proportionate rapidity. We know from the best source (that is from himself) that he complained in after life of having been made a tool by a party who deserted him as soon as their purposes were served.

† For the very disgraceful details which go to confirm the accusation of ministers and doctors of the Anglican Church courting and bribing the mistress of the Duke of York, we must refer the reader to any of the numerous published accounts of this *delicate* investigation. A very full and good account of the proceedings, the examination of witnesses, &c., will be found in the Edinburgh Annual Register for the year 1809.

* Wilberforce was greatly perplexed by this unpleasant business. He notes in his Diary:—"Wardle's motion on Duke of York—sad

the exchequer, though almost as decorous a man as Wilberforce himself, thought that the House ought not to abandon its inquisitorial functions in this instance, and that the more public the inquiry the better it would be for his royal highness. He could state, on the authority of the Duke of York himself, that that illustrious personage wished, like any other subject, to be put publicly on his trial, and to stand acquitted or convicted upon the case that might be made out. He would stake his reputation that the result of the inquiry would remove all suspicion from his royal highness. The chancellor of the exchequer finished by moving that the inquiry should be carried on by a committee of the whole House. It was agreed that this should be the course pursued, and that the committee should enter upon its functions on Wednesday next, the 1st of February. During the debate Canning had exclaimed, with great heat, "Infamy must attach somewhere! It must attach either to the accused or to *the accuser!*"

The inquiry occupied the almost undivided time and attention of parliament for seven weeks, and it continued to occupy and excite the minds of the people a great deal longer; and this too, in times full of important events, at a crisis as interesting and as critical as any that Europe had known. What Wilberforce most dreaded came to pass—Mrs. Clarke, and one or two others of that "description of persons," were examined at the bar of the House; their examinations were reported day by day; the immorality of the women was forgotten in their wit and graceful impudence; and the House smirked and laughed outright when the pious abolitionist thought they ought to have inwardly groaned. Wilberforce, however, admits that Mrs. Mary Anne did some good, as "by fascinating the House she prevented its degradation by appearing to stifle the inquiry, and take too strong a part with the Duke of York." "It is curious," he adds, "to see how strongly she has won upon people."* This modern Phryne was the daughter of a working printer or compositor, and the wife of a bricklayer or builder, whom she had deserted long ago: she had lived under the *protection*—as it was delicately called—of various gentlemen of superior condition, and was said to have ruined more than one of them by her boundless extravagance. She was remarkable rather for grace than for beauty, and more for her wit than for either: though not old, she was certainly no longer young when she first made the conquest of the Duke of York. Her obeisance at the bar of the House was pronounced a *chef d'œuvre* of theatrical grace; and, when she spoke, her vivacity and quickness, accompanied by the most perfect coolness and self-possession, made the majority of the august legislators feel as if they were only listening to an accomplished actress on the stage. Too many of them had known her aforetime, and occasionally her speaking eye, glancing at the benches, revealed these old intimacies. When the freedom and point, or levity, of her replies were checked with cries of "Order!" and with appeals to the dignity of the House, by the chancellor of the exchequer and Mr. Wilberforce, others encouraged her, and even cheered her. On the first day her examination lasted two hours. "House," says Wilberforce, "examining Mrs. Clarke for two hours—cross-examining her in the Old Bailey way—she elegantly dressed, consummately impudent, and very clever: she clearly got the better in the tussle;—a number of particulars let out about her life, mother, children, &c. Colonel Gordon's evidence would have been sufficient, and I would not have asked one question of Mrs. Clarke." But the House kept examining Mrs. Clarke for many days; and, every time she went down to it, the House was crowded, as were also the streets through which she passed on her way. She was the greatest of lions or lionesses. Even staid and decorous members of the opposition in parliament, and strait-laced political reformers out of doors, overlooked the history of her life, and took her to their hearts as a patriotess, whose revelations would do infinite good to society by exposing and degrading a member of the royal family, who had been the staunch foe of reform or innovation in church and state. Except an occasional blessing on the he-patriot of the party, the virtuous Colonel Wardle, scarcely a name was heard in public for weeks but that of Mary Anne Clarke. People lost their hats, bonnets, shoes, and pocket-handkerchiefs, in running after the carriage that conveyed her through the Park to St. Stephen's Chapel, or in crowding at the door of the House to get a near view of her face and person. The poets and printers of the Seven Dials, and the street ballad-singers, made a fortune by her.* And still her wit and impudence kept up the lively interest of the House of Commons, charming those senators into a pleasant obliviousness about the war, about Portugal and Spain, about Bonaparte, our difficulties at home as well as abroad, and about everything else. A Miss Mary Anne Taylor deposed how the Duke of York used to call Mrs. Clarke "darling," and allow her to take money for promotions, &c. [After this

work! No apparent sense in the House of the guilt of adultery, only of the political offence.——Spoke for any other proceedings than the bar of the House. Major Cartwright writes about parliamentary reform as the only panacea. Alas! 'tis more a moral disease. . . . I wanted greatly to move the examination of the Duke of York's business from the bar, open gallery, &c. to a committee up-stairs, and some parliamentary inquest on oath. This melancholy business will do irreparable mischief to public morals, by accustoming the public to hear without emotion of shameless violations of decency. . . . Lord, guide me right in this great business that is now going on."—*Diary, in Life by his Sons.*

* Diary.

* We still remember some of the lines that were written by one of these St. Giles's poets, part of a song that was sung in 1809 in every street and lane in London,—

"You have heard of Mrs. Clarke,
Who one night in the dark
With her husband felt out about bacon;
But the theme of which I sing
Is of no such vulgar thing:
If you think it you are grossly mistaken.

The Mrs. Clarke that I mean
Has of late oft been seen
At a house not a mile from the Park;
And, whenever there she goes,
You would laugh to see the beaus
Push and drive for to see Mrs. Clarke."

the errand-boys and the chimney-sweeps, playing at toss halfpenny in the streets, never cried out "Heads or Tails," but "Duke or Darling."] When the attorney-general, with due solemnity, asked Mrs. Clarke who brought her a particular message, she replied—"A particular friend of the duke's."—"Who was he?" said the attorney-general.—"Mr. Taylor, the shoe-maker of Bond-street." (A laugh.) "By whom did you send your desires to the duke?"—"By my own pen."—"I mean who carried the letter?"—"The same ambassador."—"What ambassador?"—"Why, the ambassador of *Morocco*."* This last sally convulsed the House with laughter, and induced the speaker to threaten Mrs. Clarke with the displeasure of the House—from which, it was too evident, she had nothing to fear.

That Mrs. Clarke had really distributed commissions, and among them one to her own brother, and that she had received sums of money for her interest in obtaining promotions and appointments, seemed to be proved beyond all doubt; but that the Duke of York had participated in her gains, or had even had a knowledge of her transactions, were circumstances the proof of which depended chiefly, if not entirely, on the veracity of Mrs. Clarke herself. Her credibility was somewhat shaken at the moment, as it became generally known that she was now enjoying under Colonel Wardle, the duke's public accuser, the same sort of protection which she had enjoyed under the duke; that, months before thus transferring herself, the duke had quarrelled with her, at least parted from her; and that the avowed motives of the disclosures she made were an anxiety to please her present paramour (who appears to have been as credulous in one direction as his royal highness had been in another), and her eagerness to be revenged on the duke, who had neglected to pay her 400*l.* a year, which, she said, he had promised and engaged to do. A little later the public faith in her disclosures was still farther shaken by sundry little circumstances. She quarrelled with Wardle, and separated from him—the quarrel being all about money. In the month of July, of this same year 1809, and before city and county meetings had quite finished voting thanks to Colonel Wardle "for his singular intrepidity and integrity in instituting an inquiry into the conduct of his Royal Highness the Duke of York, and for the important and disinterested services he had thereby rendered to his country," a trial came on in the Court of King's Bench, the plaintiff being a Mr. Francis Wright, an upholsterer of Rathbone-place, and the defendant, Colonel Wardle. The attorney-general, who appeared as counsel for the plaintiff, was scarcely to be expected to spare the lash of his tongue on such an occasion: he stated that Mr. Wright brought his action to recover 1914*l.* for the amount of sundry articles of furniture, delivered at Colonel Wardle's order, for fitting up a house for Mrs. Mary Anne Clarke in Westbourne-place, Chelsea. "The colonel," he said, "had personally given the order for the furniture and the promise to pay for it. The plaintiff would not have trusted Mrs. Clarke, who already owed him 500*l.* or 600*l.*; but she told him at the end of last autumn (that is, after she had quarrelled with the duke, and after Wardle had begun collecting materials for his charges), that she had a friend in her eye who would pay him for the furniture for the new house. Wardle had gone with her to the plaintiff's shop or warehouse more than once; some time after the furniture had been delivered, Colonel Wardle, being short of ready money, had called again, and had given the plaintiff, in part payment, a bill for 500*l.* at three months; but, as the investigation of the charges against the Duke of York was then to be proceeded in, this bill was not signed by Colonel Wardle, but by his wine-merchant, a Mr. Illingworth of Pall Mall, who had taken up the bill as soon as it became due. In the House of Commons the attorney-general, together with the other crown lawyers, had strenuously endeavoured to prove that the frail Mary Anne was not a witness to be believed upon her oath; but now he had another cue, and, as counsel for the upholsterer, he could professionally ask how Colonel Wardle could possibly deny the credibility of Mrs. Clarke? It was true, continued the crown lawyer, that she could not get credit of her upholsterer, yet, as her evidence would be confirmed by the brother of the plaintiff, and she was upon her oath, she was deserving of credit before a jury. Being called in, Mrs. Mary Anne Clarke appeared with her usual gaiety. She stated upon oath that she first became acquainted with Colonel Wardle in consequence of a letter written by or for him to her from the Exchequer coffee-house—that she took her new house in Westbourne-place last September, but did not enter till the 9th of November—that she communicated to the colonel that she had taken it, and held several conversations with him about furnishing it before she applied to Wright the upholsterer, to whom she was already in debt. "I did not," said the pleasant and plain-speaking lady, whose tones, however, were not now so agreeable to the colonel's ear as they had been in the House of Commons, when divulging the failings of the duke, "I did not propose to Mr. Wright to furnish my new house on credit, because I knew it would be in vain. I told him I had a friend in view who would pay him. Colonel Wardle was that friend in view, in consequence of some promises he was holding out to me. I was to give him every information in my power, and to assist him in the *investigation*, in return for which he was to furnish my house. This was to be a part of the requital to me for giving him that assistance. . . . . I had no other means then of paying. I was very much

* This ambassador of Morocco—or this Mr. Taylor, ladies' shoemaker of Bond Street—had been a very active agent for the Duke of York and his some-while mistress. It was he who bought for the lady, with the Duke's money, the house and furniture in Gloucester-place, which had belonged to, and had been for years occupied by, the American General Arnold, who had played false to Washington and the American Republic.

distressed at that time. He knew that, and knew of the debt to Wright, because he advised Mr. Wright to bring an action against the person (the Duke of York) who he thought ought to pay it. He promised to Mr. Wright, if he should bring such an action, that he would pay all the costs." She swore point blank to the colonel's ordering the furniture, and promising to pay for it all. The colonel, she said, had afterwards gone a great many times to Wright's in a hackney-coach to look out things for her. Major Dodd, private secretary to the Duke of Kent, went once with Colonel Wardle to the upholsterer's to choose some carpeting. She had chosen a pattern in Westbourne-place, and a piece had been sent in; but the colonel and the major preferred a pattern they had seen at Wright's. "They wished," said she, "to have a *scarlet* and *bronze* pattern." Nothing could bring scarlet into her face: Lord Ellenborough was obliged to speak of her living husband, and one of the counsel let drop the word "adulteress," at which she only smiled. She swore to the bill given for the colonel by Illingworth, the wine-merchant, "in consequence of the *investigation* that was going on, or about to be commenced." "I was rather fearful," said she, "of doing with him alone what Wardle wanted me to do, because he was not much known in parliament. He introduced Major Dodd to me as a gentleman, a friend of his. I had heard of Major Dodd before. About the end of November we went on a tour for three days to view the Martello Towers. Colonel Wardle, Mr. Glennie, the engineer, and Major Dodd, were of the party. I never went out of town but with Wardle. This time, before I could go out of town, I was obliged to have 50*l.* of the colonel," &c. &c. She declared that Wardle's attorney had called upon her and upon the upholsterer two or three days before the trial to endeavour to stop it, and keep the matter from being made public by referring it to arbitration; and that this attorney had told her that if it came before the court Sergeant Best would cut her up by a severe cross-examination, and Colonel Wardle and his friends would give it out that she had been bribed by ministers. Mr. D. Wright, the upholsterer's brother, confirmed Mrs. Clarke in every particular as to the credit being given to Colonel Wardle. To save his client's purse, Sergeant Best, Wardle's counsel, was obliged to expose his want of intellect, and to assail the credibility of the woman who had been the colonel's chief witness against the Duke of York. "*As for this Mrs. Clarke,*" said Best, "*she is a woman whom nobody ought to believe; she is the most artful inventor of a fictitious tale that ever appeared.*" The jury would surely not invade both Colonel Wardle's property and honour upon the testimony of *a woman who could not be believed in any court of justice;*—if he could judge of his client's feelings by his own, he was quite sure that, if she had made an exhibition like that which she had made to-day *before* the colonel had happened to make the motion against the Duke of York, *he would have attached no credit to her evidence against his royal highness!*

The jury brought in a verdict for the plaintiff, with costs, deducting the 500*l.* which had been paid by the wine-merchant's bill, and some items which were thought to be improperly charged to him. The affair cost Wardle 2000*l.*, and a loss of reputation from which he never could recover. On the very next day he published a thundering letter in the newspapers, declaring before God and his country that the verdict had been obtained by perjury alone; and pledging himself to prove the fact the earliest moment the forms of the law would allow him to do so, by proceeding to a second trial, for which he had made application. But, whether it was that the colonel shrunk from the expense, or that he dreaded any further contest with so formidable an enemy and so skilful a manœuvrer as Mrs. Clarke, this second trial never came on.

Only a part of this edifying history was known in the months of February and March, when the investigation and the debates on the amount of the Duke of York's culpability were going on in the House of Commons (the upholsterer's trial not having come on until July); but already enough was known of the character of Mrs. Clarke, of her vindictive unscrupulous temper, and of the relation in which she now stood towards the duke's accuser, to entitle that prince to more than the benefit of a doubt in those most serious and most dishonouring portions of the charges which were supported solely by her evidence. Upon other grounds it was very clearly proved that the duke, if ever he had known of her pecuniary transactions, had never participated in her gains. His known character was enough to negative any such implication; he was, in many matters where no mistress was concerned, credulous and confiding, thoughtless about money, and thus quite capable, and of necessity obliged, to run into debt; but of anything worse than this in money transactions he appears to have been altogether incapable.* It was not proved, unless we admit the evidence of Mrs. Clarke, and a single story of her friend, Miss Mary Anne Taylor (whose brother was married to Mrs. Clarke's sister), that the commander-in-chief ever knew of her getting money by the favours which he dispensed at her intercession; but that he had yielded to that intercession, and had granted a few commissions and promotions and appointments to persons recommended by his mistress, was proved and established by ample and good evidence. The whole extent of this distribution of patronage was, however, very

* During the proceedings in the Commons an honourable member (Mr. Burton) endeavoured to excuse the Duke of York upon the score of his ignorance of the value of money, saying, that forty years ago one of the preceptors of the princes had told him he never could teach them this, though they were quick enough at Greek and even at arithmetic! Whitbread replied, that in the forty years which had elapsed since this opinion was delivered by the tutor their royal highnesses had surely had ample time to gain information and experience. Other members laughed at Burton's anecdote; yet, with reference to more than one of the sons of the careful George III. and the saving Queen Charlotte, it must be admitted that the anecdote had a true point.

inconsiderable—was absolutely nothing compared with what had been dispensed in that way, under the same influences and through the same medium, in former times; and, although some of the appointments were bestowed on improper persons (thus Mrs. Clarke's foot-boy had got a commission in the army as well as her brother), this was certainly not the general rule, and there were two or three cases in which the prevailing mistress, who had her generous qualities too, had successfully exerted herself in behalf of meritorious individuals who did honour to the service, and who, being in distressed circumstances at the time, could not have paid her for the commissions or places she procured them.

The defenders of the duke were, for the most part, though not entirely, members of the present administration, and crown lawyers; while on the opposite side were many of the so-called independent members, who were not habitual oppositionists, and who assumed on all occasions the merit of voting solely and simply according to the dictates of their judgment and conscience. Among these was Wilberforce, the warmth of whose moral and religious feelings seems to have prevented him from carefully examining the question, so as to ascertain on what points the duke was culpable and on what perfectly innocent. He spoke several times, and at great length on one occasion, when the House grew impatient and hurried him to a conclusion.* He took, however, a middle line between the leniency of his friend, Spencer Perceval, chancellor of the exchequer, and the Spartan severity of Colonel Wardle. His friends told him that his speech made a great moral impression in the country; and that the Duke of Cumberland, the king, and all the royal family were extremely angry at him; and, as Wilberforce, perhaps unknown to himself, loved the breath of popularity, and prided himself in little martyrdoms for conscience sake, he must have been doubly gratified by this information. Testimonials of the highest value, as coming from the most competent judges, continued, however, to be given to the Duke of York's general management of affairs at the Horse Guards; and it was cogently urged that the numerous improvements which he had introduced into the army, and the point of excellence to which the army had attained since he had been its commander-in-chief, ought to cover and wipe away a few petty irregularities and peccadilloes. It might be proved that the duke had his weaknesses, and had, in some instances, yielded to a most artful and fascinating woman; but no one could disprove the facts that he had been assiduous in his attention to the business of the army, and that he had proved himself to be a good man of business. The army had never had a commander-in-chief with whom it was so well satisfied, or to whom it was so much attached:—take common soldiers, as well as officers of every class, and these feelings of satisfaction and attachment would be found in immense majorities. Such were the best arguments used in the duke's defence, and the truths on which they rest remain indisputable. After much consideration on the mode of coming to a decision, three different determinations remained for the choice of the House:—1. The administration proposed to acquit the duke entirely on all the charges:—2. Wardle, Lord Folkestone, Burdett, Whitbread, and their friends proposed that the duke's knowledge of, and connivance at, the corrupt practices which had been proved to exist should be admitted, or held by implication, as substantiated by the evidence, and that the House should suggest to his majesty the propriety of the duke's immediate removal from office:—3. Mr. Bankes, supported by Wilberforce, Thornton, and all that party, would acquit the duke of all personal corruption; but, assuming that he could not have been wholly ignorant of some of the abuses, they were of opinion that the command of the army could not with propriety be continued to him. On the 15th of March, or rather on the 16th (for the House sat through the night until six o'clock in the morning) there was a division on the question whether the mode of proceeding should be by address or by resolution. Ministers were very anxious to exclude the medium of address; and the proceeding by resolution was carried by 294 against 199. The House then divided upon Wardle's motion, containing a direct inculpation of the duke, which was negatived by 364 against 123, for many who allowed the minor offences would not admit the major. On the 17th of March the chancellor of the exchequer recommended the first of the three determinations, moving, "That the House, having examined the evidence in the investigation on the Duke of York's conduct, and having found that personal corruption and connivance at corruption have been imputed to him, are of opinion that the imputation is wholly without foundation." The so-called independent members, who took the middle course with Bankes and Wilberforce, kept aloof; but Perceval's motion was nevertheless carried by 278 against 196. This was only a majority of 82; but before dividing upon Perceval's resolution the House had divided upon an amendment, moved by Sir T. Turton, which went to charge the duke with having knowledge of all the corruption which had been disclosed, and, as upon this point the independent or middle party voted with ministers, the said amendment had been rejected by a majority of 200 all but one, the numbers having been 334 against 135. It was now five o'clock on Saturday morning the 19th of March, and the House adjourned till Monday

* Wilberforce said, with some point, that it was not at a time like the present, when all the continental nations were broken down by the armies of France, that this country should have a commander-in-chief liable to be blinded and duped by a woman! "Bonaparte succeeded as much by intrigue as by open force, and, if he found that we had a commander-in-chief who was duped by his mistress, it would be easy for him to gain an ascendancy over such a woman, in order to command the most important secrets of the state. Bonaparte could easily bring over such a woman, not only for a sum of money, but by promising to make a *duchess* or a *princess* of her! This was a game he had played before now; and the more innocent and the more unsuspecting the Duke of York might be the greater would be the danger if the enemy could find out anybody that had such influence over him."

the 21st. On their next meeting the chancellor of the exchequer informed them, that on the Saturday morning, as soon as their decision had been made known to him, the Duke of York had waited upon the king, and tendered his resignation, which had been accepted.* The chancellor of the exchequer added that, having made this communication, he left it to the House without comment—that whether it did not render any further proceeding unnecessary was for Mr. Bathurst and the House to determine. Mr. Bathurst, still thinking it the duty of the Commons to insert in their journals such a decision as should contain both example and admonition, persisted in moving a resolution to this effect, of which he had before given notice. Lord Althorpe, though desirous of recording some condemnation of the duke's conduct, differed from Mr. Bathurst, and wished it to be stated in the journal that the duke had resigned. This, his lordship said, would bring the whole proceeding to its proper close, and show satisfactorily why it was closed. Removal from office was not, indeed, a constitutional punishment; but it would, in this case, be so far effective as to preclude the possibility of the royal duke being ever re-appointed to a situation which he had proved himself so incompetent to fill. He had lost the confidence of the country for ever, and must, therefore, abandon all hope of ever returning to that situation. Lord Althorpe concluded with moving, that, his royal highness having resigned, the House does not *now* think it necessary to proceed any farther in consideration of the evidence. Perceval replied, that, after the House had negatived the charges, it would be unjust, it would be monstrous, thus to reserve to themselves the right of reviving the proceedings against his royal highness at any future period; and he moved as an amendment that Lord Althorpe's word "now" should be expunged. This was carried by a majority of 123; the numbers voting being 235 against 112. Mr. Bathurst's admonitory resolution was then negatived without a division.

Thus terminated a discussion which occupied nearly a third of the whole session, to the grievous interruption of public business, and the more grievous excitement of the people. The affair, however, was not without its beneficial results. A striking proof was given to the world that, under our constitution, no rank, however elevated, could shelter abuses from detection, or screen those concerned in them from the effects of public displeasure. The king's second and favourite son, a prince so near the throne himself, had been driven from office by a member of the House of Commons who was unheard of before this transaction, and who possessed neither the influence of character nor the influence of talent. It had been proved to the conviction of the country that the Duke of York was so far culpable as to render his resignation proper; that resignation had taken place in consequence, and public opinion had thus obtained a most signal triumph. Where the duke had thus incurred punishment and disgrace individuals of less rank and influence could not expect that their official delinquencies or irregularities should escape; the fate of the prince was an example and admonition not easily to be forgotten. Until the time when there will be no more war, and when men will no more want commissions in armies, or profitable places under government, it will be in vain to expect perfection in anything, vain to hope that the distributors of patronage will not occasionally yield to favouritism and other influences, besides that great parliamentary influence over appointments which—fatal as it often is—can hardly be destroyed without destroying the constitution. [And, were we to destroy the British constitution to-morrow by thoroughly democratizing it, we have the melancholy example of the United States of America to convince us that democracy is no protection against such abuses—that there is more jobbing and dirty work in one State of the Union than in all Downing-street and Whitehall.]* But, notwithstanding the occasional interference of friends, wives, sisters, cousins, and other connexions, which may possibly be as mischievous though less indecorous than that of a mistress, we believe it is admitted, by all candid and properly informed persons, that since the investigation in 1809, patronage at the Horse-guards, as well as in the other offices of government, has been distributed with more attention to the public service than at any time preceding that inquiry.

It had been hoped, on the resignation of the Duke of York, that the system of the Admiralty would be adopted at the War-office, and that the office of commander-in-chief would be put in commission. This had been the more confidently expected as it would make several places, instead of one, and so far tend to increase the patronage of government. But, to the disappointment of sundry expectants, ministers made no alteration in the existing system, and that worthy but old and pedantic and worn-out officer, Lieutenant-General Sir David Dundas, was appointed to succeed his royal highness. The army felt that it had sustained a grievous loss by this change, and before old Sir David had presided six months at the Horse-guards there was a universal clamour against him.

In the course of the session the chancellor of the exchequer moved for leave to bring in a bill to prevent the sale and brokerage of offices. He observed, that the practices lately disclosed consisted

* The Duke of York had said to his father, that, the House of Commons having passed a resolution declaratory of his innocence, he might now approach his majesty and tender his resignation, as he could no longer be suspected of acting from any apprehension of the result of the parliamentary investigation, nor be accused of having shrunk from an inquiry which, painful as it had been, he had met with a patience and firmness which could have arisen only from conscious innocence:—that he must quit with sincere regret a situation in which his majesty's confidence and partiality had placed him, and the duties of which it had been his anxious study and pride, during fourteen years, to discharge with integrity and fidelity; whether he might be allowed to add with advantage to the service his majesty was best able to decide.

* See for confirmation the extracts from the Correspondence of Lord Sydenham (Poulett Thomson), in the Memoir of his Life recently published by his Brother.

not in the sale of offices by those who had the power to give them, but in the arts of those who pretended to possess an influence over such persons. His object, therefore, was to make it highly penal to solicit money for procuring government offices, or to circulate advertisements with that view. Leave being given, the bill was brought in, and, before the end of the session, it was passed into a law.

The commissioners of naval inquiry and revision presented another report, which brought to light many more abuses in that department. The commissioners of military inquiry, who also continued their labours, presented several very significant reports, showing that large sums of money, and large powers in money-transactions, had often been intrusted to various persons without the necessary securities, checks, and precautions; that in the West Indies a regular and unchecked system of peculation had been carried on in the most unblushing manner; that the paymasters, the agents of the commissary-general, and others in our West India islands, had been in the habit of committing great frauds, &c. It is to be observed that these denunciations were almost entirely retrospective, referring to transactions which had passed many years ago. The evils appear to have originated principally in the unsystematic, slovenly way of keeping the public accounts.

It had been for some time reported by the opposition that government had made, and was still making, a regular traffic in East India appointments. A select committee of the House of Commons was nominated to inquire into the existence of any corrupt practices in regard to the appointment of writers or cadets in the service of the East India Company; and this committee reported that it appeared that a very great number of such places had been disposed of in an illegal manner. In the course of the examinations it was discovered that Lord Castlereagh, as president of the board of control, had placed a writership at the disposal of his friend Lord Clancarty, which writership Clancarty was to give to one Mr. Reding, as the price of a seat in Parliament for himself (Clancarty), the said Mr. Reding, a regular dealer in contraband promotions, meaning to sell this writership for 3000 guineas. This negotiation being disclosed to the House, Lord Archibald Hamilton, on the 25th of April, moved, that Lord Castlereagh had been guilty of a violation of his duty, of an abuse of his influence and authority as president of the board of control, and also of an attack upon the purity and constitution of parliament. Lord Castlereagh's defence was, that when this transaction took place he had no notion that such a person existed as a trafficking broker for places; that Reding had represented to him that a member of the House of Commons, who intended to vacate his seat, had a nephew whom he wished to send out to India as a writer, and would favour the election of any friend of his. "I perceived," said his lordship, "no impropriety in the case, *considering it perfectly fair for one friend to serve another at an election.* When I placed the writership at Lord Clancarty's disposal, I had no other view than to serve my friend, and had no hesitation to give a writership to the son or nephew of any respectable gentleman who could promote that view, particularly as I was myself to determine whether the party recommended for the writership was eligible. In my opinion, no turpitude attaches to the transaction." Lord Castlereagh then modestly bowed and withdrew from the House.* Lord Binning insisted that there was no corrupt design in the transaction, and moved the order of the day. Mr. Croker supported the motion, saying that in this case there really existed nothing but a parliamentary difficulty; that the thing had become familiar by custom, and could only be considered as a venial offence. The chancellor of the exchequer and Mr. Manners Sutton argued that, as the whole case rested in a mere intention:—as nothing had taken effect—as no bargain had been concluded—as no privilege had been violated,—therefore no further proceeding was necessary. On the other hand, Mr. C. W. Wynne maintained, that, if the negotiation had failed, it was not from any want of inclination in Lord Castlereagh to complete it. He knew, he said, that there were many persons in the House who were disposed to argue that the influence of government over elections was not injurious, and that little disadvantage resulted from the practice of bribery; but, for himself, he must think, when a case like the present was made out, they were bound in duty to follow the course prescribed by law and by act of parliament, whatever their private opinions might be. Surely the intention manifested and acknowledged was sufficient to establish the criminality. Sir Francis Burdett and Mr. W. Smith warmly supported Lord Archibald Hamilton. Windham recommended a middle course, saying, that, if the House passed to the order of the day, as proposed by Lord Binning, it might be regarded as an approbation of the principle involved in the proceeding; and that, on the other hand, before condemning Lord Castlereagh so very violently as Lord Archibald Hamilton proposed to do, they would do well to ask themselves whether they would hesitate, for the purpose of securing an election, to recommend a friend to government. Windham concluded by alluding to the meetings that were holding, and to the loud cry that was prevailing out of doors, for parliamentary reform—for a reform which, he said, must inevitably terminate in revolution. This was calculated to alarm many who were not altogether indisposed to mark with some censure the conduct of Lord Castlereagh. Wilber-

* Before withdrawing, his Lordship however added:—"I had no suspicion of the improper motives from which Mr. Reding was acting. The only conversation Lord Clancarty had with him was for the purpose of learning who was the person disposed to retire from parliament, and, finding that he could not obtain that information, he broke off the business. It is evident, therefore, that the bartering of a writership for any corrupt consideration was as far from Lord Clancarty's mind as from my own."

force, after being "long doubtful," at last decided to vote in favour of Castlereagh, thinking it "too severe to turn him out for such an offence." Some of Wilberforce's friends, however, took the opposite course. The debate was concluded by Canning, who moved, "That it is the duty of the House to maintain a jealous guard over the purity and independence of parliament; but that, having duly weighed the evidence and all the circumstances of the present case, the House does not think it necessary to come to any criminating resolution." Upon a division Lord Archibald Hamilton's original motion was negatived by 216 against 167. The House then divided upon Canning's motion, which was carried by a majority of 47.*

On the 5th of May, Mr. Madox, then a close ally of Sir Francis Burdett, Colonel Wardle, and other hot parliamentary reformers, brought forward in the house charges against Perceval, the chancellor of the exchequer, Lord Castlereagh, as secretary-at-war, and the Hon. Henry Wellesley, brother to General Sir Arthur, and late secretrry of the treasury, of being guilty of corrupt and criminal practices, in order to procure members to be elected into this parliament. But a few days afterwards, when Madox moved criminating resolutions, he was out-voted by a majority of 225 against 85. In the meantime Mr. Curwen had (on the 4th of May) moved for leave to bring in a bill for "better securing the independence and purity of parliament, by preventing the procuring or obtaining seats by corrupt practices, and likewise more effectually to prevent bribery." Mr. Curwen made use of some very unfortunate arguments; but the leave he asked was granted, and his bill, which dwelt in generalities, and which added little to the Grenville Act already existing, was carried by a narrow majority, and became law—but not until it had been subjected to various alterations.

On the 15th of June, two days after the closing of the discussions upon Curwen's bill, Sir Francis Burdett made a motion for a sweeping parliamentary reform. Nearly all the country gentlemen in the House had left town, and of the members that remained, but few were inclined to enter upon this discussion at the fag end of the session. Sir Francis had intended to make his motion the day before, but there had not been members enough present to make a House; and now, when the House divided, he found only 15 to vote for him, while 74 voted against him.

On the 21st of June the session was closed with a speech from the throne, again delivered by commissioners. This speech dwelt chiefly upon the determined and unconquerable resistance of Spain against the usurpation and tyranny of the French government, and upon the splendid and important successes which had recently crowned the arms of the Emperor of Austria, under the able and distinguished conduct of his Imperial Highness the Archduke Charles.

The Austrian war operated as a grand diversion likely to be highly favourable for the Peninsula, as it distracted the attention of Bonaparte, obliged him to withdraw his Imperial Guards from Spain, and prevented his sending reinforcements to that country so quickly as he would otherwise have done. The British government, undismayed by the unfortunate, but not inglorious or discouraging result of Sir John Moore's campaign, and undeterred by the orators and writers who represented the attempt as the height of madness, resolved to persevere in sending assistance to the Peninsula, and to enter upon that war on a larger and a bolder scale. Spain, at the moment, did indeed seem prostrate and lost; and even Portugal, from which the French had been completely expelled, was, long before the rising of parliament, re-invaded by an army under Marshal Soult. But, in a memorandum dated on the 7th of March, Sir Arthur Wellesley, who had well examined the country during his short stay in it, delivered his decided opinion that Portugal might be defended, whatever might be the result of the contest in Spain; and that in the meantime the measures adopted for the defence of Portugal would be highly useful to the Spaniards in their contest with the French. His notion was,—that the Portuguese military establishments ought, by means of English assistance, to be raised to 40,000 militia and 30,000 regular troops; that the British troops in the country should be raised to 20,000 infantry, and 4000 or 5000 cavalry; that the rifle corps should be increased; that other choice infantry should be sent out, together with an additional corps of artillery and more ordnance; that, even if Spain should be conquered, the French would not be able to overrun Portugal with a smaller force than 100,000 men; and that, as long as the contest should continue in Spain, the united British and Portuguese force, if it could be put in a state of activity, would be highly useful to the Spaniards, and *might eventually decide the contest.**

* After this, Mr. C. W. Wynne proposed to add to Canning's resolution words to this effect:—"That the House is confirmed in its opinion, that it is unnecessary to proceed further in the case, from the openness which Lord Castlereagh has displayed, and the regret which he has expressed for his conduct." This was negatived without a division. But Wilberforce admitted the principle into his Diary, saying, a few days afterwards, "The Burdettites are trying to stir up a flame about Castlereagh's not being condemned by the House of Commons; but he owned his fault frankly and humbly; so did all his colleagues; and it rested in intention, and never was an act."

* In this remarkable document, short as it is, nearly everything is foreseen and provided for. Sir Arthur knew how the Spanish juntas had misapplied the money which Great Britain had sent; and, therefore, he recommends that the English ambassador at Lisbon shall be empowered to give or withhold such sums as he may think necessary for the support of the Portuguese military establishments *only*. The Spanish juntas, partly through their own ignorance of business, partly through their own corruption, and partly through the difficulty of raising any taxes even in the districts where the French were not, had made a terrible jumble of the revenue. Sir Arthur recommended that the English ambassador at Lisbon should see that the revenues of Portugal, whatever they might be, were in the first instance applied to the military establishments of the country, and that our ambassador should have a complete control over the measures of the Portuguese government. As indispensable parts of his plan, Sir Arthur laid it down that the whole of the army in Portugal, Portuguese as well as British, *should be placed under the command of British officers;* that the staff of the army, *the commissariat in particular*, must be British; and that these two departments must be increased in proportion to the strength of the whole army about to act in Portugal, to the number of detached posts it would be necessary to occupy, and with a view *to the great difficulties of providing and distributing supplies in that country*. But for the care taken by Sir Arthur Wellesley of the commissariat, which other commanders in-chief had

There could now scarcely be a doubt as to the proper person to be appointed to the supreme command of the armies in Portugal. If any such doubt had lingered, it ought to have been dissipated by Sir Arthur's memorandum of the 7th of March, by other suggestions he offered to ministers with rare brevity, clearness, and precision, and by the concurring opinion of the best officers in the British army. Men as well as officers, Portuguese as well as British, called loudly for his return to the Peninsula. In spite of the very illiberal and very unwise opposition of Lord Folkestone, and a few other individuals of that party, votes of thanks to Sir Arthur, and a resolution in approbation of the gallant conduct of the non-commissioned officers and privates who had fought at Roliça and Vimeiro, were passed by both Houses in the month of February. Towards the end of March, Sir Arthur Wellesley, having previously resigned his office of secretary for Ireland, as well as his seat in parliament, and having taken a long farewell of home politics, accepted the chief command of the British forces in the Peninsula. On the 15th of April he set sail from Portsmouth for Lisbon in the 'Surveillante' frigate, which was very nearly lost in a storm at the back of the Isle of Wight, the night after she quitted Spithead.* The fleet having on board his horses, two regiments of heavy dragoons, and some horses for the artillery, sailed a few days after him; and a regiment of hussars, the 24th foot, and a brigade of light infantry, very soon followed. On the 22nd of April he arrived safely at Lisbon, and took the command of the army, which had now been left for some time in the hands of Sir J. Cradock. Almost as soon as he arrived, he said he thought that Marshal Soult would not remain long in Portugal.

Soult, after the capitulation of the Spaniards at

Lisbon.

Coruña, had obtained easy possession of Ferrol, Bilboa, and all the most important places on the northern coast of Spain. Then he had proceeded towards Portugal, and, having entered that country by Braga, he had taken possession of Oporto on the 29th of March, after a spiritless resistance of only two days. Upon the rapid advance of Soult Sir J. Cradock had concentrated his forces for the defence of Lisbon. There were other discouraging circumstances: the French had reduced many towns and districts on the east of the Ebro; Zaragoza, a second time besieged, was not so valorous or so fortunate as in 1808, but had been obliged to surrender at discretion on the 14th of February; and, what was gloomiest of all, the Spaniards at Madrid, and in many other large cities and districts, seemed to be quietly resigning themselves to the dominion of King Joseph. Still, however,

been accustomed woefully to neglect, or to leave to their inferiors—thinking barrels of salt pork and bags of biscuits unworthy the attention of well-bred gentlemen and gallant soldiers—but for the reforms he gradually introduced into our un-systematised commissariat department, there would have been no such glorious victories as Salamanca, Vitoria, and Toulouse; but the British army would have been wasted away by famine, and driven from the Peninsula with disgrace.

For the rest of this memorandum on the defence of Portugal, see Colonel Gurwood, Wellington Dispatches.

* Note by Colonel Gurwood, in Dispatches.

there were some brighter glimpses—some few indications of Spanish patriotism and resolution: for no sooner had Soult evacuated Galicia than the people rose in arms, and several places in the Asturias and in the Biscayan provinces had been re-taken by the patriots. Moreover, in Portugal, a body of Portuguese regulars had been admirably disciplined in the English manner by General Beresford, to whom the Prince Regent of Portugal had given the chief command of all his troops. Beresford's Portuguese, being added to the British reinforcements, enabled Sir Arthur to take the field with an army of about 25,000 men. His first business was to dislodge Soult from Oporto; and to this end, and after leaving a division on the Tagus to guard the eastern frontiers against the French division or corps of Victor, stationed in Spanish Estremadura, he quitted Lisbon, on the 28th of April, for Coimbra. Having collected his forces at Coimbra, he moved, on the 9th of May, in the direction of Oporto, driving back all the French who had advanced south of the Douro.* By the 11th he occupied the southern bank of that river opposite the town of Oporto. The French had destroyed the bridges and removed the boats to their own side; and Soult was preparing to retire leisurely by the road to Galicia. But Wellesley determined that the Marshal's retreat should not be quite so comfortable: he sent General Murray with a brigade to pass the Douro, about four miles above Oporto, whilst the brigade of guards was directed to cross the river at the suburb of Villanova, and the main body, under Wellesley's own eye, was to attempt a passage in the centre, by means of any boats that they could find, just above the town. The Douro at this part is very rapid, and nearly three hundred yards wide. The ground on the left bank, or English side of the river, was protected and commanded by some cannon placed on the height of the Serra convent at Villanova; and there appeared to be a good position for our troops on the opposite side of the river, till they should be collected in sufficient numbers. The enemy took no notice of the collecting of boats by the English, or of the embarkation of our troops, till after the first battalion (the Buffs) were landed, and had taken up their selected position, on the opposite bank, under the command of Major-General the Honourable Sir E. Paget.† The French then made a most furious attack, which they continued for about two hours; but the Buffs got possession of an unfinished building called the Seminario, from which nothing could dislodge them; and, although cavalry, infantry, and artillery, under the command of Marshal Soult himself, were hurled against them, the Buffs most gallantly kept their position, till supported successively by the 48th and 66th regiments, belonging to the brigade of Major-General Hill, who crossed the river in fine style, by a Portuguese battalion, and afterwards by the first battalion of detachments. General Paget was wounded soon after the French attack commenced, when the command of these troops devolved upon General Hill.* While Hill was maintaining the combat at the Seminario, and giving ample occupation to Soult, General Sherbrooke, with the guards (one brigade) and the 29th regiment, crossed the river lower down, entered into the very town of Oporto, amidst the acclamations of the inhabitants, charged the French through the streets, and presently appeared upon Soult's right flank. In the meantime General Murray had crossed the river at Avintas, about four miles higher up, and the head of his column now began to show itself on the French left. Soult instantly ordered a retreat, which was effected in the utmost confusion: he left behind his sick and wounded, and many prisoners, besides artillery and ammunition, and retired by Amarante, with the intention of passing through Tras-os-Montes into Spain.

Thus the fair city of Oporto was left in possession of the British. The passage of the broad and rapid Douro, effected in broad day, with most defective means of transport, and in presence of a French marshal at the head of 10,000 veterans, has been considered one of Wellington's finest achievements. He had lost only 23 killed and 98 wounded. Soult's loss was very large, and the sick and wounded he left in Oporto amounted to 700.† On taking possession of Oporto, General Wellesley issued a very necessary proclamation, strictly enjoining the inhabitants to respect the French wounded and prisoners. "I call upon the inhabitants of Oporto to be merciful to the wounded and prisoners! By the laws of war they are entitled to my protection, *which I am determined to afford them;* and it will be worthy of the generosity and bravery of the Portuguese nation not to revenge the injuries which have been done to them on these unfortunate persons, who can only be considered as instruments in the hands of the more powerful, who are still in arms against us." He also wrote immediately to Marshal Soult to request him to send some French medical officers to take care of their sick and wounded, as he could not spare his own army surgeons, and as he did not wish to trust to the practitioners of the

* We have no room for details of minor engagements; but in this advance there were two affairs of some importance. On the 10th of May Sir Arthur attempted to surprise the French cavalry which had crossed the Douro; and, although the surprise failed, several advantages were gained in the field, and one piece of cannon was taken. The Portuguese riflemen, and the Portuguese students, who had volunteered into the army, behaved remarkably well. On the 11th of May the French gave him a field-day. His advanced guard, consisting only of the first battalion of detachments, two battalions of the German Legion, and Colonel Doyle's battalion of the 16th Portuguese regiment, completely beat a corps of about 4000 infantry. The Portuguese troops again behaved remarkably well. It was already clear that, under good British officers, full reliance might be placed upon them. On their retreat the French were hotly pursued by two squadrons of dragoons, led by Brigadier General the Honourable Charles Stewart (now Marquess of Londonderry), who destroyed many, and took some prisoners.—*Wellington Dispatches.*

† Brother to the Marquess of Anglesey.

* General Paget, who had behaved so nobly under Sir John Moore, lost his right arm at Oporto.

† "I cannot say too much in favour of the officers and troops. They have marched in four days over eighty miles of most difficult country, have gained many important positions, and have engaged and defeated three different bodies of the enemy's troops."—*Sir Arthur's Dispatch to Viscount Castlereagh, in Colonel Gurwood, Wellington Dispatches.*

OPORTO.

town of Oporto, who, whatever might be the amount of their humanity, were certainly not distinguished by professional skill. He assured Soult that his medical officers should be returned to him as soon as they had cured the wounded; and he proposed a cartel or mutual exchange of prisoners. Whatever Sir Arthur could do to diminish the horrors of war was done, and promptly. We firmly believe it to have been in the nature of Soult to respond on his part; but it was impossible for him to subdue or control the ferocity of some of the troops that were serving under him, and that were driven frantic by their reverses and sufferings, and the merciless attacks of the Portuguese peasantry, which could only be checked by the immediate presence of British forces, who could not be everywhere.

Almost from the first commencement of the Spanish war there had been murmuring and discontent among the French troops, divisions and jealousies among the superior officers, and intrigues which embraced a very wide field, and which had many ramifications, some of which have never been explained or understood; while some are known to have originated in secret societies. A few days before gaining possession of Oporto, Sir Arthur Wellesley had obtained information from a French officer, or at least an officer in the French service (a Captain ....., himself one of the conspirators), that conspiracies existed in Soult's army. The English general did what he was justified in doing by the law and practice of war, and what no belligerent, having the means, ever neglected to do. On the 9th of May, Captain ..... was seized on his return to Oporto, after his last interview with Sir Arthur Wellesley. His papers were likewise seized, among which were found English passports, and the captain could not deny that he had had communications with the English general. It appeared that he had been endeavouring to gain over the French General ....., who, instead of entering into his views, revealed the secret to Soult. Captain ....., at the persuasion of the officer of gendarmes who had charge of him, revealed the names of some of his fellow-conspirators, and they were seized likewise. Sir Arthur obtained the original orders for their seizure and confinement *au secret*. They were all marched away as prisoners after the evacuation of Oporto. But on the 13th of May, Captain ....., having fired at the officer of gendarmes who had induced him to reveal the names of his accomplices, escaped and came to Sir Arthur in Oporto. He reported that he had escaped by the advice of a colonel of dragoons, one of the principals of the conspiracy, who conceived that when he should be gone there would be no evidence against himself. The conspirators had intended nothing less than to seize Soult, and induce the other general officers to lead the army back into France.* This Captain .....

* It appears that this Captain ..... first got into communication with Sir Arthur Wellesley as early as the 25th of April, and at Lisbon, to which city he had gone secretly with Major Douglas, who was serving under General Beresford in the Portuguese army. He informed Sir Arthur that great discontent and dissatisfaction with the measures

gave Sir Arthur very important information concerning Soult's movements and intentions; he showed him a paper very ably drawn up, as he said, by a French officer of high rank, which pointed out the different lines of retreat, and the line which Soult would prefer. He solemnly declared that the conspiracy in the French army still existed, and that, sooner or later, it must burst forth and fall heavily upon the head of the usurper; and he talked of the war in Spain as being odious to the army and to the whole French nation. Sir Arthur sent him to England and profited by his advice. He wrote to Beresford, who was at Villa Real with his Portuguese corps—"Keep Villa Real, if you can do so with safety, and depend upon my being close upon the heels of the French." When Soult reached Amarante he found that General Loison had abandoned the bridge there. This obliged him to change his route, and, marching by Guimaraens and Braga, he intended to make for Salamonde and Montealegre, and thence into Galicia, the part of Spain from which he had advanced in the early spring. But, on the evening of the 16th of May, he was overtaken on the road near Salamonde by Sir Arthur, who cut up his rear-guard and took some prisoners. A good many of the French were killed and wounded, and a great many more of them were lost in crossing a narrow bridge over the Cabado, in the dark and in the hurry of their flight. On our side the Guards only were engaged. "We should have had the whole of Soult's rear-guard," says Sir Arthur, "if we had but had half an hour more daylight. ....I shall follow him to-morrow....He has lost every thing—cannon, ammunition, baggage, military-chest, and his retreat is, in every respect, even in weather, a *pendant* for the retreat to Coruña." Thus speedily was Sir John Moore avenged on the French marshal who had pursued him. Soult, like Moore, had to retire through a mountainous country: he left the road strewed with dead horses and mules, and with the bodies of French soldiers, who were put to death by the peasantry before the advance-guard of the British could come up and save them. The French, by their own conduct, had provoked this merciless retaliation. "Their soldiers," says Wellesley, "have plundered and murdered the peasantry at their pleasure; and I have seen many persons hanging in the trees by the sides of the road, executed for no other reason that I could learn, excepting that they have not been friendly to the French invasion and usurpation of the government of their country; and the route of their column on their retreat could be traced by the smoke of the villages to which they set fire."* The same horrible scenes occurred in all the subsequent retrograde movements of the French: the blessed fountains of mercy were dried up in the invaders and in the invaded. With troops that carried with them over the roughest roads artillery, baggage, and full equipments, Sir Arthur could not hope to come up with Soult with an army that had lightened itself by throwing away everything, and that depended for its provisions on plunder. He stopped his pursuit at Montealegre, a few leagues from the frontier of Spain, across which the French fled in irremediable disorder—in a state so crippled that they could do no harm, and might have been destroyed by Romana, if that general had had any force at all. But Romana, who ought to have met Soult on the borders of Galicia, was again "nowhere."

Sir Arthur returned by Ruivaes, Braga, and

of Bonaparte prevailed throughout the French army, and particularly in the corps of Marshal Soult, which had suffered, and was still suffering, extreme distress; that a large portion of the officers of Soult's army were determined to revolt, and to seize the general, together with such of his principal officers as were supposed to be particularly attached to the interests of Bonaparte, if that army should be so pressed by the British as to oblige Soult to concentrate in situations chosen with a view to defence rather than with a view to the subsistence of the French troops. Captain .... earnestly asked for passports for himself and two other captains of Soult's army to go to France, where they wished to communicate with three general officers and with other persons dissatisfied with the existing order of things. Sir Arthur communicated with the British admiral and obtained the passports enabling the three French captains to go to France by sea. Sir Arthur, however, pledged himself no further, telling the conspirators that, though he wished them success, the *line* which he would take must depend upon circumstances. "Your lordship," said Sir Arthur, writing to Castlereagh, "will observe that I have not thought it proper to discourage the disposition which appears to prevail among the French officers; at the same time that I have taken care not only not to pledge myself to any particular line of conduct, but that those concerned should understand that I do not consider myself pledged by anything that has passed. The successful revolt of a French army might be attended by the most extensive and important consequences; whereas their defeat, or what is a more improbable event, their surrender, would affect only local interests and objects, excepting that either of these events would add to the reputation of his majesty's arms."—*Dispatch dated Lisbon, 27th April, in Colonel Gurwood, Wellington Dispatches.*

In a more private communication Sir Arthur assured Castlereagh that he fully believed in the intention of some of the French officers to revolt; that the existence of this intention was confirmed in his mind by the recollection of what had dropped from nearly every individual of Junot's army with whom he had conversed when in Portugal last year; but that he much doubted whether it would be quite so easy to carry the intention successfully into execution. He added, that he certainly should not count upon or wait for a revolt, but try his own means of subduing Soult. On his advance towards the Douro Sir Arthur saw the French captain again by night, and at a bivouac fire, on the road between Fornos and Martede. He was now informed that there were two parties in Soult's army: one, determined to seize him at all events: the other, who wished to seize him only in case of his declaring himself *King of Portugal*—a bold and strange design, of which both Marshall Soult and his predecessor Junot were at different times suspected. Captain ..... said that, if Soult could only be induced to declare himself king, the whole army of Laborde and Loison would declare against him, and *lead the army back into France.* He proposed to Sir Arthur two plans: one, that the English should endeavour to draw Soult into a snare by persuading some of the people in that part of the country to address him and invite him to declare himself king, and even that Sir Arthur himself should write to the marshal to recommend the same measure, as one most likely to pacify Portugal and Spain:—*the other plan* was, that Sir Arthur, who, as yet, was only at Coimbra, should make his dispositions, and attack Soult forthwith. To the first wild plan the English general replied, that he could have nothing to do with it, as it must deprive him of the confidence of the Portuguese. With respect to the attack, he told "our friend" that he would make it as soon as he could, but that the time must depend upon circumstances.

According to a French authority some nobles, burghers, and priests had, during Soult's residence in Oporto, presented addresses in their own name and in the name of several Portuguese towns, inviting the marshal to put an end to the troubles of the country by declaring himself king of it under the suzerainty of the Emperor Napoleon; Soult had accepted the invitation, with the proviso of the emperor's approbation; the marshal addressed to his generals of division a printed proclamation drawn up in this sense, which they were requested to put into the order of the day of the army; but the generals refused to do this, and wrote to acquaint Bonaparte, then in Germany, with this curious intrigue. According to the same authority, the officer that communicated with Sir Arthur Wellesley was the Adjutant-Major d'Argenton; and the *ensemble* of the great design of the conspirators was to make all the French troops in the Peninsula revolt against Bonaparte, bring back General Moreau, place him at the head of all those *corps d'armée*, and then invade France while Bonaparte should be contending on the Danube with the Archduke Charles, overthrow his throne and his whole system, and erect a republic or a free constitutional monarchic government.—*Histoire Parlementaire de la Révolution Française.*

* Dispatch to Viscount Castlereagh, dated Montealegre, 18th May, in Colonel Gurwood, Wellington Dispatches.

S. Terso to Oporto, where he diligently applied himself to the means of improving the commissariat; of fostering a kindly feeling between the British and Portuguese officers; of remedying the most crying distresses of the Portuguese people; and of obtaining the most accurate information as to the nature of the country and the state of the roads. It was while he was at Oporto that he learned that Mr. Frere had been superseded by his own brother the Marquess of Wellesley, whose appointment led, in course of time, to very important results. But by the 26th of May, the greater part of the British troops had crossed the Mondego, and all Sir Arthur's arrangements were completed for an advance into Spain, where he intended to co-operate with, or at least to receive some aid from, General Cuesta, who commanded the army of Estremadura, and who was said to have collected on the Guadiana from 40,000 to 50,000 men.

The advanced guard of the British army entered Spain by Zarza-la-Mayor on the 2nd of July; and on the 8th Sir Arthur's headquarters were at Plasencia.* He had not come into Spain quite so strong as he could have wished; but he thought that, counting Craufurd's brigade, which was shortly expected, he should have nearly 20,000 rank and file of infantry, and about 3000 cavalry. Cuesta crossed the Tagus by the bridge of Almaraz, and effected his junction with Wellesley at Oropesa on the 20th of July; but the Spanish general was now found to have no more than 30,000 men, and these were, for the most part, discouraged by repeated defeats, and were lank, lean, and hungry besides. Sir Arthur, who now for the first time saw a Spanish army in the field, was but little satisfied with what he saw: there was a defective organization, very little discipline, and a proud and bigoted and jealous spirit, which foreboded no good fellowship with the English soldiery, who were, for the far greater part, Protestants, and, as such, heretics in the eyes of the Spaniards. Beyond the quality of courage (and that appears to have had its ebbs and flows), Cuesta had none of the qualities which constitute a general; he was ignorant, self-willed, and obstinate; and, although Wellesley calls him by no harsher name than that of "the old gentleman," it is quite evident that he thought him an old fool. The commencement of their intercourse was quite laughable: the old Spaniard received his ally with great etiquette and ceremony; but he would not condescend to speak French with him, and, as Sir Arthur could not then talk Spanish, no conversation took place between them.* All the provisions that could be procured in the country were eaten up by Cuesta's people. At times, when Cuesta's camp abounded with provisions and forage, the British camp was so ill supplied that the men were reduced to half rations. "The French," Wellesley says, "can take what they like, and will take it, but we cannot even buy common necessaries." In vain appeals were made to the Spanish population, to the local authorities, to the juntas; Spanish inertness and prejudice, and, in some instances, a bias towards the French (for there was now a French party in some of the towns), all contributed to half starve the English army, which was ready and willing and able to pay liberally for whatever it wanted. There was, too, a notion among the victuallers, farmers, and tradespeople, that all the English were inordinately rich, and that it was proper and commendable to sell them the worst meat and drink at the highest possible prices. Between this Spanish greed, and the roguery of a part of our commissariat—which was not to be cured and made perfect in a day—excessive prices were paid for everything that was supplied to the army which had come into Spain to relieve it from the heavy yoke of France.

When Wellesley first began his march, to enter the country and gave the hand to Cuesta, the French forces were thus disposed:—Marshal Victor, the nearest to the allied army, was in Estremadura, close to the borders of Portugal, with the *first* corps, numbering in the muster-rolls 35,000 men; General Sebastiani commanded the *fourth* corps, which was in La Mancha, and which counted about 20,000 men under arms; General Dessolles, with a division of reserve, and some of Joseph's guards (in all, 15,000 men), was at Madrid, taking care of the intrusive king; Kellermann and Bonnet were stationed in Old Castile, and on the borders of Leon and the Asturias, with two divisions that formed together 10,000 men: (all these corps and troops, forming a numerical total of 80,000 men, were considered as being immediately under the command of Joseph, who knew not how to command a troop of horse or a company of foot, but who was aided and assisted by Marshal Jourdan). Soult had collected the *second* corps in the northern provinces, hoping to be able to retrace his steps into Portugal with 20,000 men; and immediately dependent upon Soult were Marshal Mortier with the *fifth* corps, 16,000 strong, and Ney with the *sixth* corps, which also counted about 16,000 men under arms. Thus, Soult's force, in all, was about 52,000; and thus, in advancing into Spain, Sir Arthur, with none to aid him but the "old gentleman" and his 33,000 Spaniards, might come into collision with 132,000 French, the total of the two armies of King Joseph and Marshal Soult. But, besides all this mighty array, there were 50,000 Frenchmen in Aragon and Catalonia, under Suchet

* The general was much vexed by the delays and failures which had impeded his marching. He had expected to arrive in Spain ten or twelve days earlier. He writes on the 27th of June from Abrantes to Lord Castlereagh,—"Just to show you the uncertainty of all communications in this country, and probably *the deficiencies of our commissariat*, I shall mention that the money which arrived on the 15th at Lisbon, and was sent off immediately, did not arrive here till late on the 25th. *It is the same with everything else.* On the day I determined to move into Spain, I ordered everything that could be required for the army, and I have not had occasion to add to or alter the original order; yet the articles ordered are not yet arrived, notwithstanding that there is a water communication from Lisbon, and officers and others come up in five days. I believe much of this delay and failure is to be attributed to *the want of experience of our commissariat;* much to the want of money, and to our discredit in Portugal, on account of our large and long-owed debts; and something to the uncertainty and natural difficulties of all the communications in Portugal."

Letter from Sir Arthur to Mr. Frere.

and Augereau; and 35,000 more were scattered over the surface of Spain to maintain posts and fortresses, and keep open the various lines of communication. The principal fortresses and fortified towns in the hands of the French were—1st, on the northern line, S. Sebastian, Pamplona, Bilbao, Santona, Santander, Burgos, Leon, and Astorga; 2nd, on the central line, Jaca, Zaragoza, Guadalaxara, Toledo, Segovia, and Zamora; 3rd, on the eastern coast, Figueras, Rosas, and Barcelona. But, before General Wellesley entered Spain, Soult found it necessary to withdraw from Galicia; and Ney followed his movement, abandoning Coruña, Ferrol, &c. A disagreement between Soult and Ney (the French marshals and generals in Spain were incessantly quarrelling, and neither Joseph Bonaparte nor Jourdan could prevent them, or bring them to any obedience of the orders emanating from Madrid) led to the deliverance of the extensive province of Galicia, where the French never regained a footing. Soult reached Zamora at the beginning of July, or about the same time that the English troops arrived at Zarza-la-Mayor; and he kept there, or hovered about the eastern frontiers of Portugal. Ney had halted at Astorga. Mortier, when advancing from Zaragoza to Valladolid, had received orders from Paris to stop. The Catalans and Aragonese were giving pretty full employment to Augereau and Suchet; Andalusia and Valencia were entirely free of French troops; the first of these two provinces had not yet been touched; the second—the fiercest, perhaps, in all Spain—had driven away its invaders with a terrific slaughter. Some of the French *corps d'armée* were suffering severely from privations, and from endemic and other disorders. This was particularly the case with the corps of Marshal Victor, who, on the approach of the British, had posted himself in a rather low and swampy country between the Tagus and the Guadiana.

Sir Arthur Wellesley detached Sir Robert Wilson with the Lusitanian Legion, a battalion of Portuguese, Caçadores, and two Spanish battalions, in the direction of Madrid; and, notwithstanding the immensity of the French force which might possibly have been brought upon him, Sir Robert succeeded in getting in Marshal Victor's rear, and in reaching Escalona, on the Alberche, which is only eight leagues distant from the Spanish capital. In this rapid advance, as in several subsequent movements, Sir Robert Wilson displayed very remarkable activity and intelligence. He led his light-footed Portuguese across rugged mountains without roads, through labyrinths of forests and wilds, and across many rivers; and, whatever was the nature of his route, he was always true to time. On the 22nd of July, the combined armies of Sir Arthur Wellesley and Cuesta attacked Marshal Victor's outposts at Talavera, and drove them in. The French would have suffered more than they did if old Cuesta had not thought fit to absent himself. On the 23rd the British columns were again formed for the attack of the French position, as Sir Arthur wished to beat Victor before he should be joined by Sebastiani, who had moved from La Mancha; but Cuesta "contrived to lose the whole of the day, owing to the whimsical perverseness of his disposition."* Thus, although the Spanish troops were under arms, and the British actually put in march, nothing was done on the 23rd; and, at one hour after midnight, Marshal Victor left Talavera to retreat to S. Olalla, and thence towards Torrijos, to form a junction with Sebastiani. Early on the 24th, Sir Arthur established his head-quarters in Talavera. "I have not," he says, "been able to follow the enemy as I could wish, on account of the great deficiency in the means of transport, and owing to my having found it *impossible to procure even one mule or a cart in Spain.*"† He had already done enough, if advantage had been duly taken of it by the Spaniards, to give Cuesta possession of the course of the Tagus, and to open his communication with La Mancha and with General Venegas, who was collecting a respectable corps in the Sierra Morena; and this was all that Sir Arthur had engaged to do. He therefore resolved to enter into no new operation, but rather to halt, and even to return to Portugal, if he should not be supplied as he ought to be. "His Majesty's troops," he adds, "have been engaged in very active operations, the success of which depended no less upon their bravery and exertions than upon the example they should hold out and the countenance they should give to the Spanish troops, *and yet they have been in actual want of provisions for these last two days.* Even if I should have been willing, under such circumstances, to continue my co-operation with General Cuesta, I am unable to do so with any justice to the troops."‡ A great deal too much has been said in praise of Spanish sobriety, frugality, and powers of abstinence or fasting. No doubt the peasantry, in the genial climate of the south of Spain, will live upon very little rather than work for more; no doubt drunkenness is not the national vice; and, speaking very generally (for some of the most ravenous gluttons we ever saw were Spaniards), the people of all the provinces can live upon a slenderer diet than the English; but this is in good part owing to their doing infinitely less work than the English,

* Sir Arthur Wellesley to Mr. Frere.—In the same letter Sir Arthur says—"I find General Cuesta more and more impracticable every day. It is impossible to do business with him, and very uncertain that any operation will succeed in which he has any concern. . . . . He has quarrelled with some of his principal officers; and I understand that all are dissatisfied with him."

† Dispatch to Lord Castlereagh, dated Talavera Reyna, 24th July.

‡ Id. Id.—In the same dispatch, Sir Arthur says to Lord Castlereagh—"I understand that Cuesta has urged the central junta to adopt vigorous measures to have our wants supplied. It is certain that at the present moment the people of this part of Spain are either unable or unwilling to supply them; and in either case, until I am supplied, I do not think it proper, and, indeed, I cannot continue my operations in Spain. I *ought*, probably, to have stipulated that I should be supplied with the necessary means of transport before the army entered Spain; I did require it, and I adopted the measures necessary to procure those means which I conceived would have answered; and, as I could not engage to enter upon any operations in Spain which should not be consistent with the defence of Portugal, I did not think it proper to make any stipulation for the advantage of the troops, which stipulation, after all, did not appear necessary to enable me to procure what I wanted."—*Colonel Gurwood, Wellington Dispatches.*

and with them, just as with other nations, a superior degree of exertion can only be sustained by an increase of aliment. Poets and imaginative travellers had really made some people believe that the Spanish soldier could live upon air, with merely a whiff of tobacco, and a bite of garlic at intervals. Sir Arthur Wellesley knew better.—"No troops," he tells his brother the marquess, "can serve to any good purpose unless they are regularly fed; and it is an error to suppose that a Spaniard, or a man, or animal, of any country, can make an exertion without food. *In fact, the Spanish troops are more clamorous for their food, and more exhausted if they do not receive it regularly, than our own troops are.*" *

When Sir Arthur halted the British troops at Talavera, Cuesta seemed all of a sudden to be invaded by an irrepressible energy and activity; and, with remarkable arrogance, he singly dashed forward in pursuit of the French. His columns passed the Alberche in rapid succession, as if they were determined to stop at nothing short of the iron barrier of the Pyrenees. Sir Arthur, who could scarcely help foreseeing how all this sudden ardour would end, recommended caution and circumspection to the old gentleman, and sent a part of the British force some ten miles in advance of Talavera. The two armies previously acting in concert were now separated, the least effective part being in pursuit of Marshal Victor, and the mass of the British forces remaining perfectly quiet—"enjoying demi-starvation upon the banks of the Tagus."† Cuesta went blundering through S. Olalla, and rushed on, like a wild bull broke loose from the amphitheatre, to Torrijos. But here he found the rear-guard of the French marshal, who had been joined by General Sebastiani; and the sting of the French tail—Victor's rear at Torrijos—was quite enough for this disorderly, ill-commanded Spanish army. During the 25th the English heard nothing of it, or of Cuesta, but on the following day the report of artillery in the distance announced its return towards Talavera—not unaccompanied. Presently Spanish runaways and stragglers passed to the British rear; and in the course of the afternoon and during the night of the 26th, the distant cannonade having died away, the greater part of Cuesta's army passed to the rear. On the morning of the 27th other battalions passed close by some of the British who had bivouacked in an olive grove—battalion after battalion forming a continuous line of march in the same direction. From amidst clouds of dust, disorderly chattering assemblages of half-clad, half-armed men became occasionally visible; again, regiments marching in perfect order, cavalry staff officers, bands of musicians, flocks of sheep, droves of bullocks, artillery, cars, carriages, and wagons varied the confused and singular scene.‡ All the information that could be obtained by the English officers from these fugitives was that they had been overpowered and beaten at Torrijos, and that the French, in full force, were following close at their heels. The latter part of this information was not quite correct, for although Victor had been joined by the fourth corps, which Sebastiani had brought up from La Mancha, he deemed it prudent to wait a few hours for the arrival of Joseph Bonaparte and Marshal Jourdan, who were marching towards him with the guards and the garrison of Madrid, and thus leaving that capital exposed to Sir Robert Wilson and his rapid Lusitanians. It was clear, however, to Sir Arthur Wellesley that he would not be allowed a long repose; and therefore he busily employed himself in examining and strengthening his position at Talavera. Great was the need he must have had at this moment of activity, genius, calmness, heroism; for, besides the great army collecting in his front under Victor, his old enemy Soult, by rapidly advancing from Salamanca, was getting in his rear, Marshal Mortier at Valladolid was preparing to follow Soult, and Marshal Ney, unknown to the English general, was hurrying from Astorga with the hope of falling upon his left flank. Thus there were more than 50,000 fighting Frenchmen behind the mountains of Plasencia ready to act on the flank and rear of the British, whose front was threatened by at least 50,000 more. Sir Arthur's force in the field did not exceed 20,000 men; for some of the battalions were still on their march from Lisbon, and did not come up until after the battle of Talavera had been fought. The Portuguese regular troops, under Beresford, had been left to guard the north-east frontier of Portugal, towards Almeida. There was nothing at hand for the immediate support of Sir Arthur's 20,000 British save the army of Cuesta; but these 30,000 men had already proved themselves worth very little in the field. General Venegas indeed had descended with the Spanish army of Andalusia from the Sierra Morena mountains, and had marched through La Mancha upon Madrid with from 20,000 to 25,000 men: but the supreme junta had sent Venegas counter-orders which had had the effect of slackening his march. At last, however, and, as it turned out, at a most opportune moment, Venegas, a much abler and more honest man than any of the junta Dons that assumed authority over him, did make a brilliant movement, and show himself on the road that leads to Aranjuez and Madrid; and it was his timely approach on that side which induced Joseph, who had now joined Victor, to engage Sir Arthur Wellesley and Cuesta, in order to save his capital. If Joseph had kept the allies in check at Talavera for a few days longer, Soult's arrival at Plasencia would have obliged the English to retire precipitately into Portugal. But Joseph and his adviser Jourdan, fearing that Venegas from the south, and Sir Robert Wilson from the north, would enter Madrid, and seize the stores, the reserves, the hospitals, &c., recommended Marshal Victor to wait no longer, but attack the allies in front; for, if Wellesley were once defeated, Madrid

‡ Id.

could very easily be protected or recovered, and both Venegas and Wilson, it was thought, might be enveloped and reduced to capitulation. The movements in Victor's army announced to Sir Arthur that a battle was at hand. His greatest difficulty was in overruling the mulish obstinacy of the old gentleman; but, at last, he got Cuesta to consent to occupy the ground he had selected for him, which was on the right near the Tagus, and immediately in front of the town of Talavera. This was a position in which the Spaniards could scarcely be seriously attacked; it afforded in abundance those covers under which they had always been found to fight best; the ground was covered by olive-trees, and much intersected by thick mud walls and ditches; there was a strong old church with a heavy battery in front of it, and along the whole line were redoubts, walls, banks, and abattis, or parapets, made of felled trees. All the avenues of the town were defended in a similar manner. The British infantry, in whom Sir Arthur placed full reliance, occupied the left of the line, which was quite open in front, but its extreme left rested upon a steep hill, which was the key of the whole position, and on which was posted a division of infantry under the orders of Major-General Hill. The whole line extended in length about two miles. There was some skirmishing and outpost fighting in the dark on the night of the 26th. On the 27th, Victor moved from S. Olalla in full force, crossed the Alberche, and attacked two advanced British brigades, which fell back steadily across the plain into their assigned positions in the line. This was at about two o'clock in the afternoon. As the day declined the French advanced to a general attack; but it was the dusk of the evening before Victor began by a hot cannonade upon the British left, and by an attempt with his cavalry to ride over the Spanish infantry. From the care taken to cover their front, the Spaniards were found to be unapproachable, and the cavalry charge failed completely. Early in the night Victor followed up his cannonade by pushing a strong division along a valley on the left of the height occupied by General Hill. The French gained momentary possession of that key to our position; but Hill almost instantly attacked with the bayonet, regained possession, and drove the enemy down the steeps. Victor repeated the attack on this point, on which everything depended, at the dead of night; but Hill was reinforced, Sir Arthur himself rode to the spot, and ordered up some more artillery; and, after another terrible conflict in the dark*—a darkness illuminated only by the flames from the cannon's mouth and the blaze of musketry—the assailants were again hurled back into the valley, and again left the level ground on the hill-top thickly strewed with dead bodies and wounded men. Repose and a dead silence succeeded; but this was interrupted about midnight by a firing towards the town of Talavera, which sounded like the crack of doom. "It was not," says an ear and eye witness, "the straggling, desultory, yet distinct reports of light troops, but a roll of musketry that illuminated the whole extent of the Spanish line. It was one discharge; but of such a nature that I have never heard it equalled. It appeared not to be returned, nor was it repeated. All again became silent. A false alarm had occasioned this tremendous volley; but we were too distant to ascertain what had produced the violent eruption, or how many of our allies had thrown away their arms, and fled, after having delivered a fire sufficiently formidable to have shaken the best and bravest troops."* But Sir Arthur, who was nearer at hand, and soon on the spot whence that formidable fire had proceeded, had the mortification of ascertaining that several thousands of the Spaniards, after discharging their pieces, were flying panic-stricken to the rear, followed by their artillery, and creating the greatest confusion among the baggage retainers and the mules, &c.; and it was with difficulty that he and Cuesta prevented the rest of the Spanish troops from following this pernicious example. We believe it was never correctly ascertained what created this sudden alarm in troops that were so sheltered and covered that they had little to fear: perhaps some cows or goats had passed along their front, or perhaps some of those animals which Sancho Panza loved had come in the darkness to browse among the olive-trees; but all that is not hypothetical is, that they made one of the loudest reports that had ever scared the night, and then turned to run. Luckily Victor knew nothing of what was passing; and, after his cavalry had discovered the strength of the Spanish position, he directed all his efforts against the British left. At daylight, on the morning of the 28th, he hurled two more strong divisions of infantry against the fatal height; but the Englishmen there had been told that they must maintain that position, and nobly did they maintain it: Hill lost many brave officers and soldiers, and was wounded himself; but he soon had the satisfaction of seeing the two French columns reeling

* According to Colonel Leith Hay, who was with his regiment on the top of the hill, it was so dark even when the first attack was made that the blaze of musketry alone displayed the forms of the assailants. "A considerable body of the French were then in possession of the height. Their numbers rapidly increasing, the drums beat the *pas de charge*; while at intervals voices were heard shouting in the dark, some calling out they were the German Legion, others not to fire. . . . . The leading company of the 29th poured in a volley when close to the bayonets of the enemy; the glorious cheer of British infantry accompanied the charge, which succeeded. The rest of our regiment arrived in quick time, and formed a close column, which speedily drove everything before it. The enemy was pushed down the hill. . . . . No second attempt was for some time made to carry this most important point. The 29th remained in possession of the ground, lying on their arms in the midst of fallen enemies. The furred chaco of a dead French soldier became my pillow for the night."—*Narrative*.

"Darkling they fight, and only know
If chance has sped the fatal blow
Or by the trodden corse below,
Or by the dying groan:
Furious they strike without a mark,
Save now and then the sulphurous spark
Illumes some visage grim and dark,
That with the flash is gone!"

*The Battles of Talavera, a Poem*, 1809 (now, we believe, the avowed production of the Right Hon. John Wilson Croker).

* Colonel Leith Hay, Narrative.

from before his British bayonets, and rolling down the steeps. In these attacks on the hill the French lost about 2500 men: entire brigades had been destroyed.

Another long pause ensued; but about the hour of noon the French renewed their attack upon the whole of that part of the position occupied by the British army. In consequence of the repeated attempts upon the height on his left, by the valley which ran round the hill, Sir Arthur had placed two brigades of British cavalry in that valley, supported in the rear by a division of Spanish cavalry. The general attack began by the march of several columns of French infantry into that valley, with a view to try the hill once more. These columns were charged by our horse, who prevented the execution of their plan; but the assailants suffered great loss in the fight, the 23rd light dragoons having nearly one-half of their number killed or wounded. While this was going on on the left, heavy columns of the infantry of Sebastiani's corps twice attacked the British right under General Campbell, but they were each time repulsed by the steady fire of the English, and, when a Spanish regiment of horse came gallantly up and charged them in flank, they retired in disorder, leaving ten guns, and heaps of killed and wounded, behind them. But the principal attack made by Victor was against Sir Arthur Wellesley's centre, which consisted of the Guards and the German Legion. Here the French marshal employed nearly every man he could spare. His massy columns came close up to the British line, as if confident in their vastly superior numbers, and as if absolutely determined, at any cost, to crush the centre, and pass over it to exterminate the disjointed remnants of Wellesley's forces; but they were most gallantly repulsed by a charge with bayonets by the whole division, and they reeled back in helpless disorder. Unluckily the brigade of Guards on the right, elated by their success, and by the inward and intimate conviction that it was not Frenchmen that could withstand a charge of British bayonets, advanced too far in pursuit, and so exposed their left flank to the fire of the French batteries: as they began to fall back some of the troops they had been pursuing rallied and turned against them; some supporting columns and French dragoons advanced; and now the Guards in their turn retired in some disorder. At the same time the German Legion, which was on the left of the Guards, and which had not advanced with them, fell into some confusion, and, being hard-pressed by the French, the Legion gave way completely. Sir Arthur's centre was thus broken; but, as soon as he saw from the summit of the steep hill on the left the over-hot charge of the Guards, he foresaw what might happen, and provided for it by instantly sending from the hill the 48th regiment, and ordering General Cotton's light cavalry to advance. And now the brave 48th, led on by Colonel Donellan, came up to fill the gap made in the centre, moving in beautiful order amidst the retiring crowds, wheeling back by companies to let the Guards and the Legion pass through the intervals, and then resuming its line and marching against the right of the pursuing columns, who, at one moment, seemed almost mixed with our guardsmen and legionaries. When close on the French flank, the 48th plied them with destructive discharges of musketry, and, closing upon them with a firm and regular pace, completely checked their forward movement. Our centre was presently restored, for the Guards and the German Legion quickly rallied; and then Cotton's brigade of light cavalry, coming up from the rear at a smart trot, the French columns, whose success had been so momentary, began to waver, their general, Lapisse, was mortally wounded, their loss from the fire of the 48th alone was dreadful, and at last they gave way and retired to their own lines, their retreat being protected by their light troops and artillery. No other attempt was made either to break our centre or to carry the murderous hill: there was, in fact, no more fighting. The British, reduced to less than 14,000 men, and exhausted by fatigue, were unable to pursue the French, and the Spanish army, which had been scarcely engaged, was incapable of making any evolutions. King Joseph's Guards and the French reserve had not been engaged during the day, and had Napoleon been there perhaps a last effort might have been tried; but, as it was, the French, having been repulsed at all points, were evidently but too happy to desist; and thus, at about six o'clock in the evening all fighting and firing ceased, each army retaining the position that it had occupied in the morning. Out of the 50,000 men which they had on the field at the beginning of the battle, the French had lost 7000 in killed and wounded, an immense number of officers and two generals being among the killed. Out of the less than 20,000 British, 857 had been killed and 3913 wounded; 653 were reported missing; and two general officers, Major-general Mackenzie and Brigadier-general Langwerth, were among the slain.* The French also lost a considerable number of men as prisoners, and as they retired they left in the hands of the

* "The battle," says Sir Arthur, "was a long and most desperate one. Our loss has been very great; that of the enemy greater. The attack was made principally upon the British, who were on the left; and we had about two to one against us; fearful odds! but we maintained all our positions, and gave the enemy a terrible beating! The Spanish troops that were engaged behaved well; but there were very few of them engaged, as the attack was made upon us."—*Wellington Dispatches.* He thought that after this experiment the French would feel they had nothing to hope, even with double numbers, from a general action with British troops. The French emperor appears to have come to the same conclusion, at very nearly the same time. In private communications, at least, the tone of Bonaparte, in speaking of British armies, was very materially altered. In a letter, dated the 31st of August, he severely censured the conduct of Victor, Jourdan, and all the generals engaged, disapproving not only of the manner in which the battle of Talavera was fought, but of its being fought at all, when there were "*only* 50,000 French to 30,000 English, who have thus been allowed to *brave* the whole French army."—*J. Belmas, Chef de Bataillon du Genie, Journaux de Sièges, &c., rédigés d'après les ordres du Gouvernement sur les documents existant aux Archives de la Guerre et au Dépôt des Fortifications.* Paris, 1836.

We see that here Bonaparte overrated the number of the British troops by more than 10,000. But he counts the Spaniards for nothing. This last opinion he very frequently repeated. In January, 1810, he wrote to his generals—"There is nothing in Spain dangerous but the English; all the rest is *canaille*, that can never keep the field."—*J. Belmas, Id.*

English 17 pieces of artillery, with tumbrils and ammunition complete.

The next morning at daybreak the whole French army, who had begun retreating during the night, were on the other side of the Alberche, and taking up a position in the rear of that river, on the heights of Salinas. Except at Albuera, the French never again fought so well throughout the rest of this war; and yet France confessed, in a hurried night-retreat, that she had been beaten and humiliated—

"Far from the field where late she fought—
The tents where late she lay—
With rapid step and humbled thought
All night she holds her way;
Leaving to Britain's conquering sons
Standards rent and ponderous guns,
The trophies of the fray;
The weak, the wounded, and the slain,
The triumph of the battle-plain,
The glory of the day."*

In the course of the same day, the 29th of July, General Robert Craufurd reached Sir Arthur Wellesley's camp from Lisbon, with the 43rd, 52nd, and 95th (rifles). The reinforcement altogether amounted to nearly 3000 men. This was the light brigade, which was ever after in advance during the Peninsular campaigns, and which acquired military celebrity for its gallantry and quickness of movement.† Sir Arthur passed the 29th and 30th in establishing his hospitals in the town of Talavera, and in endeavouring to get provisions for his half-starved men. In this he was assisted neither by the Spanish authorities nor by the Spanish inhabitants. This was the more unpardonable as there were at the moment large deposits of grain—more than sufficient to supply both the Spanish and the English army—in Talavera. But the truth was, the Spanish holders of the grain concealed it, and were determined to produce it only for a high price and for ready money. In the state of poverty in which the army of Sir John Moore had been left, that general had been obliged to contract some debts at Salamanca, and in various towns in Galicia, and to give *buenas* or promissory notes on his government for the payment of them: the British government had not yet paid these debts, which for Spaniards were rather heavy; and, as this evil news got spread over other provinces, it destroyed English credit, and increased the tenacity with which Spaniards generally hold what they have.‡ But the Spaniards of Talavera and that neighbourhood were not more disposed to open their grain deposits to Cuesta than to Wellesley. "They have no magazines," says Sir Arthur, "nor have we, nor can we collect any, and there is a scramble for everything. . . . I wish that Don Martin de Garay, or the gentlemen of the junta, before they blame me for not doing more, or impute to me beforehand the probable consequence of the blunders or the indiscretion of others, would either come or send here somebody to satisfy the wants of our half-starved army, which, although they have been engaged for two days, and have defeated twice their numbers, in the service of Spain, have not bread to eat. It is positively a fact that during the last seven days the British army have not received one-third of their provisions; that at this moment there are nearly 4000 wounded soldiers dying in the hospital in this town from want of common assistance and necessaries, which any other country in the world would have given even to its enemies; and that I can get no assistance of any description from this country. I cannot prevail upon them even to bury the dead carcasses in the neighbourhood, the stench of which will destroy themselves as well as us."* At the same time General Beresford, from Almeida, was crying out, "Blankets! blankets!" and for clothes wherewith to

* Battles of Talavera,—General Sarrazin, who, like a good Frenchman, does not like to confess too much, confesses that "the bloody day (*la sanglante journée*) of Talavera had spread terror in the French army (*avait répandu l'effroi dans l'armée Française*), and it was admitted that the English fought *quite as well as the Russians.*"

† André Vieussenx, Military Life of the Duke of Wellington. The author of this admirable brief and correct compendium served for some time in the Peninsula, with the light brigade.

‡ A good many rogues in our commissariat department augmented this evil, by practices not altogether undeserving of the gallows. Long after the battle of Talavera it was customary to pay the muleteers who followed our army, and the proprietors or contractors who furnished mules for transport, with promissory notes payable at Lisbon or at head-quarters; and for a long while there was no convincing these mulish drivers of mules that the paper was as good as money. Some of them made wrappers for cigars of their bits of paper, went home with their animals, and never returned. Others applied to commissariat clerks, and gave them from twenty to fifty per cent., or more, to change their paper into hard dollars or doubloons in hand. Often has an ignorant muleteer been known to give a note for 100 dollars for 20 dollars cash—and not unfrequently for 10 dollars. When detection was apprehended, our employés did their business through certain moneyed followers of the camp—Jews who had gone over from London, *soi-disant* amateur campaigners, traders from Gibraltar and Lisbon, and the like, who brought their dollars and doubloons with them. Some of these speculators put a climax to their rascality by sending out plated dollars—silver without and copper within. But where the dollars were good—as in most cases they were—the sacrifices that the poor Portuguese and Spaniards were obliged to make in order to procure them in exchange for their good paper were enormous. Fortunes were known to be made in a very short time in this way, and by other means about equally honourable. We have heard of a Manchester man, who followed the army for a long time, and who was known to the soldiers under the name of "White Stockings," who finished his campaigning by carrying off more profit than a great cotton mill could have rendered in the same period of time. His dealings lay chiefly with the muleteers and with the commissariat of accounts, who paid in paper, and who participated in the gains of turning paper into silver and gold.

The evil was in good part rectified afterwards by the vigilance of the commander-in-chief, and by the better class of men that were put into all the departments of our commissariat.

* This Don Martin de Garay was now, as he had been in Sir John Moore's time, the central junta's war-minister. He and some of his colleagues had taken it upon themselves to suggest, nay, almost to command, the movements which Sir Arthur Wellesley should make. They would have led him into a trap and a *coupe gorge*, as they would have done with Moore. Our unaccountable diplomatist, Mr. Frere, appears to have made himself the medium of conveying some of their complaints or remonstrances to the British General; and it is to Mr. Frere, who was still sojourning with or travelling about in the wake of the wandering junta, that Sir Arthur writes the terrible letter we have quoted in our text.

"It is not a difficult matter," says Sir Arthur in the same letter, "for a gentleman in the situation of Don Martin de Garay to sit down in his cabinet and write his ideas of the glory which would result from driving the French through the Pyrenees! I believe there is no man in Spain who has risked so much, or who has sacrificed so much, to effect that object as I have. But . . . . " (then followed the passage we have given in the text). And then Sir Arthur concludes with saying, "I positively will not move, nay, more, I will disperse my army, till I am supplied with provisions and means of transport as I ought to be."—*Letter to the Right Hon. J. H. Frere, dated Talavera, 31st July, in Colonel Gurwood, Wellington Dispatches.*

If it had been to General Wellesley that Mr. Frere had sent his French agent, and his monstrous proposition for calling a council of war, it is probable that his friend and agent, *Colonel* Charmilly, would have been handed over to the provost marshal. Mr. *Frere*, whose functions soon ceased altogether—never again to be resumed in any part of the world—must have felt that he had a firmer and a sterner man to deal with now than he had found in Sir John Moore; but the situation of Sir Arthur Wellesley, his loud complaints, and the conduct of the Spaniards, ought to have induced the diplomatist and his warm friends in England to mitigate the severity of their censures on the conduct of Moore's campaign and retreat, and to deduct ninety per cent. from the confidence they placed in the Spaniards.

cover his Portuguese troops, and for provisions wherewith to feed them.

On the 1st of August, Joseph Bonaparte, with the fourth or Sebastiani's corps and the reserve, retreated farther back to Illescas, on the road between Madrid and Toledo, in order to oppose Venegas and his Andalusian army; and Victor soon afterwards retreated likewise on the road to Madrid, from an exaggerated alarm at the rapid movements of Sir Robert Wilson. But, before even Joseph began his retreat from Salinas, Soult had got into Plasencia, only a few marches in the British rear. There was a strong pass or defile in the mountains of Plasencia, called the Puerto de Baños —a pass which could not be turned without a long *détour*, and which might well have been stopped against the enemy's advance. Sir Arthur had applied to Cuesta for this important service, and Cuesta had engaged to stop the pass; but, instead of sending an adequate force, the old gentleman sent only 600 men, who ran away almost as soon as the head of the first French column showed itself. This foremost French column was nothing less than a part of the *corps d'armée* of Marshal Mortier, who walked through the defile on the 31st of July. Soult followed with the second corps, and entered Plasencia on the morning of the 1st of August. Marshal Ney was coming fast round from Salamanca to the same point, so that in a few days or hours 53,000 men would be collected at Plasencia. On entering that town Soult found it deserted by most of its inhabitants, and, though so near to the field of Talavera, he could obtain no information of what had passed, or of what was passing—he could learn nothing of the position or numbers of the British and Spanish armies. This ignorance of each other's movements was a common occurrence in the Spanish war, and is to be accounted for by the nature of the country, the difficulties of communication, the thinness of the population, and the incurious, indolent habits of the people. There were cases where a great battle was fought in one valley, and not known behind the mountains which divided it from another valley; and, when more was known of what was passing, it was seldom that any pains were taken to convey information to their friends: the people preferred staying in their homesteads to defend or conceal their property, or taking the field and lying in ambush near the French line of march, in order to cut off stragglers and make booty. On the 2nd of August, however, Sir Arthur Wellesley learned that the enemy had entered Plasencia, but that was all he could learn. Supposing that Soult was alone with his corps, that that corps did not exceed 15,000 men, and that Soult's intention was to join Victor, he determined to encounter him before he could effect the junction. Accordingly, on the 3rd of August, the British army set out for Oropesa, leaving Cuesta at Talavera, where he engaged to protect the hospitals. This last charge was particularly recommended to him by Sir Arthur, who told him that, in case of the Spaniards being obliged, by any advance of Victor, to abandon Talavera, he might collect carts to move away the British wounded. The old gentleman engaged to do all this; but he kept his engagement about as well as he had done his preceding one, to maintain the defile of Puerto de Baños. The position of the hostile armies was now very singular: they were all crowded along the narrow valley of the Tagus, from the neighbourhood of Madrid to the frontiers of Portugal. Joseph and Sebastiani were at Illescas, between Madrid and Toledo; the Spanish general Venegas was on the opposite side of the river, not far from Toledo; Victor was lower down on the right bank, watching Cuesta, who was at Talavera; Wellesley was still lower down at Oropesa; whilst Soult was on the road from Plasencia to Almaraz; and Beresford was now said to be moving farther west along the frontiers of Portugal. "The allies, under Wellesley and Cuesta, held the centre, being only one day's march asunder; but their force, when concentrated, was not more than 47,000 men. The French could not unite under three days, but their combined forces exceeded 90,000 men, of whom 53,000 were under Soult; and this singular situation was rendered more remarkable by the ignorance in which all parties were as to the strength and movements of their adversaries. Victor and the king, frightened by Wilson's partisan corps of 4000 men, were preparing to unite at Mostoles, near Madrid; while Cuesta, equally alarmed at Victor, was retiring from Talavera. Sir Arthur Wellesley was supposed by King Joseph to be at the head of 25,000 British; and Sir Arthur, calculating on Soult's weakness, was marching with 23,000 English and Spanish to engage 53,000 French; while Soult, unable to ascertain the exact situation of either friends or enemies, little suspected that the prey was rushing into his jaws. At this moment the fate of the Peninsula hung by a thread, which could not bear the weight for twenty-four hours; yet fortune so ordained that no irreparable disaster ensued." *

On the evening of the 3rd of August Sir Arthur Wellesley learned at Oropesa that Soult's advanced posts were at Naval-Moral, and consequently between him and the bridge of Almaraz, on the Tagus, thus cutting the line of communication of the English with Portugal. About an hour after the reception of this intelligence Sir Arthur got letters from Cuesta, informing him that the enemy was moving upon his (Cuesta's) flank, and had returned to S. Olalla in his front; that Joseph was coming back to join Victor; that Soult must be stronger than General Wellesley supposed, and that therefore, and from the consideration that General Wellesley was not strong enough to check Soult's corps coming from Plasencia, he (Cuesta) intended to leave Talavera that evening (and to leave in it the English hospitals, excepting such men as could be moved by the means he had already collected) in order to join the British army

* Napier, Hist. of the Peninsular War.

at Oropesa, and assist it in repelling Soult. The old gentleman's reasons did not appear to Sir Arthur quite sufficient for giving up so important a post as Talavera, for exposing the combined armies to an attack in front and rear at one and the same time, and for abandoning his sick and wounded. He wrote one of his short and earnest letters to the wilful old man, imploring him to stay where he was, or to wait at least till next morning, in order to cover the removal of the British hospitals from Talavera: but before this letter could reach him, Cuesta, who evidently feared having his own tail pinched by Victor, had begun his march, and on the next morning the rising sun shone upon his dirty ragged troops marching into Oropesa. This was the 4th of August. About 2000 of the British wounded had been brought away from the hospitals, but about 1500 had been left behind.* Cuesta's retreat must almost immediately bring Victor and Joseph upon Sir Arthur, who, by this time, had ascertained by intercepted letters that Soult's force was much stronger than he had reckoned. The English general was now placed between the mountains and the Tagus, with a French army advancing upon each flank, and with his retreat by the bridge at Almaraz completely cut off; after the experience he had had of Cuesta and the Spanish army, he could not rely upon them in an open field of battle; and he could not, with 17,000 British, fatigued and famishing, hope to fight successively two French armies, each nearly three times stronger than his own. Before this moment of real jeopardy, he had said, in speaking of the Spaniards—"I cannot bring forward such troops, owing to their miserable state of discipline and their want of officers properly qualified. These troops are entirely incapable of performing any manœuvre, however simple. They would get into irretrievable confusion, and the result would probably be the loss of everything."† But there was still one—and only one—line of retreat left open to the British, for, a little below Talavera, the Tagus was crossed by the bridge of Arzobispo; and by this route, and by this bridge, Sir Arthur determined to retire immediately, before the enemy should have time to intercept him. He calculated that by taking up a line of defence beyond the Tagus, he might keep open the road by Truxillo to Badajoz; he communicated his determination to Cuesta, who, according to custom, opposed it. That perverse old gentleman wanted, forsooth, to stop and fight the French at Oropesa! Wearied out with his absurdities, Sir Arthur sternly told him that he might do as he liked, but that, for his own part, being responsible for the British army, he should move forthwith; and accordingly, on that same morning, before Cuesta's disorderly rear got to Oropesa, the British army filed off towards Arzobispo. It was a blessing that the Spaniards, who generally destroyed what they ought to have left standing, and left standing what they ought to have destroyed, had not blown up the only bridge open to Sir Arthur: the 2000 wounded, the artillery, the stores, were all carried safely over the Tagus; before evening the general took up an excellent position behind the right bank of that river; and then the British army was safe.* Mad as he was, Cuesta was not mad enough to stay when Sir Arthur was gone—we can scarcely believe that he would have stayed at Oropesa even if the British general had wanted to remain, or that his daring proposition about giving battle there was anything more than a Spanish *façon de parler*—he moved to the bridge of Arzobispo, and there halted his troops, who, having little to carry with them, were ready to pass the Tagus at any moment. But so little did Cuesta act in concert with Sir Arthur, that he moved his head-quarters, and suffered three days to elapse without sending him any information of his plans or movements. Finding that the French did not make their appearance near him, the old Spanish general removed on the night of the 7th to Peraleda de Garbin, between Puente del Arzobispo and Almaraz, leaving two divisions of infantry and some cavalry behind to defend the bridge, which was barricaded, and protected by several batteries. He never thought of examining whether the river might not be fordable. On the 8th Marshal Mortier, who commanded the French corps which led the pursuit, made his appearance near the *tête-du-pont*, and, while he pretended to be erecting batteries, he sent the Pole Dombrowsky with two good swimmers to sound the Tagus. A good ford, passable even for infantry, was found, not 200 yards above the bridge and the Spanish batteries. At this moment Marshal Soult himself came up, and determined to effect the passage in the heat of the day, when the Spanish troops might be taking their siesta, or mid-day sleep. And as the marshal calculated so it happened: the Spaniards, relying upon the river, and their batteries and barricades, were nearly all buried in sleep, when the French dashed across the ford, and took their works on the bridge in the rear. Some of the Spanish artillerymen were cut down at their guns, and others were compelled to turn their guns upon their own country-

* Sir Arthur says, however, that he doubted, whether under any circumstances it would have been possible or consistent with humanity to have attempted to remove any more of them. He adds—"From the treatment some of our soldiers who were wounded on the 27th, and who fell into the hands of the enemy, experienced from them, and from the manner in which I have always taken care of their wounded who have fallen into my hands, I expect that these men left at Talavera will be well treated."—*Dispatches.*

† These were precisely the same convictions as were entertained by Sir John Moore when he began his retreat; and yet Mr. Frere entertained at the time, and Southey and others of his friends continued to repeat many years afterwards, that, with the assistance of Spanish generals and Spanish troops, Sir John ought to have driven the French beyond the Pyrenees!

* In a letter written to Lord Castlereagh, four days after crossing the Tagus, Sir Arthur says, "I hope my public dispatches will justify me from all blame, *excepting that of having trusted the Spanish general in anything.* We should have been safe at Talavera, if I could have prevailed upon him to occupy Bafios as it ought to have been; and we should have avoided the disgrace of the loss of the hospital, if he had sent away General Bassecourt on the night of the 30th, or on the morning of the 31st, or if he had maintained his post at Talavera. As it is, I really believe that I have saved the whole of both armies, by retiring to Arzobispo, and taking up the line of the Tagus."

men: the works were presently demolished, and then masses of French infantry rushed over the bridge. Some Spanish cavalry that were reposing in a shady place nearly a league from the scene of action mounted at the first alarm, hastened to support their countrymen, and made a brilliant charge. But this was too late: the two Spanish divisions of infantry were in confusion, and presently horse and foot fled towards the mountains, abandoning artillery, baggage, ammunition, everything. The French said they cut down 1600 of them in the pursuit.*

By this time the British army was considerably advanced on its road to Truxillo. On the night of the 5th they halted in a ravine, distant six leagues from the Puente del Arzobispo. On the 6th they continued their route, passing over a most mountainous and rugged country, by the steepest and worst of roads, which, in many places, were scarcely roads at all. The Alps of St. Bernard were loftier, yet scarcely more difficult; but these excellent and excellently commanded English troops carried over their artillery and stores, and thought little of the exploit when it was done.† The light brigade under Craufurd had preceded the army, to watch the passage of the Tagus at Almaraz, where, however, the French did not attempt to pass in time. On the 8th the British head-quarters were at Deleytosa, a small healthy village, seated on an eminence, in the direct road to Truxillo; on the morning of the 9th Spanish cavalry and infantry again appeared retiring upon the track of Sir Arthur Wellesley. It was all that remained of Cuesta's army in full retreat. "We have now," writes Sir Arthur on the 8th, "the whole host of French marshals in Estremadura—Soult, Ney, Mortier, Kellermann, Victor, and Sebastiani, with King Joseph besides, and 5000 men from Suchet!..... I have recommended to the junta to set Romana, the Duque del Parque, and the guerillas to work towards Madrid." ‡ From Deleytosa the forced marches were discontinued, for Wellesley had now brought his army into a country where it had nothing to fear from any or all of the French marshals, who were wondering how he could have escaped them. Making easy marches over a comparatively flat country, the British army crossed the Rio del Monte, near to Jaraicejo, and took up an alignement on its opposite bank. The camp was in a most picturesque country, upon some shady hills, with extensive forests of cork, chestnuts, and oak in the rear, and with a broad deep stream in front. The country, too, was productive as well as picturesque; supplies of provision and wine, and other comforts, were procured for the almost exhausted soldiers; and here they remained, as in a Land of Goshen, in perfect inactivity for some days.* On the 20th and 21st of August the divisions of the army marched by Truxillo, the birthplace of Pizarro. On the 23rd they traversed the field of Medellin, where old Cuesta (whose army had by this time disappeared again, to go no man knew whither) had fought a battle with Marshal Victor, and had sustained a most murderous defeat in the preceding month of March, before Sir Arthur Wellesley's second arrival in Portugal. The plain still bore numerous marks of having been a field of battle; nor had the five intervening months effaced the evidences of Spanish defeat and slaughter. Fragments of uniforms, caps, bones, dead horses, cartridges, exploded shells, strewed the ground in every direction.

By the 2nd of September Sir Arthur had his head-quarters at Badajoz, close on the frontiers of Portugal; and in a day or two a part of his army was sent across the frontier, and his sick and wounded were conveyed to the strongly fortified Portuguese town of Elvas, which now became the general hospital of the army. Of the two corps which had advanced upon Madrid in Joseph Bonaparte's absence, the Spanish one, under General Venegas, was easily defeated at Almonacid, by Sebastiani, who drove it back upon the Sierra Morena and the Andalusian frontier, from which it had advanced; but the mixed Portuguese and Spanish corps commanded by Sir Robert Wilson was extricated by that rapid and ingenious officer. Wilson had made a masterly march from the neighbourhood of Talavera through the mountains to Bejar, contriving to make the French believe that he had 15,000 or 20,000 men with him; and, when warned by Wellesley to retire, he came back as rapidly as he had advanced. On the 12th of August, eight days after Sir Arthur's retreat from Oropesa, Sir Robert fought a large corps of infantry, cavalry, and artillery, for a whole day, near the Puerto de Baños, and retired at night, in good order, to Colmenar. Although nearly the whole of Marshal Ney's corps was upon him, Wilson brought his Portuguese and Spanish corps, much less diminished than might have been expected, in safety and in honour to the Portuguese

* Southey, Hist. Peninsular War.

† "At one part of the Sierra, and for a considerable distance, to drag the artillery up by the usual means became impossible. The infantry were put to the guns, who, with considerable difficulty and exertion, forced them along the mountain-road. On this day's march, for the first time, were heard complaints from the soldiers on the subject of want of food. Toiling over these mountains, dragging the cannon, severely harassed by excessive heat, the men, conversing with each other, talked loudly of the hardships endured; but a soothing and encouraging expression was alone necessary to restore their good humour, even when assailed on the tenderest point."—*Col. Leith Hay, Narrative of the Peninsular War.*

‡ Dispatch to Viscount Castlereagh from Deleytosa.

In a letter written on the same day to the Rt. Hon. John Villiers, Sir Arthur says, "All is now safe, and I should feel no anxiety on any subject if we had provisions: *but we are almost starving.*"

* Colonel Leith Hay gives a very amusing picture of the rush that was made by officers as well as soldiers into the town and market of Truxillo, to purchase meat, vegetables, bread, groceries, &c. It appears that our worthy allies the vintners and wine-sellers of Truxillo played some tricks which had a very pernicious effect on our soldiers' stomachs and bowels. Until assured that everything would be paid for, money in hand, the inhabitants fled, or pretended they had nothing to sell.

"Everything was of course charged enormously. Wine was sold in profusion. The depositaries had nearly become emptied; but ingenuity made up for the insufficiency of the supply. The Spaniards, conceiving that their allies were persons who must have wine, and at the same time would not be particular as to the quality, diluted and mixed the originally poor produce of the grape of Estremadura in such a manner, composing so horrible a description of drink, that it is only extraordinary more fatal effects were not immediately produced by its deleterious qualities."

frontier, and, by the 7th of September, or six days after the arrival of Sir Arthur at Badajoz, Sir Robert was at Castello Branco, watching the enemy's motions.*

In the meanwhile King Joseph, who had no taste for campaigning, and who had a very eager desire to return to the ease and luxuries of Madrid, had recalled Marshal Mortier, who had crossed the Tagus in pursuit of Cuesta; and Marshal Ney, who had suffered considerable loss in the affair with Sir Robert Wilson, had found it impracticable, or had not thought it proper, to ford the Tagus below Almaraz in order to follow the retiring columns of the British army. There was no concert or good-will between Ney and Soult, or in fact between any of these marshals. Soult, after the recall of Mortier and the retreat or halt of Ney, had proposed to march with his three corps into Portugal by Coria and Abrantes, in the hope of reaching Lisbon, by the right bank of the Tagus, before the English; but Ney, Jourdan, and Joseph opposed this bold plan, and soon afterwards a dispatch arrived from their emperor, who dated from the Emperor of Austria's palace at Schönbrunn after the battle of Wagram, and who forbade further offensive operations till the termination of the Austrian war should enable him to send large reinforcements into Spain. The following brief remarks are worthy of especial notice, and may be recommended to the considera tion of those who seem not to know how to distinguish between the different phases and epochs of the genius of Bonaparte, but who continue to give that extatic admiration to all his campaigns which is properly due only to his earliest ones:—

"Napoleon, since he had assumed the imperial crown, trusted chiefly to his overwhelming masses, which he recruited so cheaply by means of the conscription. The proportion of cavalry in his armies in Spain was beyond all precedent. How different from the adventurous general of the army of Italy, who, with 30,000 men, encountered and defeated three Austrian armies, each stronger than his own, in 1796! But he was now bloated with success, and war must be with him a sure game. He had already 200,000 men in Spain, and yet he did not think them enough. His generals had adopted the same views: 'It is large masses only, the strongest that you can form, that will succeed.' Thus wrote Soult to King Joseph before the battle of Talavera. It is worthy of remark, that Sir Arthur Wellesley, writing about the same time, said—'I conceive that the French are dangerous only when in large masses.' Such was the character of the wars of the French empire. And yet, with all his tremendous masses, and a proportionate waste of human life, Napoleon failed in the end."* We doubt whether the great secret has ever been so well told in so few words.

Soult's army now went into cantonments in Estremadura and Leon, near the borders of Portugal; Joseph Bonaparte had got back to Madrid as soon as it had been possible or safe to do so; French moveable columns, not unlike the infernal columns which had formerly traversed the Vendée, now traversed various parts of Spain; the irregular guerilla warfare was carried on in many distant provinces and districts; some towns on the eastern coast, in Catalonia and Valencia, were taken by the French, while others held out, costing the besiegers an enormous sacrifice of life (Gerona alone, which did not capitulate until January, 1810, when it was reduced by famine, cost the lives of from 15,000 to 20,000 French soldiers, and completely disheartened and drove away three or four French generals of the highest name); but, from the middle of August till the middle of November, no actions took place in the field, of any importance, either on the part of the army of Sir Arthur Wellesley or on the part of any of the scattered Spanish armies; nor was the repose of the British forces very materially interrupted until the month of May, 1810.

On the 4th of September, 1809, almost as soon as the news of his remarkable battle reached England, Sir Arthur was raised to the peerage with the titles of Baron Douro of Wellesley and Viscount Wellington of Talavera. He had now placed his army in cantonments on the line of the Guadiana, to cover Portugal from Soult, who continued to be cantoned in Estremadura and Leon. But, if neither Soult nor any other French force whatever had been threatening the Portuguese frontier, it would have been impossible for Lord Wellington to have tried another advance into Spain; for no junta, central or provincial, could or would undertake to supply his army with provisions, and it was only by drawing on his magazines in Portugal, which were chiefly filled from England, that he could preserve his troops from starvation; and added to this impossibility there was another—the impossibility of co-operating with undisciplined Spanish armies, and proud, obstinate, ignorant, and incapable Spanish generals. He had tried the last experiment fairly: it had failed; and, but for the resources of his own genius and the admirable qualities of his troops, he must have been utterly ruined in attempting to co-operate with the Spaniards. The want of vigour and capacity in the members of the so-called central Spanish government, which, after wandering from place to place, had now fixed itself at Seville, was quite as conspicuous as were the deficiencies of the Spanish generals in the field, who, indeed, very generally contrived to throw the blame of their own failures upon the civilians in the junta. In vain the Marquess Wellesley, who was now residing

* No man was warmer in his praises of Sir Robert Wilson than was his high-minded commander-in-chief. In a dispatch, dated the 21st of August, Sir Arthur says:—"Sir R. Wilson has been very active, intelligent, and useful in the command of the Portuguese and Spanish corps, with which he was detached from this army. Before the battle of the 28th July (Talavera) he had pushed his parties almost to the gates of Madrid, with which city he was in communication, and he would have been in Madrid, if I had not thought it proper to call him in, in expectation of that general action which took place on the 28th of July. He afterwards alarmed the enemy on the right of his army; and throughout the service has shown himself to be an active and intelligent partisan, well acquainted with the country in which he was acting, and possessing the confidence of the troops which he commanded."

* A. Vieusseux, Military Life of the Duke of Wellington.

with them at Seville, laboured to convince the junta of the fatal consequences which must result from their wretched military system, and to teach them how to render their armies efficient, and the resources of their country available; the Dons all pretended to be wiser than the marquess, or to know more about their own countrymen and country than he could know: the national pride was the rock upon which the designs of the friends and the enemies of the Spaniards were equally wrecked.* And, not satisfied with turning a deaf ear to the marquess's advice, they insulted him by casting reproaches on his brother. Don Martin de Garay the war minister, together with other members of the central junta, raised as loud an outcry against Wellington's retreat from Oropesa as they had raised against Sir John Moore's retreat from the banks of the Carion. This led our ambassador into a very unpleasant correspondence; but the marquess maintained the character of the nation, of the army, and of his brother, with proper dignity and spirit; and Lord Wellington himself wrote two or three of his closely reasoned and conclusive letters, exposing what the junta had done for him and his army, what sort of assistance and co-operation he had received from the Spanish generals, together with the degree of reliance that was to be placed upon their word.

In the autumn, the British troops cantoned in the valley of the Guadiana suffered rather severely from malaria fevers; but it was not yet considered expedient to withdraw them entirely from the territory of Spain. On the 10th of October his lordship, with a few able officers, arrived at Lisbon, and proceeded to reconnoitre and examine minutely the whole country in front of that capital. He had appreciated at the first glance after the battle of Vimeiro the excellences of Torres Vedras as a defensive position, and he had now determined upon the construction of those celebrated lines which enabled him to baffle all the efforts of the French in 1810. As early as the 20th of October he wrote a "Memorandum" for Lieutenant-Colonel Fletcher of the engineers, in which he clearly pointed out the double line of position, the entrenchments and redoubts, the number of men required at each post, &c., and ordered Colonel Fletcher to examine every road, every hill, river, or rivulet in that vicinity; to calculate the precise time it would take to erect the works, to break up the bridges in front of them, &c.* But of this great plan nothing was said, or even whispered, at the time. By the 30th of October Lord Wellington had returned to his head-quarters at Badajoz. By the 2nd or 3rd of November he was at Seville, having proceeded thither to confer with his brother the Marquess Wellesley, and, perhaps, to see whether by personal application he might not be able to set aright some of the errors and prejudices of the junta. From Seville he proceeded with Lord Wellesley to Cadiz, "partly to arrange money matters, and partly by curiosity to see the place." By the 12th of November he was back at Badajoz, where he received information that orders had been given in all the Spanish villages of that province to prevent the sale of forage and provisions to the British army.† And a few days after this last intelligence he was informed that the Spanish army had run headlong into destruction, and had suffered at Ocaña a more tremendous defeat than any they had sustained since the commencement of the war. The command of the army of Andalusia, which had retreated before Sebastiani into the recesses of the Sierra Morena, had been taken from General Venegas to be given to General Areizaga, an inferior man, an inexperienced young officer, but who happened to be in favour with the central junta. Old Cuesta had also retired from the command of the army of Estremadura, and—incredible as it may seem—a greater blunderer than he, General Eguia, had been found and appointed to succeed him. [Lord Wellington knew something of this Eguia, and as far back as the 14th of September he had set down some of his plans as "rank nonsense."] Early in November the sapient junta, who had chosen two

* The 'Dispatches and Correspondence of the Marquess Wellesley during his lordship's mission to Spain as ambassador extraordinary to the supreme junta,' 1809 (edited by Mr. Montgomery Martin), contain a great deal of information respecting the fruitless efforts that were made against Spanish pride, conceit, and stupidity.

On the 15th of September we find the marquess writing to Mr. Canning that he had vainly applied to the junta for provisions and means of movement to the British army; that he had told them his brother must abstain from all engagement to co-operate with the Spanish troops within the territory of Spain; that, even if the system of supplies could have been corrected, the state of the Spanish army alone must form an irresistible motive for withholding any future co-operation, while the same evils should be left unremedied; that in his opinion any British army, though of 40,000 men, that should attempt to act in Spain under the present circumstances of the country, and of the enemy, would be exposed to the utmost hazard of total destruction.

In the same dispatch the marquess gave it as the decided opinion of his brother, Lord Wellington, that, in the event of a British army acting in Spain, *it would be absolutely necessary that the chief command of the Spanish army should be vested in the commander-in-chief of the British forces.* The marquess thought that the difficulties of obtaining supplies did not all proceed from the poverty and nakedness of the country. In the same dispatch he says to Mr. Canning, "At present, local difficulties certainly exist in some of the provinces, and many of the districts continue to suffer under the consequences of war, or of former mismanagement. *But many provinces abound in the means of subsistence and transport.* No system, however, has been established, by which the deficiencies of one district can be supplied from the abundance of another, nor does any regulation exist properly calculated to secure and collect the resources of any province for its separate defence, and still less for any more remote objects of active war. The civil establishments throughout the provinces are not properly formed for the purpose of ascertaining, or bringing into use for the service of the army, either the productions of the soil, or the articles of transport and conveyance existing in the several districts. To this want of due regulation and system must be added *the corruption, and even the positive disaffection, of many of the civil authorities in the provinces; in many instances the strongest evidence has appeared of positive aversion to the cause of Spain and of the allies, and of treacherous inclination to the interests of France.*

"The disposition of *the people* is generally favourable to the great cause in which the nation is engaged, and the mass of the population of Spain certainly appears to contain the foundations on which a good and powerful government might be securely established, and the materials of which an efficient army might be composed. Among the higher and middle classes of society are to be found too many examples of the success of French intrigue. In those classes may be traced a disposition to observe events, and to prepare for accommodation with that party which may ultimately prevail in the existing contest. Many persons of this description, if not favoured, are not discountenanced by the government. From these circumstances, and from the want of any regular mode of collecting popular opinion, the public spirit of the people is not properly cultivated, nor directed to the great objects of the contest. The people also are still subject to many heavy exactions, and the abuses and grievances accumulated by recent mal-administration have not yet been duly remedied or redressed."

* For this extraordinary document, which has been considered as one of the most striking evidences existing of Wellington's comprehensive mind, penetration, and foresight, see Colonel Gurwood, Wellington Dispatches, vol. v., from p. 234 to 239.

† Dispatches.

such excellent generals, ordered the army of Andalusia, joined by the greater part of the army of Estremadura, to advance suddenly upon Madrid, and this without any previous communication with Lord Wellington at Badajoz, or with the Duque del Parque and the other Spanish commanders in the north of Spain. Young Areizaga wanted to have the whole glory of recovering the Spanish capital: with nearly 50,000 men and 60 pieces of artillery, he descended from the mountains, where the French could not have touched him, and advanced with the confidence of an ignorant boy into the wide plains of La Mancha. It was on the morning of the 19th of November that he encountered in the open fields of Ocaña the two united corps of Mortier and Sebastiani, who advanced upon him in three columns, threw his cavalry head over heels, and broke the infantry of his right wing; upon which his left wing retired, or fled, without firing a shot. Then followed a general *débacle*, with the loss of fifty-five of their sixty cannon, of the military chest, provisions, baggage, clothing, &c., and with a terrific loss of life, which must have been sustained rather in the flight than in the fight.* The fugitives that were quick or fortunate to escape rushed like maniacs through the strong pass of Despeñas Perros, or fled by other rough roads towards Murcia or Valencia. Many thousands were taken prisoners, so that more than one half of this army—the largest that the junta had hitherto sent into the field—was destroyed or lost. It is said that very cruel usage was adopted to force the prisoners into the French service; that 8000 of them yielded, but took the first opportunity to desert, and join the guerillas in the mountains.

The defeat of Areizaga at Ocaña drew after it the defeat of the Duque del Parque, who had quitted the line of the Tagus to co-operate in the insane plan for recovering Madrid. Del Parque, in the month of October, being well stationed on the heights of Tamames, had defeated General Marchand, with a force not much superior in number to that of the French. This rare event too much elated the duque, who, not satisfied with freeing Salamanca from the French, risked his army several times in the open country; and, when Areizaga was thought to be advancing victoriously through La Mancha, he pushed forward into the open country of Castile, till Marchand, whom he had defeated, was joined by Kellermann and a fresh division from Valladolid. Even then, ignorant of their real force, he advanced against the enemy. On discovering that Kellermann had come up the duque retreated; but it was too late, and he was overtaken and beaten to pieces by Kellermann, on the 28th of November, at Alba de Tormes, the whole of his cavalry being seized with a sudden panic, and taking to flight before a French sabre or bullet could touch them. The Spanish infantry did better, forming into square and repulsing three successive charges of the French cavalry; but, when del Parque ordered a retreat upon Tamames, the scene of his victory in October, the infantry too began to desert; and on the following morning the roads were strewed with musquets and knapsacks thrown away by the fugitives, and the duque's army of 20,000 men was dwindled down to a few hundreds. Kellermann reported that he took all the artillery of the right wing, killed 3000 men, and made 200 prisoners.* Thus the two armies which constituted the principal regular force of the Spaniards, and which, if they had been kept within the line of the Tagus and posted along the Sierra Morena, might long have protected Andalusia and the provinces of the South from French invasion, had been thrown away on a most foolish errand! Lord Wellington, whose advice and warning had been rejected and despised, was deeply mortified by the events. "I lament," says he, "that a cause which promised so well a few weeks ago should have been so completely lost by the ignorance, presumption, and mismanagement of those to whose direction it was intrusted. I declare that, if they had preserved their two armies, or even one of them, the cause was safe. The French could have sent no reinforcements which could have been of any use; time would have been gained; the state of affairs would have improved daily; all the chances were in our favour; and in the first moment of weakness, occasioned by any diversion on the continent, or by the growing discontent of the French themselves with the war, the French armies must have been driven out of Spain. But, no! nothing will answer except to fight great battles in plains, in which the defeat of the Spanish armies is as certain as is the commencement of the battle. They will not credit the accounts I have repeatedly given them of the superior number even of the French: they will seek them out, and they find them invari-

* We could never understand how—or, to speak more plainly, we could never believe that—whole Spanish battalions died immoveable at their posts, in an open plain, in Cuesta's famous battle of Medellin. The British army, even in later days, when the Spaniards were vastly improved, never saw them capable of quite so much steadiness. At Medellin there was indeed a smashing fire of artillery upon the Spanish ranks and columns; but this would hardly account for the sort of destruction which is reported to have taken place. It appears that at Medellin, as at Ocaña, the Spaniards were broken and enveloped at once, that their retreat was completely cut off, and that, in their despair, they sold their lives dearly. At the time of the battle of Ocaña, when Bonaparte had successfully terminated the Austrian war, and when his brother Joseph was entertaining sanguine hopes of establishing his throne, the system was recommended and adopted of taking as many Spanish prisoners as possible, and of trying afterwards to induce them to enter into the service of the intrusive king; but at the time of the battle of Medellin, when Joseph's fears were great, a much more sanguinary system prevailed. Marshal Victor, however, wrote to King Joseph after the battle of Medellin: "The loss of the Spaniards was so great that it must be seen to be believed. I myself have gone over the field of battle to ascertain the facts. All the Spanish battalions which General Cuesta had stationed to oppose us, whether in line or in columns, *are still lying there in the same order.* Every man, officer and soldier, was killed; I at first stated their loss at 10,000 to 12,000 killed; I now believe it was more. All my staff have seen it as well as myself. But you must not suppose that it was a massacre of prisoners: no, they defended themselves to the last extremity, exclaiming '*No quarter.*' The sight of the field of battle is really frightful." Still this may have been, in good part, an attempt to cover the atrocity of the slaughter. Colonel Napier, after mentioning how Latour Maubourg with his cavalry swept round the left flank, and then fell on the rear of Cuesta, and how, at the same moment, Lasalle and his cavalry galloped in upon the broken bands, says, with a startling brevity, "A horrible carnage ensued, for the French soldiers, while their strength would permit, continued to follow and strike, until three-fifths of the Spanish army wallowed in blood."—*History of the Peninsular War.*

In the battle of Medellin Cuesta was wounded, and fell from his horse; but he was quickly remounted, and escaped. Another Spanish general, Frias, was severely wounded and was taken prisoner.

* Southey, History of the Peninsular War.

The declaration of war by Austria against France —which would not have been made at that moment without English encouragement and promises of aid—bound our government to attempt two great diversions (in addition to the war we were carrying on in the Spanish Peninsula, and which gave occupation to 200,000 French) in two very opposite parts of Europe,—in Holland and in the South of Italy. From the beginning of the month of May preparations were made for fitting out one of the greatest armaments that had ever issued from the ports of Great Britain; and by the end of July an army of 40,000 men was collected, and a fleet of thirty-seven sail of the line, two 50-gun ships, three of 44 guns, twenty-three frigates, thirty-one ship and brig sloops, five bomb vessels, twenty-three gun brigs, and about one hundred and twenty sail of hired cutters, tenders, gunboats, &c.—in all two hundred and forty-five vessels of war—accompanied by about four hundred sail of transports, was ready to convey and co-operate with the army. Unfortunately the destination of this mighty armament could not possibly be concealed from the French, or from any other people that knew what was, and had long been, in progress on the Scheldt. Not even Nelson and Trafalgar had made Bonaparte despair of disputing the sovereignty of the seas and invading England. Ever since the spring of 1807 formidable naval preparations had been carried on by France in those waters; and, finding that the port of Antwerp was not quite deep enough to float an 80-gun ship, with her guns and stores on board, Bonaparte had forced his brother Louis, the nominal King of Holland, to cede to France the port of Flushing, which lies at the entrance of the Scheldt, and offers a capacious bason, in which twenty or more sail of the line may lie in perfect safety, and in readiness for sea on all occasion. By the spring of the present year ten 74-gun ships were at anchor near the Calot Sand; nine ships of the line were on the stocks at Antwerp, most of them ready to be launched, and at the same place the keels of nineteen ships of war, large and small, were laid, while on the stocks at Flushing there were one 74 and three smaller vessels. Besides these there were, at Flushing, at Antwerp, and in the Texel, several sail of the line actually ready for sea. Counting on his conference with the Emperor Alexander at Erfurt, the Emperor of the French fully expected that nineteen or twenty Russian ships of the line would be put at his disposal; he knew that he could calculate on the hardy seamen of Denmark, and on what little remained of the fleet of that country; the defeats of the King of Sweden by the French and by the Russians would place the naval resources of the Swedes in his hands; and altogether he hoped to collect at some opportune moment a fleet of sixty sail of the line on the Dutch coast. Bonaparte, too, was known to have expended nearly 3,000,000*l.* sterling in converting Antwerp into a great naval dépôt, in making basons, dock-yards, and arsenals, and fortifications to defend them. It was not to be expected that England should allow these preparations to go on without making an attempt to interrupt them; and, as soon as our armament was begun, its destination was but an obvious inference. The very same reasons which account for the impossibility of secrecy justify the government in selecting Holland rather than any other country, in which to operate the diversion in favour of Austria; and this point was, moreover, recommended by the known existence of a very strong party in the United Provinces hostile to the French. Nor in the present state of the northern powers, with Denmark hostile, with Russia hostile, with Sweden crushed and falling to pieces, with Prussia conquered and her sea-ports and forts in the hands of the French, would it be very easy to discover where our diversion could have been made except in Holland. Small flying forces, like those led by Major Schill and the Duke of Brunswick, were able to maintain themselves for a short season in the north of Germany and the country on the Elbe; but those impoverished regions could not have supported a large British army, and a small one would have been sacrificed. And, even admitting that 30,000 or 40,000 British troops might have been landed on the Elbe,* marched into the interior of Germany, and there supported with the provisions and stores they carried with them, or by such as should be sent after them, from England, our government might be excused for not rushing into this bold adventure, since such an army must be only secondary to the great armies of the Emperor of Austria, and, in fact, almost entirely dependent on Austrian steadiness, ability, and good luck, which were all so very doubtful—to say nothing of that treachery, both in council and in the field, the existence of which seems to be proved by so many fatal reverses in past campaigns, as well as in the present. Before our expedition sailed from the Downs, Bonaparte had fought and won the battle of Wagram, and errors had been committed by the Austrians similar in nature and equal in amount to any that they had committed in former wars. Our appearance on the continent might reasonably be expected to revive the spirit of the Emperor Francis; and it behoved our government to make a great effort for the destruction of the docks and arsenals on the Scheldt, and for the capture or destruction of all that they contained. The Walcheren expedition, even as it was managed, gave serious alarm to Bonaparte, then far away on the Danube, and it kept on the Dutch coast, and on the N.W. coast of France, some troops which might have been sent to reinforce him in a struggle in which he was, at least once,

* Some trifling demonstrations were made on the Elbe. Captain Goate, with H. M. sloop the 'Mosquito,' and three small gun-vessels, entered that river on the 9th of July, and, landing sailors and marines, took both the town and the battery of Cuxhaven, although the battery was strong, surrounded by a wet ditch, and defended by 500 French troops. And subsequently to this an English flotilla with some hundreds of troops on board appeared in the same waters. The force was too small to do any good, as the popular insurrection in the north of Germany was then being crushed; but it appears to have been in these English vessels that the Duke of Brunswick and his brave companions escaped from the continent.

ably in all parts in numbers superior to themselves."*

The defeat of the Duque del Parque left the French at full leisure to direct their operations against the most vulnerable part of Portugal. On the line of the Guadiana, where his army was stationed, or on the side of Alemtejo, Lord Wellington could apprehend no attack, attempts in that quarter having always proved unsuccessful: and, after what Soult had suffered during his advance to, and retreat from, Oporto, it was not at all likely that the French would make a second experiment upon Portugal from the Galician frontier at the opposite extremity of the kingdom. But an intermediate route from the province of Salamanca by Ciudad Rodrigo was more open and much easier, and would lead the invading columns into the heart of Portugal or about midway between the Galician frontier and the frontier of Alemtejo, cutting off Lisbon from Oporto. The capture of Ciudad Rodrigo would, moreover, cut off the communication between the Spanish government and the northern provinces of Spain, and, besides opening the easiest way into Portugal and bringing on the fall of Almeida, it would inevitably give the French possession of Old Castile; and Lord Wellington obtained certain information that a French council of war had recommended the immediate siege of Ciudad Rodrigo. His lordship's primary object was, and had all along been, the defence of Portugal. It was therefore clear that the line of the Guadiana was no longer the line for him; and he resolved to withdraw his troops from that frontier, to march them to Lisbon and to the right bank of the Tagus, and to extend them from thence towards Oporto and the river Douro. He would thus meet the storm where it was now sure to burst. This plan, promptly conceived—for a few days before, and until the annihilation of the armies of Areizaga and del Parque, it had been unnecessary to think of it—was carried into execution with excellent order, and with all the rapidity that was necessary. Quitting the unhospitable ground of Spain altogether, the mass of the British army moved through Alemtejo in the rainy month of December, crossed the Tagus at Abrantes, and marched on to the Mondego. At the beginning of January, 1810, Lord Wellington fixed his head quarters at Viseu, having his out-posts along the frontiers of Spain towards Ciudad Rodrigo. He had left General Hill and his division at Abrantes; and General Fane's brigade of heavy cavalry also remained on the banks of the Tagus. Abrantes, which commands the passage of the Tagus (over which river a bridge of boats had been constructed), is situated on the summit of a lofty hill, is naturally a strong place, surrounded by an old wall; and its defences had been improved by English engineers. Viseu, at the distance of 134 miles N.N.E. from Lisbon, also stands on elevated ground. In both places the troops, who were now properly supplied with provisions, recovered their health, and got rid of the malaria fevers they had caught in Spain. Parliamentary oppositionists and other persons at home might represent the case as hopeless, the attempt as madness; but assuredly Lord Wellington never for one moment despaired of defending Portugal against whatever French host might be brought against him; and the gallant army under his command fully shared in this confidence. After these toilsome marches had all been completed, there was a long repose; but the time, far from being lost, was most advantageously employed in improving the commissariat, the baggage and conveyance department, and other branches and departments (without which the bravery and activity of an army may be thrown away, and the strategetical skill of its commander baulked and defeated), in training and thoroughly disciplining the reinforcements which arrived from England, and in raising the Portuguese regular army to a state of efficiency in numbers, armament, and discipline. In this last part of his many and arduous duties his lordship was most ably seconded by General Beresford, who showed, in the following campaign, what Portuguese troops were worth when trained and commanded by British officers. This result, and numerous other advantages, could only be obtained through the superior docility and modesty of the people, and the more rational and submissive temper of their provisional government. The Portuguese had the habit of depending on their old allies the British, and of looking up with respect to their superior wealth, resources, means, and endowments; the Spaniards, and especially the superb Castilians, had only the more ancient habit of considering themselves as the first people in the world, and of despising all other nations. Lisbon at this time presented the appearance of the capital of a great British colony; our embassy, our merchants, our navy, our troops seemed to hold undisturbed possession of the city. The Portuguese soldiers, commanded and disciplined by English officers, and receiving their pay in English money, looked more like partisans of their powerful ally than the military force of the country to which they belonged. Now and then the Bishop of Oporto, president of the council of regency, showed some insubordination and gave a little trouble; but, on the whole, everything was apparently subjected to the control of England, whose assistance alone could prevent the French armies from re-obtaining possession of the whole country and satisfying their revenge on the people.* If a similar control, or even an approach to it, could have been obtained in Spain, that unhappy country might have been spared some years of the most terrible and destructive war that has been known in modern Europe.

* Dispatches. His lordship adds, "I am only afraid, now, that I shall be too late to save Ciudad Rodrigo, the loss of which will secure to the French Old Castile, and will cut off all communication with the northern provinces, and leave them to their fate. I wonder whether the Spanish officers ever read the history of the American war, or of their own war in the Dutch provinces, or of their own war in Portugal."

* Col. Leith Hay, Narrative.—Col. Gurwood, Wellington Dispatches.

very nearly over-matched and beaten. We apprehend, however, that no excuse can be found for ministers in their strange selection of commanders for this expedition: the Earl of Chatham, to whom they gave the supreme command of the land forces, had scarcely anything to recommend him except his being an amiable man, and connected with great men;* and, as for Rear-Admiral Sir Richard John Strachan, it would be committing an injustice to the navy not to say that there were fifty officers, even among those who had the requisites of professional rank or grade, fitter than he for the command of the fleet. If the government could have got rid of the rank and routine system, and of other causes which often had much to do with these appointments, there was one officer at hand fittest of all for this particular service—Captain Lord Cochrane. Or, by recalling him from the Mediterranean, they might have employed the ambidexterous Sir Sidney Smith, who was equal, or very nearly so, to Sir Richard Strachan in rank, and who was quite equal, if not superior, even to Lord Cochrane in in-shore work, or for operations, such as the present, which required the sailor to have "one foot on land and one on sea." But, as if the appointment of inferior commanders were not sufficient to mar the business, the government, uninstructed by many examples, neglected to define the authorities of each, thus leaving the sluice-gate open to those differences of opinion and jealousies of authority which had usually broken out between generals and admirals. The objects of the expedition, as explained in the Earl of Chatham's instructions, were, "The capture or destruction of the enemy's ships, either building at Antwerp and Flushing, or afloat in the Scheldt; the destruction of the arsenals and dockyards at Antwerp, Terneuse, and Flushing; the reduction of the island of Walcheren; and the rendering, if possible, the Scheldt no longer navigable for ships of war." Nelson, in 1801, had fixed his eye upon the same point, and had considered it as a week's expedition for a small fleet and 4000 or 5000 land troops; but since that time the works of Bonaparte had rendered the enterprise much more difficult. Ministers knew that Great Britain had held possession of the island of Walcheren before now; unfortunately they had no statistical returns to show at what expense of health and life that occupation had been maintained in the days of William III. and Queen Anne; and they declared afterwards that they never contemplated a permanent, or even a long, possession of the island. The study of statistics, which had scarcely been begun in 1809, was altogether unknown a century earlier: there existed no materials in the war-office, in the army medical board, or anywhere else in England, whereby to judge of the insalubrity of those islands in the estuary of the Scheldt: nevertheless, there is truth as well as point in the assertions that "the expedition to Walcheren, planned and conducted as it was, was the fruit of statistical ignorance in every one—everywhere from the prime minister to the commander-in-chief, and from him to the surgeon's mate: and that ignorance, which every Middleburghian, any Dutchman could have enlightened or dispelled, cost us 10,000 brave men, not a little money, and not a little credit."*

On the 28th of July the Grand Armada—for such it might be called—set sail from the Downs.† In the course of the following day, it was nearly all collected on the Dutch coast; and then began the differences of opinion, and the discoveries that the fleet was not sufficiently provided with boats for landing the troops, ordnance, &c. The wiser part of the officers were for going on to Antwerp at once (Antwerp was not forty-five miles distant), to try a *coup de main* before the place should be put in a full state of defence; but the less wise were for beginning with Flushing, and this last opinion prevailed. Flushing, whose importance, as compared with Antwerp, was as ten to a thousand, was invested on the 1st or 2nd of August; but so slow were our incapable commanders that nearly a fortnight elapsed before they got their batteries all ready,‡ and began their bombardment in earnest. They began to bombard hotly on the 13th; and on the 15th, when two churches, the Stadt-house, and 250 houses had been destroyed, General Monnet, who commanded the garrison of Flushing, held up the white flag and requested a suspension of hostilities. On the following evening the articles

* Even according to a not unfriendly organ (which was occasionally played by Walter Scott, as well as by Southey) the appointment of the son of the first Earl of Chatham and brother of William Pitt, "excited considerable wonder, for Lord Chatham was a man whose habits of indolence were notoriously inveterate, insomuch that in the height of his brother's power it had been found necessary to remove him from the office of first lord of the admiralty."—*The Edinburgh Annual Register.*

In a note to the above passage it is said, "While he held the situation of first lord of the admiralty he was called the *late* Lord Chatham, because his hour of rising was usually in the afternoon." In the text there are a few other sentences which seem to denote the pen of Scott: "Lord Chatham's manners were agreeable, and in conversation he displayed talents, which, as they never appeared on other occasions, seem only to have been exerted for conversational purposes, or only equal to them. Mr. Pitt was known to have described him as a person of useless abilities. He had served on the continent during the Anti-jacobin war, and was third in command at the disgraceful capitulation of the Helder. At this present time he held the situation of master of the ordnance, and in that capacity possessed a seat in the cabinet. In the course of the expedition, and still more after its conclusion, some inconvenience was found to result from having thus invested a cabinet minister with command."

* Edinburgh Review, vol. xlix., article on Military Education.

† The Earl of Chatham was accompanied or followed in part of the expedition by the late Sir William Curtis, biscuit-baker, banker, contractor, alderman, lord mayor. According to a street song of the day,

"Great Chatham sailed safe from the Downs,
With Curtis so loyal and funny;
They both came back again safe,
But cost John Bull twelve millions of money."

There is a note in Dodsley's Annual Register to this effect:—"Among the visitors of the fleet was one who attracted much notice by the pomp of his appearance, or what may be called his equipage. This was Sir William Curtis, who was wafted to the Downs in a yacht, either of his own, or hired for the purpose, or borrowed, beautifully painted, adorned with a streamer bearing devices prognosticating victory and glory, and carrying delicate refreshments of all kinds to the military and naval commanders, and the principal officers."

‡ General the Earl of Chatham said he was waiting for Admiral Sir Richard Strachan, and the admiral said he was waiting for the Earl of Chatham. Their positions were described in a well-known quatrain—

"The Earl of Chatham, with his sword drawn,
Stood waiting for Sir Richard Strachan;
Sir Richard, eager to be at 'em,
Stood waiting for the Earl of Chatham."

of capitulation were signed; and the garrison, amounting to about 6000 men, laid down their arms in front of the place, to be conveyed as prisoners of war to England.* The ships that were afloat had fled at the approach of the English; those that were on the stocks, or in dock, were secured. With the exception of the peaceable surrender, on the 17th, of two small islands to the north of the Eastern Scheldt, the reduction of Flushing was the virtual termination of the campaign. On the 21st, and not sooner, the *late* Lord Chatham removed his head-quarters from Flushing to Veere; and on the 23rd he went to Ter Goes, on the contiguous island of South Beveland, and talked solemnly of going on to Antwerp. But before he could get there he must reduce Lillo and Liefkenshoeck, places strong of old, and of late years made much stronger; and now he learned that each of these two forts mounted 40 pieces of heavy cannon, and had a formidable garrison; that the dykes in the neighbourhood had been cut, and the whole country laid under water; that bars had been drawn across, and all sorts of impediments thrown into the Scheldt to stop the advance of our men of war; that a particularly strong boom-chain had been drawn across the river from Lillo to Liefkenshoeck; that arrangements had been made to sink vessels in a narrow part of the channel between those forts and Antwerp; and that batteries *à fleur de l'eau* had been erected by the French wherever the river was narrowest and most difficult. A great many of these preparations had been made during the fortnight and more that he had been pottering at Flushing. And, while he paused and pondered for nearly another fortnight, Marshal Bernadotte arrived at Antwerp, and from 40,000 to 50,000 regular troops, French, Dutch, and Germans, were collected in that neighbourhood, together with hosts of militia both from Belgium and from Holland. Add to all this, that 10,000 of the British troops had been left behind to keep possession of the Island of Walcheren; that 3000 were on the sick list; that nearly all the provisions brought from England were eaten up; that the country we had seized could supply next to nothing; and we need not be surprised that a council of war called together by the Earl of Chatham, on the 27th of August, should be decidedly of opinion "that it was not advisable to undertake further operations."† Sir Richard Strachan thought that it would, and then thought that it would not, be possible to fulfil that part of the government instructions which directed him, *if possible*, to render the Scheldt no longer navigable for ships of war; and so did nothing at all. Seriously, the thing was an impracticability, and our ministers must have been dreaming when they thought of it. In spite of the two-third rations, and of the sickness which was spreading, it is possible that our commanders might have remained some time longer where they were, doing nothing; but, as they stopped their offensive operations, the enemy commenced theirs. On the 30th and 31st of August they opened a fire of guns and mortars from both banks of the river; and compelled our ships to retire from their advanced position. This, indeed, was of no importance now; the ships of every description departed altogether from the country as soon as the weather would permit, and by the 4th of September every part of Zealand was evacuated by the English, except the island of Walcheren.* On the 14th of September, Earl Chatham embarked for England with the greater part of the army, leaving Sir Eyre Coote to hold the command of the remainder, and to keep possession of Walcheren, for the purpose of blocking up the Scheldt, stopping the egress of the Batavo-Gallic fleet, and keeping open an inlet for the trade of Great Britain into Holland! Before the Earl of Chatham took his final departure, 8000 men on the sick list denoted either that the climate did not suit the constitution of his British Majesty's subjects, or that there was something peculiarly noxious there this year in the air and season. And he had not been gone long when all the force he had left under Sir Eyre Coote began to disappear with alarming rapidity in the hospitals or in the grave. The disease has been described as nothing but very bad fever and ague, chiefly pro-

* During the siege of Flushing the king's approbation was signified to Earl Chatham (an especial favourite at court) for the *promptitude* with which he had commenced, and the *vigour* with which he had conducted, his operations!

In all, Chatham had consumed nearly 10,000 rounds of ammunition. General Monnet was dismissed from the French army with disgrace, for surrendering while he had still 4000 men fit for duty.

† Of the practicability of doing all that the Earl of Chatham was commissioned to do (had he but had more speed and more skill), a French military writer says,—

"Blankenberg is the point of coast the most convenient for the disembarcation of a body of troops destined for the invasion of Flanders. From this spot a paved road runs straight to Antwerp. Its length is 26 leagues; it passes through Bruges and Ghent. These two cities, at this time the capitals of rich and populous departments, which indirect taxation was harassing more than the conscription, would have supplied few recruits; but, in taking up a position there, the English would give to their plans an air of importance, convert to their use the resources of this fertile country, occasion a momentary inquietude and fear, and paralyze the zeal of those Belgians who, from interest, were devoted to France. From the Downs to Blankenberg is 20 leagues; and the passage could be so managed that the fleet should arrive at the break of day. The disembarcation would be accomplished without striking a blow, and Bruges be immediately occupied. The light detachments would then advance upon Sluis, a dismantled fort, and then, by Moldegham and Caprike, upon Ghent. A division of 10,000 or 12,000 men should also march upon Courtray, with orders to push forward a party, and retain a communication with Ghent by the great road of Menin. At length the main body of the army arrives, by forced marches, at the Tête de Flandre and Liefkenshoeck, both of which it carries in a trice. Meanwhile, the English fleet appears at the mouth of the Scheldt, and is now able, with some prospect of success, to commence operations in combination with the army. Any one may convince himself, by referring to the map, that this object may be attained, as far as relates to the journey, in seventy-two hours after the disembarcation has been effected at Blankenberg."—*Victoires et Conquêtes.*

* Zealand, it will be remembered, consists of the islands of Walcheren, North Beveland, and South Beveland. South Beveland is by far the largest of the three islands; its length being twenty-five miles from east to west, and its main breadth about nine miles. Walcheren, which is separated from the two Bevelands by very narrow channels of the sea, is about thirteen miles from east to west, and nine miles from north to south. The surface of the three islands of Zealand is flat and low, being in many places beneath the level of the sea at high water. As the water percolates through the bank, and accumulates by rain, much care and labour is required to remove it. This is commonly effected by means of sluices and mills. Inundations occasionally occur, and, as the water stagnates, the grounds are frequently left covered with slime and mud. The soil is excessively fertile, and produces corn, abundance of fruit, vegetables and madder. The indigenous inhabitants of the islands are very liable to endemic fevers during summer and autumn. They have in general a very unhealthy aspect: the skin is sallow, and sometimes it pits on pressure; the muscles are soft, yielding, and inelastic; the abdomen is tumid, while the limbs are small.—*Henry Marshall, Contributions to Statistics, &c.*

duced by the French cutting the dykes and inundating the neighbourhood of Flushing in the hot season of the year; but it should appear, from the dreadful mortality on the spot, and from the appearance of many of the patients who survived only to come home and die in English hospitals, that there must have been an admixture of typhus or of some other of the more virulent class of fevers. Malaria fever and ague kill but very slowly, even in much hotter climates.* Our army physicians and surgeons appear, at the moment, to have understood little or nothing of the disease or of the causes that produced it, and it is said that the medical board, not having been consulted previously, had made no preparations and had sent out no medicines proper for the case. Some wiseacres took it into their heads that the disease originated in the quality of the water of the island, which the men were obliged to drink; and this opinion had so much weight at home that English water was sent over for the use of the troops, the requisite quantity being calculated at 500 tons per week. When the first importation of Thames water arrived it seemed to be so little wanted that Sir Eyre Coote asked the army physicians what he should do with it, and by their advice he distributed it to the fleet. The water in which the soldiers often had to stand and work or march (several thousands of them were, on one occasion, up to their middle in water during the whole night), the want of needful accommodation, and even of common comforts, for the sick, were more apparent causes of disease than the water they took inwardly. As the army had been intended for most active service—for a rush and dash upon Antwerp—it had been encumbered as little as possible with heavy baggage: hence there was a want of covering and bedding for the sick, many of whom were obliged to lie on the floor in their great coats, and with their knapsacks for pillows. In the Flushing hospitals the roofs had been broken in by the bombardment, and the patients lay exposed to the weather. Towards *the end* of October a hundred English bricklayers were sent over, with English bricks and mortar, tiles and trowels all complete, to mend the hospital roofs (as if such workmen and such materials could not have been procured in the country at the end of August, when the disease began to be dreadful); but the repairs proceeded but slowly, and the imported workmen themselves soon increased the number of the sick. In the large town of Middleburg there was better accommodation and abundance of room; but, not to disturb the townspeople, the poor sick soldiers were quartered in cold damp churches, or huddled in barns and warehouses, mostly without windows and a free circulation of air. The Dutch, who sleep between two feather beds, might have been made to spare some bedding; but such a resource seems never to have been thought of by our stultified commanders, who left two fever-stricken soldiers to toss and groan in the same bed—where beds there were. If the Earl of Chatham* and his successor Sir Eyre Coote, and the officers serving under them, had studied how to render the fever a pestilence and a plague, they could scarcely have hit upon a better course than the one they followed. When the government became seriously alarmed at ravages almost unexampled in military history, they called upon the principal officers of the army medical department to repair to Walcheren to examine into the causes of the malady, and report thereon.† To this summons the surgeon-

* Besides Flushing, the island of Walcheren contains two other towns, Middleburg and Veere, and many villages. Middleburg, the chief place, had then a population of 10,000 or 11,000 souls. Even when the dykes were not broken, and the country not *inundated*, it was not considered a very salubrious spot; but, it was probably not (to the indigenous) much more unhealthy than Romney Marsh, or the Hundreds of Essex, or the worst parts of the Lincolnshire Fens. A writer who has laudably distinguished himself by his exertions for promoting the medical statistics of the army, and the study of statistics in general, says that the ratio of mortality in Zealand is a little higher than it is in the marshy parts of some of the counties in England, and about the same as in the parish of Spalding, which is situated in the lowest part of the fens of Lincolnshire. But it appears that the influence of the climate of Zealand upon *strangers* must be far more fatal than is that of our worst Lincolnshire fen; that the old Scotch regiment in the Dutch service had been known to bury their whole number at Sluys, in Dutch Flanders, in three years; that, of the French forces employed since the war of the Revolution in those marshy regions, about 33 per cent. had been annually cut off by endemic disease, and that even Dutch troops brought thither from healthier parts of the country had scarcely suffered less than the French.—*Henry Marshall, Deputy Inspector General of Army Hospitals, Contributions to Statistics of the Sickness and Mortality which occurred among the troops employed on the Expedition to the Scheldt in the year* 1809. (*From the Edin. Med. and Surg. Journal, No.* 133.)

* All the blame is not to be imputed to Coote: the same lodging and treatment of the sick obtained before Chatham left for England; and, by the 8th of September, which was six days before the earl quitted Walcheren, the number of sick amounted to nearly 11,000! Many of these sick accompanied Chatham home. In the malaria fevers of the south of Europe the patient, in most cases, feels an immediate benefit from being conveyed into a healthier atmosphere. But with this Walcheren fever it was not so; and it is said that General Monnet, the commandant of Flushing, had recommended the French government never to remove the sick, it having been found that a greater number of those who were kept in the island recovered, than of those who were removed from the island. A battalion of our first regiment of foot-guards, 872 strong, returned to England with 399 sick. The battalion was landed at Chatham in September. Many of the men who had returned apparently well were attacked with the fever, so that by the 8th of March, 1810, only 117 of the original strength of the battalion had escaped the disease, and some of these 117 men were attacked with intermittent fever as late as the middle of the month of June, 1810. It appears that of the number of cases in hospitals a large ratio terminated fatally. "But," adds Mr. Marshall, "long after this date many of the men who had apparently escaped the noxious influence of the climate of Walcheren were attacked and suffered severely from the specific endemic disease. . . . . It is well known that among the regiments who had been employed in Walcheren, and who served afterwards in the peninsula, many of the men were, upon the first exposure to cold and fatigue, rendered unfit for duty, so as frequently not to leave one-third of the strength fit for service. A similar result may frequently, if not generally, be expected in all cases where troops have suffered severely from endemic fever, which commonly leaves less or more of organic disease, by which means recovery and restoration to health is often *only* partial and temporary."

† The alarming progress of the Walcheren fever is thus stated:—

On the 20th of August, the fifth day after the capitulation of Flushing, sickness began to show itself among the troops in South Beveland. The number of sick this day was 1564.

August 23. Sickness increased very much within the last twenty-four hours.

August 26. The sickness continued to increase rapidly. The number of sick amounted to 5000 rank and file.

August 28. The sickness still increased. Some of the general and many of the other officers were seized with fever.

August 31. Sickness still increasing; and, as in every case the actual numbers brought down for embarcation were much greater than stated in the returns given in to regulate the appropriation of transports, there was a deficiency of tonnage and room; and so the sick were embarked with the well, and both classes much crowded. The officers of the medical staff suffered very much from the disease.

September 1. The number of sick in South Beveland was upwards of 5000.

September 3. The number of sick amounted to 8194.

September 4. The troops in South Beveland embarked, and that island was completely evacuated.

September 7. The transports with the troops ordered to England sailed. The sick of the whole army, including those sent to England, amounted to upwards of 10,948.

September 10. Sick in Walcheren, 7396. Thus, as only 16,766 rank

general of the army replied, that the question was not surgical but medical, and that consequently the duty ought to fall to the physician-general of the forces: the physician-general of the forces, on his part, represented that he had too much to do at home to be able to go abroad, and that the duty properly and indisputably appertained to the inspector-general of army hospitals: the inspector-general of army hospitals replied, that the duty required was purely medical, and, as such, belonged to the physician-general—but, upon learning that both the physician-general and the surgeon-general had declined going, the inspector-general declared that he was ready to go upon the shortest notice. When this curiously dishonourable correspondence was laid before old Sir David Dundas, the present commander-in-chief (who was not without his share of blame in the Walcheren expedition), Sir David and the secretary-at-war, Lord Castlereagh (who had a far greater share of blame with respect to the original enterprise than the commander-in-chief), were both decidedly of opinion that Sir Lucas Pepys, the physician-general, was the most proper person to be employed on this service; and accordingly an order was forthwith issued to Sir Lucas to proceed immediately to Walcheren. Sir Lucas hereupon expressed in writing his great concern at finding that a man of nearly seventy years of age, and with his infirmities, should be thought capable of undertaking such a duty—a duty which he solemnly declared himself incapable of performing. Sir Lucas recommended two other army-physicians to go in his stead, adding that they would see the business well performed, "whereas, if he himself were able to go, it would be merely *pro formâ*, and no possible good could arise from it, *because he knew nothing of the investigation of camp and contagious diseases.*" * But good came out of this evil, honour out of this disgrace. The physician-general and the surgeon-general were both dismissed, and a new and incomparably better medical department was established.

Some able men on the spot alleviated the sufferings of the soldiers; but, in proportion to the numbers left under Sir Eyre Coote's command, the sickness and mortality continued to be very great. Nevertheless Sir Richard Strachan, who remained there with his fleet—which, strange to say, suffered nothing from the disorder †—dissuaded ministers from the thought of giving up their precious conquest. It was a post, he said, of great importance as a naval station, and also as a pivot for future military operations on the continent. Indeed, as a demonstration in favour of Austria, it became of great importance, and might probably be equal to the defensive employment of 100,000 of the enemy's men, for it must keep the Emperor of the French in a constant state of alarm or uneasiness, being so contiguous to the continent. Sir Richard even drew up a plan of defence—and not a bad one—which was submitted to the admiralty. He considered that, as the defence must be principally naval, about 12,000 land troops would be enough for duty on the island. On the other hand, Captain Cockburn (since Admiral Sir George), whose skill and judgment were highly prized, was as decidedly of opinion that no permanent possession ought to be contemplated, and that Walcheren would never prove worth the expense of defending it.* But England considered herself bound to retain possession so long as it could be of any use to our unlucky ally, and the Emperor of Austria solicited us to continue our operations in Holland down to the moment, and apparently even past the time, when, beaten again, and again losing all heart, he prostrated himself at his conqueror's feet, and purchased terms for himself by proposing, or consenting to, the marriage of his daughter with Bonaparte. Dearly as it cost us, our occupation of Walcheren cost Bonaparte many exertions as well as anxieties, much wear and tear of his troops in marching and countermarching, and a great deal of money. French writers give a different account, and state that the Belgian militia, and a few thousand conscripts and volunteers from Paris and the French frontiers, were sufficient to keep the English army in check; but even these forces could not be equipped and brought into the field without a heavy outlay; and it is well known that Bernadotte brought down, and long kept at Antwerp, and in the forts and batteries lower down the Scheldt, many French and German troops that would otherwise have been sent from Hanover and from the Rhine to the Danube. Our ministers, however, at one time really acted as if they intended to keep Walcheren for good and all: they ordered our engineer-officers to continue to improve the fortifications, and some more bricklayers and masons, with large quantities of bricks and lime, were sent out to work upon the parapets and ramparts of Flushing, and to aid in making a chain of batteries and redoubts, to extend from Veere to Rammekins, and from Rammekins to Arnemuiden. But at last, on the 13th of November, which was a month all but two days after the Emperor Francis

and file were left behind at Walcheren, nearly one-half of that force must have been in hospital, or in attendance on those that were.—*Henry Marshall, Deputy Inspector General of Army Hospitals, Contributions to Statistics, &c.*

* Edinburgh Annual Register, 1809.

† "So local were the causes of disease that vessels stationed only a few yards from the land continued perfectly healthy."—*Id.*

* Captain Cockburn could perceive no other advantage in our possession of Walcheren than this:—the enemy's fleet in the West Scheldt could not escape from it without hazarding an engagement with our fleet which would lie in Flushing roads. "But," he said, "the natural consequence would be that the enemy's ships would remain where they were, and where, as it had been proved, we could not get at them. If, on the contrary, Walcheren did not belong to us, and our squadron destined to oppose the Scheldt fleet were kept in the Downs, favourable circumstances might indeed enable the enemy to escape, but it would be at considerable risk;" "and I cannot but think," he added, "that a French fleet being at sea is more advantageous to us than the knowledge of its existence in a safe harbour. In the latter case it is a constant source of anxiety to us; in the former, it is impossible to describe the energy, spirit, and hope with which the chance of its destruction fills every breast, especially of those who have spent many a long and dreary night blockading them. It is also to be remembered that, owing to the confused and hurried manner in which the enemy's squadrons traverse the seas during the short periods of their escaping our vigilance, the damage they have ever done our trade has been comparatively very small; but, on the other hand, if any of our squadrons fall in with them, the result always has been, and I trust will ever be, both honourable and advantageous to our country."

had signed his degrading treaty of peace with the Emperor Napoleon in Vienna, his capital, orders were dispatched to Lieutenant-General Don, who had succeeded Sir Eyre Coote in the command, to evacuate Flushing, and take such measures as he might judge most effective for the destruction of the basin and of the naval defences of the island. General Don was to occasion as little injury as possible to the inhabitants; but he was to leave the whole island in such a state as would render its ports and arsenals unserviceable. Yet even now our ministers seemed to entertain some vague notion that Austria would fly to arms and renew the struggle rather than submit to the saddest extremity of humiliation; and Lord Liverpool, who had succeeded Lord Castlereagh as secretary-at-war, in his very orders to Don to destroy the works, told that general that it was now determined to evacuate the island of Walcheren, *unless some new circumstances should occur in the progress of the operation, which might render expedient an alteration in this decision.* When secretaries of state and secretaries-at-war send such orders as these, generals and admirals may be expected to make blunders. General Don was an excellent man, and a sensible and good officer, but Lord Liverpool's riddle perplexed him in the extreme, and so he destroyed with one hand, and continued building up with the other—for, although the work of destruction was commenced on the 26th of November upon the parapet of the sea lines, at that very time, and for many days afterwards, six or seven hundred labourers were employed in carrying on the line of redoubt between Veere and Arnemuiden. At length, however, the labour of construction was suspended, and the labour of destruction prosecuted with more vigour. Possibly the noble secretary-at-war had been informed of the dilemma in which he had placed the general. The piers of the flood-gates of the basin at Flushing were blown up with gunpowder; the strong and costly pile-work on the east side was destroyed, that on the west side being left, as it could not be destroyed without risking the destruction of a part of the town; the arsenal and magazines in Bonaparte's new dockyard were burned; but very little was done to damage the land fortifications of the place, lest the houses and property of the townspeople should be injured by the explosion. The 6000 prisoners who surrendered in Flushing had been shipped off for England long ago. The ships on the stocks were destroyed; but one fine new frigate was brought away, as were also the timbers of a seventy-four, which, being put together at Woolwich, produced in 1812 a good ship, which was called the 'Chatham,' to preserve, we suppose, the memory of that earl's Walcheren exploits. These things and the fever were about all we brought back from an expedition which cost us several thousands of lives, and many millions of money.*

* The St. Giles' songster, or laureat of the expedition, to keep his verse in measure, greatly diminished the amount of the money: instead of 12,000,000*l.*, the Walcheren expedition is said to have cost 20,000,000*l.*, and thus to have imposed on the nation a perpetual burthen of 1,000,000*l.* of annual taxes. If one-half of this enormous sum had been sent into Austria, Bohemia, Hungary, the Tyrol, and Italy, the chances are that the Emperor Francis would not have been crushed; and it is quite certain that, if the other half of the money had been spent on our own navy, we might have built with it ten times as many line-of-battle ships as we could have seized or destroyed by getting into our hands all that were in the Scheldt.

Murat.

Our diversion on the side of Italy cost no such enormous sacrifices, and yet it too was attended with some advantages to our allies, for it tended to deprive Bonaparte of the services on the Danube of his most brilliant and best cavalry general, his brother-in-law, Joachim Murat, by virtue of Bayonne decrees, now King of Naples. Our movements, moreover, along the whole extent of the Neapolitan coasts obliged Murat to reinforce his army in Calabria, to wear it out with long marches hither and thither, as the danger seemed more imminent on this point or on that, and to keep on the shores of the Mediterranean and Adriatic both French and Italian troops which would otherwise have been employed against the Austrians in Upper Italy, and in the Tyrol or the Illyrian provinces. It is true that with all these stoppages Bonaparte contrived to beat the Emperor Francis, but his work would have been much easier and more speedy if even this our Italian diversion had not been made. It was not for even a wiser ministry than our own to calculate that Austria, after beginning the struggle so energetically, would end it so feebly, and that, after gaining so many successes, and putting her assailant within an inch of ruin, she would allow herself to be trampled upon, and give up all for lost.

The crowned dragooner had signalized his accession to the Neapolitan Bourbon throne, or his arrival at Naples, by recovering from the English possession of the isle of Capri. His unwarlike predecessor and brother-in-law, Joseph, after ordering two attempts, which turned out deplorable failures, contented himself with sitting down quietly, and seeing every day, whether in his palace at

Naples or in his palace at Portici, the white Bourbon flag of Ferdinand IV.*—the sovereign he had dispossessed,—waving over an island which is not more than twenty-four miles from the city of Naples, and which, with our ships and gun-boats that took shelter under it, very completely blockaded the whole Neapolitan gulf or bay. But this did not suit the bravery and the martial habits of his successor. Murat collected an imposing force on the beautiful promontory which juts out beyond Sorrento, and approaches to within two and a half English miles of the eastern extremity of the island; and, choosing a moment when our ships-of-war were absent, he carried over a force which might almost be called an army, and with it a frigate, a corvette, and a swarm of gun-boats. The place, which had been gallantly won by a few of our sailors and marines in 1806, was lost by some land forces in the autumn of 1808. The garrison was very weak, consisting of the Corsican Rangers in British pay, and two weak regiments of Maltese fencibles, which, contrary to their own intreaties and the judgment of Governor Sir Alexander Ball, had been turned into one regiment of the line. There was not an English regiment, there was not so much as an English company, on the island: all the British soldiers there amounted to one corporal and eight men of our Royal Artillery. But the Maltese regiment was officered partly by Maltese and partly by English officers, and some of the officers of the Corsican Rangers (besides Lieutenant-colonel Hudson Lowe, the commanding officer of the regiment and governor of the island) were Englishmen. But the natural strength of the place was great, and the defence, though protracted only for a few days longer than it was, would have allowed the English cruisers time to come up, and sweep away the Neapolitan army. It might have happened that the whole French and Neapolitan force should have been cut off, and captured on the island, or in their attempt to escape from it. It should appear that Murat was not without this apprehension, for, bold and adventurous as he was, he did not venture his own person in the expedition, but remained at Capo delle Campanelle, at the extremity of the Sorrentine promontory. As it was, his flotilla was ready to fly at the appearance of almost every sail in the distance, and once or twice they really fled to seek refuge behind the land batteries in the bay of Naples. Capri had got the name of the "little Gibraltar;" but, except in its rocks and precipices, it bore but a slight resemblance to the most celebrated of our fortresses, the fortifications and artificial defences being altogether contemptible. The French general, Lamarque, who commanded the expedition, attacked in three places at one and the same time. The first party that got on shore suffered considerable loss from the fire of the Maltese, who were posted on the heights of Anacapri, which command the island; but they contrived to hold their ground. Colonel Hudson Lowe, though having but a small disposable force, and being threatened with another attack on Capri, the lower town, reinforced the Maltese; but the French and Neapolitans had effected their landing and ascended the commanding heights of Anacapri, and had thus overcome the only real difficulty that the position presented. When the moon rose, Lamarque's people, who appear to have been reinforced, made a rush upon Anacapri, where the Maltese, after seeing their English colonel shot through the head, laid down their arms almost without resistance, or fled to the town of Capri by a flight of 538 steps, which is carried down the face of a precipice in a very curious manner. Other troops then came up from the western end of the island; artillery was brought over the rocks to Anacapri, and turned upon the lower town and its miserable little fort. An effort of no great magnitude, the landing of a few hundred English sailors and marines, would of a certainty have thrown the Neapolitan part of the forces into a complete panic; but a flotilla that sailed into the bay from the island of Ponza (where, also, the Sicilian flag was flying) was too weak to make the attempt, and it had no effect in prolonging the defence made by the single Corsican regiment and the nine English artillerymen. The siege was, however, prolonged from the 4th till the 18th of October. General Lamarque proposed a surrender of the garrison by a "capitulation" as prisoners of war. This was rejected by Sir Hudson Lowe, who, although the walls had been breached, would agree to no other terms than that of evacuating the island by a "convention," which should stipulate for a free departure of the whole of the garrison with their arms and baggage, and also for protection to the inhabitants of the island. And to these conditions, highly honourable to the defenders, the French general finally consented. Lamarque apprehended that an English fleet might soon arrive and coop him up in the island, without provisions and without other necessary supplies. The flag of Murat was scarcely hoisted over the little town of Capri ere a strong English squadron, with troops on board, came in sight; but it was now too late.*

Murat also recovered almost immediately several

* As we had taken possession of Capri in the name of the old King of Naples and Sicily, his flag had been immediately hoisted there.

* In this brief account of the loss of Capri we have been assisted by private information and by a local examination. There is abundant evidence, official and unofficial, to show what was the real force in British pay which held possession of the island for King Ferdinand. Yet General Colletta and other historians of his school and party represent the triumph of Murat as if obtained over a most formidable English garrison—a real English army. They talk of English troops surrendering in heaps. Not satisfied with gross exaggeration, they have recourse to invention and downright lying. They falsify the conditions on which Sir Hudson Lowe agreed to evacuate the place, by saying that he and his garrison bound themselves not to serve against the French or the allies of the French for a year and a day! Within half a year Colonel Lowe was engaged in the capture of the island of *Ischia*. Poor Murat, with all his bravery and all his great exploits, was absurdly vain, and given to make a great deal of very petty exploits. Medals were struck and great bad pictures were painted to commemorate his conquest of Capri and his triumph over the English at Capri, where he never set his foot, and where there were no English troops to triumph over. Not only the French and Italian, but also all the English accounts we have seen of these affairs are very incorrect. We have repeatedly visited the island, and all its positions. Capri, or the lower town, is altogether indefensible with Anacapri in the hands of an enemy.

The Rock of Scylla.

places in Calabria, and among them the rock, town, and castle of Scylla, which, in the course of two years, had changed masters three or four times.

But it was easier to take old castles and irregularly fortified towns than to subdue the fierce spirit of the Calabrian people. Bands of insurgents—all called by the French brigands or banditti—still kept the field, or lurked in the mountains and among the forests. As soon as one redoubtable chief was captured or killed, another sprung to supply his place and avenge his fall. The Guerilla warfare in Spain was not more ferocious than this; the same inhumanity prevailed on both sides. "When we take the Calabrians we hang and shoot them; when they take us they roast us alive," says a witty Frenchman, who could laugh in the midst of all these horrors.* But the hanging and shooting was conducted by the French on a frightfully extensive scale, and with scarcely the shadow of a trial, so that very frequently men were executed who had never been in arms at all, or who had long since abandoned the cause of Ferdinand IV. as hopeless. It was a blind and furious martial law that prevailed; and the executions were conducted solely by the military. Nor did the French spare their tortures: they frequently set fire to houses, huts, and villages, and burned all within them; and, even when they hanged their captives, they would allow no preparation, no friend to soothe them, no priest to assist and console them; and, when the poor wretches were strung up by the necks, they were fired at by their savage executioner, not to shorten their suffering, but out of mere spite or wantonness, for aim was taken, not at a vital part, but at the legs, &c. In every considerable town there was a prison always crowded with Calabrian insurgents or *suspects*, who were treated with nearly every refinement of barbarity. Fresh captives were continually brought in; but the daily executions made lodging-room for them in the foul pestilential prisons. Every town had its gallows *en permanence* (like the guillotine at Paris during the reign of terror), and no gallows was ever seen without two or three or more peasants swinging from it. It was usual to execute the prisoners early in the morning, and to leave them suspended *in terrorem* until the following morning, when they were taken down to make room for others. All the dead when taken down were thrown into immense pits, where they lay stark naked, or in their ragged clothes, one upon the other, a horrible promiscuous heap of human bodies. At times these uncultured men showed a high spirit, and bravely resented the imputation of being brigands. One of them said to the French military tribunal at Monteleon,—"The robbers are yourselves! what business have you here and with us? I carried my gun and my knife for King Ferdinand, whom may God restore! but I am no robber!" To these wholesale executions and torturings were added the intolerable grievances of the conscription; young men of all classes, from the highest to the lowest, were seized and sent out of their native country to fight for the French, whom they abhorred, in

* Paul-Louis Courier, Mémoires, Correspondence, &c.

Upper Italy, in Germany, in Spain, or wherever it might suit Bonaparte to employ them; and, in order to prevent their desertion or escape, these proud and fierce Calabrians were chained together in parties of twenties or fifties and marched through the country under strong escorts of *gens d'armes*. Nor were the prisons and the gallows reserved solely for the untameable peasantry; many individuals of respectable station in society—women and children, as well as men—were thrown into those most filthy and horrible of gaols, and many of the men of the best name and reputation in those provinces were hanged or shot, or hanged and shot at one and the same time. As in Spain, this system of terrorism only gave a keener edge to revenge and cruelty on the other side.* When Murat endeavoured to introduce a more moderate system he found it impossible to do so, and the mere attempt caused the French and their Neapolitan partisans to complain loudly that he was favouring the Calabrians to their own cost and prejudice. The Calabrians, on the other hand, considered every attempt at conciliation as a plot to betray them. When the new war in Germany became known, and when intelligence reached the southern extremity of the peninsula, that the Austrians had beaten Eugene Beauharnais in the north of Italy, and had compelled the French to retire behind the Adige, the Calabrians were highly excited, and assumed a tone towards the French which proved they believed that the moment of their deliverance was at hand. This excitement mounted still higher when it was reported that the Austrians had entered Milan, and that the English were fitting out a great armament in Sicily. And a few days later a climax was put to the Calabrian fury by intelligence that the pope, "by the authority of God Almighty, and of St. Paul and St. Peter," had excommunicated Bonaparte.

On the 11th of June Sir John Stuart, the hero of Maida, and now commander-in-chief of our forces in Sicily, embarked with 15,000 British troops. On the 13th his appearance induced the enemy to abandon the greater part of their posts along the shore of Calabria Ulteriore; and the posts and works upon the line opposite to Messina, from which the French had long been threatening Sicily with invasion, were seized and destroyed by Lieutenant-Colonel Smith. Arms and ammunition were landed and sent up the country for the use of the insurgents, who took possession of some of the mountain passes, where they did great mischief to Murat's army, and who recovered several towns in the interior of the country, where they took sanguinary vengeance on the French, and their partisans and abettors. Two smaller expeditions, issuing from the port of Messina, landed 400 or 500 Sicilian soldiers and Calabrian refugees in the Gulf of Gioia, and 2000 or 3000 soldiers, regular and irregular, between Reggio and Palmi. A portion of these forces, assisted by a few of our troops, undertook the siege of Scylla; the rest carried on a loose guerilla warfare, which cost Murat rather dear. At the same time flotillas of English and Sicilian gun-boats and other armed vessels ran along and scoured all the coasts of Calabria from the promontory of Scylla to the edge of the Gulf of Salerno, and from Reggio to the head of the Gulf of Taranto, operating simultaneously in the Tyrrhenian and in the Ionian seas, threatening a dozen places in one day, capturing or destroying many of these places, making the French generals hurry now hither now thither, and spreading consternation in every town and station on both sea-boards, for, though here to-day, no one could tell where the flotillas might be to-morrow. And, while these two flotillas swept all the coasts of Calabria, Commodore William Hoste scoured the whole coast of Apulia, the richest province of the Neapolitan kingdom, from Otranto to Manfredonia, capturing every vessel that showed itself at sea, cutting out fleets of corn-ships in the ports and bays, and knocking to pieces or capturing many of the sea-forts which the French had erected, and which the Neapolitan troops and militia could very seldom maintain.

But in the meanwhile Sir John Stuart, having been joined by some Sicilian forces which embarked at Palermo, nominally under the command of King Ferdinand's second son, Don Leopold, Prince of Salerno, had made straight for the bay of Naples, to menace the capital and seize some of the islands in its immediate neighbourhood. On the 24th of June the advanced division of the British and Sicilian troops, which contained the British troops, anchored off Cape Miseno, close to Baia and Pozzuoli, and, by water, not more than ten or fourteen English miles from the city of Naples, which was thrown into a state of excessive alarm, and almost into a state of insurrection. The English general was kept waiting some time by Don Leopold, whose presence it was expected would produce a great effect among his father's old subjects, and when the prince arrived he was a drag and an impediment all operations. Though coming to fight for his father's crown Don Leopold could not live or move without his iced water, his fresh fruit, and his other luxuries.; and part of the fleet was kept stationary while *speranaras* brought from Sicily the congealed snow of mount Etna, for this very luxurious and unwarlike Bourbon.* Nothing would have been more easy than to bombard Naples and batter it to pieces; nor would it have been a work of great difficulty with 15,000 British troops to have landed and driven Murat out of that city, for he had only some 11,000 or 12,000 regular troops collected there, and of these the greater part were Neapolitans, whose discipline was incomplete, and whose fidelity and courage were both exceedingly doubtful. But to destroy the city under the eye of the son of the old king would have been a parti-

* Lieutenant P. J. Elmhirst, R. N., Occurrences during a six Months' Residence in the Province of Calabria Ulteriore, in the years 1809, 1810, &c.,—Lettres sur les Calabres, par un Officier Français.

* Private information received from an English officer who was in the expedition.

cularly revolting act; and, though 15,000 British troops might have taken, they could not have kept Naples in the case of the French beating the Austrians in Upper Italy; and several weeks before the arrival of our armament at Cape Miseno, the Archduke John, though not beaten by the French, had been compelled, by the reverses of the Austrian armies in other quarters, to abandon Upper Italy altogether. Besides, Sir John Stuart's plan was merely to create and keep up an alarm, and "to make such a movement, as, although it should produce no issue of achievement to ourselves, might still operate a diversion in favour of our Austrian allies."* And a considerable body of troops, which Murat had recently detached from Naples as a reinforcement to Eugene Beauharnais, as well as almost the whole of a corps of 6000 men which he had sent into the Roman States to complete the seizure of the papal dominions, which his brother-in-law Napoleon had ordered, were precipitately recalled on the first appearance of our armament on the coast. On the 25th of June 2300 men, including some Sicilian light infantry, a regiment of Corsican rangers, and a detachment of Calabrian Free Corps, were landed under the command of Major-general MacFarlane, in the island of Ischia, distant only four or five miles from Cape Miseno. A chain of batteries, which the French had erected to fortify every accessible part of the shore, was easily turned; and then the batteries were successively abandoned. Two or three hundred prisoners were taken. With the remainder of his very insufficient force General Colonna retired into the castle, which is situated on the summit of a steep detached rock. Colonna rejected a summons from MacFarlane; but, on the 30th, when a breaching battery was erected, he surrendered upon terms of capitulation. The small but thickly peopled island of Procida lies between Capri, Cape Miseno, and Ischia, being separated from the latter island by a deep but narrow channel of the sea: it has an old castle, and then had some other batteries and defences; but the Neapolitan commandant surrendered at the first summons, and this event fortunately contributed to the almost entire capture or destruction of a large flotilla of about forty heavy gun-boats, which attempted during the night to run from Gaeta to Naples, and expected to find protection, as well as co-operation, from the fortress and artillery of Procida, in its passage through the narrow strait that separates the island from the main. In the two islands 100 pieces of ordnance of all calibres and about 1500 regular troops were captured. Captain T. Staines, on the morning of the 25th, being at the east of Procida, discovered a frigate, a corvette, and several gun-boats coming out of Pozzuoli bay, and he drove them back again to the shelter of their land batteries. On the next day Captain Staines took a land battery near Cape Miseno, and then with the 'Cyane' frigate, the 'Espoir' corvette, and twenty-three Sicilian gun-boats, stood in to Pozzuoli bay, in the hope of bringing Murat's frigate, corvette, and gun-boats to action. The 'Cyane,' Staines's own ship, got becalmed so near to the shore that a battery of four 36-pounders opened upon him. He embarked in one of the Sicilian gun-boats, soon silenced the battery, and, landing with a party of men, spiked the guns, destroyed the carriages, hove a 10-inch mortar into the sea, and returned to his frigate without a single casualty. On the afternoon of the 27th the Neapolitan commodore came again out from Pozzuoli, not to fight, but to try to run round the point of Posilippo to Naples. Besides his frigate and corvette he had now twenty gun-boats; and he was encouraged to hope that his short trip would be fortunate, if not altogether uninterrupted, for Staines's Sicilian gun-boats were at a considerable distance in the bight of the bay, and his corvette the 'Espoir' was becalmed astern. But Staines rushed after him, making the 'Cyane' man her sweeps, and thus, pulling the English frigate, rounded the point of Posilippo, and entered into the inner bay of Naples alone, in pursuit of the enemy. At half-past seven in the evening, when the Neapolitan frigate the 'Cerere' was within three miles of the mole of Naples, the 'Cyane' succeeded in getting alongside of her, and Staines commenced the action within half pistol shot distance; the Neapolitan corvette 'Fama,' and the twenty gun-boats tacked and took part in the fight, and, as the whole flotilla kept edging in to the shore, the land batteries opened their fire upon the 'Cyane,' which at one time was within gun-shot of the mole-head. The 'Cerere' got a reinforcement of fresh men from Naples, but notwithstanding this advantage she hauled down her colours, seeing that the gun-boats and her consort, the 'Fama,' were panic-stricken and were using their sweeps to escape into the harbour. But a second reinforcement of men was sent off from the mole the next minute, and the 'Cerere' re-hoisted her flag. But by half-past eight the Neapolitans, whose fire had been for some minutes very slack, ceased firing altogether, and uttered shrieks that were heard both on shore and at sea:—their over-crowded decks were literally strewed with killed and wounded. But by this time the gallant Staines had had his left arm knocked out of the socket at the shoulder and had been wounded in the side; his first lieutenant (James Hall) had been dangerously wounded, and his second and only remaining lieutenant had also received a serious hurt; the frigate that had sustained the fire of so many land and floating batteries was crippled in her masts and rigging, and all her sails were completely riddled by grape and langridge: thus she was neither in a condition to take possession of the silenced Neapolitan frigate nor even to haul off from the land batteries, which kept up an incessant fire. But, fortunately, by this time the 'Espoir' and some of the Sicilian gun-boats came to her assistance; and, while the 'Cerere,' in a frightful state, slided round the mole-head into

* Sir John Stuart's dispatch to Lord Castlereagh.

the harbour, the 'Cyane' was towed out of the bay by the Sicilian gun-boats.*

Captain Bausan, the native Neapolitan officer who commanded the 'Cerere,' was a brave man and good sailor; some of his officers and crew, though unaccustomed to such close and murderous firing, did their duty well and were entitled to praise. They never had the remotest chance of victory; but the dreadful slaughter which befel the frigate might have been in good part avoided if it had not been for the rashness, folly, and ignorance of Murat. Bonaparte had made his brother-in-law grand admiral of the empire; but, though the best of cavalry officers and most quick-sighted of dragoons, Murat knew absolutely nothing of naval matters. Since the arrival of Sir John Stuart's armament he had been galloping along the coast from place to place, issuing a series of orders that were altogether absurd, except in as far as they related to the manning of the land batteries, which were very numerous: it was he that had uselessly ordered the flotilla of gun-boats to come from Gaeta, where it was safe; and it was he that had positively enjoined Bausan to push round from Pozzuoli. On that day he put on his splendid and fantastic uniform of grand admiral; and on horseback, and surrounded by an immense staff of Frenchmen and Italians—all landsmen like himself—he posted himself on the shore near Pozzuoli, then at the point of Posilippo, then at the mole-head of Naples, to cheer and encourage the Neapolitan combatants, making signals, gesticulating, shouting, and finally tearing his mustachios in rage and useless spite. And when the 'Cerere' was striking her flag so near to the spot where he stood, it was he that sent off the reinforcements in gun-boats and other craft, crowding and cramming them, not with sailors, but with land troops—a mixture of French, Neapolitans, and Swiss,—who were of no use when they got on board, and who served only to confuse and confound Bausan, and swell the number of killed and wounded in the 'Cerere.' From that day King Joachim never again put on his uniform of grand admiral.

The two islands which Sir John Stuart had captured with hardly any loss are among the most healthy, and Ischia is the most beautiful and productive, of all the islands that lie close in to the coast of Italy; they afforded an excellent footing for our troops, who could move thence with facility and promptitude to ulterior objects; while the enemy, collected to observe their movements on the opposite shore of the main and in the unhealthy neighbourhood of Baia, Miniscola, the lake of Patria, and the Pantani, or marshes, must suffer greatly from malaria fevers. But no permanent occupation had ever been contemplated; and, as it became evident that no diversion of ours could save Austria from her fate, Sir John Stuart dismantled the castles of Ischia and Procida, destroyed the batteries and all the other works, reimbarked his troops, and returned to Sicily, which was soon after threatened with invasion by Murat, and which, in the absence of the British, might at any time have been over-run and taken by 5000 veteran French troops.

The siege of Scylla had not prospered. The French general Partonneaux advanced in force to the relief of that changeable old fortress; and the English, with their Sicilian and Calabrian allies, retreated with so much precipitancy that they left their train of artillery, their siege-tools, and most of their stores behind them. But the old castle on the rock which stands over the roaring caverns of Scylla and faces the resounding vortexes of Charybdis—neither of them quite so formidable now as in Homer's days—seemed destined to belong to no party in this protracted war. Not long after Partonneaux had succeeded in raising the siege, the French garrison abandoned the place in some sudden panic, leaving behind them not only the artillery and other materials they had captured, but all their own guns and stores, which were seized and secured and carried over to Sicily by a detachment of Sicilian and British troops. Of the Calabrian partisans who had been landed, some were cut off by the French, some returned to Sicily, and others maintained themselves in the mountains, in the forest of Sant-Eufemia near Maida, and in other wild and almost inaccessible places, whence they issued forth at opportune moments to carry havoc among the weak detachments of Murat's army. The service in Calabria became so unpalatable that all the French officers who were there exerted themselves to the utmost to get removed, and hardly any officers of that nation could be found willing to supply the places of such as were recalled. Many resignations took place; the table of Murat's war-minister was almost constantly covered with letters from French officers who begged to be employed in the Tyrol, in Germany, *in Spain*, anywhere rather than in Calabria, and who frequently put the alternative of an immediate removal or a permission to resign their commissions.* The more extensive struggle going on in

* Sir John Stuart, Dispatches; James, Naval History; private information collected on the spot; Colletta, Storia di Napoli.

General Colletta mystifies, and absolutely falsifies his account of this (on the part of Captain T. Staines and his men) most adventurous and gallant action. With a bold defiance of the hundreds of thousands of eyes that saw the affair from the shore, this French partisan represents the Neapolitan frigate and corvette as being assailed by ten times their own force (dieci contra uno), and speaks as if a whole British fleet had followed the Neapolitan commodore from Pozzuoli into the bay of Naples, and had there fallen upon his single frigate! Perhaps General Colletta was not at Naples at the time, but employed in Calabria. But when he wrote his history tens of thousands of his countrymen were living—and many thousands of them are still living—who saw Staines's frigate alone pursuing the 'Cerere,' the 'Fama' and the twenty gun-boats round the point of Posilippo, and engage the 'Cerere' almost yard-arm to yard-arm, getting between her and the land batteries in order to prevent her escaping into the harbour, and braving at the same time the fire of the 'Fama,' and that of the gun-boats. The 'Cyane's' consort, the 'Espoir,' did not come up until the Neapolitan frigate had struck her flag once, if not twice, and had entirely ceased firing. Colletta's misrepresentations could not have been involuntary, and could hardly have proceeded from ignorance of the facts. Seven years after they occurred there was no subject more frequently spoken of by his countrymen who had been spectators of the fight, and who still remained in their astonishment at the daring of Staines, and in horror at the scene the 'Cerere' presented when towed into the harbour.

* Paul Louis Courier tells us that, when, simply out of an eager desire to explore Magna Grecia and the whole of that beautiful country which had once stood so high in civilization, literature, and art,

the Spanish peninsula kept the attention of Europe away from the irregular war at the end of the Italian peninsula; but, we repeat, Calabria cost the French enormous sacrifices, and continued, almost to the last day of the war, to be a fatal drain upon the armies and resources of Bonaparte. It was chiefly, we presume, on account of the countenance and open aid and assistance which our government, the generals commanding our forces in Sicily, and the admirals of our fleets gave to the insurgents, and guerilla-like partisans, that the French persisted in styling all those Calabrians and Sicilians brigands, and in treating them as such whenever they fell into their hands. It sounded well to represent the King of Great Britain as the ally of banditti, and his generals, admirals, ambassadors, and envoys as being leagued with robbers and cut-purses. The French, who united in their own minds the extremes of incredulity and of credulity, must have had a very large belief in the credulousness of mankind when they asserted and maintained that the entire population of whole provinces were nothing but brigands. For robbery to be a profitable calling there must be somebody to be robbed. Wild as was the country, Calabria had never been a land of brigandism. That system had only obtained in the frontier-provinces of the kingdom—in the Abruzzi and on the edge of the Terra di Lavoro. In those provinces there were high roads, frequented by rich travellers and foreigners; but in Calabria there was nothing of the sort, that region, at the end of the peninsula, forming a sort of *Finis Terræ*, leading to nowhere. There were no bands of robbers either in Calabria Citra or in Calabria Ulteriore when the French first arrived; but the mass of that brave, active, and fierce population flew to arms, and crowned the hill-tops, and blocked up the roads, or lurked by the road-sides, to repel and despoil the invaders of their country, the enemies of their king and church, and—as they conceived—of their God. These men were insurgents, not robbers; their patriotism was as pure and as indisputable as that of the Spanish peasantry, and, cruel and vindictive as they were, they were not more so than the Spaniards. Their leaders, for the most part, however lowly their original condition (and there were French marshals, dukes, and princes who had begun life in a condition quite as obscure as that of any of them), held regular commissions from their old king, Ferdinand IV., who had all the rights of a belligerent, and who by the law of war was justified in making every effort for recovering by the sword dominions which had been taken from him by the sword and by foul treachery. His commission was entitled to as much weight and respect as any of the commissions granted by Bonaparte or by his brother Joseph, or by his brother-in-law Murat; but, as the French read the law, Ferdinand's commissions were null, his commissioned officers were brigand chiefs and rebels forsooth to King Joseph or King Joachim, and, as such, were, whenever captured, hanged. If the unhappy man wore a red coat the execution had an additional grace and gust; and it was proclaimed to the world that an infamous robber and cut-throat, with an English uniform on his back, and with English money in his pocket, had been seized and put to that ignominious death which his lawless life and crimes had merited. It signified nothing to these French reporters that the uniform of King Ferdinand's guards was scarlet like our own; King Ferdinand and his guards were out of sight of Europe, shut up in Sicily, and all the world knew that red was the English colour; and thus it was deemed advantageous to attempt to cast dirt upon it. It is only by subscribing to a new and dangerous theory that we can deprive the poor Calabrians of the honour of a bold and a persevering resistance; and by subscribing to that theory we must equally dishonour the Spaniards, the Portuguese, the Tyrolese, and, in fact, every people that either in modern or in ancient times have risen in masses against the invaders of their country, and persevered in their resistance after their armies, regular or irregular, had been defeated in the field. By this fatal theory the William Tell of Switzerland, the Wallace and the Bruce of Scotland, must be taken down from their glorious and time-honoured pedestals to be classed with lawless insurgents or brigand chiefs. If, as this new theory imports, regular armies are to be considered as the only belligerents, and the inhabitants of a country invaded are to be regarded only as neutrals, and as such excluded from any participation in the struggle,* then all such inspiriting risings as those of the Swiss and the Scots in the olden time, or as those of the Calabrians, the Spaniards, and the Tyrolese in our own days, must have the stamp and opprobrium of illegality put upon them. If, because an overwhelming invading force (following upon a series of the most treacherous deeds, which have enabled the invader to penetrate into the heart of the country and to obtain previous possession of most of its strongholds) defeats and scatters a weak and ill if not treacherously commanded regular army, and establishes a line of posts along a particular river (say the Ebro), the spirited population, the body of the people living within those lines and knowing that they have been betrayed by the invader, and suspecting that they may have been betrayed by some of the officers of their own army, may not rise and arm and do their best to rescue their country from thraldom, then is patriotism made a crime and offered up as a sacrifice to professionalities and arbitrary technicalities.† If everything is to be made dependent upon regular armies, and if the people, of whom the army is but a part and an instrument, are not

he volunteered to go into Calabria, all the rest of the French officers were petitioning and imploring to be employed somewhere else.

† Colonel Napier advances the opinion we condemn with his usual earnestness and force of language. See many passages in his History of the War in the Peninsula.

to step forward into the field, then a few injudicious movements of a general and two or three defeats must decide the fate and independence of a country! And these reasoners seem to forget that the people incapable of rising against an invader and oppressor must be a people incapable of furnishing brave soldiers, or materials proper to make that regular army upon which everything dear to the nation must wholly and solely depend. If such convictions had been entertained by the invaded and oppressed peoples of Europe there would have been no loss of 300,000 French regulars in Italy and in Spain, there would have been no dismal retreat from Moscow, no glorious *rèveil* of the great Germanic family; but Bonaparte would have established his universal dominion; the characteristics of nations, which give variety and interest and beauty to the world, would have been rudely obliterated, and French manners, French morals, and French taste would have been enthroned, in a tyrannical intolerant domination, in all parts of the civilized world. But theorists are weak when they grapple with the real feelings and passions of human nature; no people that are not absolutely degraded will ever subscribe to this new doctrine; their instinct will revolt at it; they will continue to do as their ancestors have done; they will not place their loyality, their patriotism, their religion, their homes and hearths, as a deposit in the hands of the regular army they raise and pay, to be risked in a throw of the dice, or to be utterly lost in a few battles; and it is only inasmuch as the theory may influence future governments, when called upon to estimate the nature and probable results of such national insurrections, that the theory itself calls for any criticism.

While the French were alarmed, and fully occupied in the south of Italy, Admiral Lord Collingwood, who still retained the command in chief of our Mediterranean fleet—wearing out in hard service the last days of an honourable and most valuable life—recommended General Sir John Stuart to send an expedition against the islands of Zante, Corfu, and Cephalonia, which lie opposite to the Neapolitan coast, at the mouth of the Adriatic, and which, partly by force, and partly by an amicable understanding with the Czar Alexander, had been seized and occupied by the French, who were also looking forward to conquests or occupations in the Morea, and in other parts of continental Greece. The general, at first, seemed rather adverse to the plan, doubting whether he could safely spare a sufficient number of troops from Sicily, and being much perplexed by the arguments and entreaties of Queen Caroline, who took upon herself all that share of public business which ought to have been transacted by her fishing, shooting, pleasure-hunting husband, and who strongly deprecated the removal of any English troops from the island of Sicily, unless they were employed against the French in the continental dominions of Ferdinand. Sir John Stuart, however, after a very little hesitation, warmly embraced Lord Collingwood's project. The expedition was undertaken with such secrecy, that none of the people knew whither they were going; and neither at Sicily, nor even in our own possession, Malta, was there the slightest suspicion of such a thing being in contemplation until the affair was all finished.* The naval part of the expedition was commanded by Captain Spranger of the 'Warrior,' who was accompanied by a sloop of war and transports, and who was joined, near the mouth of the Adriatic, by two ships of the line, some frigates, and smaller vessels: the military part was entrusted to Brigadier General Oswald, who had under his orders 1600 troops, of whom about one half were Corsican rangers, Sicilians, Calabrians, and other foreigners in British pay. There was known to exist in those

MALTA.

Ionian islands, among the Veneto-Greek population, a very strong party inimical to the French, and to communicate with this party, and rouse it into action, a Signor Foresti and an Ionian Greek count were brought over from Malta, where they had taken refuge from the French and their countrymen of that faction. The expedition sailed from Messina on the 23rd of September, and arrived off Cephalonia on the 28th. By the 1st of October all the expected ships and some gun-boats arrived; on the evening of that day, the whole fleet came to anchor in the Bay of Zante, just out of reach of the nearest batteries; and at daylight, on the following morning, the troops began to land under cover of the fire of some of our ships and gun-boats, which soon silenced the land batteries. As our troops landed and formed, the French retired from every direction into the castle, which was invested forthwith. A proclamation was issued to the inhabitants, many of whom immediately offered to assist in expelling their late masters. The castle being a place of no very great strength, though advantageously situated on a commanding elevation, the French commandant thought proper to capitulate; and before the day was over, he surrendered to the English commanders not only the whole of the island of Zante, but also the islands of Cephalonia, Ithaca, and Cerigo. And thus was the British flag hoisted over Homeric islands, and the narrow kingdom of the cunning Ulysses. The government of the Septinsular Republic was restored under British protection. Two of the seven islands, however, were left in the occupation of the French; but one of these—the island of Santa Maura—was reduced in the month of April, 1810, by General Oswald and Lieutenant-Colonel Hudson Lowe.* Corfu, the most important island of the whole group, was too strong to be attacked by a small force; it remained a very useless possession in the hands of the French, who could carry on no trade, and whose communications with France, and even with the near coast of Italy, were almost constantly cut off, until the downfal of Bonaparte; and it was given up by Louis XVIII. at the peace of Paris in 1814. The seven islands were then more completely restored to their independence, and formed into a state under the protection of the King of Great Britain, represented by a lord high commissioner, who resides at Corfu, and convokes once a year the parliament or legislative assembly. During the war a British military establishment was necessary to preserve the islands from the enemy, and since the peace it has only been the presence of the British forces that has kept the islanders from revolution, invasion, intestine war, and anarchy.

On January the 5th a treaty of peace was signed between the Ottoman Porte and England, having been negotiated by Mr. Elliot. Sultan Selim, with whom we had gone to war, had been for some months in his grave when this peace was signed, and so had been his cousin Mustapha, who had succeeded to Selim's authority in the month of May, 1807. Mustapha Bairactar, Pasha of Rudchuck, animated by affection for the deposed Selim, by jealousy and hatred of the vulgar Cabakchy Oglu and the mufti who had brought about the revolution of 1807, and by the desire to restore his master to the throne and carry out his plans for disciplining the Turkish armies, collected a great force on the Danube and marched to Constantinople, where he deposed all the new ministers of Sultan Mustapha, putting to death the agha of the janissaries and other enemies of Selim and reform; and on the 28th of July he proclaimed the dethroned Selim as the only true and legitimate sultan, and rushed to the seraglio to liberate him from his prison. The bairactar's movement was sudden and rapid; but Sultan Mustapha, who had been feasting at one of the imperial kiosks on the Bosporus, got into the seraglio before him, and sent his black eunuchs to strangle his cousin Selim in his cell or chamber. When the foul deed was done, Mustapha retired into his harem, saying, "Now open the gate, and deliver Sultan Selim to the bairactar, since he demands it!" The slaves went and threw open the massive inner gate of the seraglio; the terrible bairactar, who had been threatening to force the gate open with artillery, rushed into the court, and there saw the blackened and disfigured corse of his master and benefactor whom he had come to serve and save. The pasha was at first petrified with horror; and then he and his rough soldiers knelt and wept over the body of Selim. The bairactar was at last roused into action by the capitan pasha. "Seize me the murderous Mustapha!" roared the bairactar: "proclaim his younger brother Mahmoud Sultan! Cut me off the heads of the vile slaves that have murdered the good Selim!" At the words courtiers, pages, and eunuchs mingled with the bairactar's soldiers and ran with them through the numerous and intricate apartments of the seraglio in search of Mustapha and Mahmoud. Sultan Mustapha was easily found and seized, and thrown into the very prison where his frightful black eunuchs had only a few minutes before strangled his cousin Selim. But the young Mahmoud was not found so soon. His brother Mustapha had tried to discover him and put him to death while the bairactar was weeping in the court below, for

* The capture of Santa Maura was attended with some hard fighting. It was altogether a brilliant little episode in the war, highly honourable to the British troops, to various foreign corps in our service, and to Oswald, Hudson Lowe, Major Church (since General Church, in the service of Ferdinand, King of Naples, and of Otho, King of Greece), to Majors Clarke and de Bosset, and to Captains Eyre and Stevens of the royal navy. The two last-named officers were among the most animated in the combat, and were both wounded. It was Colonel Lowe that moved first and took the town. It was Major Church that gallantly carried the first French redoubt, with four companies of the Greek light infantry, a regiment which he had assisted in raising and disciplining at Malta. The French general, Camus, had above 1000 men, and a fortress of considerable strength, with strong field-works connected with it. He was, however, soon driven from his field-works, our Royal Marines breaking through the abattis, and charging into the entrenchments. The French fled at all points, pursued with the bayonet from work to work, and abandoning the camp and cannon of the attacked line. They threw themselves into the fortress; but nine days after they surrendered, and became prisoners of war. Greeks, Corsicans, Calabrians, all the foreign corps that were employed in the expedition, behaved remarkably well.

he well knew the ancient and universal superstition of the Turks, who believed that the empire must fall and finish with the extinction of the reigning dynasty, with the last descendant of the venerable house of Osman, and, as of that race there now existed only Mustapha and Mahmoud, he knew that, if he could but strangle his brother as he had strangled his cousin, both his life and his throne would be safe. But young Mahmoud was saved by some faithful and fond servants, who hastily carried him to a remote and dingy corner of the seraglio, and concealed him under a heap of mats and carpets: and there he was found by some of the bairactar's people, who hailed him as sultan, and conveyed him to their chief. Before the bairactar's arrival at the capital, a party acting in concert with him had surprised Cabakchy Oglu in his country house on the Bosporus, and, regardless of the sanctity of the harem, they had murdered that Yamack chief in the midst of his women, and had sent his head as an acceptable present to the bairactar. That terrible Pasha of Rudchuck, who by virtue of the revolution he had effected now became grand vizier to Sultan Mahmoud, began his ministry with bloody deeds of vengeance and retaliation. On the first day of his installation thirty-three heads fell under the sharp yataghans of the executioners, and were exposed to the gaze of the public at the outer gate of the seraglio. These were the assassins of Sultan Selim, or the particular favourites of Sultan Mustapha. On account of the elevated dignity of his office the hideous Nubian head of the Kislar Agha, or chief of the black eunuchs, or governor of the women, was put upon a bright silver dish. These decapitations were followed by drowning and strangling. A number of the women of Mustapha's harem, who were said to have manifested great joy on learning the death of Selim, were sewn up in sacks, and were thrown into the deep sea, hard by the Maiden's Tower, where the waters of the Bosporus sweep with a strong current round the Asiatic point of Scutari into the Propontis. All the officers of the Yamacks that could be caught were strangled and then thrown into the Bosporus. About one hundred individuals were sacrificed by the bairactar to the manes of Sultan Selim. As soon as his vengeance was satisfied, or as soon as he had destroyed all those he had dared destroy (for the mufti and the oulemas, who had done greater injury to Selim and his reforms than the rude Yamacks had done, were placed by the sanctity of their offices above the reach of his yataghans, sacks, and bow-strings), the new grand vizier started on the work of reform both civil and military. He had some just and enlightened views which might possibly have tended to prop up a decrepid and tottering empire, which in no way will be able to support itself, by itself, for any great length of time, in Europe; the heart and head of the young Sultan Mahmoud went with him and his schemes, for, during the period which had intervened between the dethronement of that prince in the spring of 1807 and his murder in the summer of 1808, Selim, the most accomplished Turk of the time, had acted as instructor or tutor to his young cousin, a caged prince, a captive like himself; but the bairactar was hot, impetuous, impatient of any delay, furious as a tiger at any remonstrance, and, by attempting to reform too much at once, he ended by reforming nothing, and by sacrificing his own life and the lives of hundreds or of thousands of his friends or partisans. The personal habits and vices of the man contributed to his hasty ruin: like nearly all Turkish pashas he had an insatiable appetite for gold; he drank wine copiously, and not in private, as many well-reputed Mussulmans did, but in public, and with indecent bravado; and, whether in his cups or sober, he had the pernicious habit of beating the Turks with sticks. All this enabled the mufti and the oulemas to arm the people against him. On the 14th of November, during the Ramazan, or Mahommedan Lent, when the Turks fast all day and feast all night, the janissaries, animated by the oulemas, and headed by their new agha, collected in the dusk of the evening, set fire to some houses close to the palace of the grand vizier, and fell furiously upon some of the bairactar's regular European disciplined troops. The bairactar had been drinking deep of the forbidden wine, and had retired to his harem, where no man dared to disturb him on a trivial occasion. Fires were frequent, and so were quarrels and skirmishes between the regular troops and the irregular and most turbulent janissaries. Thus the grand vizier was not roused to a terrible waking until the conflagration had nearly reached his own abode, and until his palace was entirely surrounded by the janissaries and the mob of the city, who were all shouting death to him, and anticipating the pleasure of seeing him burnt alive in his house, or fall at their feet under the strokes of their yataghans in some hopeless attempt to escape from the fire. Yet this last attempt, if boldly and promptly made, might possibly have saved the bairactar even now, for he had many brave and faithful men about him, and the janissaries had a superstitious awe and dread of his own personal courage and prowess: but, instead of making a rush out into the street, at the worst to die like a soldier, the infatuated pasha began to collect his diamonds and his jewels and his sacks of gold, like a miserable miser; and, when he had got these things together, he fled to a strong tower of his palace, which was not built of wood like the rest, but of solid stone, and there he shut himself up with the best beloved of his wives or concubines, and with a black eunuch. The new capitan-pasha, who had owed his promotion to the bairactar, and Cadi Pasha, who was commanding some of the disciplined troops stationed in the Asiatic suburb of Constantinople, made vigorous efforts to relieve the grand vizier and save the reform system from perishing. They carried the regular troops into the city; they reinforced the sultan's guards in the seraglio; they spread the report that the bairactar

had escaped from the tower; they ordered a tremendous fire to be opened upon the insurgents from the battlements of the imperial palace; and they charged the janissaries with the bayonet in the streets; while some of the capitan-pasha's ships, anchored in the deep port of the Golden Horn, and close in shore, kept up an incessant cannonade on the palace of the agha of the janissaries, and upon every group of insurgents who ventured to show themselves near the side of the port. Thus passed the whole of the day of the 15th of November, during which the mufti and all the great oulemas fled and concealed themselves, leaving some fanatic dervishes and inferior imams to keep up the courage or the fury of the janissaries and the rest of the populace. On the morning of the 16th, Cadi Pasha, at the head of a disciplined column 4000 strong, and with some artillery, made a sortie from the seraglio, drove the janissaries before him, took one of their strong barracks near the mosque of Santa Sophia, reached the Hippodrome where Cabakchy Oglu had sat in state to receive the heads of Sultan Selim's ministers and the friends of reform, and broke the beleaguering lines which had been drawn round the vast and still-burning palace of the grand vizier. But the intolerable heat of the flames did not permit him to approach the incombustible stone tower; and, whether the bairactar had been roasted alive, or had been so fortunate as to escape from flame and steel and bullet, he could not ascertain. From this moment Cadi Pasha began to conduct himself like a stupid, ferocious maniac: he split his column into numerous detachments, which rushed through different quarters of the city, pillaging and murdering, sparing neither age nor sex, and setting fire to the houses. This united all classes of the population in one cause, and filled every heart with unmitigable rage: a fire was opened from every house, and from both sides of the narrow tortuous streets, on his advancing detachments; even women and children got to the house-tops to hurl stones and tiles and sheets of lead at the heads of the regular troops, and to pour boiling oil upon them. The detachments were stopped in their murderous march, and fell back upon the Hippodrome, followed by mingled masses of mob, janissaries, dervishes, and imams. In the captured barracks, by Santa Sophia, Cadi Pasha had left no more than 300 of his regulars. A countless mass of janissaries rushed to the building, determined to recover it. The incalculable advantage of the European discipline was fully displayed; and, as the regulars could expect no quarter, they fought as vigorously as men could fight. Five times, ten times, twenty times and more, they beat back those tens of thousands of undisciplined, disorderly janissaries. At last some of the janissaries, or some of the mob, set fire to those vast and magnificent barracks, which, being mainly constructed of wood, soon blazed in every part, and threw out flames and sparks, which carried the conflagration to all the buildings in the neighbourhood, except the ancient and fire-proof temple of Santa Sophia. The 300 regulars kept firing upon the janissaries from the midst of flames and smoke, until the roof and the walls fell in, and buried them to a man in one huge burning grave. But by this time a fourth part of the city of Constantinople, including the most densely peopled quarters, was in a blaze; hundreds of the inhabitants, unable to escape out of the narrow streets, were burning to death; agonizing shrieks were heard on all sides; and Sultan Mahmoud was gazing on these scenes of the infernal regions from one of the towers of the seraglio. The heart of the young sultan was not so hard then as it was found to be when he had reigned twelve or fifteen years longer. He ordered Cadi Pasha to cease hostilities, and he sent a khattisherif, or the most solemn of imperial decrees, to the janissary agha, enjoining him to employ all the means in his power to check that horrible conflagration. Cadi Pasha, with all the men that remained of his column, returned into the seraglio; and the janissary agha, not daring to disobey so solemn an order, attended to the conflagration, which was threatening destruction to every part of the immense city except the stone mosques, the seraglio, and the stupendous lines of walls which were built by the Greek emperors. But, emboldened by Cadi Pasha's retreat, and by the cessation of the firing from the seraglio, the mob and some of the janissaries went close up to the gates of that palace, threatening Mahmoud and his ministers, and shouting that Mustapha was their true sultan, and must be restored to the throne. This served as Mustapha's death-warrant. Hitherto Mahmoud had rejected the advice of all his friends and servants, who told him that the only way to put down this insurrection and preserve himself was to put his brother and prisoner to death; but now he made a sign to Cadi Pasha, who left the presence, attended by the chief executioners, to return presently with the intelligence that Mustapha was strangled, and that Mahmoud had a charmed life, being now the sole representative of the House of Osman. The news was soon carried throughout the city: it paralysed the janissaries, the mob, the men of the law and gospel, and all men; for the most furious Turk among them would not fight in the teeth of a prophecy, or plunge the empire into the abyss by proceeding to extremities against that single life on which the preservation of the name, glory, and very existence, as a nation, of the Osmanlys, was believed to depend. The now-ascertained fate of the bairactar also contributed to calm the popular rage and make the janissaries put their yataghans into their girdles. On the evening of the 16th, when the flames of the grand vizier's palace were extinguished by the absence of any more materials to nourish them, some Turks of the lowest or poorest order approached the s one tower, which remained entire, but all scorched and blackened; and, after removing the ashes and hot rubbish which blocked up the entrance, they forced open an

iron door and rushed into the tower, in the expectation of finding the pasha's treasures. Their progress was stopped by a second iron door at the head of a narrow staircase, which ran within the thick stone walls; but, upon forcing open this second door, they entered a small dark chamber, and there they found, extended on the floor, the bairactar, his favourite wife or slave, and his black eunuch. The three had been asphyxiated, or smothered and choked, by the heat and smoke and the vapour from the wood, burnt into charcoal. And close by the side of the dead pasha-and-vizier they found his bags of gold and his diamonds and jewels. The original discoverers ran away with the treasure-trove; but they took care to tell some janissaries that they had no longer anything to fear from their terrible enemy—that the bairactar was most assuredly dead. The janissary agha, who believed that his foe had escaped disguised as a woman, and who was agitated by apprehensions that he would soon return at the head of a great army, ran to the stone tower, and rejoiced his eyes and heart by gazing upon the extinct friend of reform. The janissaries lifted up the body and carried it to the seraglio gate, in order that Cadi Pasha and the regular troops within might behold the fate of the unclean and untrue Mussulman. They then dragged it through the filthy streets to the Hippodrome, impaled it, and left it there for three days to gratify the eyes of the people. The regular troops now declared that they would no longer fight against the janissaries, their brothers and the defenders of their faith. Sultan Mahmoud, who had now nothing to fear, negotiated with the chiefs of the janissaries, who agreed to allow the regulars to quit Constantinople and return to their several homes without molestation.* But the young sultan was compelled to declare that he renounced for ever the reforms and the military institutions of the Christian nations, which had caused so much woe to the faithful. Anathemas were launched against every man that should venture again to speak of such abominable innovations; and the janissaries burned to the ground the magnificent barracks which had been erected for the accommodation of the regulars, in order, as they said, to destroy the last trace of the Nizam-Gedittes. The sleek and demure mufti then put on his green satin robe and his measureless turban, and went with the principal oulemas to congratulate his sovereign on this new triumph of religion and the ancient laws. Everything soon returned to its accustomed order: the people built up new combustible wooden houses to supply the places of those which had been consumed; the janissaries and the oulemas resumed all their ancient rights, privileges, and influence, and never foresaw, until it was too late, the merciless destruction which Sultan Mahmoud was gradually and slowly, but most cunningly and incessantly, preparing for them, and which at last overtook them and extinguished the janissaries in 1825.*

It was against the young and inexperienced Mahmoud, when weakened by the dissolution of his regular disciplined army, when abandoned by France, at war with England, and surrounded by difficulties of all kinds, that the magnanimous Alexander of Russia declared war, being encouraged thereunto by the conferences and treaties of Tilsit and Erfurt. At the beginning of the present year (1809) the Russian negotiators at the Congress of Yassi demanded from the sultan's ministers, as a preliminary to any peace, the cession of the Turkish provinces on the left bank of the Danube. Upon the indignant refusal of the Turks the congress broke up, and then the czar declared war, upon the sole pretext of the injury done to him and his ally the Emperor of the French by the peace concluded with England by the sultan. The Russians kept their ground in Moldavia and Wallachia, being assisted by the Greeks and the rest of the Christian population of those provinces; but, when they crossed the Danube and pushed forward into Bulgaria, as if with the intention of forcing the passes of the Balkan or Mount Hæmus, and advancing upon Constantinople, they began to suffer severely from the sword and spear of the Osmanlys, from malaria fevers, and other distempers, and from that want and almost famine which their corrupt, thievish commissariat usually contrived to create. Undisciplined as they were, the Turks had lost little of their dogged courage, and, though generally beaten when they risked a battle in the open field, their flying light cavalry often struck terrible blows. On the 22nd of October, while the Russians under Prince Bagration were investing Silistria, they were suddenly attacked by a Turkish army under the command of the grand vizier, who was aided and guided by a Polish refugee, the brave Gleyzer, who had fought under Kosciuszko for the independence of his country against the Russians. The fierce battle lasted from morning till night, when the arrival of a fresh corps of Albanians gave the victory to the grand vizier. The Russians with

* These merciful terms would not have been granted to the capitan pasha, to Cadi Pasha, or to several other officers of high rank; but the sultan contrived to smuggle them out of the seraglio and to get them into a row-boat, with which they escaped down the Propontis. Eventually nearly all of them were murdered. The capitan pasha, after flying to Russia, where he met with a hospitable reception from the Emperor Alexander, was cajoled by the new grand vizier, who induced him to return to Constantinople, and then caused him to be strangled. Ali Effendi and some others returned to the capital on the faith of a general amnesty, and were immediately seized, and treated like the capitan pasha. Cadi Pasha ran a bolder course than any of them, but it equally led him to the fatal bow-string. Though an admirer of the tactics and discipline of the Europeans, he was a true Turk, a sincere Mahomedan; his pride and his faith would not permit him to demand the hospitality of infidels, and he soon re-appeared in Constantinople under the disguising and protecting habit of a dervish. Quitting the capital, he went over to Asia with the intention of repairing to Caramania, and there collecting and organizing an army of bold adventurers, with which to scour Asia Minor and carry on a cruel war against the janissaries. He got as far as the neighbourhood of Kutaya, when he was recognised, and where he was seized and strangled in virtue of a circular order from the Porte, which enjoined the agent's government to put him to immediate death wherever he might be found. The head of Cadi Pasha was carried to Constantinople, and was exposed for a whole month at the gate of the seraglio. A few of the reformers lay concealed in poverty and obscurity for many years, and until Sultan Mahmoud was enabled to carry out his reforms in a sea of blood and treachery, when they re-appeared in honour and in power in the capital, and aided in destroying the janissaries.

* Juchereau de Saint-Denis, Révolutions de Constantinople.—Private information collected in the country.

difficulty effected their retreat to an entrenched camp; but a second action took place, and, being again defeated with terrible loss, they withdrew from Bulgaria, re-crossed the Danube, and went into winter-quarters in Moldavia and Wallachia. It is cited as an example of Bonaparte's habitual duplicity, and as a proof that, whatever promises he had made at Erfurt to Alexander, he was not desirous of seeing the Russian empire aggrandized on the side of European Turkey, that the Turkish artillery in all these actions was well served under the direction of French officers, who acted with the secret permission of their own government. The treaty we had concluded with the sultan led to sundry and very extended advantages to British commerce, which the Emperor of the French had resolved to exclude from Europe. The great trading ports of Smyrna and Constantinople were again open to our flag; and through the Gulf of Salonica, and the port and town of that name, our manufactures and colonial produce found their way into the heart of the European continent, to the shores of the Baltic sea, into Hungary, Austria, Bohemia, Poland, into the parts of Germany the most entirely subjected to the will of the conqueror; and, continuing their circuitous and contraband route, many of these bales ultimately got introduced into Holland, Belgium, and the north of France itself.

Our government had not even yet recovered from its delusion about the value of countless sugar islands and West Indian colonies, nor opened its eyes to the sacrifice of capital and of human life contingent on these conquests and occupations.*

In 1807 we had taken the Danish West India islands of St. Thomas, St. John, and St. Croix; in 1808 we had captured the French West India islands of Mariegalante and Deseada; and in the course of the present year we took possession of the French West India colonies of Cayenne and Martinique, as well as of a part of Spanish San Domingo, of which the French had gained possession. These petty, insecure, and costly conquests were also extended to the African coast, where we took Senegal from the French.

During the year there were several smart actions at sea besides the brilliant affair in the Bay of Naples. The necessity of conveying supplies to their armies employed on the Spanish coast made the French navy bolder than it had been for some time. All blockading ships are liable to be driven from their stations, and during the whole season ours were frequently removed to go upon other services, to Sicily, to the coast of Calabria, to Dalmatia, and Istria, and to the conquest of the Ionian islands. Detachments both from the Brest and the Toulon fleets got out to sea to convey fleets of French transports and store-ships. Their object never being to fight, but to make a run to the Spanish coast or to some other appointed place, nearly all the affairs that happened were running fights. On the 22nd of October, Lord Collingwood, who had been blown away from Toulon to Minorca by a gale of wind, and who had sailed from Minorca to the coast of Catalonia, received intelligence that the enemy had come out and was fast approaching him. This was an event for which he and his officers and crews had been longing for more than three years. "Every soul," says his lordship, "was in raptures: I expected their whole fleet, and that we should have had a dashing business. The next morning, between eight and nine o'clock, they came in sight; but they were few—only one rear-admiral, with three sail of the line, two frigates, some other armed things, and a convoy of about twenty vessels. They were going to supply the French army at Barcelona with provisions, &c. As soon as they discovered us they made off. Night came on and I thought that we had lost them; but, as the fleet separated in different parties, by good luck Admiral Martin's division fell in with them, near their own coast, in the Gulf of Lyons, where he chased them on shore." The French rear-admiral (Baudin), giving up his attempt to reach Barcelona, tried to run into the harbour of Cette, near the mouths of the Rhone. Two of his ships of the line, failing in this, ran themselves on shore within pistol-shot of each other, at a spot about six miles to the north-east of Cette. The other French ship

* Neither the country nor the government was sufficiently enlightened upon this important subject until the publication of Major Alexander M. Tulloch's 'Statistical Report on the Sickness, Mortality, and Invaliding among the Troops in the West Indies. Prepared from the Records of the Army Medical Department, and War Office Returns; and presented to both Houses of Parliament by Command of Her Majesty in the Year 1838.'

The admirable tables in this report, the inductions made therefrom, and the medical details which accompany them, render the whole subject clear to any capacity; and convey an amount of information which must be the means of saving many thousands of British lives, and which cannot be overlooked or neglected by any English ministry, present or future. The honour of opening the way to this invaluable result seems to be chiefly, if not exclusively, due to Sir James M'Grigor, the director-general, who, in the year 1816, first established an Historical Record of the Medical Transactions in the British Army; to Henry Marshall, Esq., of Edinburgh (known to the world by other literary and scientific efforts, all tending to better the condition of mankind), formerly a surgeon in the army, and now deputy inspector-general of hospitals; and to Major (then Lieutenant) A. M. Tulloch, who has a rare talent for statistical investigations and arrangements. Long before the government took up the matter in a serious and effective manner, Mr. Marshall, assisted in some cases by Lieutenant Tulloch, published at his own expense, or in the pages of the United Service Magazine, statistical papers and essays on the health of our troops in various parts of the world, on enlisting, invaliding, &c. These publications gradually attracted notice, and elicited other papers and observations from other quarters.

At length, in October, 1835, the secretary-at-war (Lord Howick) deemed it requisite that an inquiry should be instituted into the extent and causes of the sickness and mortality among the troops in the West Indies, with the view of founding thereon such measures as might appear likely to diminish the great loss of life annually experienced in those colonies. For this duty Messrs. Henry Marshall and A. M. Tulloch were nominated by the secretary-at-war, on the recommendation of the director-general, Sir James M'Grigor. On the first report being submitted to the secretary-at-war, he was so much struck with the value of the document that he directed the investigation to be extended to all our numerous colonies and foreign stations whatsoever. In consequence of this order, statistical reports of the same kind have been drawn up and presented to parliament, in the years 1839-40-41, on the sickness, mortality, &c., among our troops serving in the United Kingdom, in Gibraltar, Malta, Corfu, and other places in the Mediterranean; in Western Africa, St. Helena, the Cape of Good Hope, and the Mauritius; in Ceylon, the Tenasserim provinces of India, and the Burmese empire. A special department, under the management of Major Tulloch, has been established in the war-office; the most assiduous attention is paid to the returns of the regimental surgeons serving abroad, and which are now made in a far more accurate, distinct, and scientific manner than in former times; and thus the government and country may soon hope to be in possession of a most valuable and perfectly complete series of army-medical statistical reports, which must have the effect of preventing the recurrence of many lamentable errors in our war-office.

of the line and a frigate, though closely pressed by two English ships, succeeded in reaching Cette harbour, which scarcely contained water enough to float them. Finding it impossible to save the two stranded line-of-battle ships (a fine new 80-gun ship and a fine new 74), Baudin began dismantling them and landing the crews. This was on the evening of the 25th of October. As it grew dark the English ships tacked with the intention of being close in to the two wrecks on the morning of the 26th; but the wind fell, and they did not regain sight of them until the evening, when they were set on fire by their own crews. At eight P.M. the 'Robuste,' Baudin's flag-ship, and her consort the 74, were blazing fore and aft, and at about ten o'clock at night they blew up with a tremendous explosion, Martin's squadron then lying nearly becalmed about seven miles from the spot. One of our frigates had succeeded in capturing five of the French store-ships. The two ships which had run into the shallow harbour of Cette (the one a new 74, the other a fine large 40-gun frigate*) were left in great jeopardy. Seven French transports, or store-ships, in charge of an armed store-ship, two armed bombards, and another armed vessel, put into the Bay of Rosas, on the coast of Catalonia, and anchored under the protection of the castle of Rosas, of Fort Trinidad, and of other strong land-batteries. Lord Collingwood determined that they should not escape him, and he detached Captains Hallowell, B. W. Taylor, H. Hope, and others, to board them with their ships' boats, and either cut them out or burn them at their moorings. And this was done on the evening and night of the 31st of October, in the most gallant style, in spite of the boarding-nettings and the other precautions which the French had adopted, and in the teeth of a terrible fire of the castle, Fort Trinidad, and the other batteries, and of repeated volleys of musketry from troops assembled on the beach. M. Baudin had sailed from Toulon on the 21st of October, the anniversary of the battle of Trafalgar. It was a long time before any part of the Toulon fleet ventured to sea again.† The directing of these operations and the conquest of the Ionian islands, which was entirely his own project, were the last important services rendered to his country by Admiral Lord Collingwood. This good and great man, this illustrious model for naval commanders, whose life and letters ought to be found in every cabin and with every ship's company, had long been in a declining state of health. He had several times entreated the admiralty to relieve him, but the government had constantly entreated him to remain. During nearly three years he had hardly ever set foot on shore. During the whole of his command in the Mediterranean his toil and anxiety were immense, his occupations most various; he was involved in difficult political transactions; he had to maintain a correspondence with many foreign princes and ministers on the European side of that sea, and with pashas, deys, and sultans on the African side of it; and the letters and dispatches of this thorough English sailor, who had been at sea from his childhood, are admirable even in point of style. His constant service abroad made him often lament that he was hardly known to his own children. On the 22nd of February, 1810, he wrote to Lord Mulgrave, regretting that he had been under the necessity of writing to the secretary of the admiralty, and requesting their lordships' permission to return to England. "This," he says, "I have not done until I am *past service*. I am at present totally incapable of applying to the duties of my office. My complaint is of a nature to which I apprehend it is difficult to apply a remedy, for I have hitherto received no benefit from medical advice. Since November it has been daily increasing, so that I am now almost past walking across my cabin; and, as it is attributed to my long service in a ship, I have little hope of amendment until I can land." Three days after writing this letter he moored in the harbour of Port Mahon, in a state of great suffering and debility. As government after government seemed determined not to relieve him, his friends in the fleet had repeatedly urged him to surrender his command, and to seek in England, with his affectionate wife and daughters, that rest and comfort which had long been so necessary to his declining health; but he had always replied that he thought it his duty not to quit the post which had been assigned to him, until he should be duly relieved by orders from the admiralty—that his life was his country's in whatever way it might be required of him. Now, however, on the 3rd of March, he surrendered his command to Rear-Admiral Martin, who had given so good an account of M. Baudin's squadron; and orders were given for instantly preparing his old ship, the 'Ville de Paris,' for the voyage home. There was no time to lose, for his life was ebbing fast away. Two days were spent in unsuccessful attempts to warp the ship out of Port Mahon; but on the 6th the wind came round to a favourable quarter, and at sunset, the 'Ville de Paris' cleared the harbour, and made sail for England, the sailors wondering whether "good old Col" would live to get there. When he found that he was again at sea, he rallied for a moment, and said, "Then I may yet live to meet the French once more." The next morning there was a considerable swell, and Captain Thomas, on entering his cabin, said that

* The Duke of Clarence (since William IV.) in a most friendly and characteristic letter to Collingwood says, "It is extraordinary that the French should build such fine ships and handle them so ill."

† In the sailor-like letter to which we have alluded, the Duke of Clarence says, "It is odd that the enemy should have selected the 21st of October for sailing!..... I have only to lament that the enemy did not give your lordship and the British fleet an opportunity of doing more; and trust from the bottom of my heart that the next letter which you will have occasion to write will bring the news of the Toulon fleet being in your lordship's power." After praising the gallantry of the officers employed in the hazardous services, his royal highness adds: "I am clearly of opinion that the lieutenants deserve and ought to be promoted. I am for liberal rewards!" But more than one ministry had checked the generous impulse of Lord Collingwood, and, while they prevented his bestowing liberal rewards in the shape of promotion, they had displayed little liberality themselves. Collingwood's repeated lamentations over the neglect even of the brave men who had fought at Trafalgar excite grief, astonishment, and anger.

he feared that the motion of the vessel disturbed him. "No, Thomas," replied the veteran, "I am now in a state in which nothing in this world can disturb me more—I am dying." He expired that evening without a struggle, having attained the age of fifty-nine years and six months.* The death of Nelson was not more honourable, and scarcely more truly glorious.

Monument to Lord Collingwood.

Long before the sortie from Toulon, great efforts had been made by the French to get their Brest fleet in order, and to expedite squadrons from La Rochelle. In the month of March, nine or ten sail of the line and other vessels—a portion of the Brest fleet—were discovered in Basque Roads, lying between l'Ile d'Aix and the town of Rochelle. Admiral Lord Gambier appears to have been the first officer on the station to propose making an attack on these ships by means of fire-ships. In a letter to the admiralty, dated the 11th of March, the admiral says,—"The enemy's ships lie very much exposed to the operation of fire-ships: it is a horrible mode of warfare, and the attempt very hazardous, if not desperate; but we should have plenty of volunteers for the service."† The admiralty, however, had anticipated Lord Gambier, and, guided by a report by Captain R. G. Keats, nearly two years ago, that board had ordered a number of fire-ships to be prepared, and had directed Mr. Congreve to get ready to proceed in a transport with a supply of his famous rockets, and of men skilled in the management of them. On the very day on which the board issued these orders, Lord Gambier's letter of the 11th of March reached the admiralty, and Captain Lord Cochrane, with his frigate from the Mediterranean, reached Plymouth. About an hour after Cochrane's frigate had dropped anchor, her captain, by telegraph from the admiralty, was ordered to attend the board, as Lord Cochrane was well acquainted with the Basque Roads and that part of the French coast. Cochrane was decidedly of opinion that the attempt by fire-ships would succeed. Lord Mulgrave, the first lord of the admiralty, then asked him if he would undertake to execute the plan? At first Cochrane declined, pleading the jealousy which his sudden appointment might excite in his brother officers serving on that station; but upon a subsequent interview he yielded to Lord Mulgrave's representations. On the 19th of March, before Cochrane had been consulted, or before he had consented to take the command of the fire-ships, the admiralty wrote to Lord Gambier acquainting him with their preparations of rockets, fire-ships, &c., and telling him that all these preparations were making with a view to enable his lordship to make the attack: but they left it discretional with Lord Gambier to make the attack either conjointly with his line-of-battle ships, frigates, and small craft, fire-ships, bombs, rockets, or separately by any of the above means. On the 25th the admiralty addressed another letter to Lord Gambier, acquainting him that they had thought fit to select Lord Cochrane to conduct the fire-ships, but under his (Lord G.'s) directions. Cochrane, who took this letter, and who sailed with his frigate forthwith, reached the Basque Roads and presented himself and the admiralty letter to

* A Selection from the Public and Private Correspondence of Vice-Admiral Lord Collingwood: interspersed with Memoirs of his Life, by G. L. Newnham Collingwood, Esq., F.R.S.

This admirable book, like Southey's Life of Nelson, and Sir John Barrow's Lives of Lord Anson and Lord Howe, ought to be put into the hands of all young sailors. The admiralty ought to cause cheap copies of these works to be printed and distributed throughout the navy. A good progress has been recently made, and is now making, in establishing libraries for our non-commissioned officers and soldiers. We trust that the warrant officers and sailors of the royal navy will neither be forgotten nor left behind.

Gambier on the 3rd of April. As there was a delay in the arrival of some of the fire-ships from England, Lord Gambier ordered eight large transports that were with him to be fitted up as explosion vessels. Three or four other fire-ships were also equipped on the spot under the immediate inspection of Lord Cochrane. By the 10th of April thirteen or fourteen of the fire-ships, and the ship with the congreve-rockets and the inventor of those missiles, had joined the fleet. On the 11th, *early in the morning*, Lord Gambier's frigates and small vessels moved forward to cover and support the attack; and the ships of the line approached as near as they safely could with proper reference to the rocks and shoals, which would prevent their manœuvring. The attack was not to be made until dark night; but there were probably good reasons for making this demonstration and approach by daylight, for the navigation was difficult. But we can discover no excuse for the ignorance of the whole fleet (not excepting Lord Cochrane, who ought to have discovered the existence of that bar, or who ought at least to have conjectured its existence, seeing that Nelson had encountered the same impediment in his attack on the flotilla at Boulogne, and that such a means of defence had often been employed before, and was of very ancient origin) as to the existence of a strong boom in front of the French ships. These ships were disposed in a treble line, in a narrow passage; and they were protected by some tremendous land batteries, mounting long 36-pounders. The boom was no ordinary boom: it was half a mile long, extending along the whole front of the foremost line, or right across the channel which leads from Basque to Aix Road: it was composed of enormous cables secured by the heaviest anchors that had yet been made, and floated by buoys. The island of Aix, which in a manner commanded the approach, had 2000 land troops, mostly conscripts, and a number of French gun-boats and other row-boats were collected at Aix and La Rochelle to run in front of or behind the boom. When the hour arrived Lord Cochrane embarked in one of the fire-ships; and at about nine o'clock, in an uncommonly dark night, these explosion vessels moved towards the enemy, propelled by a wind which was favourable, but too fresh to allow of the fire-ships being chained together in divisions of three or four each, as had been intended. Each fire-ship was therefore left to act an independent part. The commanders of some of them set fire to their fusees a great deal too soon, and they exploded at too great a distance to do any mischief. Two or three others of the fire-ships were stopped by the floating boom, the existence of which it should appear that not one of them suspected; and, as the foremost of the French ships were 300 or 400 feet within the boom, these explosions did them no harm. But the 'Mediator,' the largest and most efficient of these combustible craft, commanded by Captain Woolridge, who best understood this sort of service, broke the boom, and thus afforded a clear passage not only to herself but to the other fire-ships behind her. As these floating "machines infernales" advanced in a blaze, all the French ships, a little sooner or a little later, cut their cables, and most of them ran ashore. Though two or three of them were grappled, not one of them was blown up by our fire-ships, whose explosions resembled an eruption of Etna or Hecla. In one single fire-ship 1500 barrels of gunpowder were ignited, and confined and crammed on the top of all this gunpowder were 300 or 400 shells charged with fusees, and 3000 or 4000 hand-grenades. Yet the noise and blaze and the panic-terror they raised were infinitely greater than the destruction they immediately caused. When the blaze was over, and the darkness of night restored, Lord Cochrane (he had exploded his own fire-ship too soon) remained at a distance from the rocks and shoals, scarcely knowing what had been done or what was best to do next. The return of day showed seven French ships aground, and little able to make any resistance. He thought they might all be destroyed as they lay, and he signalised Lord Gambier accordingly. But the wind was blowing hard upon the coast, and Gambier, a cautious man, dreading that lee-shore, and those shallow fortress-bound waters, declined sending in any more vessels. Perhaps the admiral did not like the way in which Cochrane was making his signals to him, and was calling upon him to do this thing or that as though he (Cochrane) had been commander-in-chief; and it is certain that Cochrane's most unexpected appointment had created a deal of jealousy among the captains in the fleet. At about six o'clock on the morning of the 12th Cochrane signalised that seven of the enemy's ships were on shore and might be destroyed. Shortly after, when he could see more clearly, he made signal that all their ships were on shore except two, and might be destroyed by only a part of Lord Gambier's ships. But Lord Gambier made no signal to weigh until three hours later; and then he suspended that signal by making another calling all captains on board his flag-ship. Other delays occurred which Lord Gambier explained to the satisfaction of his friends and of the court of admirals who afterwards examined his conduct, but not to the satisfaction of Lord Cochrane or to that of the generality of the English public. In the meanwhile the tide began to rise, and some of the French ships, getting afloat, made for the Charante river. The end of the affair, the result of various operations which cannot possibly be explained without long details for the most part of a very technical nature, was, that, entirely through the exertions of Cochrane, four of the French ships which could not get afloat struck, and were set fire to and destroyed; and the rest escaped up the Charante, though all very much injured and with crews completely disheartened. The French officers themselves confessed that this had been a most unfortunate affair; that the greater part of their

crews were completely dispirited; that every day they were lamenting their situation and speaking in praise of the enemy; and that this was the greatest injury the English had done.

Lord Cochrane on his return to England received the honour of the red riband of the Bath. After, and not before, receiving this distinction he told the first lord of the admiralty, that he should in his place in parliament oppose any vote of thanks to Lord Gambier. Upon hearing this and other and much louder expressions of dissatisfaction, Gambier demanded a court-martial. This court, composed of admirals Sir Roger Curtiss and William Young; vice-admirals Sir John T. Duckworth, Sir Henry E. Stanhope, Billy Douglas, and George Campbell; rear-admiral John Sutton, and four post captains, gave sentence, that Admiral Lord Gambier had acted with zeal, judgment, ability, and an anxious attention to the welfare of his majesty's service, and that he was most honourably acquitted of all charges. Cochrane's friends alleged that there were strong prejudices against him and strong partialities for his superior officer: the opposition party, with their newspapers and other organs, warmly espoused the cause of Cochrane, who, inclined to the party before, now became a hot partisan, a radical reformer, and a systematic or constant opponent of the government.*

When Bonaparte returned so hastily from the mountains of Galicia to the good city of Paris, in alarm at the demonstrations making by Austria, he set on foot negotiations with the court of Vienna rather in order to gain two or three months' time for his own military preparations than with the hope or the wish of averting the storm. He fancied that the ill success of Sir John Moore would prevent the English government from sending any other army into Spain;—of the Spanish armies left to themselves he could entertain no apprehension;—and, while his marshals were finishing the war in that country, he confidently expected to be able to crush the Emperor Francis, who had no assistance to expect from Russia, or from Prussia, or from any of the German states, or from any of the powers of the North. He would make no concession, he would not even enter into explanations; and therefore, at the end of March, Francis declared war, and issued a manifesto recapitulating the various provocations which Austria had endured since the peace of Presburg. Austria had made astonishing exertions to recruit her armies to the number of nearly 300,000 men; but the mass of these troops had not had time to attain to any perfection of discipline, and again the armies were too much divided and subdivided, the Emperor Francis aiming not merely at a defensive war and the recovery of the Tyrol, which Bonaparte had given to the king of Bavaria, but also at the recovery of Lombardy, and all those rich transalpine states which now constituted the Gallic-Italian kingdom, and at conquests in Poland to be made at the expense of the grand duchy of Warsaw which Bonaparte had set up. While one great army under the Archduke Charles marched towards the river Inn and the fatal fortress of Ulm, another large army under the Archduke John (who intended to co-operate at a favourable moment with his brother Charles through the passes of the Tyrol) was set in motion towards Upper Italy, and a third army under the Archduke Ferdinand was sent into Poland. Each of these three armies began admirably well; but only to end lamentably. On the 9th of April the Archduke Charles crossed the Inn, and presently occupied Bavaria and communicated with the Tyrol, in which latter country the brave, loyal, and patriotic inhabitants—chiefly mountaineers and peasants—had risen upon the French and Bavarian troops and had driven them out. On the 10th of April the Archduke John, with his army full of spirit and of hope, descended from the Alps into Italy, driving the French and Italian troops of the viceroy Eugene Beauharnais before him, and steadily advancing to the Tagliamento, capturing all the open towns and laying siege to the fortresses of Osopo and Palmanova. In Poland the Archduke Ferdinand defeated Bonaparte's satellite, Poniatowski, and marched as a conqueror into the city of Warsaw. In the meanwhile, Bonaparte had collected an immense but compact army on the Rhine, consisting of French, Italians, Poles, Bavarians, Wurtemburgers, Saxons, and of all the contingents of the Rhenish confederation. He counted with confidence on the rapidity of his movements, and on the very imperfect condition of discipline among the majority of the troops in the ranks of his old opponent the Archduke Charles. "Six thousand of our people," said he, "ought to attack and beat 12,000 or 15,000 of that mob, *cette canaille-là*."* On the 20th of April he defeated the archduke's advanced guard at Abensberg; on the 23rd he escaladed the walls and took the city of Ratisbon, on which occasion he was slightly wounded in the foot by a spent musket-ball. He then advanced still more rapidly, separating the Austrian divisions from one another, and, by one of his most skilful or quickest manœuvres (which the Austrians ought to have understood by this time, and so have been provided against), he completely dislocated and broke the Archduke's line. Risking a battle at Eckmuhl under very disadvantageous circumstances, Charles was thoroughly defeated, lost a great part of his artillery, ammunition, and baggage, and is said to have owed his own escape to the speed of his horse. The archduke retired into Bohemia, leaving the road to Vienna open to the French, who entered it in triumph on the morning of the 13th of May, after a mere show of resistance which lasted only three or four days. The garrison, 15,000 strong, the court, the nobility, had all fled

* For the affair of the Basque Roads, the court-martial on Lord Gambier, &c., the reader may consult the naval histories of Captain Brenton and Mr. James, and the Edinburgh Annual Register for 1809, which contains a very full account written, or revised, by Southey.

* Bonaparte's Letter to Marshal Massena.

from the place before it capitulated; but there remained there one princess of the house of Austria, the Archduchess Maria Louisa, whom sickness had retained in the palace of her fathers. [A notion, however, prevailed at the time and afterwards, that the archduchess's malady was in good part a fiction.] The conqueror caused the archduchess to be treated with all respect and reverence; but at the same time he acted as sovereign and master in her father's capital. In conformity with the system which we have ventured to condemn, when recommended and upheld by English writers, but which was certainly well suited to his purposes and modes of making war, he declared not only that no popular insurgents, but also that no militia, had any right to take any part in the hostilities, or to make any effort against the invaders of their country. On the 14th of May he issued a decree commanding the immediate dissolution of the Landwehr, and threatening with the severest punishments all such men as should not lay by their arms and return quietly to their homes within a fortnight.

The Archduke Charles now collected his army on the left bank of the Danube, only a few miles below Vienna. Having constructed some bridges, Bonaparte crossed the river and attacked the archduke. The great battle of Aspern, which was begun on the 21st of May, was one of the most memorable that took place in the whole course of these long or often-renewed wars. When night closed on the field of carnage the combat was undecided; but the loss of Bonaparte was far greater than that of the archduke, who had been reinforced by some Austrian and Hungarian veterans, and who displayed throughout the day both an unflinching courage and excellent generalship. The battle was renewed early on the following day, and was raging with fury on both sides, when Bonaparte was informed that the bridges in his rear, which he had constructed to keep up his communications with the right bank of the Danube, had been carried away by a flood. Upon this he ordered a retreat, and withdrew, not without some confusion, into the island of Lobau, in the middle of the Danube, and cut away the bridge which joined the island to the left bank of the river. The loss of the French in killed and wounded was very great: Marshal Lannes, duke of Montebello, finished his earthly career at Aspern; Generals Espagne and Saint-Hilaire were also among the slain; and an immense number of field-officers perished on the field or died of their wounds on the isle of Lobau. The visible discouragement of the men was good evidence that Aspern had in fact been a defeat to the French. It is true that at this juncture the Emperor Alexander had declared war against the Emperor Francis, and had raised his army in Russian Poland to 50,000 men; but these Russians seemed to satisfy themselves with merely observing the Austrian army under Archduke John, and the Polish army (of which the czar was much more apprehensive) under Prince Poniatowski; and they certainly abstained from taking any active part whatever in this campaign. But, on the other side, while Bonaparte and the mass of his Grand Army were cooped up and miserably huddled together on an island in the Danube, popular patriotic insurrections of a formidable character were breaking out in his rear, and even in regions contiguous to the Rhine and the frontiers of France: the gallant Major Schill, the best of partisan leaders, had raised the standard of liberty and independence in the North of Germany; the inept Jerome Bonaparte, king of Westphalia, was compelled to fly from his capital; the chivalrous Duke of Brunswick, the avenger of his old father, threw himself into Bohemia with his Black Hussars; and one of the princes of Hesse, and other men of ancient and honoured names, followed these examples, and propagated and most bravely fought for the reviving Germanic feeling. All Germany learned for the first time these ten years that Bonaparte had been vanquished and compelled to fall back. The news gave heart and hope to all that were enemies to the French and friends to their own country: the fermentation of the Germanic populations became general; and those governments and princes that had attached themselves to the fortunes of the Corsican Emperor of the French must have been broken up and swept out of the country if this true Germanic feeling in the people had been allowed a little more time, and had received proper encouragement from bold and decisive operations on the part of the armies of the Emperor of Austria. It was with difficulty that Bonaparte's submissive ally, the King of Saxony and Grand Duke of Warsaw, could restrain the sympathies of his German subjects; and in Prussia, notwithstanding the fear and awe of the government, the people seemed almost everywhere on tiptoe, inflamed with the desire of avenging the disgraces of Jena, the humiliations of their king, and the wrongs of their graceful, high-spirited, and broken-hearted queen. Major Schill himself was a subject of his Prussian majesty, and he had marched off from Berlin with his regiment of hussars and a few hundred Prussian infantry,—brave men, who would risk the death of soldiers on the field of battle, or the hanging and fusilading of the French, who chose to consider and to treat them and all such patriot bands as banditti and brigands, rather than witness any longer the slavery of their country and the opprobrium of the whole Teutonic family. The retreat from Bavaria of the Archduke Charles had not damped the spirit of the resolute Tyrolese, who were in arms almost to a man, making a noble stand against another united army of French and Bavarians. At the beginning of June bands, more or less considerable, issued from the mountains of Bohemia, and penetrated into Saxony, Franconia, Hesse, Hanover, and others of the circles of the old empire, exciting the populations to rise, launching proclamations, and gathering many partisans: their cry was, "Arm to defend your liberties! Arm for the deliverance and the liberties of

Europe!" It was hard for French generals to get native German troops (and they had few but German corps under their command) to fight against the German patriots.* The King of Wurtemburg was reduced to almost as sad straits as his brother-in-law Jerome, King of Westphalia. This popular enthusiasm and insurrection might not have sufficed in itself to break the iron sceptre of Bonaparte; but, with a little time and encouragement, the partisan bands might have been well organised and disciplined, the regular armies of the confederation of the Rhine and the other veteran German troops that were unwillingly following the standard of the Emperor of the French would have deserted from him as they did a few years later, and an ocean of blood might have been spared humanity. But, after his exploits on the field of Aspern, a torpor or a stupefaction appears to have fallen upon the Archduke Charles. In part, this might be accounted for by the reverses which were following the first successes of the Archduke John in Italy, and of the Archduke Ferdinand in Poland; but there certainly must have been some other cause, or causes, more secret and more powerful to produce this long inaction. Treachery and treason of the darkest kind have been suspected, not in the Archduke Charles, who was one of the most honourable of men, but in inferior generals, and among the members of the government and the Aulic Council, which always directed the war, whether near or distant, and which never, since the beginning of the French Revolution, had directed it aright. For six whole weeks Bonaparte's army was allowed to remain undisturbed in the isle of Lobau. During this long interval it was reinforced by the arrival of the corps of Marshal Davoust; strong redoubts and batteries were raised on the island; new bridges were prepared; every possible advantage was taken of the abundant resources offered by the city of Vienna; and Eugene Beauharnais with the army of Italy, and Marmont with the army of Dalmatia, after the retreat of the Archduke John, and by a succession of rapid and brilliant marches, gave the hand to their emperor and his Grand Army. When all these advantages had been procured, Bonaparte, with a great superiority of force, determined to try his fortune again on the left bank of the Danube. The Archduke Charles had fortified that bank, had erected batteries to prevent the passage of the French from the isle of Lobau, and had thrown up other batteries and redoubts at Aspern, Essling, and other points: but the Archduke John, who had effected his retreat from Italy into Hungary, was not brought up to the scene of action, nor did the Archduke Ferdinand quit Poland and march to the succour of his brother, until it was all too late. The Austrians, too, appear to have conceived that the French could only effect their passage at the identical point where they had made it before, so that all their works were made merely to face the isle of Lobau. On the night of the 4th of July Bonaparte opened a tremendous fire from his batteries on Lobau; and, while the dull Austrians were replying to it, the French went silently over to another islet a little lower down the river, established six bridges, and began to glide over to the left bank. By the morning of the 5th Bonaparte and the mass of his army were well established on that bank, and on the flank of all the archduke's positions, which were thus in a manner rendered useless. It should appear that the Austrian army knew nothing of this manœuvre until it was all but completed. The Archduke Charles retired obliquely upon Wagram, a few miles behind Aspern, fighting hard as he went at Enzersdorf, at Essling, and at one or two other points, and removing his artillery from his now useless works. Towards evening Bonaparte attempted to finish the affair by attacking the Austrian centre. He began by a concentrated murderous fire of artillery, the number of his guns being now increased to a greater disproportion than ever, and nearly every gun being loaded with grape-shot. But the Austrian veterans were not to be broken; the centre stood like a wall, replying with a less numerous but well-served artillery; in some charges made on the wings of the archduke's army and on other parts of his line the French were repulsed with great loss; the Saxons and other German troops commanded by Bernadotte showed symptoms of uneasiness and insubordination—a feather thrown into the scale of the indecision of these Germans would have made them march over to the archduke as they marched over to the grand allied army on the field of Leipsic in the year 1813;—finally, some of the *élite* of the native French troops fell into confusion, which was increased by the darkness of night. About an hour before midnight the firing of the artillery ceased, and Bonaparte was again compelled to confess inwardly that he had been worsted. When he complained to Bernadotte, with whom he was perpetually quarrelling, of the conduct of the Saxons and of the general ill success of the day, the marshal replied, "Sire, we have no longer such troops as those we brought from the camp of Boulogne in 1806!" The best of the French army had in fact been already sacrificed. On the morrow, however—the memorable 6th of July—when the Archduke Charles drew up his army in the form of a crescent on the plain of Wagram, and, resuming the offensive, attacked the French with the hope of driving them back into the Danube, the Austrians were defeated, but rather by superiority of number and by the immensity of the enemy's artillery than by any superiority either in bravery or generalship. The battle of Wagram was—or at least the decisive part of it was—a battle of cannons and howitzers. For some hours victory seemed to sit upon the crest of the brave Austrian

* The brave Duke of Brunswick said, in one of his proclamations, "Germans! would you shed your blood for foreigners, for Frenchmen? Your brothers, against whom they are making you march, are coming only to break your chains. Rise, Hessians! Rise, Prussians, Brunswickers, Hanoverians! Unite together to wipe out the shame of Germany, and to punish her oppressors! The moment of deliverance is at hand!"

prince. Bernadotte was driven from his position; Massena recovered that position, but could not hold it; Eugene Beauharnais with his army of Italy was driven in and almost routed; columns of Austrians seemed gaining ground in every direction, and at one moment the French left wing was completely turned, and dismay reigned in the *état-major*, or grand staff, of the Grand Army. But Marshal Davoust, with an immense corps composed entirely of Frenchmen, made an impression on the left wing of the Austrians; and at the critical moment Bonaparte, who kept his attention entirely fixed on Davoust, deployed the batteries of his imperial guards, ranging sixty or more pieces of cannon in the first line like infantry, and opening an awful fire on the heads of some advancing columns.* These attacking columns halted; their weak artillery was soon silenced; Davoust's corps shouted victory; and then Bonaparte, saying "The battle is won," formed his entire centre into column, and with twenty-one battalions of infantry under Macdonald, the two divisions of Eugene Beauharnais, the cuirassiers and the light cavalry of the guard, with the old and the new guard, and the noted *grenadiers à cheval*, he drove across the plain with his condensed mass, broke through the archduke's centre, and reached Wagram. Now, indeed, the battle was gained, but tremendous was the price he had paid for it: three of his generals were killed, twenty-one of his generals were wounded, and according even to French accounts 6500 men were killed and 15,000 were wounded. The lying bulletins, which could no longer deceive anybody, stated his total loss at 1500 killed and a few thousands wounded; but it now appears from documents found in the French war-office and in other depositories that Bonaparte had altogether about 33,000 men put *hors de combat* in the two battles which he fought near Wagram. The Austrian loss was certainly inferior to this; on the 5th they had a decided advantage; on the 6th they were for a long time victorious; and even when their centre was broken their retreat was effected in good order, and there was no pursuit, the French halting in a state of doubt or exhaustion on the ground they had gained. It is a hot pursuit that swells the number of killed, wounded, and prisoners. They abandoned some of their artillery, but the Austrians carried away with them more prisoners than they had themselves lost. In their own official accounts the Austrians estimated their loss in the field at 20,000 killed and wounded, and it appears that their loss in reality did not exceed 26,000 or 27,000. Thirteen Austrian generals were killed or wounded, and the Archduke Charles himself received a slight hurt in repelling a charge. But the most lamentable part of the story seems to be this:—during the two days' fight the Archduke John, with 10,000 or 12,000 choice troops which he had brought back from Italy, was lying at Presburg on the Hungarian frontier, on the same side of the Danube as his brother Charles and Bonaparte, and only six or seven leagues from them. A good forced march might have brought the Archduke John to the field, at latest on the second and decisive day of the fighting; and it is allowed by most of the French themselves that his appearance, at any moment before Bonaparte's last tremendous charge, would have thrown the French into irremediable confusion. It is said that pressing orders and earnest entreaties were sent by Charles to his younger brother to hasten his march; but there the Archduke John remained, to leave an historical doubt to posterity as to the motives of his conduct or the causes or accidents which delayed his advance. He was as brave as his brother, and unquestionably quite as loyal: we cannot credit the insinuations of the French that he was actuated by a mean jealousy; but we incline rather to believe that there was treachery as well as stupidity among some of the men who surrounded him; that there was an opposition and conflict between the orders given him by the Aulic Council and the orders sent him by the Archduke Charles, or that the orders were badly given by his brother and badly understood by himself.

JOHN, ARCHDUKE OF AUSTRIA.

Still, however, the army of the Archduke Charles was neither destroyed nor discouraged and dispersed; men and officers were ready to fight again, and the archduke was eager to continue the war. By skirmishing and manœuvring he might have gained time sufficient to allow not only the Archduke John but also the Archduke Ferdinand and other generals of separate corps to form their junction with him; the partisan warfare continued in Germany, the Tyrolese were as yet standing as conquerors on their own proud mountains, and the warlike population of Hungary might have furnished immediately swarms of squadrons of excellent light cavalry, while Bohemia would have

* "The Austrian centre," cried Bonaparte, "must be battered by artillery like a fortress!" When the horrible struggle seemed going against him he exclaimed to Drouot, the general of his artillery, "Drouot, bring up all the batteries of the guard! We must sustain Davoust's column at any price! *Allons*, Drouot, throw me ten thousand cannon-balls! Crush me those masses before you!"

Thus, the less he relied on his troops, the more he relied on his cannon; and thus he kept increasing his artillery out of all proportion.

poured forth her yagers or tirailleurs, among the best light infantry and riflemen in the world. Alarming news arrived from Murat at Naples, who was watching the storm then gathering in Sicily and in Calabria; and in the course of a few days the spirit of Bonaparte became disquieted by the storm which had then burst upon Holland,—by the capture of Walcheren, which was a far more serious source of uneasiness than has been generally allowed,—and by the news of the defeat of his brother Joseph and his marshals at Talavera. So far was the Archduke Charles from thinking of a dishonourable, dastardly peace that he was actually fighting the French on the 11th of July, and was even preparing for another general battle, when certain diplomatists drove into his camp and told him that the Emperor Francis had agreed to a truce, and that an armistice had just been concluded at Znaym. This led to the opprobrious peace of Schönbrunn, which was not signed, however, till the 14th of October. During this, to him, most opportune and profitable suspension of hostilities, Bonaparte chiefly resided in the imperial palace of Schönbrunn, leading nearly the same course of life to which he was accustomed at the Tuileries, and ruling in Vienna like a lord and master.* From this ancient residence of the house of Hapsburg he issued his decrees to all parts of the continent, and endeavoured also to open a correspondence with some disaffected states or subjects of Francis, in order to terrify him into greater submission and vaster sacrifices even than those which the Austrian cabinet seemed ready to make, and to sow germs of discord, rivalry, and confusion which might keep that empire for ever in a weak and prostrate condition. But, though he had assuredly found on this as on former occasions some traitors that served him for money, he could not find on the whole surface of the Austrian empire any such thing as a body of disaffected or disloyal men, and, now that Italy was gone, he could not discover in the curious composite which made up that empire, in the different kingdoms, in the provinces and adjoints, in many of which the people differed in origin, in language, in habits, and in several instances in religion, a single *foyer* of discontent and rebellion, or any one class willing to throw themselves under French protection and assert an independence of the house of Hapsburg. Except in their lost Italian provinces the sway of the Austrians had been mild and popular, and the government of Francis II. was, and ever had been, considered as a paternal government. In Hungary, where the people differ as much from Austrians as our old highland clans differed from the lowland Scotch or from the English, and where a proud and spirited nobility had maintained an oligarchic constitution—where jars occasionally took place between the imperial authorities and the aristocracy, and where the great magnates had often been known to defy the Aulic Council, the French fancied that something might be done; but, when Bonaparte addressed an invitation to the Hungarians to separate themselves from Austria, to form an independent kingdom under a native ruler, and to give to the crown of the Magyars the lustre which once belonged to it, they turned from the invitation with contempt and disgust. These men had no sympathy with the French; their liberties and privileges had been well preserved under the house of Austria, and they knew but too well the fate of democracies, oligarchies, and all other governments that had claimed the protection of Bonaparte.

A few words must be said on the campaigns in Poland and Italy. The grand duchy of Warsaw did not capitulate with its capital. The Archduke Ferdinand laid siege to Thorn. While a strong garrison detained him there, Poniatowski, having doubled his army, fell upon the Austrians with 40,000 men, drove them out of the city of Warsaw, beat the archduke in two battles fought at the end of April and beginning of May, invaded Austrian Poland, penetrated into Gallicia, and forced the archduke to evacuate entirely the territories of the grand duchy of Warsaw by the beginning of July.

Eugene Beauharnais.

When the Archduke John first descended into Italy to contend with the French viceroy, his progress was favoured by many circumstances: the spirit of the Austrian armies had never been higher than then, and the common people of the country were heartily sick of the French dominion, and irritated, exasperated in the extreme by the harsh, lawless, and, in their eyes, impious conduct of Bonaparte towards Pius VII., a pontiff whose personal

* It was at Schönbrunn that Bonaparte narrowly escaped the dagger of an enthusiastic young man, a member of the *Tugenbund*, or of some other of those secret societies which had now and at a later period so great an effect in exciting the Germanic feeling. Stabbs, the son of a respectable Protestant clergyman of Erfurt, went to a grand review of the imperial guard, and rushed upon the emperor in the midst of his staff. Berthier and Rapp seized him and disarmed him when his knife was but a few inches from Bonaparte's heart. "What injury have I ever done to you?" said the conqueror. "To me personally none," replied the youth; "but you are the oppressor of my country, the tyrant of the world!" Bonaparte, who had already fusiladed more than twenty burghers of Vienna *pour faire peur*, caused the youth to be shot on the very next morning. The boy, for he was scarcely eighteen years old, died like a hero.

virtues, and imposing and touching demeanour, greatly increased the reverence felt for the sanctity of his office. A large portion of the Italian nobility were, and a considerable portion of the *bourgeoisie* had become, free-thinkers—converts and disciples to the doctrines of Voltaire and the French *philosophes*,—and as such disposed to regard with joy or with indifference any humiliation offered to the tiara, or any blow struck at the Roman priesthood; but these classes of men were acutely sensible to the injuries offered to themselves personally, to the enormous stride of taxation which was going *pari passu* with retreating trade and the rapid fall of the value of the rich productions of the country, to the intolerable war contributions, and to the still more intolerable military conscription, which spared no rank or condition of men. And even many of those nobles and citizens of Lombardy who had most favoured the French, and who had most profited by Bonaparte's government, apprehended that the end of his system was coming, and that the best thing they could do under present circumstances would be either to remain neutral and indifferent, or to win a reconciliation from their old masters the Austrians by lending them assistance, or by affecting to feel infinite joy at their successes and happy return to a country which they had so long possessed. This was the common logic of self-interest; but there were higher and nobler natures—enthusiastic, generous minds, that had outlived their early dream of liberty and pure republicanism and the union of all Italy,—that were weary and disgusted with these bloody struggles, which, end which way they would, were sure to leave the Italians the slaves of a foreign master. As the Archduke John advanced as a conqueror across the rich Lombard plain, all the villages and small towns, and not a few of the larger cities, hailed his approach by shouting "Long live our old good master the Emperor Francis!" Eugene Beauharnais attempted to stop him near Sacile, and, risking a general action, was completely defeated. But the archduke, instead of vigorously pursuing the viceroy's beaten and, in good part, demoralised army, marched slowly on and lost many good opportunities on the banks of the Adige. Marshal Macdonald arrived to advise and direct Eugene; and reinforcements began to pour into Lombardy from Tuscany and from parts of Lower Italy. The archduke, however, passed the Piave and the Brenta, the people of Padua received him as a deliverer, and when he seemed to threaten Venice there was a popular party in that city impatient to rise and join him. At this moment the victorious Tyrolese insurgents came down the valley of Trent and showed a bold front within the Italian frontiers and on both banks of the Adige, erecting the double-necked eagle, the standard of Austria, wherever they advanced. But anon came the news of the Archduke Charles's defeat at Eckmuhl and his retreat beyond Vienna and the Danube: the brave Tyrolese were obliged to retire to their own country, the passes into which, on the side of Bavaria, were now left open; and the Archduke John was ordered by the Aulic Council to retire from Italy and join the Archduke Charles as quickly as he could. The retreat began; the poor Italians who had committed themselves were left to the tender mercies of the French; Beauharnais followed the Archduke John with forces numerically superior; a bloody battle was fought near Conegliano; but the archduke, though worsted, continued his retreat in good order, effecting the difficult passage of the Tagliamento under the eye of Beauharnais. Macdonald, pursuing too incautiously, was well beaten in one or two affairs in the mountains of Carniola; but, waiting at Gratz until he was joined by Marmont and the French army of Dalmatia, who with great difficulty and not without terrible loss had fought their way through Croatia and other mountainous regions where the populations were all in arms, Macdonald and Beauharnais descended through the valley of Raab to the banks of the Danube and the vicinity of Vienna, where they gave the hand to Bonaparte and the Grand Army. Eugene, however, had not been allowed to get through the valley of Raab without some hard fighting. On the 14th of June, the anniversary of the victory of Marengo, Bonaparte's step-son found himself opposed near the town of Raab by the Archduke John, whose army, even after so long and hurried a retreat and much suffering, and in spite of the discouraging news which reached it from all quarters, formed in admirable order, and fought with so much spirit that twice in the course of the battle the enemy was nearly defeated. The Archduke John and Eugene Beauharnais were young men nearly of the same age; they were at least equal in valour; and, if Macdonald had not been at hand to give his advice, we may doubt whether there would have been any inequality in the military skill displayed by the two young commanders-in-chief. Although defeated in the end, the archduke retired in such perfect order that Eugene did not venture to attack even his rear-guard. The Austrian prince reached the valley of the Danube, crossed that river, and ascended the left bank as far as Presburg; but then came the slowness, the indecision, the blunder, or the treachery, or some other mysterious cause, of which we have complained. By the line he took the archduke had only a few miles' longer march than the viceroy. Eugene joined Bonaparte several days before the battle of Wagram, which was not fought till twenty-two days after the battle of Raab; the Archduke John, with the loyal population of Hungary on both flanks and on his rear, appears to have reached Presburg two or three days before the decisive, but, for a long time, doubtful, battle of Wagram—but there he staid. After reconsidering every hypothesis, we are the more confirmed in the opinion that in this campaign, as in all the preceding campaigns of the Austrians, treachery was at work, and that the emperor was grossly betrayed. We know that the French general Seras attempted to corrupt with money the

commandant of one of the emperor's fortresses; we know that this honourable officer scorned the bribe and those who insulted him by offering it, and died fighting gallantly in the breach; but we do not know how often the golden napoleons succeeded in the objects for which in all these wars they were profusely distributed. After this campaign, even as after Mack's campaign of Ulm, numbers of Austrian officers and civil employés were known to start suddenly into opulence and luxury, without any visible source for their increased fortunes.

It was from the palace of Schönbrunn that Bonaparte aimed his last thunderbolt at the head of the pope. In May, 1808, he had annexed, *for ever*, the best part of the papal dominions to the mock kingdom of Italy; and his generals and the Roman revolutionary party—about the most savage, atheistical, and intolerant of all the reformers of that day—had constituted Pius VII. a prisoner in the Vatican. All the cardinals that offered the slightest resistance or remonstrance were expelled from Rome. Gabrielli, the cardinal secretary of state, or prime minister, was sent away to his bishopric at Sinigaglia. The pope appointed Cardinal Pacca to fill the place: Miollis, the French general, immediately ordered off Pacca to Benevento; and, upon this cardinal's refusing obedience, he was seized by French gendarmes and forcibly carried across the Neapolitan frontier. Another cardinal, the decanus of the sacred college, was treated in the same manner. Pius, after again reminding the Emperor of the French of the services he had rendered him, and of the long winter journey he had made to crown him in Notre Dame, threatened Bonaparte and his agents with the thunders of the church; but he held his hand. On the 17th of May, 1809, four days after entering Vienna, Bonaparte issued a decree, in which he united the remainder of the Roman States, not to the mock kingdom of Italy, but to the French empire, leaving to the present pope, in case of his quietly submitting, his palaces, which had been robbed already of the treasures of art they contained, and an annual allowance of about 80,000*l.* sterling. Upon this Pius VII. held his hand no longer. On the 10th of June printed copies of a bull of excommunication against all the perpetrators and abettors of the invasion of Rome and of the territories of the Holy See were affixed to the gates of the principal churches of the city, and were rapidly distributed by devout people in every part of Italy, and in all ultramontane Catholic countries. *Philosophes* and unbelieving soldiers sneered at this thunderbolt; but it was a real thunderbolt nevertheless, that scorched and withered some of Bonaparte's best interests. A few days after it was launched the armament of Sir John Stuart made its appearance in the Bay of Naples, and the French were getting beaten or bewildered by the Calabrian insurgents. Murat was greatly alarmed; and it is said that it was he who, without any previous instructions from his brother-in-law and master in the palace of Schönbrunn, concerted with Miollis, who was equally afraid of a popular insurrection at Rome, measures for seizing the old pope and sending him a state prisoner into France, where his predecessor, Pius VI., had died in a miserable captivity. But we know from better authority than that of Las Cases that Murat consulted previously with Bonaparte, and that an express order to get the pope out of Italy came from Schönbrunn. Miollis, who was governor and a sort of viceroy in Rome, chose a proper instrument for the deed of violence in a rough low-born soldier of fortune, Radet, who had served for many years in the gendarmerie, and who was now one of Bonaparte's barons, legionaries of honour, and a general of French gendarmes. The pope had shut himself up in his palace on the Quirinal. At midnight the palace was surrounded; and between two and three o'clock on the morning of the 6th of July some of Radet's French gendarmes, and a few Roman reformers who knew the building well, and who would have had no reluctance to cut the old pope's throat, scaled the walls of the palace, broke open several doors, and, throwing open the great gates, let in their comrades from without. The Swiss guards, whom the pope had collected within the walls of the palace, offered no resistance, having received his own solemn order to that effect. General Baron Radet penetrated to the apartment in which Pius was, and found him in full pontifical dress, surrounded by priestly attendants. The leader of gendarmes told the pontiff that he had orders to remove him from Rome, unless he recalled the bull of excommunication, and consented to sign an entire abdication of his temporal authority. Pius replied that this he could not do. Radet then told him that he must depart immediately. "I then yield to force," replied the helpless and truly venerable pontiff; and, taking his breviary under his arm, he meekly followed the French general to the gate, where a carriage was found ready, and whence he was instantly driven off under a strong escort of French gendarmerie. Only Radet went with him in the coach, which flew as rapidly through the country as relays of six horses could make it fly. Not a soul was permitted to accompany him, or to follow him; and it was all in vain that he represented his great physical suffering from this rapid, break-neck, never-resting way of travelling. Radet was in an agony of alarm all along the road lest the pope should be recognised. When he was well advanced on his journey he was transferred to the custody of some other gendarme officer; and so he was carried on from one military post to another, there being no lack of gendarmerie in any part of Italy. When they reached the Riviera di Levante, or eastern coast of Genoa, the French dreaded the mountain passes and the devout peasantry. They therefore huddled the poor old pope on board a frail and dirty bark that was bound for Genoa, and that was creeping along the coast, as all vessels were then obliged to creep, in order to avoid the

British cruisers. Pius asked whether they intended to drown him. The gendarmes answered No. As soon as they landed him in Genoa, they smuggled him into another carriage, which was driven off at full gallop. They whirled the pontiff over the rough and mountainous road of the Bocchetta, and never made a halt till they came to the fortified town of Alessandria, near the field of Marengo. From Alessandria they carried him with the same speed across the plains of Piedmont, then scorched by the July sun, to Sant' Ambrogio di Susa, at the foot of the Alps. Completely exhausted by fatigue and suffering, the old pope asked whether Napoleon wanted to have him dead or alive. They answered, Certainly alive. "Then," said Pius, "let us rest here this night." They were forced to consent, for it seemed evident that he would die that night on the lofty, cold Alps, if they continued their journey. On the following day they hurried him over the road of Mount Cenis and through the deep valley of Savoy. From Savoy they turned aside to the old French province of Dauphiny. They imprisoned him for a time in the city of Grenoble; but orders came from Bonaparte to remove him to the fortress of Savona, in the western Riviera of Genoa. There was a much nearer road from Grenoble: but these Frenchmen were ingenious tormentors; and so they carried the pope by Valence, where his predecessor had died, by Avignon, which until the French revolution had belonged to the see of Rome, and by Aix and Nice. Pius VII. was left in his captivity at Savona for nearly three years, when he was removed to Fontainebleau.

This treatment of the pontiff, although it made a deep impression on the Austrian people, produced no visible effect on the negotiations for peace. Several times, indeed, but not upon spiritual grounds, the Emperor Francis seemed all but determined to declare the armistice at an end, and to try again the fortune of the sword. Failing in his endeavours to cajole the Hungarians into a revolution under his auspices, Bonaparte saw that, after all, it would be no such easy matter to dismember the Austrian empire, or (bating Italy) to keep permanent possession of any of the kingdoms or provinces which had been united under the dominion of the Hapsburgs—that old house of Austria which, as he was accustomed to say, was always falling, but never dying! He evidently stood dismayed at its mighty *vis inertiæ*. The news, too, of the defeat of so many of his renowned generals at Talavera disturbed his *prestige*, and induced him to believe that England would not so soon recall Sir Arthur Wellesley from the Spanish peninsula, and that the subjugation of Portugal and Spain would demand a more exclusive attention, and the constant employment of a much greater force than he had anticipated. It is also believed—and upon what appears to be a very reasonable foundation—that he had already decided upon divorcing Josephine, and taking to himself a young wife likely to bear children and heirs; that his pride was inflamed with the notion of allying himself with one of the most ancient, and what was considered generally, although perhaps incorrectly, the proudest sovereign house in Europe; that during his long residence at Schönbrunn he had made indirect overtures, and had found a certain party among the Vienna noblesse, courtiers, and even ministers, who encouraged his aspiring to the hand of Maria Louisa, the young and fair archduchess, who had been left behind at the capital when all the rest of the family fled from it. Another suggestive of moderation may have proceeded from the formidable attitude of the army of the Archduke Charles, who was well known to be as averse to the peace as ever, and who threw up his command as soon as it was concluded.

Comparatively moderate as were the conditions granted to Austria by the treaty of Schönbrunn, signed on the 14th of October, the Emperor Francis, even without putting into the account the bestowal of his daughter's hand, or without believing that a secret promise was extorted from him to consent to that strange and unseemly matrimonial alliance, which must be preceded by a measure abhorrent to the Catholic church and to all delicate consciences, had many and most painful sacrifices to make. He was obliged to abandon the faithful Tyrolese, who had flown to arms at his call; and he was compelled to cede Trieste, Carniola, and part of Croatia, Saltzburg, Cracow in Poland, and Western Gallicia, and several other districts, containing in all about two millions and a half of population. In nearly every direction this treaty injured and weakened the frontier of the Austrian empire; while from the rest of Germany, which had hoped so much at the commencement of the war, it brought down distrust, astonishment, and contempt on the cabinet of Vienna. In addition to all this, and to the exhausting task of having had to support for so many months the whole of Bonaparte's grand army, the Austrians were bound to pay into the French exchequer, as expenses of war, seventy-five millions of francs, or about 3,000,000*l.* sterling.

Bonaparte, cheered by the intelligence that the British had entirely evacuated Walcheren, returned triumphantly to Paris; and there, on the 3rd of December, opened the session of the submissive and admiring *Corps Législatif*, telling them that now, Spain and Portugal only excepted, the continent of Europe was in a happy peace.

Hard was the fate of the patriot insurgents in the north of Germany: when taken, some of them were fusiladed as traitors and brigands, even like the Calabrians and the Spaniards; while others were thrown into prisons, or forced and tormented until they enlisted and enrolled themselves either in the French army or in those contingent German armies which continued for four years longer to follow the eagles of Bonaparte. The French displayed no magnanimity, no mercy; and they seem hardly ever to have troubled themselves with the thought that these Germans, whom they treated

as rebels and traitors, had never owed any allegiance to Napoleon, but were all the subjects of this or that German king or prince, to whom, and to the laws of their own country, alone they were amenable. Yet, while he issued his decrees and commands as to the mode of dealing with these insurgents, and while French military commissions passed drum-head sentences of death upon these German patriots, the French emperor affected to be injured and insulted by any assertion that the Confederation of the Rhine was not a free confederacy of independent sovereign states, or that the other principalities and powers of Germany did not enjoy a perfect independence under his protection.

Major Schill, that gallant and romantic partisan leader, was fortunate enough to die in battle—in a most unequal strife—with his sword in his hand, wet with the blood of one of Bonaparte's Dutch generals, whom he slew before he fell himself. But the French emperor had proclaimed Schill as a "*brigand et homme sans aveu;*" and, if the hero had been taken alive, some remorseless military tribunal would have treated him as such. The blood of Schill was better inspiration to the young poets of Germany than any water from the Pierian spring: out of the blood of all these heroes the Teutonic liberty arose, as in the olden time the stupendous fabric of the church had been cemented by the blood of saints and martyrs. The Duke of Brunswick, brother of Caroline, our Princess of Wales, performed prodigies with a mere handful of men (Bonaparte called his serene highness a brigand too): he made up for the deficiency of his numbers by the rapidity of his movements, and seemed almost gifted with ubiquity; he perplexed the French generals and corps detached in pursuit of him, making them believe he must have many thousands of men, when, in fact, he had only a few hundreds. It was the Duke of Brunswick, who had come over from England before the commencement of this Austrian war, and who had called round his standard some of the old soldiers of his father, that led the best of the bands that issued from Bohemia at the beginning of June or a few days after the battle of Aspern. His black hussars, who wore skulls and cross-bones on their breasts and caps, in memory of the fate of their late aged sovereign and of the avenging vow of his son, their present leader, swore neither to give nor to receive quarter. Their appearance was everyway lugubrious: their red flags were surmounted with black crape; but a more martial and braver set of horsemen never put foot in stirrup or followed a more fearless chief. From the mountains and forests of Bohemia, where they had been lying for a considerable time in order to recruit their force and collect some free corps to co-operate with them, the Brunswick hussars dashed into Lusatia, and, capturing châteaux and towns, they pushed forward into the heart of Saxony, the king and government of which country were entirely devoted to French interests. On the evening of the 11th of June, when the French were in apparent jeopardy in the Isle of Lobau, the duke and his black hussars rode into Dresden, the capital of Saxony. On the 23rd they were at Leipsic, where the students of the University showed how they sympathised with them and the Teutonic cause. On the 14th of July, eight days after the battle of Wagram, they returned to Dresden, and re-entered that capital without opposition. The armistice of Znaym was nothing to the Duke of Brunswick: the Emperor of Austria might despair and dishonour himself and his country, but Brunswick would not. He was now surrounded by enemies, disavowed by Austria as well as by Prussia, and far away from that open sea by which he might escape to England. "But I will die rather than surrender to the murderers of my father and usurpers and tyrants of my dominions! Soldiers, will you follow me?" And away went the Brunswickers with their chief, rapid and dark, like a stormy midnight wave. They rolled into Westphalia and towards Cassel, the now strangely Frenchified capital of Jerome Bonaparte, whose ephemeral kingdom included the duke's hereditary states. Masses of men were now gradually enclosing them; there was the *corps d'armée* of the Saxon general Thielmann, and the corps of the French generals Gratien and Reubell; but, changing the direction of their march, and throwing themselves into the forests and wilds of the country, with which they were better acquainted than were their pursuers, they reached Halle, the seat of another Teutonic university, where his blood-red standard and black crape excited all who had German hearts within them. It appears to have been some enthusiastic students who told the Brunswickers there was lying at Halberstadt a regiment composed of young Westphalian nobles and renegades, who took pride in wearing the uniform of Jerome. Quick! boot and saddle! and away went the black hussars, gliding through the dark intervening woods. The gilded Westphalians, though taken by surprise, must have shown some fight, for the duke had two horses killed under him; but in the end Jerome's choice regiment was sabred or put to flight, and the Brunswickers captured all their camp equipage. From Halberstadt the duke, with his daring troopers, rode to the city of Brunswick, and entered that ancient capital of his forefathers. The affectionate and best part of the citizens would have given him a fête, or a good German banquet, but this was no time for feasting or for piping and dancing: the representative of their old dukes and margraves was still but a poor fugitive, an adventurer engaged in the most perilous of adventures; and he considerately implored the good burghers not to commit themselves, or draw down the vengeance of Jerome and the French, by showing respect and love for him. This advice was scarcely given when the cavalry of the French general Reubell rode up in pursuit. The trumpet of Brunswick sounded the charge, and, shouting Teutonia! Germany!

the black hussars cut their way through their foes; and then trotted along the road that leads to Hanover, cutting down most of the bridges in their rear, and carrying dismay among all the weak garrisons or posts of King Jerome. Their course was now so rapid and so eccentric that their numerous pursuers knew not where to seek them; and, after traversing nearly the whole of Franconia and the electorate of Hanover, they reached the small port of Elsfleth on the left bank of the Weser, where they found some British transports, which conveyed the duke, with twenty-two of his officers and a good many of his men, safely to England.

But the most doleful story connected with the war of 1809 remains to be told. The Austrian diplomatists had delicately inserted a clause in the treaty of Schönbrunn importing that the Tyrolese, whose country was to be restored to the King of Bavaria, should lay down their arms and receive from Bonaparte and his Bavarian majesty an amnesty or pardon for all past offences—or, for having bravely and most successfully fought for their country, their homes, their church, and their sovereign. But the Tyrolese, who had gained so many victories among their native mountains and valleys, would not lay down their arms, nor submit to be transferred, like slaves with a plantation, to a detested master; and they persevered in this resolution even when they knew that strong bodies of the French army in Germany, and of Beauharnais's army in Italy, were marching against them. Their recent exploits may have encouraged some hope; and they had little or no confidence in any amnesty from governments on which they had inflicted such serious losses, or in forgiveness and oblivion from troops exasperated by defeat and—be it admitted—by the fierce mode in which some of the wild and fanatic mountaineers had carried on the war.

As soon as the Archdukes Charles and John had begun to move in the spring, the Tyrolese, rising, as we have said, almost to a man, chose for their generalissimo, or chief of chiefs, Andrew Hofer, a man of about forty-two years of age, who was living in his native village in the deep valley of Passeyer, and in the little inn his father had left him. Hofer, who had been one of the first to resent the injuries inflicted by the French and their allies or servants the Bavarians on the ancient rights, privileges, and usages of his country (which had all been scrupulously respected by the Austrian sovereigns), inflamed with his patriotism and excited by his example Speckbacher, who had led rather a Robin Hood kind of life in his youth, but who had now married a woman with some little property and had become overseer of the salt-mines at Hall, as his father had been before him, and Haspinger, a Capuchin friar, and two or three monks, or village priests, who possessed an amazing influence over that devout and superstitious peasantry. Andrew Hofer—bating some little failing which may be excused by his profession and by the occasional rigidity of the climate in which he lived—was a man of irreproachable morals and of more talent and education than were commonly to be found among his countrymen of the same rank. He was gifted with a ready rustic kind of eloquence, and his well-known strength, bravery, and hardihood, and his commanding personal appearance, all combined to make him the chief of an essentially popular insurrection. Having always lived in the solitudes of the Tyrolean mountains, he was ignorant of the vices and temptations of civilization. Gold could not tempt him, nor could promotions and honours. While people of the highest quality in Italy and in Germany, as well as in France, were deluded by the flattering promises or by the brilliant prospects opened by Napoleon, this poor mountain innkeeper persevered in his innocent mode of life, and saw and appreciated things more correctly. "In men of this stamp," says the historian of revolutionised Italy, "there are generally two sentiments most deeply rooted—the love of God and the love of their country. Both these qualities shone conspicuously in Andrew Hofer, and for these the Tyrolese had a singular love and veneration for him."* His attachment to the superstitions of the Catholic church, and occasionally to the bottle, only rendered him the dearer to a people who were all superstitious and generally rather fond of wine. It is reported of him that he at times led the peasants to victory with a crucifix and rosary on his breast, a musket or sabre in one hand, and a bottle in the other. It was the religious feeling which gave vehemence and support and durability to the patriotic feeling; and here, as in Spain and in Calabria, the people were incensed by insults offered to their priests and monks, and by impious hands laid upon their churches and shrines. "This," says Botta, "was a singular and a terrible warfare. To the rumour of arms was added the continual tolling of all the church bells, with the shouting of the peasants, who exclaimed incessantly, 'In the name of God! In the name of the Most Holy Trinity!' All these noises united, and repeated by the echoes of the Alps, produced a confusion full of novelty, horror, terror, and religion."† But, excited and fierce in combat as they were, the Tyrolese were guilty of no savage and unnecessary cruelty. For this honourable fact we have many authorities, and among them that of a Frenchman, an amiable and accomplished traveller, who says, "They only killed those who resisted. 'Cut me down those fellows as long as they stand up against you,' cried Hofer; 'but once down, give them quarter! Only a coward strikes a man that is on the ground, because he is afraid he should get up again.' This was the Spanish insurrection, with its monks, its peasants, and its guerillas; but it was the Spanish insurrection without its crimes and its horrors, and

* Carlo Botta.

† Three means were resorted to in order to advise the mountaineers of the proper moment of rising in mass: saw-dust was thrown on the rivers Inn and Eisach, which carried the signal along in their rapid course; fires were lit on the tops of mountains and on the ruins of the old castles; and women and children ran from rock to rock, from glen to glen, from cottage to cottage, saying, "It is time!"

if there was inhumanity on one side, it was certainly not on that of the Tyroleans. They at least did not murder their prisoners after the battle: Hofer, when a conqueror, spared the lives of his opponents, but, when conquered, his own life was not spared."* When the peasantry first took the field under the command of two or three priests, a friar, an overseer of salt-works, and an innkeeper, the entire population of the country did not much exceed 600,000 souls; but nearly every able-bodied male took up arms, or co-operated with means of destruction more terrible than martial weapons, and in this last species of warfare the women and the children took their part. Keeping possession of the perpendicular rocks, which rise like walls on either side of their strong passes, they collected there immense stones, fragments of rocks, trunks and arms of trees, dragged them to the very edges of the precipices, kept them suspended there in large masses by means of hay-bands and strong ropes, until the enemy was engaged in the narrow gorge and fairly beneath them. Then a guttural voice would be heard crying, "Hans, is all ready?" "Yes!" was shouted among the rocks; on which the word of command was given, "In the name of the Father, Son, and Holy Ghost, let go your ropes!" and, at the word, down went the mighty masses, a hundred fathoms deep, upon the heads of some Bavarian or French column. They were admirable marksmen, being accustomed to depend upon their fowling-pieces and rifles for a good part of their subsistence, and to follow the ibex and chamois among the summits and glaciers of the Alps; but it is said that their rifles scarcely killed so many of the invaders of their country as did these tremendous avalanches.

The first great blow struck in the field was by Andrew Hofer. He signally defeated the Bavarian troops at the end of April, in the valley of the Eisach, and killed, wounded, or took about 900 men. On the same or on the following day, his friend Speckbacher, the salt-mine overseer, drove the Bavarians out of the important town of Hall, and, shortly afterwards, 20,000 bold peasants took Innspruck, the old and picturesque capital of the Tyrol, in spite of the obstinate defence of General Kinkel and Colonel Dittfurt. The Bavarian colonel, when dying of his wounds, asked what distinguished officer had led them on so well. "No one," said the Tyrolese; "but we fought for our religion, our emperor, and father-land." In the course of a very few days from 4000 to 5000 disciplined troops, including some French as well as Bavarians, were surrounded on various points and compelled to surrender to the peasants they had affected to despise. On a smaller scale the French general Bisson underwent the same fate which Dupont had undergone at Baylen. But the successful Spanish generals had a good many thousand regular disciplined troops, while our poor innkeeper, overseer, and monk had nothing of that sort. Another army of 3000 or 4000 Bavarians met with no better success, and all the battalions and squadrons that followed these were beaten in succession by the insurgents. In no place and at no hour were the French or Bavarian troops safe from attack; for, by night as well as by day, and from every side, the Tyrolese, sallying out from their hiding-places and travelling by strange moun-

Halle, in the Tyrol.

tain-paths, chose their own time for attack, always attacking unexpectedly, and generally crushing the incautious soldiery. Some weak battalions from the regular army of Francis II., sent to co-operate with Hofer, appear to have done quite as much harm as good; and the Marquis Chasteller, their general, soon beat a retreat. Nor did Colonel Jellacitch, a strategist of some note, perform any much better service; for, though he had been accustomed to mountain warfare, he had not been accustomed to carry it on with wholly irregular forces, and he pedantically blundered in trying to make the Tyrolese peasantry act according to line and rule, like an Austrian army.*

When the retreat of the two archdukes Charles and John, and the capture of Vienna, allowed the Bonapartists to act with more vigour in this quarter, Marshal Lefevre, Duke of Dantzic, with the Würtemburg general Wrede under him, entered the Tyrol, on the German side, by the valley of the Inn, with a strong French and Bavarian corps, and Generals Rusca and Baraguay d'Hilliers began to penetrate on the Italian side by Trent and the valley of the Adige, with a portion of Beauharnais's army of Italy. Lefevre and Wrede regained temporary possession of Innspruck; but vain were all the efforts they made to penetrate into the Lower Tyrol; and as for Rusca and d'Hilliers, they halted in despair at the mouth of the valley, a little above Trent. The progress of the Bavaro-French, or Gallico-Bavarians, was marked with every circumstance of cruelty and horror. In the neighbourhood of the Isel mountain, or Berg-Isel, Speckbacher and Haspinger had gained one great victory at the end of May: the auspicious spot was chosen for another action, and there, on the 12th of August, the invaders were again defeated. Lefevre retreated across the Inn, Innspruck was recovered, and Hofer entered the city and acted as viceroy.† When the emperor signed the treaty of Schönbrunn, the Tyrolese were absolute masters of their country from end to end, from side to side. Unhappily the clause in the treaty which we have mentioned was followed by an imperial manifesto, in which Francis II. enjoined the patriots to lay down their arms and submit quietly to the King of Bavaria. Although this manifesto had little or no influence over the majority, some of the chiefs and many of the simple peasants considered that the commands of their Kaiser were entitled to their obedience even in this hateful and extreme case. It appears that Hofer himself, about equally loyal and superstitious, inclined to this opinion, and to the belief —since the bloody affair of Wagram and the submission of Francis—that it was the will of Heaven that all opposition to Bonaparte should prove fruitless. [Europe would have fared better if a discouraging conviction, nearly amounting to the belief of this poor innkeeper, had not been prevalent and predominant among princes and statesmen of high degree, politicians in parliament and out of parliament, and generals in the field.] At least for a time, Hofer remained irresolute and doubtful. But the sight of the returning French and Bavarian columns, and of the vengeance they were taking on his countrymen, roused him from his inaction. The enraged peasants again cried, "It is time!" and again Hofer, who felt that he must fight or die like a thief—that the mercy promised to all would not be extended to him or to any man like him—once more put himself at their head. He had now to contend with Saxons as well as with French and Bavarians, for that Napoleonic satellite the King of Saxony and Grand Duke of Warsaw had sent a *corps d'armée* to co-operate in the detestable work going on in the Tyrol. At the same time, the Emperor Francis, on the one hand, conjured them to submit, and Beauharnais, the French viceroy of Italy, on the other, proclaimed that such as continued the war should no longer be treated as soldiers, but as rebels and brigands. In the vale of the Passeyer, his own native and once happy valley, Hofer gained one signal victory more, killing, wounding, or taking

* Although always ready to arm and march when called upon so to do by the emperor, the Tyrolese had always shown a dislike to regular military service. Before this insurrectionary war, as since their re-annexation to Austria, they had seldom been employed except as jagers or sharpshooters. As a loose, a light, and what may be called the irregular part of a regular army—where everything depends on activity, keen-sightedness, and quickness in marching and in firing, —they are admirable. They prided themselves on their ignorance of those established rules of military manœuvres which they had seen fail so miserably with Mack and other Austrian tacticians and strategists. They had an expressive epigram on the subject, which Southey has thus translated, almost verbally:—

"You say 't is luck alone when those
Unskilled in tactics beat their foes;
But better 't is without to win
Than with those tactics to give in."—

*Quarterly Review*, vol. xvii., *Hist. of Hofer and Transactions in the Tyrol.*

† A Saxon officer has left the following record of the campaign of Marshal Lefevre in the Tyrol. It conveys a striking impression of those artificial avalanches which we have described in our text:—

"We had penetrated to Innspruck without great resistance; and, although much was everywhere talked of the Tyrolese stationed upon and round the Brenner, we gave little credit to it, thinking the rebels to have been dispersed by a short cannonade, and already considering ourselves as conquerors. Our entrance into the passes of the Brenner was only opposed by small corps, which continued falling back, after an obstinate though short resistance. Among others, I perceived a man, full eighty years of age, posted against the side of a rock and sending death amongst our ranks with every shot. Upon the Bavarians descending from behind to make him prisoner, he shouted aloud, 'Hurrah!' struck the first man to the ground with a ball, seized hold of the second, and with the ejaculation, 'In God's name!' precipitated himself with him into the abyss below. Marching onwards, we heard resound from the summit of a high rock, 'Stephen! shall I chop it off yet?' to which a loud 'Nay' reverberated from the opposite side. This was told to the Duke of Dantzic, who, notwithstanding, ordered us to advance; at the same time he prudently withdrew from the centre to the rear. The van, consisting of 4000 Bavarians, had just stormed a deep ravine, when we again heard hallooed over our heads, 'Hans! for the Most Holy Trinity!' Our terror was completed by the reply that immediately followed: 'In the name of the Holy Trinity! cut all loose above!' and ere a minute had elapsed, were thousands of my comrades in arms crushed, buried, and overwhelmed by an incredible heap of broken rocks, stones, and trees, hurled down upon us. All of us were petrified. Every one fled that could; but a shower of balls from the Tyrolese, who now rushed from the surrounding mountains in immense numbers, and among them boys and girls of ten and twelve years of age, killed or wounded a great many of us. It was not till we had got these fatal mountains six leagues behind us, that we were reassembled by the duke, and formed into six columns. Soon after, the Tyrolese appeared, headed by Hofer, the innkeeper. After a short address from him, they gave a general fire, flung their rifles aside, and rushed upon our bayonets with only their clenched fists. Nothing could withstand their impetuosity. They darted at our feet, threw or pulled us down, strangled us, wrenched the arms from our hands, and, like enraged lions, killed all—French, Bavarians, and Saxons—that did not cry for quarter. By doing so, I, with 300 men, was spared and set at liberty. When all lay dead around, and the victory was completed, the Tyrolese, as if moved by one impulse, fell upon their knees, and poured forth the emotions of their hearts in prayer under the canopy of Heaven; a scene so awfully solemn, that it will ever be present to my remembrance. I joined in the devotion, and never in my life did I pray more fervently."

prisoners upwards of 2000 of the enemy. Speckbacher and other chiefs gained several more advantages: but the contest was now too unequal; ammunition began to fail; the French, Bavarians, and Saxons, by getting possession of the towns and larger villages, and by driving in or destroying their flocks and herds, reduced the insurgents to the brink of starvation; and their councils became contradictory, bewildered, and at last timorous. When the game was fairly up; when some had laid down their arms, and claimed the amnesty; when some had escaped into Austria; when more had been taken prisoners and mercilessly shot or hanged like robbers; when the remnant were driven from post to post, from rock to rock, being hunted down like wild beasts, or driven to hide and starve in the depths of the forests, or in caverns in the rocks, on the summits of the eternally snow-clad Alps, Andrew Hofer, taking his wife and children with him, betook himself to his Patmos—a wretched Alpine hut, about four long German miles from his own dwelling, and at times altogether inaccessible from the deep snow which surrounded it. It is said that every facility of escape from his hiding-place was offered by the Austrian government, as well as by the Viceroy Beauharnais, a young man who had not been altogether spoilt by a bad school, but who had generous qualities in him, and no proneness to bloodshed; that both, directly or indirectly, testified their desire to promote him; but that no persuasion could induce him to think of abandoning his country and family and faithful friends, or even to cut off the long beard which he wore, and by which he could easily be recognised anywhere. Some of those faithful friends secretly carried such provisions to him as were necessary to support life: and thus he lived among rocks and snow, from the end of November, 1809, to the end of January, 1810. A considerable price was now set upon his head; but, though many must have known his hiding-place, none would reveal it, or grow rich by becoming infamous. It has been mentioned to the honour of the simple race, that there was no instance of any Tyrolese being induced to turn traitor for a bribe; and that even their women knew how to be silent. But at last, even in the Tyrol, a traitor was found. This villain too was a priest; his name (may it be for ever execrated!) was Doney. For the Judas price he revealed the secret, and pointed out the Alpine hut, hid in a crevice, and with a deep cover of snow, in which Hofer, with his family, lay concealed, to some 2000 men who were sent to seize him, or to prevent the possibility of an escape by entirely surrounding that mountain. It was dark night when the soldiery first approached. There was a bare possibility, a desperate chance, that Hofer himself, by plunging through the snow and down the, to him, well-known precipices, might escape, but there was none that his wife and children could follow him. He therefore stayed where he was, with his Samson-like beard in his hand, and, when he found that the Philistines were fairly upon him, he came forth from the hut, and saying, "Frenchmen! I am Andrew Hofer! Fire! kill me if you will, but spare my wife and children!" he quietly submitted to be bound. Chains were then brought the better to secure the strong and long-dreaded man; and he was marched, with his wife, his daughter, and little son of twelve years old, to the town of Botzen, or Bolzano, which lies on the Adige, above Trent and the Italian frontier. On this hard journey he was taunted by Bonaparte's soldiery, but honoured by the tears of his countrymen and countrywomen; and, having a whole heart within him, and a long-tried fortitude, and a hope that looked beyond this world, he bore his cross without a moan. His was the most happy or most serene countenance seen along the road or in the towns and villages where his powerful escort halted. The French general Baraguay d'Hilliers, who was now at Botzen, behaved to the prisoners with much humanity; he gave orders that Hofer should be less rigorously confined, and that a stop should be put to the excesses of the soldiery, who had been plundering and destroying his little property in the Passeyer valley. Several French officers too commiserated the patriot's fate, and, by such attentions as they could and durst bestow, made a return for the humanity and kindness with which he had invariably treated his prisoners. Had it depended on d'Hilliers, on these officers, or on Eugene Beauharnais, Hofer had not died; but his fate had been already decided by sterner minds and harder hearts. His wife and children were set at liberty by an express order from some high quarter; but they were not permitted to follow him, and so he kissed them for the last time, and parted from them for ever. From Botzen he was carried down into Italy, by that rough and rugged descent which passes by

> Di quà da Trento l'Adice percosse,
> O per tremuoto, o per sostegno manco;*

and there he was thrown into the fortress of Mantua. If there was any right in the case, he was amenable not to the laws of France or to the kingdom of Italy, but to the laws of Bavaria; the King of Bavaria, by a forcible transfer, to which Hofer and his countrymen had never consented, and by the prepotency of arms, had been, since the treaty of Presburg, sovereign of the Tyrol; but to Napoleon Bonaparte or to Eugene Beauharnais Andrew Hofer had never owed any allegiance whatever. Nevertheless, on his arrival at Mantua one of Bonaparte's bloody military tribunals or courts-martial was immediately assembled, and the French general Bisson, who had been beaten near Inns-

> *The Rev. Ichabod Wright's translation.*

The Slavini di Marco, as this dismal spot is called, is a vast wild tract in the valley of the Adige, or Adice, between Roveredo and Ala, covered with fragments of enormous rocks, torn or washed from the sides of the mountains. It spreads across the whole valley of Trent, only leaving room for a very narrow road; here and there a few dark pines, looking like funeral yews or cypresses, are scattered on the surface.

pruck by the peasant host, who had signed a capitulation with the magnanimous innkeeper, and who was still inwardly festering with the sting of that disgrace, was chosen president of the court. But all the members of this tribunal at Mantua had not been trained and matured in the school of Savary; some of them voted for an unlimited and some for a limited confinement in a safe and remote state prison, and two of them had even the courage to vote for a full acquittal. But orders, which none of them could disobey, were transmitted from Paris to Milan, and then by telegraph to Mantua, to finish proceedings and shoot the Tyrolese within four-and-twenty hours. Although, from what had passed at Botzen with Baraguay d'Hilliers and his officers, and from what he had seen and heard of the tribunal at Mantua, he did not expect death, when his doom was announced to him he received the intelligence with perfect firmness and composure, merely asking for a priest to shrive him. This favour, often denied to others besides the Duke d'Enghien, who perished in the castle ditch at Vincennes, was granted to Hofer. At the dawn of day, as he was conveyed from his prison to his place of execution—a broad bastion near the Porta Ceresa—he passed by the barracks at the Porta Molina, where a number of Tyrolese patriots (call not such men rabble insurgents and vulgar outlaws!) were closely confined; all therein fell on their faces, put up their prayers for him, and wept aloud. Such of his countrymen as were at large in the fortress gathered on the road by which he was conducted, and threw themselves on the ground and implored his blessing. He blessed them, he implored their forgiveness for the share which he might have had in leading them into their present captivity and trouble, expressing at the same time his assurance that they and his country would one day be restored to the emperor; and as he mentioned the name of Francis II. he followed it up with a hearty and heart-stirring "*Vivat!*" the loudest and the last that he ever uttered. He delivered to the priest, that attended him even to the place of execution, everything he had:—his money, 500 florins in depreciated Austrian notes, was to be distributed among his poor countrymen prisoners in the fortress; his silver snuff-box and his beautiful rosary were to be given to particular friends; his small silver crucifix he bequeathed to the priest and confessor himself: and, save the clothes he wore, this was all the worldly gear he possessed on quitting the world. On the broad bastion the company of grenadiers formed a square open to the rear, and twelve of the privates and a corporal stepped forward,—Hofer standing erect in the middle. The drummer handed him a white handkerchief to bind his eyes, and reminded him that it was necessary he should bend on one knee. He threw away the handkerchief, and refused to kneel: "I was used to stand upright before my Creator, and in that posture will I deliver up my spirit to him!" He then cautioned the corporal to take good aim, and gave the word "Fire" in a loud and articulate voice. His death, like that of Palm the bookseller, was not instantaneous, for the grenadiers, at first, performed their office imperfectly; but a merciful, well-aimed shot at last dispatched him, and he fell. And that spot on the broad bastion of Mantua is still visited and held as sacred by his countrymen.*

The French, as if to compensate by honours to the dead for the wrongs done to the living, testified their respect for Hofer's remains by going through all the pomps and ceremonies of a public funeral. His body, instead of being allowed to remain exposed some time on the place of execution, as was usual in such cases, was immediately borne by the grenadiers, on a sable bier, to the church of St. Michael. There it was laid out in state, a guard of honour was appointed to watch over it, and all the populace of Mantua and the neighbourhood were admitted to see that the much-dreaded *Barbone*, or 'Great Beard,' was really no more.

Speckbacher, the overseer, who was next to Hofer in the estimation of his countrymen, had many and almost miraculous escapes. A thousand ducats were offered for his head; but, although it was known to more than thirty peasants that he was for eight days working with them, disguised as a common labourer, in Rattenberg (an expedient which he adopted not simply for the sake of concealment, but also in order to acquire a knowledge of the defences of that town), no one seemed to notice him until his departure, and then they only spoke of his appearance among them in secrecy and by means of signs. When at last he reached Vienna, the Austrian government offered him lands in Hungary, and provided for him. To the family of Hofer the emperor, who could scarcely do less, assigned a pension. He also sent a sum of money to enable them to go and settle in Austria, which they were invited to do; but the widow preferred returning with her children to her old dwelling in the valley of Passeyer. There, it is said, she was visited by Francis II., when he was returning from Paris and from witnessing the overthrow of Bonaparte, in 1814. A plain and substantial monument was now erected by command of the emperor in honour of Hofer's memory, on a lofty part of the Brenner mountain, which overlooks the patriot's habitation. And in 1823 Francis II. ordered that the remains of Hofer should be brought from Mantua to Innspruck, and there interred in the cathedral church of the Holy Cross, near to the tomb or mausoleum of the emperor Maximilian I. On the 22nd of February of that year, six of the patriot's old companions in arms entered the metropolitan church of the Tyrol bearing the coffin, upon the lid and pall of which lay the broad-brimmed peasant's hat and the sword of the hero.

* Carlo Botta.—Baron Bertholdy, Account of the War in the Tyrol.—Southey, in Quarterly Review, vol. xvii. (the foundation of this article is laid on two authentic and almost official German works, the one published at Berlin, in 1816, the other at Leipsic, in 1817).—Capefigue, Le Consulat et l'Empire.—M. Mercey.—Ann. Regist.

The untoward course of events on the Continent, the disastrous issue of the Austrian war, together with sundry other causes, produced violent dissensions in the British ministry, in a part of which there had never been much harmony. It is a capital defect in the construction of our cabinets, which confides the direction of war not to one, but to two ministers, the secretary of state for foreign affairs having nearly as much authority over generals in the field as the secretary-at-war. Indeed, the foreign secretary often corresponds directly with admirals of fleets, commodores of squadrons, &c., and has thus often interfered with the Admiralty and issued orders contradictory to those of that important board. An extension of this principle would have made a sort of Aulic Council of the English cabinet. When there is one master mind and ruling spirit at the head of administration—a mind capable of grasping all the important business of the state, and of imposing its will and its unity of plan and operation upon all the departments—the mischief is obviated; but the Duke of Portland was only nominally the head of the present administration, and more than one of the ministers thought himself equal in all things to any one of his colleagues. There had long been a jealousy and a divergency of opinion between Mr. Canning (the secretary of state for foreign affairs) and Lord Castlereagh (the secretary-at-war). What one proposed in the cabinet the other almost invariably condemned, and each was constantly complaining of an invasion of his official authority by the other. On the 21st of September, when the country was resounding with outcries against the Walcheren expedition, the management of which was said to be disapproved of by the secretary for foreign affairs, a duel was fought between him and Lord Castlereagh. The parties met on Putney Heath, at an early hour in the morning, Lord Castlereagh being attended by his cousin the Earl of Yarmouth (the late Marquess of Hertford), and Mr. Canning by Mr. Charles Ellis. Their first discharge took no effect. They fired a second time; and Mr. Canning seemed prepared for a third fire, when Lord Castlereagh, who appears to have been cooler at this moment than either of the seconds, said, "I believe the right honourable gentleman is wounded." His lordship's last bullet had indeed taken effect; Mr. Canning was wounded below the thigh-bone, and his blood was trickling to the ground. But the wound was not dangerous; and Lord Castlereagh had had a narrow escape, for a button on the right lappel of his buttoned coat had been shot away. The two ministers had sent in their resignations before they went to Putney Heath. The Duke of Portland also resigned, and died a few days thereafter.

The country generally at the time entertained a very different opinion, taking part with Mr. Canning, and regretting his retirement; but it should appear, upon a calm reviewal of the whole matter, that some blame attached to both parties, that some blame was due to the premier and to the president of the council, and that the greatest blame of all attached to the system and present construction of the cabinet. Much was known before through paragraphs in newspapers and hints dropped in clubs and political circles;* but now statements and counter-statements of the cause of the quarrel were published by the principals. Lord Castlereagh asserted that a proposition had been agitated by Mr. Canning, without any communication with him, for his removal from the war department; that Mr. Canning, towards the close of the preceding session of parliament, had urged a decision upon this question, with the alternative of his seceding himself from the government, and so had procured a positive promise from the Duke of Portland (the execution of which he afterwards considered himself entitled to enforce), that he, Lord Castlereagh, should be removed; that, notwithstanding this promise obtained from the Duke of Portland, by which his lordship considered that Mr. Canning had pronounced it unfit that he should remain charged with the conduct of the war, and by which his situation as a minister of the crown was made dependent upon his will and pleasure, Mr. Canning had continued to sit in the same cabinet with him, and to leave him not only in the persuasion that he possessed his confidence and support as a colleague, but also allowed him, in breach of every principle of good faith, both public and private, though thus virtually superseded, to originate and proceed in the execution of a new enterprise (the Walcheren expedition) of the most ardent and important nature, with his apparent concurrence and ostensible approbation. "You were fully aware," added his lordship, in a letter representing these facts, which he had addressed to Canning on the 19th of September, "that, if my situation in the government had been disclosed to me, I could not have submitted to remain one moment in office, without the entire abandonment of my private honour and public duty. You knew I was deceived, and you continued to deceive me. I am aware it might be said, which I am ready to acknowledge, that, when you pressed for a decision for my removal, you also pressed for its disclosure; and that it was resisted by the Duke of Portland and some members of the government, supposed to be my friends. But I never can admit that you have a right to make use of such a plea in justification of an act affecting my honour, nor that the sentiments of others could justify an acquiescence in such a delusion on your part, who had yourself felt and stated its unfairness. Nor can I admit that the head of any administration, or any sup-

* As early as the 14th of June, Walter Scott, who had recently been in London, and in almost daily intercourse with Messrs. Canning, G. and C. Ellis, Croker, and other persons who best knew what was passing, writes to his friend Southey—"Mr. Canning's opportunities to serve you will soon be numerous, or they will soon be gone altogether; for he is of a different mould from some of his colleagues, and a decided foe to those half-measures which I know you detest as much as I do. It is not his fault that the cause of Spain is not at this moment triumphant. This I know, and the time will come when the world will know it too."—*Life, by Lockhart.*

posed friend (whatever may be their motives), can authorise or sanction any man in such a course of long and persevering deception."* The answer to this first letter of the correspondence (which, of course, was not published till after the duel) was delivered by pistol-shot on Putney Heath. In a cooler statement made after the duel, but published at the same time with the preceding letter, Lord Castlereagh affirmed that it was undoubtedly true that Mr. Canning, during the Easter recess, did make a representation in a letter to the Duke of Portland with respect to the war department, founded upon differences between him and Lord Castlereagh; but that it was not true that this letter was shown to the cabinet, or that the subject was even stated to the cabinet, however it might have been secretly communicated to some of its members:—that it was also true that a suggestion was made for appointing the Marquess Wellesley to succeed Lord Castlereagh as secretary-at-war:—that it was likewise undeniable that a decision upon this point was postponed till near the close of the session, when Mr. Canning called upon the Duke of Portland and enforced the decision by declaring to his grace that he would resign unless Lord Castlereagh was removed and the Marquess Wellesley appointed his successor:—that, the Duke of Portland having then given Mr. Canning the specific and positive promise he desired, Mr. Canning pressed that it should be immediately acted upon, and that Lord Castlereagh should be made acquainted with it:—that Lord Castlereagh, however, was not acquainted with it, and Mr. Canning acquiesced in its being concealed from him:—that undoubtedly Lord Camden was acquainted with the whole transaction; but that it was not true that his lordship ever undertook to make the disclosure to Lord Castlereagh, that he never did make it, and that Mr. Canning was thoroughly apprised that what had taken place was not made known to Lord Castlereagh:—that, in this state of profound ignorance, Lord Castlereagh was permitted, though virtually no longer a minister, and in a state of delusion, to continue to conduct the campaign, and to engage in a new expedition of the most extensive, complicated, and important nature, under the full persuasion not that Mr. Canning had supplanted him in office and possessed in his pocket a promise for his dismissal, but that he really enjoyed Mr. Canning's sincere, liberal, and *bonâ fide* support as a co-operating and approving colleague:—that, further, Mr. Canning, having thus in his pocket Lord Castlereagh's dismissal, and having arranged with the Duke of Portland that it should be carried into execution at the termination of the Walcheren expedition, did, on the 3rd of September (the day that the account arrived from Lord Chatham that he could not proceed up the Scheldt to Antwerp), write to the Duke of Portland, demanding the immediate execution of the promise made to him:—that Mr. Canning never contended for Lord Castlereagh's removal from the government, but only from the particular office he held, and into which he wished to introduce Marquess Wellesley:—that it appeared that the demand of the fulfilment of the promise led to the immediate resignation of the Duke of Portland, and subsequently to that of Mr. Canning:—and, finally, that, as soon as the whole of this unparalleled conduct was, at this late period, disclosed to Lord Castlereagh, he immediately placed his resignation in his majesty's hands, and called upon Mr. Canning for satisfaction.

In his counter-statement Mr. Canning admitted that so long ago as Easter he had represented to the premier the insufficiency of the government as then constituted; and had requested permission to resign his office, unless some change should be effected; and that it was equally true that it was then proposed to Mr. Canning, and accepted by him as the condition of his consenting to retain the seals of the foreign office, that a change should be made in the war department. But Mr. Canning denied that the time at which that change was ultimately proposed to be made was of his choice; or that he was a party or consenting to the concealment of that intended change from Lord Castlereagh. Mr. Canning further affirmed, that, as for secrecy and concealment, he had offered to show his correspondence with the Duke of Portland to one of Lord Castlereagh's most intimate friends, to be communicated to his lordship whenever he might think proper; that he had shown that intimate friend the copy of a letter addressed to the Duke of Portland in the month of July, in which he (Mr. C.) requests, "in justice to himself, that it may be remembered, whenever hereafter this concealment shall be alleged (as he doubts not that it will) against him as an act of injustice towards Lord Castlereagh, that it did not originate in his suggestion,—that, so far from desiring it, he conceived, however erroneously, Lord Camden to be the sure channel of communication to Lord Castlereagh,—and that up to a very late period he believed such communication to have been actually made;" and that the copy of this letter and of the Duke of Portland's answer to it "acknowledging Mr. Canning's repeated remonstances against the concealment," were still in the possession of Lord Castlereagh's friend:—that the first communication to Lord Camden was made on the 28th of April, at Mr. C.'s particular desire;

* Lord Castlereagh added—"For, were I to admit such a principle, my honour and character would be from that moment in the discretion of persons wholly unauthorised, and known to you to be unauthorised, to act for me in such a case. It was therefore your act and your conduct which deceived me; and it is impossible for me to acquiesce in being placed in a situation by you, which no man of honour could knowingly submit to, nor patiently suffer himself to be betrayed into, without forfeiting that character.

"I have no right, as a public man, to resent your demanding, upon public grounds, my removal from the particular office I have held, or even from the administration, as a condition of your continuing a member of the government. But I have a distinct right to expect that a proposition, justifiable in itself, shall not be executed in an unjustifiable manner, and at the expense of my honour and reputation. And I consider that you were bound, at least, to avail yourself of the same alternative, namely, your own resignation, to take yourself out of the predicament of practising such a deceit towards me, which you did exercise in demanding a decision for my removal.

"Under these circumstances I must require that satisfaction from you to which I feel myself entitled to lay claim."

and that, Lord Camden being the near connection and most confidential friend of Lord Castlereagh, it never occurred to Mr. Canning that his lordship could have kept back such a communication from Lord Castlereagh. As to the period at which the change in the war department was to take place, Canning said he was induced, in the first instance, to consent to its postponement till the rising of parliament, partly by the representations made to him of the inconveniences attending any ministerial change in the middle of a session, but principally from a consideration of the particular circumstances under which Lord Castlereagh stood in the House of Commons after Easter; circumstances which would have given to his lordship's removal at that period of the session a character which it was certainly no part of Mr. Canning's wish that it should bear.* Mr. Canning went on to declare that he certainly received the most positive promise that a change in the war department should take place immediately upon the close of the session; but that, when the session closed, the earnest and repeated entreaties of most of Lord Castlereagh's friends in the cabinet were employed to prevail upon him (Canning) to consent to the postponement of the arrangement; in compliance with which, at last, and most reluctantly, he did give his consent to its being postponed to the period proposed by Lord Castlereagh's friends, namely, the termination of the Walcheren expedition then in preparation; doing so, however, upon the most distinct and solemn assurances that, whatever might be the issue of that expedition, the change should take place at that period; that the seals of the war department should then be offered to Marquess Wellesley (the person for whose accession to the cabinet Mr. Canning was known to be most anxious), and that the interval should be diligently employed by Lord Castlereagh's friends in preparing Lord Castlereagh's mind to acquiesce in such an arrangement. He added, that it was matter of astonishment to him, when, on the issue of the expedition, he reminded the Duke of Portland that the time was now come for his grace to write to Marquess Wellesley, to find that, so far from the interval having been employed by Lord Castlereagh's friends in preparing his lordship for the change, the same reserve had been continued towards him against which he (Mr. C.) had before so earnestly remonstrated. This counter-statement concluded with saying, "Being informed of this circumstance by the Duke of Portland, and learning at the same time from his grace that there were other difficulties attending the promised arrangement, of which Mr. Canning had not before been apprised, and that the Duke of Portland had himself come to a determination to retire from office, Mr. Canning instantly, and before any step whatever had been taken towards carrying the promised arrangement into effect, withdrew his claim, and requested the Duke of Portland to tender his (Mr. Canning's) resignation, at the same time with his grace's, to the king. This was on Wednesday, the 6th of September, previously to the levée of that day." [Thus Mr. Canning tendered his resignation on the third day after the reception of Earl Chatham's doleful dispatch, and fourteen days before Lord Castlereagh called him to account.] "All question," the statement proceeded, "of the performance of the promise made to Mr. Canning being thus at an end, the reserve which Lord Castlereagh's friends had hitherto so perseveringly practised towards Lord Castlereagh appears to have been laid aside, and Lord Castlereagh was now made acquainted with the nature of the arrangement which had been intended to have been proposed to him. What may have been the reasons which prevented Lord Castlereagh's friends from fulfilling the assurances given to Mr. Canning, that Lord Castlereagh's mind should be prepared by their communication for the arrangement intended to be carried into effect, and what the motives for the disclosure to Lord Castlereagh after the arrangement had ceased to be in contemplation, it is not for Mr. Canning to explain."

The publication of these papers placed Earl Camden, who was president of the council, together with some other friends of Lord Castlereagh who were in the cabinet, in a very awkward position. Lord Camden, to exonerate himself, published a very short paper, wherein he simply declared, "That it is necessary that it should be understood that, however Mr. Canning might have conceived the communication alluded to to have been made to Lord Camden, it was never stated to Lord Camden that the communication was made at the desire of Mr. Canning; and that, so far from Lord Camden having been authorised to make the communication to Lord Castlereagh, he was absolutely restricted from so doing:—that, as it may also be inferred that Lord Camden was expected to prepare Lord Castlereagh's mind for the proposed change, it is necessary that it should be understood that Lord Camden never engaged to communicate to Lord Castlereagh any circumstances respecting it before the termination of the expedition." And here, as far as the principals were concerned, the matter for the present rested.* This was indeed a

* This alludes to the East India writership which Lord Castlereagh, as president of the board of control, had placed at the disposal of his friend Lord Clancarty, and to the criminatory motion made in the House by Lord Archibald Hamilton. See ante, p. 370.

* In the month of November Mr Canning published two more letters, addressed by him to Lord Camden, in which he explained at greater length his own conduct, justifying it, and attributing the conduct of the Duke of Portland, in the reserve practised towards Lord Castlereagh, "to that gentleness of nature which eminently distinguished him, and which led him to endeavour to prevent political differences from growing into personal dissensions, and to aim at executing whatever arrangements might be expedient for improving or strengthening the administration with the concurrence (if possible) of all its existing members." These papers run to a great length, and we can only find room for some of the passages in which Mr. Canning defends himself against the evil impressions which Lord Camden's published statement seemed calculated to make upon his character, veracity, and honour. In the second of these letters Mr. Canning says to Lord Camden—

"This statement appears to me to have been much misunderstood. It has been construed as if your Lordship had meant to aver that what you were *restricted from doing* and what you *had not engaged to do* were one and the same thing: whereas your lordship's statement, in point of fact, contains two distinct propositions, and refers to two separate periods of time.

"The period during which your lordship states yourself to have

pitiful story, but far more injurious to the reputation of the cabinet as a body than to Mr. Canning as an individual member of it; and Lord Castlereagh had at least as much reason to complain of his own friends and of the Duke of Portland as of Mr. Canning. There appears, however, to have been no good ground for the entire blame of the Walcheren expedition being thrown upon the secretary-at-war, as it certainly was and long continued to be, by the majority of the public and by nearly all parties. He was only responsible in common with the rest of the cabinet, who consented to and approved of that enterprise without a sufficient examination of the nature of the country and of the numerous difficulties with which it must inevitably be attended; and it was not Lord Castlereagh, but others, that appointed the incompetent Earl of Chatham to the command.

The ministers that remained in office after these three resignations—with Lord Liverpool, the only remaining secretary of state, who had for some time to perform the duty of the home office, the foreign office, and the war office—were reduced almost to despair, scarcely knowing where to look for a new head and for two new colleagues. Their situation appeared at first so forlorn, that (on the 23rd of September) official letters were addressed to Earl Grey, the now leader of the Foxite Whigs, and to Lord Grenville, informing them that his Majesty had authorised Lord Liverpool and Mr. Perceval to communicate with their lordships for the purpose of forming an extended and combined administration. To this invitation Earl Grey, who was in Northumberland, replied at once that he would not enter into any coalition with the ministers now in place. Lord Grenville, who was in Cornwall, replied that he would lose no time in repairing to town, and begged leave to defer all observations till his arrival. The day after his arrival in town he sent an answer conformable to that of Earl Grey.*

Great hopes were now entertained by the adverse party that the ministry would fall to pieces altogether. It was said, as on some former occasions, that high offices and places went a-begging, and that none could be found to accept them. At one moment it was reported that the Hon. R. Dundas, son of Lord Melville, and now president of the board of control, would be put into Castlereagh's place in the war-office; but this came to nothing. The only hope of the ministry now rested upon the Marquess Wellesley. Hints were thrown out that the marquess would not join any administration in which Mr. Canning was not included. But the marquess came home from Spain, being succeeded in his embassy by his brother Henry (now Lord Cowley), and accepted, not the war department, which Canning had destined for him, but the office of foreign affairs, which Canning himself had vacated. Early in December the ministerial arrangements were completed, Mr. Perceval taking the place of the deceased premier the Duke of Portland, thus uniting in himself, as Mr. Pitt and Mr. Addington had done before him, the offices of first lord of the treasury and chancellor of the exchequer. The loss of the Duke of Portland was little more than that of a name; but the loss of the eloquent pen and the still more eloquent tongue of Canning—the best debater, and, on the whole, perhaps the greatest orator now in parliament—was a most serious loss; and the secession of Mr. Huskisson, who resigned his seat at the treasury, was also felt and regretted. As if his previous domestic employment had particularly qualified him for the war department, the Earl of Liverpool was transferred from the home office to the office which Lord Castlereagh had quitted, becoming secretary of state for the department of war and the colonies, and being succeeded in the home office by the Hon. R. Ryder. Lord Palmerston became under secretary-at-war in lieu of Sir James Pulteney. These were all the changes that were made. It was expected that Canning would join his powerful voice to opposition, and the

been *'absolutely restricted'* from making a communication to Lord Castlereagh extends from the 28th of April, on which day the first communication was made by the Duke of Portland to your lordship, to the time at which the proposed arrangement for the new distribution of the business of the war department was superseded by your lordship's tender of your resignation.

"The period during which your lordship states yourself *'not to have engaged'* to make a communication to Lord Castlereagh extends from the time of the tender of your Lordship's resignation to the termination of the expedition to the Scheldt.

"It ought, however, to be observed, that during the first of these two periods—from the 28th of April to the 12th of July—the nature of the communication to be made to Lord Castlereagh and the nature of the restriction imposed upon your lordship were entirely changed.

"*Previously* to the 8th of June, the communication which your lordship would have had to make to Lord Castlereagh was simply that I had represented the expediency of a change either in his department or in mine, and that *no* decision whatever had yet been taken upon this representation.

"With respect to *this* communication, it does not appear that the restriction upon your lordship was absolute and indefinite.—But I knew nothing of its existence.

"*Subsequently* to the 8th of June, the communication to be made to Lord Castlereagh was, that an arrangement was in contemplation for a new distribution of the business of the war department.

"With respect to *this* communication, not only was the *restriction* upon your lordship not indefinitely continued, but your lordship actually received on the 28th of June an *injunction to make this communication* to Lord Castlereagh at a period distinctly specified, viz., the sailing of the expedition. And this injunction was only superseded by a voluntary act of your lordship's—your tender of your own resignation on the 12th of July as the basis of another arrangement.

"During the whole of the period, from the 28th of April to the 12th of July, the concealment practised towards Lord Castlereagh was either without my knowledge and contrary to my belief, or it was against my earnest remonstrances.

"It was without my knowledge and contrary to my belief up to the week in which parliament rose; and from that time forth it was against my earnest remonstrances."

It does not appear that Earl Camden ever gave any printed or public answer to this public letter. He had threatened to resign at the time of the turmoil, but he remained president of the council when the Duke of Portland, Canning, and Castlereagh had all thrown up their places.

* After saying that, under the circumstances there mentioned, he felt satisfied that the communication proposed in Perceval's letter could not be productive of any public advantage, Earl Grenville added—

"I trust I need not say that this opinion is neither founded in any sentiment of personal hostility, nor in a desire of unnecessarily prolonging political differences.

"To compose, not to inflame, the divisions of the empire has always been my anxious wish, and is now, more than ever, the duty of every loyal subject; but my accession to the existing administration could, I am confident, in no respect contribute to this object; nor could it, I think, be considered in any other light than as a dereliction of public principle.

"This answer, which I must have given to any such proposal if made while the government was yet entire, cannot be varied by the retreat of some of its members.

"*My objects are not personal: they apply to the principle of the government itself, and to the circumstances which attended its appointment.*"

cabinet was generally considered as but weak and tottering when parliament met.

A.D. 1810. The session opened on the 23rd of January. The king's speech was again delivered by commission. It had cost ministers no small pains to draw it up, for there were few subjects for congratulation. The most was made of the very little that had been effected by the Walcheren expedition, the loss of life and the immense cost being passed over in silence. There was but one bright ray to relieve the gloom, and that was Wellington's victory at Talavera, which was correctly termed "the glorious victory." As for Austria, the speech declared that, although she had undertaken the war without encouragement on the part of his majesty, every effort had been made for her assistance which his majesty deemed consistent with the support of his allies and the interests of his own dominions. Amendments, strongly condemning the ministerial direction of the whole war, and particularly the Walcheren expedition, were moved in both Houses, but were rejected by 144 to 92 in the Lords, and by 263 to 167 in the Commons. Lord Castlereagh warmly defended his own conduct, and not only the share he had in that enterprise, but also the whole of the expedition to the Scheldt as originally planned. It was not his fault if a good plan had been badly executed: it was a *coup de main* against the naval power of the enemy and a diversion in favour of Germany that was intended, and not the capture of Walcheren alone. It was Bonaparte's practice to slight distant diversions; but, when he should thus be attacked in a vital point, it was reasonable to expect that it would operate powerfully in favour of our allies. He was not ignorant of the nature of the climate of Walcheren at that season of the year; but it was never intended by government that our army should be locked up there for such a length of time. He had expected that our troops would be employed in a dry healthy country between Walcheren and Bergen-op-Zoom. But even the unhealthiness of Walcheren had never been considered as a bar to our occupancy: we had held that island thirty-one years during the existence of the Barrier Treaty, and we had had it in our possession since then. With the evacuation of the island he (Lord Castlereagh) had had nothing whatever to do. Mr. Canning said that he never would have consented to the expedition if he had conceived that nothing greater would have been accomplished. But he had thought that the capture and possession of the naval arsenal at Antwerp—a British object of the first importance—would have been the result; and that some support was due to our friends the patriots of Germany. General Tarleton thought that a most peculiar degree of responsibility lay upon Lord Chatham, who was at one and the same time a cabinet minister (master-general of the ordnance) and commander-in-chief of the expedition; and other orators—among whom was Mr. Whitbread, who prognosticated that Lord Wellington would be compelled to evacuate Portugal in the spring, as Chatham had been compelled to evacuate Walcheren in the autumn—animadverted very severely on the whole of the conduct of the unlucky general.

On the 26th of January, Lord Porchester, in the Commons, moved that the House should resolve itself into a committee to inquire into the conduct and policy of the late expedition to the Scheldt; and the motion was carried, against all the exertions of ministers, by a majority of nine, the numbers being 195 against 186. It was impossible for such an inquiry to be properly conducted by a committee of the whole House of Commons; and there were serious and very obvious objections to a public disclosure of all the projects which had been entertained, and of all the military blunders which had been committed. These objections were of such weight, and ministers were so anxious to conceal the national weakness and dishonour from Bonaparte, who regularly had the English newspapers and parliamentary reports translated to him, and who always took most of his notions respecting this country from the exaggerated party speeches of our opposition members, that it was resolved to enforce the standing order for the exclusion of strangers during the inquiry. But in spite of this precaution our disgrace in the Walcheren affair was blazoned to the world, for minutes of the evidence were published notwithstanding the order of the House, and, being carried over to Paris, were inserted at full length in the Moniteur, as consoling proofs of the incapacity of our ministers and military commanders. Though evidently screened and protected by the court, and defended to the utmost by the ministry, the Earl of Chatham found himself under the necessity of resigning his office of master-general of the ordnance.* After many long and tempestuous debates, the condemnatory resolutions, drawn up as logical consequences from the facts which had been produced in evidence, being moved by Lord Porchester, were negatived, but only by 276 against 227. General Craufurd then made two motions, the first approving the conduct of ministers with regard to the policy of the expedition, and the second approving the retention of Walcheren after it had been found that Antwerp was not to be captured; and the first was carried by 272 against 232, and the second by 255 against 232.

The enforcement of the standing order for the exclusion of strangers not only failed in the object for which it was intended, but led to new troubles and disgraceful scenes. There was at this time a debating society in London, called the "British Forum," the president and chief orator of which was one John Gale Jones, a very obscure individual, who was suddenly and unexpectedly raised into the dignity of a patriot and a martyr. This manager Jones proposed the matter as a proper subject of discussion in his Forum, and afterwards placarded the walls with hand-bills stating that, "after an

* The Earl of Chatham was succeeded in the ordnance by Lord Mulgrave, who was succeeded in his post of first lord of the admiralty by Mr. Yorke; but these appointments did not take place for some weeks.

interesting discussion, it had been unanimously decided that the enforcement of the standing orders, by shutting out strangers from the gallery of the House of Commons, ought to be censured as an insidious and ill-timed attack upon the liberty of the press, as tending to aggravate the discontents of the people, and to render their representatives objects of jealous suspicion." The same placards proposed as a question for the next night's meeting of the society, "Which was the greater outrage upon public feeling, Mr. Yorke's enforcement of the standing orders or Mr. Windham's recent attack upon the liberty of the press?"* Of all this Mr. Yorke complained in the House, on the 19th of February, as a gross violation of the privileges of the House. On the 20th, the printer of the hand-bills, being brought to the bar, expressed his contrition, and gave up the name of his author. On the morrow, the president of the Forum himself was brought a prisoner to the bar, and was, by the unanimous vote of the House, committed to Newgate. On the 12th of March, Sir Francis Burdett moved that John Gale Jones should be discharged; and in so doing he questioned the legality of the commitment, and the privilege and power of parliament. Several of his party, though hot reformers like himself, fell from his side on this question, and he was outvoted by 153 to 14. A few days after the debate Sir Francis printed his speech in an enlarged form, and with more offensive language than he had used in the House. He published it in Cobbett's Weekly Register, putting his own name to it, and introducing it with a letter to his constituents. The thing was a libel nearly from beginning to end—a passionate and dangerous appeal from the authority of parliament to the excited people;—but the passages which seemed more peculiarly to demand punishment were those in which he denied the right of the House to commit for breach of privilege, and asked whether our liberty should lie at the mercy of the House of Commons, which House he characterised as "*a part of our fellow-subjects collected together by means which it is not necessary to describe.*"† On the 27th of March, Mr. Lethbridge, member for Somersetshire, brought the matter before the House. Whitbread succeeded in carrying an adjournment till the morrow, and the question was then further adjourned till the 5th of April, when it was carried, by a majority of thirty-eight, that Sir Francis Burdett should be committed to the Tower under the warrant of the Speaker, as guilty of a libel on the House. Sir Francis shut himself up in his mansion in Piccadilly, barring his doors and windows, and declaring that he would yield only to force. On the 6th, he sent a letter to the Speaker expressive of this resolution, of his contempt for the House, and his conviction that the warrant was illegal. An immense mob now gathered near his mansion, shouting "Burdett for ever!" and compelling all passengers, whether on foot or riding in carriages or on horseback, to pull off their hats and join in the cry. The lord privy seal, the Earl of Westmoreland, was assaulted and covered with mud, as were sundry other individuals of less note. The far greater part of these poor fellows intended nothing more serious than that amusement which they call "a lark;" but a few fanatic demagogues glided among them, and harangued them over their beer, and at night they were joined by thieves and pickpockets, by all the rascality of London and Westminster, who hoped to make good booty in that immense crowd. A party began to break windows, an example which other parties were sure to follow. In rapid succession the windows of Mr. Yorke, Lord Chatham, Sir Robert Peel, the Duke of Montrose, Lord Westmoreland, Sir John Anstruther, the Marquess Wellesley, Mr. Wellesley Pole, Lord Castlereagh, and many others, were smashed. Windham's windows escaped, for they could not find his house. But by this time the horse guards were out, and several corps of volunteers were called to quarters. The troops scoured the streets, and by two o'clock in the morning the mob dispersed, some with broken heads and some with other men's watches in their pockets. In the course of the following day the serjeant-at-arms, with the Speaker's warrant in his hand, gained admission into Sir Francis's house; but the baronet put the warrant in his pocket, and his friend Mr. O'Connor led the serjeant-at-arms down stairs, and to the door, telling him that out he must go, if not by fair means, then by foul. Placards of a very inflammable nature, and addressed to the people, were stuck up in several parts of the town, and particularly in the neighbourhood of the Tower. About noon a troop of the life guards and a company of the foot guards took post before Sir Francis's house. This did not prevent the mob from pursuing the same courses as on the preceding evening; and several respectable persons travelling on the outside of stage-coaches through that great western thoroughfare were much injured because they did not sufficiently wave their hats or raise their voices. At length the life guards were ordered to clear the street. The rabble fled as usual, but they soon returned, and the commotion assumed so serious an aspect that it was thought proper to read the Riot Act. During this operation Sir Francis from time to time showed himself at the window, and was cheered by the mob. He was visited by Lord Cochrane, Lord Folkstone, Colonel Wardle, Major Cartwright, the Earl of Thanet, Mr. Coke of Norfolk, Mr. Whitbread, and other political and private friends, nearly all of whom are said to have im-

* In the course of the debate upon Mr. Yorke's motion for enforcing the standing order against strangers in the gallery, Windham had certainly delivered some rather heretical opinions about the liberty of the press. But he appears to have been excited thereto by a great deal of extravagance and rhapsody from Sheridan and others.

† The language of the letter was intemperate and *ad captandum* throughout: the illustrations were of that kind most likely to excite such of the common people as had passions stronger than their reasoning faculties. Scriptural illustration was not spared. "One cannot," said Sir Francis, "with such impressions in one's mind, help entertaining a fear that the gentlemen of the House of Commons may be in danger of incurring the sentence of St. Paul upon the insolent and tyrannical high-priest Ananias, who had commanded him to be stricken for opening his mouth in his own defence:—'God shall smite thee, thou whited wall: For sittest thou to judge me after the law, and commandest me to be smitten contrary to the law?'"

plored him to put an end to a farce which might probably end in a tragedy for some, or to yield obedience to the Speaker's warrant now that enough had been done to constitute a case for the trial of the right of the House of Commons. But the baronet, who had been carried shoulder-high by the people on several occasions, would not yield to this reasonable advice, and probably there were other friends besides the hot Mr. O'Connor who recommended a very different course. To keep up the commotion, Sir Francis wrote a letter to the sheriffs of Middlesex, complaining that an attempt was made to deprive him of his liberty, under the authority of an instrument which he knew to be illegal, and that his house was beset by a military force; avowing his determination never to yield a voluntary obedience, but to resist the execution of such a warrant by all the legal means in his power; and calling upon the sheriffs, as the constitutional officers appointed to protect the inhabitants of the bailiwick from violence and oppression, to furnish him with the aid with which the laws had provided them, by calling out either the *posse comitatus* or such other force as the case and circumstance might require. The government, wholly unprepared for this sort of resistance, were greatly perplexed; and the magistrates acted with timid indecision, doubting whether it was or was not lawful to use force in executing the Speaker's warrant. At last, Mr. Perceval, the premier, advised the serjeant-at-arms to take the opinion of Sir Vicary Gibbs, the attorney-general. Mistakes were committed in the drawing up of the legal case to be laid before him; and the crown lawyer gave a reply which went rather to increase than diminish the embarrassment and indecision, for he left it doubtful whether, if death should ensue on executing the speaker's warrant by force, the serjeant-at-arms would not lie open to an indictment for murder; as also whether any person in the contest that should think proper to kill the serjeant-at-arms could be held in law guilty of murder.*

Mr. Matthew Wood, who chanced to be one of the sheriffs this year, professed the same political principles and the same eagerness for parliamentary reform as Sir Francis Burdett; the alderman was indeed now and long afterwards a sort of satellite to the baronet. After communicating Sir Francis's letter for the aid of the *posse comitatus*, &c. to the lord mayor, Sheriff Wood posted off to the Speaker to augment his perplexities by showing him the letter and asking his advice upon it. Abbot, the Speaker, got rid of the unpleasant visitor by telling him that he had done his duty, and that no doubt the sheriffs would know how to do theirs. Mr. Sheriff Wood, choosing to consider the letter which he had received as "an intimation of a disturbance, of which, as conservator of the peace, he was bound to take official notice," went straight to the beleaguered mansion in Piccadilly. Sir Francis, glad to see so dear a friend or so warm a partisan, requested Mr. Sheriff Wood to pass the night in the house in order to protect him by the civil power against tyranny and military force. Wood readily consented, and called in his colleague Mr. Sheriff Atkins, when they jointly addressed a letter to the secretary of state for the home department, enclosing a copy of Burdett's letter to them, and requiring his instructions how to act. Mr. Ryder, the new secretary, replied that it was not for him to deliver any opinion upon the baronet's letter; but that he could have no doubt that the sheriffs would feel it to be their duty to give every assistance which might be required of them in aid of the Speaker's warrant, rather than think of offering any resistance to it. With the aid of the baronet's pantry and cellar the night passed off pleasantly enough, and at about three o'clock in the morning the sheriffs shook hands and withdrew, expressing their decided opinion that no attempt would then be made to break into the house. Serious mischief had, however, been done in the course of the preceding evening. Unluckily, it chanced to be a Saturday evening, when the working people were released from their labours and had money in their pockets to buy drink. There were a few hundreds of German cavalry at this time in England waiting to be conveyed to the peninsula—brave but quiet and inoffensive men, who wore the sad mementos of the old Duke of Brunswick, or who had been raised by his gallant son and other expatriated princes to fight against the common enemy. A portion of the public press had represented these few hundred Germans as highly dangerous to the liberties and the constitution of England, and, since these Gale Jones and Burdett turmoils had begun, great pains had been taken to exasperate this feeling, and hand-bills had been distributed filled with inflammatory declamations against foreign troops. In the course of the Saturday it had been deemed necessary to call out a few more troops. Among these was a party of English light dragoons, who wore a uniform which was new to the London mob. A cry was set up that these men were German mercenaries employed to cut the throats of the people. The military were hooted and pelted, and, what was much worse and far more rare, several shots were fired at them. The soldiers bore these insults and outrages with a forbearance of which none but disciplined English troops are capable; and, even after one of their comrades had been shot with a ball through the jaw, they were not allowed to load their pistols till the magistrates had once more read the Riot Act, and made fruitless endeavours to repress the tumult. The magistrates, the civil officers, as well as the soldiers and their commanders, were assaulted with mud and stones. At length a few

* The fault might be in the law or in the want of precedent, and not in Sir Vicary Gibbs; but it appeared hard to leave an unlearned serjeant-at-arms to judge for himself when the learned attorney-general would not judge for him; and the amount of Sir Vicary's answer, as was said by Sir John Anstruther in the debate of Monday, the 9th of April, was just this—"Serjeant-at arms, go and execute your warrant; you shall have all possible aid, both civil and military; but then we can't say how far you may lawfully go: never mind, however, do your duty, and then no matter whether in the event you are hanged for it or not."

cavalry pistols were drawn from their holsters and discharged in self-defence, and one man in Piccadilly fell mortally wounded.

On Sunday morning, at seven o'clock, the serjeant-at-arms, attended by a party of police-officers, once more demanded quiet entrance into the house, and, being denied it, he stationed messengers to watch the house, and remained with his deputy in the neighbourhood to apprehend Sir Francis in case he should come out. The morning was very fine and all that part of the town soon became crowded, but far more by the curious than by the mischievous. Many, however, there were decidedly bent upon mischief, and while some of these picked the pockets of the unwary, others hissed and groaned or threw stones and filth at the soldiery. If they had been French troops, no power on earth would have prevented a charge and a carnage; but our men behaved as they had done before.* But they felt, and some of them said, that they would rather be in the hottest of a battle like that of Talavera, than be sitting there like statues to be insulted and injured and covered with filth by a mob of their own countrymen. About one o'clock in the afternoon the two sheriffs waited again upon Sir Francis. Sheriff Wood had still no doubt as to the illegality of the Speaker's warrant, or as to the right of continuing to resist it; but Sheriff Atkins now declared that he thought the warrant must be obeyed, because it directed that the serjeant-at-arms of the House of Commons should call on all mayors, sheriffs, magistrates, &c. to assist in its execution. Sheriff Wood then trudged away to the magistrates who were assembled at the Gloucester Coffee-house, Piccadilly, and, according to his own account, remonstrated with them against ordering the soldiers to act, telling them that if any death ensued he would indict them all for murder.†

The life guards stationed near Burdett's house continued patiently to bear the insults of the mob, presenting, however, their pistols from time to time in the hope of intimidating them. But, at last, the guards made a charge, yet so as to disperse the people without injuring them. The mob opened and fled on all sides; but as soon as the guards returned to their post they rallied, and continued the same annoying warfare as before. But it was now dusk and raining in torrents; and the darkness and the rain drove away many thousands. Still the more dangerous part of the mob remained; and these heroes, being driven from the western end of Piccadilly, gathered in force between the east end of Coventry-street and St. James's church. As on the two preceding nights, they had made the inhabitants illuminate their houses; but at about ten o'clock on this unholy Sabbath night they made all the lights in the windows be put out, and at the same time they broke all the street lamps on either side of the way. Then, in this darkness, they carried away the ladders and scaffolding from a house under repair, and with these materials made a low barricade across Piccadilly, towards which they endeavoured to allure the cavalry, expecting that they would come on at full gallop in the dark, and so be thrown. But this pretty artifice was discovered, and the barricade was broken down by a party of foot soldiers. Towards midnight it rained harder than ever, and, to the infinite relief of the quiet inhabitants, the mob melted away. By Monday morning ministers had come to the determination of breaking into the baronet's house, and carrying the warrant into effect by military means. For this decision Burdett was prepared, and he got up a dramatic scene in which to meet it. He assembled his family and friends in his drawing-room on the first floor, and in the front part of the house, and there sat down to breakfast with Lady Burdett, the Countess of Guildford, three of the Ladies North, Mr. and Mrs. Coutts, his brother Mr. Jones Burdett, peppery Mr. O'Connor, and one or two others. Breakfast being finished, Sir Francis began to hear his son (then an Eton boy) read and construe Magna Charta in the original. The patriot baronet was thus engaged—presenting, as his friends thought, a fine subject for an historical picture—when Mr. O'Connor started up dramatically on observing a man's face peering into one of the drawing-room windows. The face belonged to a constable or peace-officer, who had placed a ladder against the house, and who was now in the act of throwing up the window-sash, in doing which he broke some of the baronet's panes of glass and cut some of his own fingers. O'Connor rushed to the window. It is said that this Irish Achates intended to hurl the poor peace-officer into the area below; and that Sir Francis stopped him by calling out not to hurt the man. What O'Connor did was to seize the officer by the breast with one hand and to shut the window with the other. Baffled in this attempt to storm through the drawing-room windows, the police made an attack in an humbler quarter;—descending into the area towards the region of the kitchen and the scullery, they burst open a window, sashes, frame, and all, and entered the house through a servant's room. At the crash the bold O'Connor ran down stairs to see if all were safe below, and there he found some twenty men with those magical wands, constables' staves, in their hands. He retreated to the drawing-room, and was quickly followed thither by the constables and by the serjeant-at-arms, who, advancing to the baronet, said, "Sir Francis, you are my prisoner." Sir Francis replied by asking the serjeant under

* One of the mob threw a handful of mud right into the face of a dragoon, who merely wiped off the filth, rode up to the fellow, and said, "You rascal! If I had not a sword and pistols I would get off my horse and break every bone in your skin! Don't do that again."

† The magistrates, however, publicly contradicted this, affirming that they never heard Sheriff Wood use any such threatening language, and that his appearance at the Gloucester Coffee-house and his interference did not in any way prevent them from doing what they conceived to be their duty.

If Alderman Wood, carrying out his theory, could have paralysed the magistrates, and have prevented their acting in concert with the troops, a good part of the capital would, that night, have been plundered and burned, and more lives would have been sacrificed than were lost in the London "No Popery" riots of 1780.

what authority he had broken into his house in violation of the laws of the land. The serjeant-at-arms spoke of the Speaker's warrant; the baronet spoke of the laws and constitution, and refused to submit. "Then, sir," said the serjeant, "I must call in assistance and force you to yield." Upon which the constables laid hold of Sir Francis, Mr. Jones Burdett and Mr. O'Connor stepped up, and each took the baronet under an arm. The constables closed in on all three, and drew them down stairs, Sir Francis protesting all the way, in the king's name, against this violation of his person and his house, and telling them they were acting at their peril. A coach was ready at the door: Sir Francis got in, with his brother, the deputy serjeant-at-arms, and a messenger; the serjeant himself mounted his horse; and then, with a strong escort of cavalry, coach and mounted serjeant went off at a smart pace. To avoid mischief they had determined to proceed to the Tower by the roundabout way of the New Road, Marylebone, Pentonville, Islington, the City Road, &c. They had got to the top of Albemarle street, Piccadilly, when a cry was set up, "They have taken him! They have dragged him out of his house!" And at the cry countless multitudes began to scamper off towards the Tower, for the most part by much nearer roads than that which the cavalcade were taking. Ever since Friday placards had been stuck up in the city calling upon all true Britons to protect the patriot. But by this time government had collected such a military force as had rarely been seen in the capital before.* And, while the serjeant-at-arms and the cavalry escorted the prisoner, two battalions of foot guards marched by the shortest route through the Strand and through the heart of the city (the necessary consent having been previously obtained from the Lord Mayor) and drew up three deep before the Tower gates, to cover the entrance. Shortly after, the prisoner arrived, the dragoons cleared the way, and the coach drove up to the Tower gates, the mob shouting "Burdett for ever!" There was also much hooting and much running; and a good many of the mob fell or were forced into the Tower ditch, but as there was little water, nobody was drowned, and as the mud was soft, no bones were broken. Sir Francis alighted and, when he had been received with the usual ceremonies, the gates were closed. But when the troops began to return towards their barracks in the west, the mob began to pelt them most furiously. Finding themselves threatened from behind palings and iron railings, and embarrassed in narrow streets, and being able to bear this usage no longer, the soldiers fired, and about eight persons were wounded, two of them mortally. The troops thus made way for themselves through Fenchurch Street, then crossing over London Bridge returned to the Horse Guards by way of Lambeth and Westminster Bridge. The alarm was greater on this than on any of the preceding days: the metropolis was agitated from one end to the other, and many thousands believed that what had appeared a trifle at first would end in a formidable rebellion. At night Sir John Anstruther in the Commons complained bitterly of the timid, undecided conduct of government, which, he urged, had allowed the storm to gain head. It was not a subject, he said, upon which he could speak very coolly, when he recollected that, owing to a remissness in some quarter or other, the lives of his wife and children had been for a long time endangered. [Many other persons had the same recollections or convictions as Sir John Anstruther.] He said that it appeared that ministers had not taken any steps to provide against consequences which might easily have been foreseen; but he ended by throwing the principal blame upon the attorney-general. Sir Vicary Gibbs attempted to throw the blame from his own shoulders upon those of the serjeant-at-arms, which—even by those friendly to government—was not considered either very just or very generous. Nor was it in fact very extraordinary that the serjeant-at-arms, checked by the ambiguous legal answer of the attorney-general, should have hesitated how to act when the persons of the highest authority to whom he looked for instructions knew not how to advise him.

On the following evening, when the letter of Sir Francis Burdett was taken into consideration by the House of Commons, several members who had voted against his committal to the Tower censured his conduct in unmeasured terms. The baronet's offensive letters were now considered but part of a system for bringing the House of Commons into contempt; and it was asserted, even by friendly parties, that, if the House had not taken notice of his first letter, published in Cobbett's 'Register,' they would have been dragged into something else, and have had to meet other and bolder attacks. The House was far more concerned in this quarrel than were the ministers. It was the authority of the House that had been insulted and defied. Expulsion from the House was spoken of; but, as this must necessarily lead to a new election in Westminster, to the withdrawal of the military, and to saturnalia of fourteen days' duration, the notion was given up. Mr. Davies Giddy (the late Mr. Davies Gilbert) would not now give Sir Francis credit even for rectitude of intention; Lord Porchester thought no language of reproach could be too strong to apply to his conduct from beginning to end; Sir John Sebright said it was the most disgraceful conduct that had ever come under the cognizance of the House, and asked whether it was a love of civil liberty that induced Sir Francis to stir up a tyrannical mob to aid him in the solution of a great constitutional question? And Mr. Lyttleton declared that, though he had lived on terms of friendship with Sir Francis, he now abjured him both as a private and as a political friend. Even Mr. Whitbread, who called Burdett's letter to the House "a high and flagrant

* In addition to the volunteers, about 19,000 regulars, horse and foot, were collected in and round London; and about 15,000 more, from different parts of the country, were halted within a day's march.

breach of the *privileges* of parliament," maintained that the warrant of the speaker was legal, complete, and ought to be *omnipotent*. The Speaker's warrant, said Whitbread, if good for anything, is good for *everything*: and it certainly authorises the breaking open of doors if it is necessary to its execution that doors should be broken open. But it was chiefly as a parliamentary reformer that Whitbread contended for the preservation of this and of all other privileges of the House. The cause of reform (so he said) was now making rapid progress;—within the last month very many converts had been made to that cause. In what state would the House be placed in the event of a reform, if stript of the power now under discussion? The crown was known to have a great influence in that House, as well as elsewhere (meaning in the Upper House); and what must the people expect to be the inclination and aim of that influence in the event of reform? Must they not calculate upon its hostility? and what power could a reformed House of Commons have of counteracting that hostility, if its warrant were not effective? As soon as possible after his committal, Sir Francis Burdett, having recourse to those legal means which he might have applied to at first, without risking bloodshed and such disgraceful rioting, caused the Speaker to be served with a notice that a bill would be filed against him in the Court of King's Bench. On the 13th of April the Speaker communicated it to the House, and the letter containing the notice was entered upon the Journals, Mr. Whitbread observing that it might be the ground of great questions to be tried hereafter. On the 16th, Sir Samuel Romilly moved for the discharge of John Gale Jones, whose debating club and placards had produced, or had at least hurried on, the great Burdett explosion. Romilly did not think that Jones had not merited punishment; he only thought that he had been punished enough already by being detained a few days in Newgate. Windham reminded the House that a meeting of the Westminster electors was announced for the morrow, and that, if the House should liberate Gale Jones, those noisy patriots would be sure to impute it not to their mercy, but to their fears. Romilly was outvoted by 160 against 112; so the president of the Forum was left in durance until the rising of parliament, which must equally open the doors of Newgate to him and the gates of the Tower to Burdett.

At the time appointed, the great Westminster meeting was held in Palace Yard, close under the Houses of Parliament. It was numerously, if not well, attended, and there was no want of the passionate ingredients of eloquence on the part of the Westminster orators who spoke; for Sir Francis, besides being "England's glory," was "Westminster's darling." They passed a string of resolutions, declaring that they most highly approved of Sir Francis's letter to his constituents; that they thought his conduct, in calling upon the civil power for the protection of his house against a military force, was dictated by prudence, knowledge of and confidence in the laws of his country; and that the House of Commons should be called upon to restore to them their beloved representative, and to co-operate immediately with him in his endeavours to procure a fair representation of the people in parliament. A letter addressed to him in the name of his constituents had been drawn up, and, being now read with general satisfaction, it was resolved that it should be presented to the patriot in the Tower by the high bailiff of Westminster. It was a very peppery epistle. It declared that his constituents felt as a personal wrong the indignity which had been offered to him; that they, however, were not surprised to find that, when every excuse was made for public delinquents, the utmost rigour was exercised against him who pleaded for the ancient and constitutional rights of the people; that he, Sir Francis, had nobly stepped forward in defence of a fellow-subject (Gale Jones) unjustly imprisoned; and that the House of Commons had answered his arguments by breaking into his house, seizing his person, &c. They upheld all that had occurred as rendering more than ever necessary a radical reform; and they repeated Sir Francis's own libel, and quoted his words as to the construction of the present House of Commons, where so many members, said they, "are collected together by means which it is not necessary for *us* to describe." The letter to the baronet ended with saying that the treatment he had met with was but a sad presage of what might be expected by all those that had the courage to stand forward in defence of the people's rights. The Westminster meeting also voted a petition and remonstrance to the House of Commons, couched in the most disrespectful terms, denying the privilege of the House, and calling for the immediate liberation of Burdett, and a speedy reform of parliament. In the evening this petition and remonstrance was presented by the baronet's colleague, Captain Lord Cochrane, who, unfortunately for himself, if not for his country, had quitted the sea service to become an active member of reform societies, and a hot and impatient politician. His lordship moved, according to custom, that the petition should lie on the table. The Hon. J. W. Ward (afterwards the Lord Dudley and Ward) opposed the motion, saying, that, if the House received the petition, they would submit to the grossest violation of their dignity. Mr. Curwen suggested the propriety of withdrawing it for the purpose of preparing one of a more decorous kind, if the object of the petitioners really was to promote the cause of reform, to which he, Mr. Curwen, was friendly. Other members thought the language of this petition highly indecent; but Whitbread justified the petition, and not only Canning, but also Perceval, though they condemned the language, said that some intemperance might be overlooked—that in cases of petitions it was better for the House to err on the side of indulgence than on that of severity; and the Westminster paper was ordered to lie on the table.*

* "This," says Sir Samuel Romilly, "is certainly not the last

In the meanwhile, the ferment being kept up out of doors by popular meetings, clubs, handbills, pamphlets, and newspapers, a coroner's inquest in the city had brought in a verdict of wilful murder in the case of a young man who had been shot by the soldiers on their return from the Tower,* and the mob had persevered in insulting the military wherever an opportunity could be found. On the other hand, however, another coroner's jury had returned a verdict of justifiable homicide in the case of a man who had been shot by the military which had formed the escort of Sir Francis from Piccadilly to the Tower; and a proclamation had been issued by government calling on all justices of the peace, &c. to aid and assist in suppressing all tumultuous meetings, and offering a reward of 500*l.* for the apprehension of any person who had been concerned in firing at or otherwise wounding the military in the discharge of their duty; and this was followed by another proclamation offering a reward of 500*l.* for the apprehension of the person who had fired at Ensign Cowell while on duty on the night after Burdett was lodged in the Tower.

Yet Lord Ossulston, one of the Burdettites, rose in the House of Commons on the 18th of April, and asked whether the government did not mean to offer a like reward for the discovery of the unknown lifeguardsman against whom the first verdict of wilful murder had been returned? He was told that under all the circumstances of the case this was not to be expected. Whitbread then moved, without the customary notice, that that verdict should be taken into consideration by the House; and he was supported by Mr. William Smith, who argued that, though the soldiery in general had behaved well, it did not follow that one of them might not have been guilty of murder. The home secretary (Ryder) affirmed that a strict inquiry had been instituted into the conduct of the populace on the one hand and of the troops on the other; that the inquiry was still proceeding; but, from everything which had yet appeared, the privy council had resolved to advise his majesty not to issue a proclamation upon the subject of the first verdict. The premier asked whether the House ought to take into their own hands the administration of justice while in progress? Were they to be inspectors of coroners' verdicts and indictments for murder? Were they to put themselves in the situation of grand jurors? Captain Agar, who had been on duty, stated that from ten to twenty shots were fired by the people before he heard one shot fired by the soldiers; and that, as several shots were fired by the troops at about the same time, it was very likely that the soldier who fired the unfortunate one did not know it himself. Mr. Lascelles observed that, if a lifeguardsman should be sent before a jury at the present moment, it was very probable he would be tried for his life under circumstances very partial and oppressive. Whitbread's motion was negatived without a division; and then the Easter recess gave some relief to the government, and some time for the people to grow cool.

During the recess, however, popular meetings were held in various places; and the freeholders of Middlesex, or the men who arrogated to themselves the exclusive right to that designation (including many who were freeholders neither in Middlesex nor anywhere else), assembled at Hackney, and there voted an address of thanks to Sir Francis, and a petition and a remonstrance to the House of Commons. Mr. George Byng presented this petition to the House on the 2nd of May, but his brother member for the county of Middlesex, Mr. Mellish, declared that he could not support so violent and indecorous an appeal. Mr. Perceval said that this was a deliberate insult to the House, an experiment to try how far they would go in forbearance. The discussion was adjourned till the next day, when it gave rise to a hot debate with furious criminations and recriminations. Mr. Barham said it was not a petition, but a protest against the authority of the House; not an application for redress of grievances, but a bold menace. He lamented that there were members of that House who could lend themselves to the clamours of popular faction. Such men were little aware of the consequences to which their conduct directly tended; for, if once the factions, of which they were but the tools, should succeed in their real object, these very men would be the first victims of the storm which they had helped to raise, and would be swept away like chaff before the wind. Several liberal members spoke against the danger and disgrace of conceding anything to the menaces of the people, or even of receiving such petitions; but they charged government with having produced all this disrespect and disaffection by opposing

affront which, in consequence of the contest in which the ministers have rashly plunged the House, they will have to receive and to record against themselves. These are the first-fruits of this boasted vindication of the rights and dignity of the House of Commons."—*Diary of Parliamentary Life, in Memoir by his Sons.*

* It was positively asserted that this thoughtless young man, Thomas Ebrall by name, and another young man who was likewise killed, had each seized the bridle of a lifeguardsman's horse, which was precisely the act of aggression which of all others justified the soldiers in using their weapons. Nevertheless, the juries in both instances brought in verdicts of wilful murder against some lifeguardsman unknown; and, to keep alive horror, indignation, and revenge, a tombstone was put over the grave of Thomas Ebrall (in Aldgate churchyard) recording his fate and the coroner's inquest, and giving the following text from the Apocrypha:—

"Thus saith the Lord God; My right hand shall not spare the sinners, and my sword shall not cease over them that shed innocent blood upon the earth."—2 Esdras, ch. xv.

For this there was precedent to be found in the John Wilkes St. George's Fields riot: see ante, vol. i. pp 60—67.

Where the money was found for the tombstone and funeral, and for other matters far more expensive, it is not difficult to surmise. The parliamentary reformers and the other adversaries of government seem to have contemplated changing the ministry and effecting higher objects by force of tombstones and exciting epitaphs. There was erected at the back of St. Martin's Church a monument bearing this inscription:—

Sacred to the memory of
JOHN IRWIN, Esq.,
of Sligo, in Ireland, surgeon to his majesty's forces,
who died on the 22nd day of April,
1810,
aged 58 years:
A victim, like thousands of our gallant countrymen,
to the fatal consequences of
the unfortunate expedition to the Scheldt,
commanded by
John, Earl of Chatham.

It was noted as something very prophetic or very significant, that on the 14th of April, the fifth day after Burdett's committal to the Tower, the sword, buckles, and straps fell from the equestrian statue of Charles I. at Charing-Cross!

parliamentary reform, and by screening such culprits as the Duke of York, Lord Castlereagh, &c. To which the ministerial benches retorted, that these very gentlemen, in their eagerness for parliamentary innovations which might ruin the constitution, and by their inconsiderate and vehement attacks upon persons in authority, had created and nourished the popular violence. The motion for receiving the Middlesex petition was rejected by 139 against 58.

But the very next day a petition in much the same strain was voted by the livery of the city of London. It was presented on the 8th of May; but the motion that it should be received was negatived by 128 against 36. Major Cartwright, a very old champion of reform, and one who devoutly believed that nearly all the ills that flesh is heir to could be cured by a sweeping radical reform-bill, sent in a long memorial in the form of a petition praying for the said reform in parliament, &c. It was presented by Whitbread; but, as the major called the committal of Sir Francis Burdett an act of flagrant illegality, and as his memorial was portentously prolix, it was rejected also, the premier observing that, if such long petitions from an individual were to be encouraged, the House might expect to have others presented lengthened out into *folio* volumes!

But the business was not over yet. The suit which Sir Francis had commenced against the Speaker was followed up by similar law-proceedings against Mr. Colman, the serjeant-at-arms, and Earl Moira, the Constable of the Tower. On the motion of Mr. Perceval a select committee was appointed to consider of the proceedings to be taken and to examine into precedents. On the 11th of May Mr. Davies Giddy brought up the report of this select committee. He said there were but three modes in which the House could proceed:—1. To inhibit the courts of law from proceeding in these actions; but for this course there was no precedent. 2. To commit all the persons concerned in bringing or promoting such actions; for the exercise of such a power there were many precedents, but it did not appear expedient to follow them. 3. The only mode remaining, therefore, was to plead to the actions, and let the parties sued show to the court that the acts complained of were done in consequence of the privileges of that House. Mr. Davies Giddy moved accordingly: 1. That the Speaker and the serjeant-at-arms might be permitted to appear and plead to the said actions; and, 2. That the attorney-general should be directed to defend them. There were long debates, and there was a second report brought up from the select committee, but the measures recommended by Giddy were ultimately adopted.

The case of Burdett *v.* Abbot came on before Lord Ellenborough, in the court of King's Bench, but not before the 8th of February, 1811; and, the cause being postponed, it was not until the 17th of May of that year that the attorney-general made his reply in defence of the Speaker. The justification set up for the warrant, &c. appeared to the court perfectly satisfactory, and the plaintiff was cast. On the 19th of June of the same year the case of Burdett *v.* Colman was tried in the same court, when the jury without hesitation found a verdict for the defendant. In the course of this trial it was proved by Burdett's own witnesses that the serjeant-at-arms had discharged his unpleasant duty with the greatest politeness and civility. Several other witnesses deposed to the riotous disposition of the mob and to the good conduct of the soldiery, and gave it as their opinion that the serjeant-at-arms could not have executed his warrant without a strong military force. The record of the cause Burdett *v.* Lord Moira (Constable of the Tower) was then called on, and dismissed for want of a jury.

Since the No Popery riots London had seen no such commotion as this, and since the days of John Wilkes no such idol as Sir Francis Burdett. The French newspapers announced that it was a revolution.*

The prorogation of parliament of necessity produced the liberation of "the martyr of liberty," who had passed as pleasant a martyrdom in the Tower as heart could desire; receiving the visits of his friends and the deputations of bodies corporate, and catching the echoes of his fame as it rolled through the country. On the morning of the 21st of June vast multitudes assembled to escort him and carry him in triumph from the Tower to Piccadilly; portions of this multitude were organised in bodies, and had their banners and their bands of music; there was a car of Liberty, and there were inscriptions and devices of a very stimulating kind. As the troops were ordered to be on the alert, there would have been certain riot and, very probably, bloodshed, if the baronet had returned, as he was expected to do, through the heart of the City and along the Strand; but he very wisely resolved to take his departure from the Tower privately. The outer gates of that fortress were closed, and the immense mob, not knowing what was passing within, kept waiting hour after hour, lining the edge of the ditch and covering the open space denominated Tower-hill. At last, a soldier on the walls, sending his words through a speaking-trumpet, roared "*He is gone by water!*" The people would not believe the soldier. A police-officer, or constable, or some civil authority of that kind came out and solemnly assured them that Sir Francis was gone by water. By water—impossible! By boat up the river, and lose this triumph—it can never be! Thus said the patriots by the ditch and

* All these things, even to ourselves, read like a dream; and so, possibly, they may do to Sir Francis Burdett. But we are old enough to remember the great consternation which was caused by the riots, and which, as usual, was greater in the country than in the capital. We were living at the time at a considerable but quiet town, on the western road, just 49 miles from Piccadilly or from Hyde Park Corner. Direful was the intelligence which the mail coachmen and guards and the stage coachmen were said to have brought down on the Saturday night! Sir Francis Burdett was standing a regular siege in his mansion: the people and the troops were fighting in Piccadilly ankle-deep in blood! On the Sunday some coaches were delayed; and then not a few of the denizens believed, like Bonaparte, that it was a revolution.

on the hill; and their incredulity lasted till half-past four o'clock in the afternoon, when three great placards were suspended over the Tower-gates with the following solemn inscription: "Sir Francis Burdett left the Tower by water at half-past three." Yet still the congregated patriots were incredulous. Surely he never would go by water and disappoint his friends, unless he had been compelled so to do! Some said there had been foul play in the Tower; some, that they had forced him into a boat and were carrying him up to Westminster to be reprimanded by the House of Commons before he got his discharge. Mr. Sheriff Wood and Mr. Sheriff Atkins at last came to the Tower-gate on horseback. At first, these two dignitaries appeared as little able as the rest to account for the non-appearance of the baronet; but they were allowed to enter the Tower, and in about a quarter of an hour they returned and informed Major Cartwright, and the other reform gentlemen who had been appointed to conduct the main procession, that verily and truly Sir Francis had gone by water, not by compulsion, but willingly and in a boat accompanied by two friends. With a considerable part of the mob this water business had a very prejudicial effect upon the baronet's popularity. John Gale Jones, whose confinement also expired with the close of the session, issued from Newgate at four o'clock, and drove in a hackney-coach to Tower-hill to join the procession and, as he thought, to divide with Sir Francis the honours of the triumph. His name was chalked upon the pannels of the coach, and as he went along he stopped from time to time to harangue the people and to complain to them of the hardship of having been turned out of Newgate at two minutes' notice.

The supplies voted for the year amounted to 52,185,000*l.*, of which the Irish proportion was 6,106,000*l.* The ways and means, which it was calculated would leave a surplus of 141,200*l.*, included a loan of 8,000,000*l.*, which was negotiated on terms even more moderate than those of the preceding year. No new taxes were proposed; and a very favourable report was made of the commerce and general prosperity of the country. At the same time Mr. Perceval drew a striking picture of the state of commercial affairs in France, and of the effects produced by our Orders in Council. The Orders in Council had not done all the mischief to the enemy; but Bonaparte's war system and the working out of his "Continental system" together had contributed to destroy nearly all foreign trade in France and its dependencies.

Of the money voted, 1,380,000*l.* was appropriated to foreign subsidies (988,000*l.* for Portugal and 400,000*l.* for Sicily); nearly 20,000,000*l.* was devoted to naval services, and nearly 25,000,000*l.* to the land forces and ordnance.

The opposition orators continued uttering their doleful predictions. The battle of Wagram, all the last Austrian campaign, and the matrimonial alliance between the Emperor of the French and the daughter of the Emperor of Austria, which was completed in the month of March of this year, convinced them all that it was hopeless to think of continuing the war—madness to dream of supporting any longer either Portugal or Spain, or of interfering with the will of the conqueror in any part of Europe. They saw countless and invincible columns pouring into the Peninsula (now that Napoleon could have nothing else to do) to sweep the weak English army into the sea; they mourned over or sneered at the victory of Talavera, which, they said, was either no victory at all or a very useless one, since it had been followed by a retreat; and most of them opposed the vote of thanks, and the pension of 2000*l.* per annum, moved by the government to Lord Wellington.

The subject of the slave trade was re-introduced in the Commons by Mr. Brougham, and in the Lords by Lord Holland, who severally moved for addresses requesting the king to persevere in his measures to induce other nations to co-operate in the abolition of that trade, and to take such further steps as might be necessary. Mr. Brougham stated that persons in this country continued to carry on the traffic in a clandestine and fraudulent manner; and the address he proposed prayed that orders for checking such practices might be given to the commanders of his majesty's ships and to the officers of the customs. Both addresses were voted without opposition; and a resolution moved by Mr. Brougham for taking measures early in the next session to prevent evasions of Wilberforce's Slave Trade act, was also unanimously agreed to.

Early in the session Mr. Bankes made a motion for rendering perpetual the act for preventing the grant of offices in reversion; but, though a bill for this purpose passed the Commons, it was thrown out by the Lords on the second reading.

A motion was made by Lord Melville, the disgraced friend of the navy, who was now fast approaching his last hour, which was calculated to do an immense deal of good both to the land and sea service, and to put a stop to the flagrant jobbing carried on between private ship-owners and merchants, who hired out transports to government, and the transport-board, which had the management of those concerns. Lord Melville recommended that an adequate number of king's ships should without delay be prepared and held in readiness for the accommodation of such troops as it might be found expedient to embark for foreign countries. He showed that a great saving of life would arise out of a more airy and comfortable accommodation given to the troops on board ship; that by employing armed troop-ships, manned by seamen of the royal navy, there would be less danger in the navigation, less risk of the convoy and troops getting scattered, more facility for landing and re-embarking, more speed and more certainty in all operations; that it was an essential advantage to have the crews of ships which conveyed troops subject to naval discipline, and under honourable and experienced officers. Though they had to undergo a sort of examination before the

transport board, the commanders of these hired transports were nothing but skippers, and in general not superior to the masters of colliers or other coasting-vessels (we mean of that day, for it would be injuring the improved skippers of our own day to compare these masters of transports to them). His lordship adduced the evidence of good military officers to show the importance of amending the system of conveying troops by sea, and the almost total impracticability of landing an army in the face of a respectable enemy in transport-boats.* The plan he submitted to parliament was simply this: to fit out, from the ordinary of the navy, a number of armed troop-ships adequate to the accommodation of 24,000 soldiers; to keep these vessels, and a few two-decked ships and a certain number of frigates and light-armed vessels, always ready, so that at any given moment a single letter from the admiralty and the war-office might assemble the ships and troops at any rendezvous, and thence send them on their errand with secrecy, speed, and a diminished liability to accidents at sea and accidents on landing. He calculated that such an establishment would require 48,000 tons of shipping, and that, through savings in other particulars, the expense would be less than that which government now incurred in hiring transports, which were not only badly manned and commanded, but not unfrequently slow sailers, crazy, and scarcely seaworthy. But the ministry were not disposed to listen to this excellent advice. Lord Mulgrave (the present head of the admiralty) said that it would be far more expensive to convey troops in ships of war than in hired transports. The Earl of Liverpool, the war-secretary, without expressing any opinion upon the project, shook his head and said it was one of great difficulty—it required very serious consideration—it could not be decided upon now. And so the previous question was agreed to without a division. The old transport-service continued to disgrace us, to endanger and oft-times sacrifice the lives of our troops, till the end of the war; and whenever we shall be engaged in another extensive warfare our disgrace and our losses will be renewed, unless some such system as Lord Melville's be established, or some immense improvements be introduced into the out-fitting, manning, officering, and entire management of the hired transports.

One measure of essential benefit to the service was brought forward by Mr. George Rose, who continued in office as vice-president of the board of trade and treasurer of the navy. He obtained leave to bring in a bill for the increase of seamen, by establishing naval seminaries on the coasts, where young boys might be properly educated for four or five years. They were to be supplied from those who were parish paupers, of whom the number was counted at 90,000; they would not cost government more than 5*l.* each, and this supply would keep up a succession of seamen to the amount of 7000 every year. This would go to diminish the hardship of forcible impressment; and the extension of such a system might altogether do away with that cruel and anomalous practice.

A scheme for parliamentary reform, brought forward by Mr. Brand, was rejected by 234 against 115. The debate was chiefly remarkable on account of the strong opinions pronounced against radical reform by the moderate reform party, and on account of some very enthusiastic declarations in favour of the transatlantic republican system. Mr. Sturges Bourne said that such a plan as Mr. Brand's would never satisfy the so-called radicals, who wanted frequent elections and universal suffrage; and he asked whether the working of these things in the United States was calculated to recommend them to our imitation? Whitbread rejoined, that the grand political creation which had taken place in America, so far from failing in its object, had far exceeded the extent of human hope; that it was the work of one of the greatest and best of men—of George Washington—of that patriot who had communicated to the government which he had reared a portion of the purity of his own spotless mind and unsullied life; that the United States had grown at once from the weakness of infancy to the strength of manhood, and had engaged in all the pursuits which lead to greatness and happiness. In this enthusiasm there was falsehood as well as prejudice, or, if not intentional falsehood, then an ignorance of facts: the system of government which obtained in the United States could not be called the government which Washington had reared, for Washington had opposed, as much as he could, the fundamental dogma of universal suffrage: he had clung, to the last hour of his life, to a more aristocratic form of government; and he

* One officer declared that the greatest loss of our troops in landing in Egypt was occasioned by the confusion of the transport-boats, and that, had not the centre and right been carried in men-of-war's boats, that landing would not have been accomplished in the gallant manner it was. Another officer stated, that, in the re-embarcation of Sir John Moore's army at Corunna, the men-of-war-boats made ten trips while the transport-boats were making one. [We have seen in our account of that embarcation how some of the skippers of the transports cut their cables in their panic at a few cannon balls, and ran their ships on shore, with the troops on board.] "The officers," said Melville, "who superintended that midnight embarcation, endured far more anxiety than they had experienced in the hour of battle, owing to the want of order and discipline among the transports, which was such as to produce the utmost confusion and embarrassment, and to excite, in the minds of those present, the greatest alarm for the fate of the army. These distressing circumstances would not have occurred if, instead of common transports, there had been regular troop-ships, under naval discipline." His lordship pointed out other advantages to be derived from the keeping in constant readiness a number of large troop-ships, instead of going into the merchants' market to hire and freight them. If, in the spring of last year, before preparations were begun for the Scheldt expedition, there had existed in this country an establishment of armed troop-ships, adequate to the conveyance of 10,000 men, a very considerable portion, if not the whole, of the enemy's fleet in the Scheldt might have been captured or destroyed; and, without much difficulty, the basin of Flushing might have been destroyed also. But his lordship was of opinion that, if we had had such an establishment of floating barracks as that which he was now recommending, neither the evacuation of Walcheren nor the destruction of the basin of Flushing would have been necessary. The prospect of our capturing or destroying the enemy's ships, which were sure to run up the Scheldt on the news of our approach, was reduced to the single chance of a successful attack upon Antwerp. "If," said his lordship, "there had been, in the spring of last year, such an establishment as I am now contending for, 8000 or 10,000 men might have been easily embarked, without ostentation, noise, or parade, and might have proceeded in perfect secrecy to the point of attack, when, in conjunction with our blockading fleet on that coast, a successful result would, I confidently believe, have crowned their operations."

had left upon record, in public as well as private papers, predictions or forebodings of the anarchy and other evils which would result from the too great extension of a direct democratic influence and the use of universal suffrage—predictions which every year had tended to realize. The motions of Mr. Parnell on the subject of Irish tithes, and of Mr. Grattan and Lord Donoughmore on Catholic emancipation, and the important exertions made by Sir Samuel Romilly for the reform of our too sanguinary criminal laws, will be noticed in other chapters. The session of parliament terminated on the 21st of June. The royal speech, which was again delivered by commission, affirmed that Portugal was exerting herself with vigour and energy, and that in Spain, notwithstanding the reverses which had been experienced, the spirit of resistance against France continued unsubdued and unabated.

At the beginning of the year the aspect of affairs in the Peninsula was far from bright. The battle of Ocaña had left Spain without any considerable organised army in the field; and, although the supreme junta issued an address to the Spanish nation calculated to re-animate patriotism and check despondency, the forced loan which the junta required of half the specie possessed by individuals, with other sacrifices and exertions, was a measure which their influence and reputation were not adequate to carry into effect. The sacrifice demanded from private individuals was indeed too great, and the Spanish people had too little confidence in the virtue of their public men. Several of the members of the supreme junta were suspected not only of peculation but of downright treachery —of seizing the money of the people with one hand, and of selling the people and the country to Joseph Bonaparte with the other. In the course of the preceding year, besides the defeats which we have enumerated, the Spaniards had sustained several overthrows. General Reding had been defeated and killed in the battle of Valls, and Blake, who had succeeded to the command-in-chief of Catalonia, Valencia, and Arragon, having rashly marched to meet Suchet in the open field, had been defeated in two sanguinary affairs near Zaragoza and Belchite, and had lost all his artillery, most of his colours, and the greater part of his men. But the way in which the Spaniards had defended the old walls of Gerona gave better hopes; for, though that place had surrendered on the 10th of December, it had only yielded to famine after a six months' siege: though rent with three wide breaches, it had constantly repulsed its assailants, and had caused them a terrible loss; nor did those staunch Spaniards think they were starving until they had eaten up all their horses and mules.

Towards the close of 1809 Marshal Soult had been appointed chief of the staff and principal military adviser to King Joseph in the place of Jourdan, who was recalled to Paris. It was the fate of all these marshals to be dissatisfied with the service, and to cause great disappointment and dissatisfaction to their emperor, in whose bosom, however, these unpleasant feelings continued to be mitigated by the opportunity afforded him of saying, "I cannot be everywhere," and of showing to the French people how much their glory and success depended upon him personally. Soult, however, commenced operations with vigour and with a unity of plan. Taking with him King Joseph, who could scarcely have been safe without him, the ablest of the French marshals marched upon the Sierra Morena with the determination of crossing those mountains and subduing Andalusia, together with all that country of the south which had not yet been touched by the French arms. The folly of Areizagas, and the dolorous rout of Ocaña, had left no army to defend the passes; without the least obstruction Soult poured his columns through the ravines of the Sierra, and on the 21st of January established his head-quarters at Baylen, the scene of Dupont's surrender. Soult's object was to reach the sea-coast with a division of his army and seize the strong city of Cadiz before it could be put in a state of defence, and before the Duque d'Albuquerque should be able to reach it with the fragments of a Spanish army he was collecting. Moving, therefore, rapidly from Baylen, Soult with one corps advanced upon Seville, sending two other corps in the direction of Malaga and Granada. The supreme junta had announced their intention of retiring from Seville to Cadiz on the first rumour that the French were approaching the Sierra Morena; and, before Soult had reached Baylen, their authority and political existence was no more. The citizens of Seville, thinking they were abandoned and betrayed, rose in tumult and deposed the supreme junta. The members of the junta had then fled to Cadiz, in the hope that there people would still recognise their authority and submit the fate of the country to their guidance; but the citizens of Cadiz rose in an insurrection more fierce than that of the citizens of Seville, and, finding that their very lives were threatened, the members of the junta formally resigned. But before this public act they named a temporary regency, to which they transferred their authority, stipulating that it should be retained only till the Cortes, or representation of the whole nation, could be assembled.

As usual with them, the fugitive Spanish generals and the wandering junta seem to have taken no thought of what they were leaving behind them, provided only it was not coined money. As the French advanced from town to town, they found and collected large quantities of ordnance and military stores, which had come principally from England, and which any people but the Spaniards would have removed. The citizens of Seville had talked highly about defending their fine old town; but the city was too vast to be converted into a fortress, no preparations had been made, the assistance of British troops had been refused by the late junta, and so Soult entered Seville not only without opposition but in a kind of triumph.

SEVILLE.

For some time the head-quarters and the court of King Joseph were established in Seville.* But Marshal Victor was hurried on to Cadiz to make sure of that most important city. In rapid marching even the French troops were not equal to the Spaniards. The Duque d'Albuquerque, though he had a long way to come, and though he was embarrassed by some absurd orders which the supreme junta at Seville had issued before it ceased to exist, got with 8000 or 10,000 men to the Isla or Isle of Leon and the city of Cadiz before Victor, and when that marshal drew near he found the approaches guarded and the fortifications manned. Albuquerque had marched 260 English miles in an astonishing short space of time. If he had arrived four-and-twenty hours later than he did, Cadiz must have been lost; and if the duque had followed the absurd or treacherous instructions of the Seville junta, instead of coming to the Isla de Leon, he would have gone towards Cordova to have sustained a certain defeat, without the possibility of being of any use. But the danger at Cadiz was not yet over; and Albuquerque himself confessed that, if Victor had ventured to make a spirited attack on his first arrival, he must have succeeded, and that nothing but British assistance could enable the Spaniards to hold out. Before this close approach of danger offers of English aid and advice, which had been tendered by Lord Wellington in the preceding autumn, and which had been repeated since, had been proudly if not insolently rejected at Cadiz as well as at Seville; but now pride and jealousy gave way to fear, and the Cadiz junta not only consented to receive British troops, but implored that they might be sent with all speed: nay, more than this, they even consented to receive a Portuguese regiment for the service at Cadiz, which the Portuguese regency had offered to send at the instigation of Lord Wellington.* By the 5th of February, only two days after Albuquerque's arrival at Cadiz, Major-General the Honourable W. Stewart was instructed by orders from Torres Vedras to embark in the Tagus with two companies of artillery lately arrived from England, with the 79th and 94th regiments, and the 2nd battalion of the 87th, to proceed instantly to Cadiz, and there to land and co-operate in the defence of the place by every means in his power. And within four days more (though every man seemed required for the defence of Portugal) Wellington embarked the 20th Portuguese regiment for the same destination. The arrival of these British and Portuguese troops

* It was from Seville that a proclamation, signed some days before by Joseph Bonaparte, was issued to the Spanish people. It affected to consider that the contest had never been dubious and was now decided. It called upon the Spaniards to submit to their inevitable destiny; and it repeated the menace which Napoleon had used, by reminding them that it was the interest of France to preserve the integrity and independence of Spain; but that, if Spain would still remain an enemy, France must seek to weaken, dismember, and destroy her.

* Our commander-in-chief in Portugal had clearly foreseen all that would happen in Spain; that the Sierra Morena passes would not be defended; that the French would soon be in possession of Seville, and of the arsenals, magazines, and manufactures of arms which had been established there; that no Spanish army could give the enemy any opposition; and that, for the preservation of Cadiz, a prompt and strenuous effort must be made by us.—*Colonel Gurwood, Wellington Dispatches.*

now gave the greatest satisfaction to the junta and people of Cadiz. Other British forces, together with a fragment of the Spanish army which had escaped from the field of Ocaña, were brought down from Gibraltar, and other small corps were brought in from various places; so that it was calculated that there were 18,000 Spanish troops for the defence of Cadiz and the Isla de Leon, besides the volunteers of the town and the British and Portuguese troops. The number of British alone soon amounted to 6000 men; and Lieutenant-General Graham, one of the bravest and best of our officers, was sent out from England to take the command of them. The new junta—more docile than junta had ever been before—also consented to give the direction of the Spanish fleet to Admiral Purvis, who brought in his own squadron to co-operate in the defence. The Spanish ships of the line were twenty in number: some of them were not rigged, many of them were almost falling to pieces for want of repair; but a little patching made them available for floating but fixed batteries, and for other useful purposes; and the British admiral moored them all across the harbour. Both Soult and Joseph came down to the coast; and, by the 15th of February, the French army, which occupied the neighbouring country from Rota to Chiclana, was estimated at 25,000 men. The siege or blockade of Cadiz lasted more than thirty months, or from the 5th of February, 1810, to the 12th of August, 1812, when it was finally raised in consequence of the successive advantages gained by Wellington. In strictness of language it could neither be called a siege nor a blockade; for, though they cast peculiar guns and mortars for the purpose, the French were kept at such a distance that they could scarcely throw a shell or shot into the place; and, as for a blockade, they could not so much as cut off all its communications by land, while the communications by sea were kept constantly open by the English fleet, so that all needful supplies of provisions, reinforcements, &c. were carried in from England, from the coast of Barbary, from Gibraltar, and from other places on the Spanish coast. It was rather an observation than a siege or a blockade; but it gave constant occupation to French forces varying from 25,000 to 15,000 men, and it led to no inconsiderable loss, in detail; for the guerillas, who were fast increasing in numbers and in boldness, paid the French lines many visits, and frequently cut off and cut to pieces their detachments and convoys.

The two other *corps d'armée* which Soult had sent to the south-eastern coast encountered but few obstacles. Nearly the whole of Andalusia was overrun. Sebastiani entered Granada without resistance, and carried the old Moorish town of Alaha by storm. Between that place and Malaga he had to encounter bands of armed peasants, headed by priests and monks, but he cut his way through them; and the populous and pleasant town of Malaga threw open its gates. The place pleased the French so much that there they seemed determined to stop; but, as the insurrection spread to the mountains on the borders of Murcia, and as Blake was again collecting an army in that quarter, Sebastiani, in the month of April, entered that province, and, after a number of petty actions, obliged the Spaniards to retreat down to the eastern coast and take shelter within the walls of Alicant. But in all the mountains which traverse or hem in the great country of Andalusia the entire population was in arms, causing constant trouble and frequent loss. To subdue this insurrection, and to keep open the communication between the corps of Victor at Cadiz and that of Sebastiani at Malaga, a body of 6000 French had been left at Ronda, a romantic old hill town, situated among cork woods, and in the midst of the lofty mountains called the Sierra de Ronda. To surprise these French a detachment of Spanish troops, commanded by General Lacey, moved rapidly from Algeciras, in the Bay of Gibraltar, into the interior of the country, and, by taking bye roads across mountains and forests, they came so suddenly upon the French at Ronda that they gained a victory without the trouble of fighting for it. The French fled panic-stricken and in the greatest disorder, leaving nearly all their arms and ammunition, which were distributed among the mountaineers. The arrival of fresh forces from Seville, from Cadiz, and from Malaga (from which three places Ronda is about equidistant), compelled these hardy insurgents to withdraw to their fastnesses; but this was only for a season.

In Catalonia, O'Donnell, the best of the Spanish generals, kept up a more regular system of warfare against the French, being assisted by the nature of the ground, which was interspersed with numerous strong positions, and dotted by a good many fortresses, and also by the English squadron along the coast, and by the organisation and daring spirit of the Catalonian militia, known by the name of Somatenes and Miguelets. In several of their enterprises, O'Donnell completely foiled Marshals Suchet, Augereau, and Macdonald; and, though often forced to retreat from the more open part of the country, his Catalans kept their ground in the mountains, and continued to inflict terrible losses on the invaders.

But all eyes were now fixed upon Portugal, and upon the British army there, for it was known that the great effort of the campaign on the part of the French would be made in that direction. The peace with Austria had enabled Bonaparte to send large reinforcements from Germany into Spain. During the winter Junot and Drouet had crossed the Pyrenees with two fresh corps; they were followed by a part of the imperial guards, and it was rumoured that the emperor himself was coming. By the beginning of the month of April, Ney, Kellermann, and Loison, with about 60,000 men, were in Old Castile and Leon, threatening the Portuguese frontier in that direction; and, as a prelude, they had besieged and taken Astorga, and had made their preparations for the siege of Ciudad

Rodrigo. At the same time General Regnier was on the borders of Spanish Estremadura with about 12,000 men, menacing the frontier of Portugal on that side. Bonaparte, in the honeymoon of his marriage with the imperial Austrian, did not come, but he sent Marshal Massena, Prince of Essling, to take the command of the army in Old Castile and Leon, which now assumed the name of "the Army of Portugal." Massena had obtained the name of the darling child of Victory; Massena, from his earliest essays as a commander in the Maritime Alps and the Apennines, had been accustomed to mountain warfare; Massena, though with an evident injustice to Soult, was considered the greatest general and strategist next to Bonaparte himself; so, assuredly, with superior forces, Massena could not fail in executing his emperor's commission, which was simply this—to drive the English leopards and the sepoy general into the sea. Massena himself had no doubt as to his success, for on quitting Paris he had said that he only required three months to replace the eagles of the emperor on the walls of Lisbon. He arrived at Valladolid about the middle of May, and assumed the command not only over the corps of Ney, Kellermann, and Loison, but also over those of Junot and Drouet. Without counting large detachments and garrisons left in the provinces of Valladolid, Santander, and Leon, Massena had thus 90,000 men under arms for the field; but the corps of Drouet, about 18,000 strong, did not take part in the campaign in Portugal until it was somewhat advanced; and Regnier was left in Estremadura for some time longer with his 10,000 or 12,000 men. It was therefore with a force of from 60,000 to 62,000 men that Massena first put himself in motion to meet Lord Wellington. His lordship, who had been but stintingly reinforced during the winter, and who had been obliged to send troops to Cadiz, had about 24,000 British troops, and from 28,000 to 30,000 Portuguese regulars. There was, moreover, a considerable Portuguese militia, employed mostly in the garrisons and in the provinces beyond the Douro, in Alemtejo and Algarve—in short, on the wings of his lordship's regular army. But, while Massena could concentrate his whole force for the attack on Portugal north of the Tagus, Wellington was obliged to leave part of his force in the provinces south of that river to guard against any sudden movement of Soult's army of Andalusia, which, being more than 60,000 strong, might very possibly be induced to send a strong detachment into Alemtejo, where General Hill with 12,000 men was already observed by Regnier, with a force nearly if not quite equal to his own. Scarcely one-half of Hill's troops were British. Massena's army was mostly composed of old soldiers flushed with recent success and in a high state of training. Lord Wellington could only confidently rely upon the British part of his forces, for the Portuguese regulars were as yet untried, and the militia was not at all to be trusted in the open field. Great pains had, however, been taken by Marshal Beresford with the Portuguese regulars; many of the officers of those troops were English, and Lord Wellington had brigaded several of the regiments with British regiments, judging rightly that, being mixed with English corps, they would feel a greater confidence in their first trial, and a nobler emulation afterwards.* These Portuguese regulars gloriously justified the confidence placed in them. Early in June, Massena commenced operations in earnest by investing Ciudad Rodrigo, which was defended by a Spanish garrison, but which was almost within sight of the British advanced division posted on the Azava. The Spaniards defended themselves bravely till the 10th of July, when, a practicable breach being made, the French entered the place by capitulation. Bonaparte's Moniteur taunted Wellington for having permitted the siege to proceed, in sight of his outposts, without making an attempt to relieve the place; and the reproach was repeated, not only by many Spaniards, but also by some of Wellington's own officers. But his lordship knew his business better than to play into the hands of the French by any rash or false movement. He could not risk his small army for the relief of Ciudad Rodrigo; his object and his paramount duty was to defend Portugal, and above all Lisbon. This he had pledged himself to do, and he knew he could do it. He had not promised the Spanish governor that he would attempt to relieve him by risking the safety of Portugal. He had offered, indeed, to unite the whole British army for the relief of Ciudad Rodrigo, by making General Hill's corps cross the Tagus, if the Marques de la Romana, who had collected some forces in Estremadura, would undertake to maintain himself there against Regnier; but the marques, in several interviews which he had with his lordship during the siege, declared point blank that he could not maintain himself in Estremadura, or in any way cover that frontier of Portugal, if General Hill should cross the Tagus.* He departed not a hair's breadth from his plan: he calmly retained his position on the left bank of the Coa, having his light division advanced a little beyond that river. As the corps of Marshal Ney came thundering on after the fall of Ciudad Rodrigo, it came in contact with our light division, which was commanded by Ge-

* Dispatch to Lord Liverpool, in Colonel Gurwood, Wellington Dispatches.—The French, who were greatly enraged at being detained more than a month before Ciudad Rodrigo, a place hardly to be ranked in the third order of fortresses—a place commanded from many points, and destitute of any bomb-proofs—with their ordinary delicacy accused Lord Wellington, in their Moniteur, of lying and deception, and of having deceived Herraste, the Spanish general, with hopes of relief. His lordship's calm and dignified reply is contained in the above dispatch to Lord Liverpool. Bonaparte's generals, moreover, had adopted the principle that every town that had no hope of relief from without was bound to surrender immediately, and not to impede the march of a great army. "It is a very convenient doctrine for the French," says his lordship, "that a fortified place which is attacked by them, and has no hope of relief from an army in the field, ought to surrender without making any defence; but the contrary doctrine is the only one by which they can be effectually opposed. The inhabitants of every town in a state of siege must suffer considerably, but their remaining in it during the period of siege is a matter of choice, and in the case of Ciudad Rodrigo, in particular, was not a matter of necessity; and it would be quite a new principle in war, and a most advantageous one for the French, that every town threatened with a siege, of which the inhabitants might feel the inconvenience, and for which there could be no hope of relief by an army in the field, ought to surrender without making any defence."

Ciudad Rodrigo.

neral Craufurd, a very brave and an able man, but somewhat hot-headed and self-willed. Instead of falling in quietly and easily, as he had been ordered to do, Craufurd, eager for fame, halted repeatedly, and disputed the ground against a much superior force: he finished by effecting his retreat in a masterly manner by a bridge across the Coa, by repulsing the French in their attempt to follow him, and by costing Ney 1000 men in killed and wounded. But Craufurd himself suffered considerable loss, and Wellington could ill bear any useless reduction of his small British force. This fighting, however, gave Massena a specimen of the resistance he was likely to encounter in his march to Lisbon, and it delayed for a day or two some of the enemy's operations.*

Massena, upon crossing the frontiers of Portugal after the reduction of Ciudad Rodrigo, issued a flaming proclamation to the Portuguese, abusing the English as the cause of all mischief and discord, and attributing the presence of Wellington's army in Portugal to "the insatiable ambition of England;" as if "the presence of French armies in Spain and Portugal bore evidence of the total want of ambition on the part of France."* The proclamation ended by recommending the Portuguese people to remain perfectly quiet, and receive the French soldiers as friends, in which case they should find protection for their persons and property. But the conduct of Massena's army had already been vindictive, unprincipled, monstrous. Lord Wellington issued a counter-proclamation, in which he said, "The time which has elapsed during which the enemy have remained upon the frontiers of Portugal has fortunately afforded the Portuguese nation experience of what they are to expect from the French. The people had remained in some villages, trusting to the enemy's promises, and vainly believing that, by treating the enemies of their country in a friendly manner, they should conciliate their forbearance; that their properties would be respected, that their women would be saved from violation, and that their lives would be spared. Vain hopes! The people of these devoted villages have suffered every evil which a cruel enemy could inflict. Their property has been plundered, their houses and furniture have been burnt, their women have been ravished, and the unfortunate inhabitants, whose age or sex did not tempt the brutal violence of the soldiers, have fallen the victims of the imprudent confidence they reposed in promises which were only made to be violated. The Portuguese now see that they have no remedy for the evil with which they are threat-

* The enemy afterwards made three efforts to storm the bridge over the Coa, in all of which they were repulsed by Craufurd and his light division.—*Wellington Dispatches.*

"There can be no doubt that in this skirmish the British troops fully supported their character for gallantry and coolness; but it was to be regretted that the action had taken place at all. It was not our wisdom to waste our strength in partial encounters, particularly when these must be followed by a retrograde movement.....Yet was Craufurd an officer of singular ability and bravery, and certainly one of the best of the army, as all his proceedings showed. But I doubt if he was strictly within his orders; and certainly considerable dissatisfaction was felt at head-quarters when the report of the affair came in."—*Marquess of Londonderry, Memoir of the Peninsular War.*

* A. Vieusseux, Military Life of the Duke of Wellington.

ened but determined resistance. Resistance, and the determination to render the enemy's advance into their country as difficult as possible, by removing out of his way everything that is valuable, or that can contribute to his existence, or frustrate his progress, are the only and certain remedies for the evils with which they are threatened. The army under my command will protect as large a proportion of the country as will be in their power; but it is obvious that the people can save themselves only by resistance to the enemy, and their properties only by removing them. The duty, however, which I owe to his royal highness the Prince Regent, and to the Portuguese nation, will oblige me to use the power and authority in my hands *to force* the weak and the indolent to make an exertion to save themselves from the danger which awaits them, and to save their country; and I hereby declare that all the magistrates or persons in authority who remain in the towns or villages after receiving orders from any of the military officers to retire from them, and all persons of whatever description who hold any communication with the enemy, and aid and assist them in any manner, will be considered traitors to the state, and shall be tried and punished accordingly." *

Marshal Massena found he could not move quite so rapidly as he had calculated on doing. He had given himself only three months to achieve the conquest of Portugal and drive Lord Wellington into the sea; but he passed nearly one whole month in inactivity on the line of the Coa. In the interval General Regnier quitted Spanish Estremadura, crossed the Tagus with his whole corps, and established himself at Coria and Plasencia; and General Hill, making a corresponding movement, had also crossed the Tagus to take post at Atalaya, from whence he could either be joined to Lord Wellington's army or could be thrown again in front of General Regnier.* At last, on the 15th of August, the French broke ground before Almeida. This ancient but strongly fortified city, situated in the province of Beira, between the rivers Coa and Turones, at the distance of less than 30 miles from Ciudad Rodrigo, was defended by a good Portuguese garrison, commanded by an English officer, Colonel Cox, who was prepared for a determined resistance. Lord Wellington brought his army nearer, so as to be able to strike a blow if the enemy should afford an opportunity, and at all events to oblige Massena to keep his corps in a more collected state during the siege, which would render his operations the more difficult on account of the want of subsistence. The French opened their fire on the 26th of August, and on the night of the 27th, in consequence of the accidental explosion of a magazine which contained nearly all the ammunition, and by which a large part of the town and defences were destroyed, the governor was obliged to capitulate. Some treachery was suspected; but it appears more probable that the awful explosion arose from one of those accidents which no one can foresee, and to which all military actions are more or less liable. There was, however, a good deal of treachery afterwards; the Portuguese major commanding the artillery, who was the person employed by Cox to settle the capitulation, went out and informed the French of the exact state in which the explosion had left Al-

* Proclamation to the people of Portugal, dated 4th August, 1810, in Gurwood, Wellington Dispatches: new edition, 1838.

* Dispatches. "General Hill had for some time been altering his quarters, in conformity to the changeable habits of the enemy. Wherever General Regnier appeared, the British general was in his front. This became a measure, with reference to the invasion of the country, of positive importance; although it was ultimately proved that no idea of entering the Portuguese territory on more than one line was ever contemplated by the French generals."—*Colonel Leith Hay, Narrative of the Peninsular War.*

ALMEIDA

meida, and never returned! Massena made the traitor a colonel! Moreover, the whole of the 24th Portuguese regiment, with the exception of its major and of its English officers, went at once into the French service!* Lord Wellington was greatly disappointed, for he reckoned on the place detaining Massena till the rainy season set in. He seemed, however, provided for everything; and, strange to say, his famed opponent let nearly three weeks elapse after the reduction of Almeida before he seriously moved forward. This strange delay nearly brought on the rainy season, which the English general wanted, as the swelling rivers and streams, and the increasing badness of the roads, must greatly retard the march of the French columns.†

Lord Wellington fell back with the main body of his army to the valley of the Mondego, and fixed his head-quarters at Gouvea. No French corps advanced to supply the place of Regnier in Estremadura, so that the English, having all their enemies concentrating in their front, or along the frontier between the Douro and the Tagus, had nothing to fear from any other quarter. On the 15th of September the great French army began its march down the valley of the Mondego, by the right bank of the river, in the direction of Coimbra, through Viseu. Here the vaunted Massena seems to have committed another mistake. "There are certainly," said Wellington, "many bad roads in Portugal, but the enemy has taken decidedly the worst in the whole kingdom." His lordship, who had retired by the left bank of the Mondego, and by a better road, now crossed the river, and took up a strong position in front of Coimbra. He had already called up from Atalaya and the south the corps of Hill and Leith, and those generals were marching rapidly to the Mondego and to the position appointed for them on "grim Busaco's iron ridge." Some troops were left on the left bank of the river to secure the high road to Lisbon on that side; but, with this exception, Lord Wellington's whole army, as well Portuguese as English, were collected, by the 24th, upon the Serra de Busaco, a lofty mountain-ridge extending from the Mondego to the northward. Altogether the ridge extended nearly eight miles, forming the segment of a circle, whose extreme points embraced the enemy's position. The faces of the mountain towards the French were very steep, and, in some places, quite precipitous. The Serra was traversed by three roads leading to Coimbra; but good care was taken to defend these and several gorges and defiles, which, though not regular roads, at times afforded passage to shepherds and their flocks, and smugglers with their mules. To convey some idea of the great extent of the position at Busaco, it has been stated that after 50,000 men had been placed upon it, a space of nearly two miles intervened from the left of General Leith's corps to the right of the third division, which stood next in line. At the loftiest summit of the ragged mountain, about two miles from its northern extremity, there was a lonely convent of Carmelites, and there Lord Wellington fixed his head-quarters. The 26th of September was a beautiful day, with bright sunshine. From the heights of Busaco, which command a very extensive prospect over the low country to the eastward, all the movements of Massena's army of Portugal were distinctly visible, at first by the aid of glasses, and then to the naked eye: it was impossible to conceal them from the observation of our troops stationed all along the Serra; nor did the enemy seem to aim at any concealment. One of the animated spectators on the height says—"Rising grounds were covered with troops, cannon, or equipages: the widely extended country seemed to contain a host moving forward, or gradually condensing into numerous masses, checked in their progress by the grand natural barrier on which we were placed, at the base of which it became necessary to pause. In imposing appearances as to numerical strength, I have never seen anything comparable to that of the enemy's army from Busaco: it was not alone an army encamped before us, but a multitude—cavalry, infantry, artillery, cars of the country, horses, tribes of mules with their attendants, suttlers, followers of every description, formed the moving scene upon which Lord Wellington and his army looked down."* The evening of the 26th closed upon the allies finally arranged in position on Busaco; and, after dark, the whole country at the foot of the mountains, and far away in their front, was illuminated by the fires of the French army. As early as two o'clock in the morning of the 27th, our silent and motionless army could distinctly hear the stir of preparation in the French camp. In the grey of the morning those immense columns were seen in motion, with our piquets and some of our light troops retiring before them. It is said that Marshal Ney, on arriving at the base of the Serra de Busaco, had been strongly impressed with an opinion of the unattackable nature of the ground which Wellington had chosen, but that Massena, scorning Ney's advice, determined, after reconnoitring, to try the strength of Busaco. Massena had hoped to cross the Serra and penetrate to Coimbra before Wellington could collect an army strong enough to oppose his march; and even

* "It is said," says Wellington, "that their object is to have an opportunity of deserting from it, which is well enough for the private soldiers, but is highly disgraceful to the character of the officers."—*Dispatches.*

† It should appear that, while Wellington was prepared for everything, Massena was prepared for nothing. The French had undertaken the last siege necessary to be undertaken before advancing upon Lisbon, and treachery or a most fortunate accident had thrown Almeida into the power of Massena a month before he had any right to expect that advantage. "But," says a military writer, "what is the utility of fortunate accident, in a military point of view, unless immediate advantage can be taken? It has always appeared to me the most brilliant feature in this campaign of Lord Wellington, and one presenting a remarkable contrast in the maturity of arrangement of two distinguished men:—a very formidable army threatened the country which the British general was destined to defend: it reduced one fortress and laid siege to another, where, contrary to all human calculation, accident occasioned the fall. The consequence was, that, Lord Wellington being prepared for all contingencies, the premature reduction of Almeida did not essentially annoy him, while his antagonist was unprepared promptly to follow up the advantage naturally arising from the circumstance."—*Colonel Leith Hay.*

COIMBRA.

now, though he saw clearly enough that the English general was determined to risk the experiment of a battle, he deceived himself as to the amount of his forces; for some corps of the allies were concealed by the nature of the ground, and a Portuguese reserve and some English regiments had been halted out of sight on the reverse of the Serra or on the face of the hill which slopes down towards Coimbra. Besides, Massena saw that a part of Wellington's front line was composed of Portuguese troops, that entire Portuguese regiments were mixed with the British; and he, and all the French under him, despised the Portuguese troops as much as they did the Spanish, not knowing the almost magical effects which had been produced in the course of a very few months by General Beresford's drilling and training, and little calculating on the noble emulation which the allies and fellow-combatants of the unflinching British infantry were about to display.* At about six o'clock in the morning of the 27th, as the mist and the grey clouds were rolling away, the French made two desperate simultaneous attacks in great force, the one on the right and the other on the left of Wellington's position, on the highest part of the Serra. The column which attacked our right was preceded by a cloud of tirailleurs, which out-numbered the light infantry of General Picton, and forced them to retire: some of the tirailleurs gained possession of the highest rocks, and appeared to their comrades below to have got upon the flank of Wellington's right: the attacking column followed rapidly and resolutely; a good part of it reached the top of the ridge, and was in the act of deploying when it was attacked in the most gallant manner by a part of Picton's division, consisting of the 88th regiment, under the command of Lieutenant-Colonel Wallace, the 45th under the command of Lieutenant-Colonel the Hon. R. Meade, and the 8th Portuguese regiment under the command of Lieutenant-Colonel Douglas, the whole being directed by Major-General Picton. These three regiments advanced with the bayonet, and drove the enemy's division from the advantageous ground which they had gained. The Portuguese, charging in line with the British, emulated their prowess, and met with the best encouragement that could possibly attend such a first essay; for the whole work was done in a very few minutes, and the enemy were bayoneted on the ridge, or broken and hurled down the steep, to a dense mass which Massena had collected there to support and follow up their attack, but which now moved not forward, but backward. Another French division, attacking still farther to the right, without being

* It should appear, however, that the Emperor of the French had not been taught sufficient caution by Wellington's victory over fearful odds at Talavera, and that Massena was urged on to fight by his impatient master. In an intercepted letter to Massena, Bonaparte was found reminding that marshal of his great superiority of force, of his 12,000 cavalry, and of his immense train of artillery. "It would be ridiculous," he said, "to suppose that 25,000 English can balance 60,000 French, if the latter do not trifle, but fall on boldly, and after having well observed where the blow may be struck." Bonaparte counted the Portuguese troops for nothing, or put them on the same level as the Spaniards; but Massena, and other marshals too, to their great cost, very soon discovered the mistake. *For the intercepted letter see Colonel Napier's History of the Peninsular War.* "The discipline of the Portuguese army," observes a British officer, "was daily improving. The uncommon exertions of Marshal Beresford, and the British officers under him, were rewarded by the praises of all who witnessed the miraculous change in the appearance, movement, and general conduct of the soldiers committed to their charge. The old, incorrigible, indolent, and useless Portuguese officers were placed on the retired list, and their commissions were given to young men, full of zeal, willing to learn, and able to discharge the active duties required of them."—*Recollections of the Peninsula.*

aware that Lord Wellington's lines extended so far, or that General Leith's corps was there, was brought to a halt by the unexpected appearance of the head of a British column before it could reach the plateau or the summit of the hill, and was attacked in a trice by Colonel Barnes's brigade of General Leith's corps, composed of the royals, the 9th, and the 38th regiments. The 9th, commanded by Colonel Cameron, being the leading battalion of our column, when about a hundred yards distant from the French, wheeled suddenly into line, and fired a volley, the effect of which was terrific and decisive. The ground was covered with dead and dying, not new levies or mercenaries, or half-hearted contingents from foreign dependent states, but men who belonged to the *élite* of the French army. This destructive fire being followed up by an immediate charge, this division gave way and broke, and rushed or rolled down the hill side as their comrades had done. On the same space of ground seldom has been seen such a destruction as overtook this French division. Both these divisions which made the attack upon our right belonged to the corps of General Regnier, who had witnessed on the plains of Maida what British bayonets could do, and who seemed destined to be particularly unfortunate whenever he met our troops. The attack on Wellington's left was made with General Loison's division of Marshal Ney's corps and with one brigade of the division of Marchand; this attacking column being supported, as the other had been, by a mass of troops formed at the base of the Serra, and prepared to move forward at a moment's notice. It was not a whit more fortunate than General Regnier's force, and it scarcely fought so well. It was confronted exclusively by the British light division under General Craufurd and General Pack's brigade of Portuguese. One division of infantry alone made any progress to the top of the hill, and, being immediately charged with bayonets by General Craufurd with the 43rd, 52nd, and 95th British, and the 3rd Portuguese Caçadores, it was broken and driven down with immense loss. General Coleman's brigade of Portuguese, which had been kept in reserve, was moved up to the right of Craufurd's division, and made a brilliant and successful charge upon some French, who had not reached so elevated a spot, but who were trying to gain the ridge. These men too were driven down with terrible destruction. Some of the Portuguese, charging into a thick mass, got so wedged in among the French that they had not room to use their bayonets; so, imitating the example which had been set by English soldiers, they turned up the butt ends of their muskets and plied them with such vigour as soon to clear the way. The little artillery that was used in the action was nearly all Portuguese, and it was exceedingly well served. For some time the troops at the base of the Serra kept within a short distance, as if intending to renew the attack; but Massena had had enough of that iron ridge, and the rest of the day passed in loose skirmishes between the light troops of the two armies, the British and Portuguese descending the hills to meet their foes. In the words of Lord Wellington himself, who in these matters measured every word he said or wrote, the loss sustained by the enemy in his attacks on the heights was *enormous*: 2000 were left killed upon the field of battle (killed chiefly by the bayonet), and from 3000 to 4000 were wounded. Three generals of division were among the wounded; one general was killed; one general was taken prisoner, together with a few hundred men and officers. The loss of the allied army did not exceed 1300, of which number 578 were Portuguese—a very convincing proof that the men whom Lord Beresford had trained had gone well into action. "This movement," says Wellington, "has brought the Portuguese levies into action with the enemy for the first time in an advantageous situation, and they have proved that the trouble which has been taken with them has not been thrown away, and that they are worthy of contending in the same ranks with British troops in this interesting cause, which they afford the best hopes of saving."*

* Colonel Gurwood, Wellington Dispatches.—Southey, in Edinburgh Annual Register, and Hist. of the Peninsular War.—Colonel Leith Hay, Narrative.—Major Moyle Sherer, Military Memoirs of the Duke of Wellington.—H. B. Robinson, Memoirs of Lieutenant-General Sir Thomas Picton.—This last named work, though it contains some nonsense, and some ridiculous half-concealed attempts to elevate Picton by the depression of the Duke of Wellington, gives some interesting anecdotes, and some very characteristic letters written on the spur of the moment by that very brave, but somewhat too hot-headed, Welshman, Picton. A few days after the battle, in writing to his friend Colonel Pleydel, General Picton says—"Our army is healthy, well equipped in every respect, and *regularly supplied with provisions*." This denotes an improvement in our commissariat. And in the dispatch of the commander-in-chief, from which we have last quoted in our text, there is an admission of the same kind. Through this improvement, and the skilful way in which their strength had been husbanded for trying and critical moments, the troops had been enabled to do their very best in the battle of Busaco. "Throughout the contest on the Serra," says his lordship, "and in all the previous marches, and those we have since made, the whole army have conducted themselves in the most regular manner. Accordingly all the operations have been carried on with ease; the soldiers have suffered no privations, have undergone no unnecessary fatigue, there has been no loss of stores, and the army is in the highest spirits." Lord Wellington acknowledges his particular obligations to the adjutant and quarter-master-generals; but the excellent result must have been in good part owing to those fundamental improvements in the commissariat department, the necessity of which he had been so long urging on government.

Before the campaign of this year began, some excellent regulations with regard to this service were issued from the War-office. They fixed the gradations of rank as follows,—

1. Commissary-General.
2. Deputy-Commissary-General.
3. Assistant-Commissary-General.
4. Deputy-Assistant-Commissary-General.
5. Clerk.

They ordered that no clerk should be eligible to promotion until he had served at least one year; that no deputy-assistant-commissary-general should be eligible unless he had had at least four years' service as deputy, or five years dating from his first entering as a clerk; that no assistant-commissary-general should be promoted unless he had had five years' service in that grade, or ten years' service counting from the time he became a clerk; and that no deputy commissary-general should be promoted to the highest grade of all until he had served three years as deputy. Thus a commissary-general would have, *in mintmo*, an experience of at least ..13 years.

A deputy-commissary-general.....10
An assistant-commissary-general ..... 5
A deputy-assistant-commissary-general ..... 1

*Government Gazette*, 19*th March*, 1810.

In this way, service, experience, and good conduct were made the essentials, and an end was put to rapid, indiscriminate, and, in many cases, shameful promotions. An evil practice had long obtained of crowding the commissariat department with a set of boys; but an end was put to this also by the present regulations. Altogether this was a great step in the right direction. Some abuses lingered, and perfection was not to be obtained without time and practice; but we believe it is admitted that from the spring of 1810 the British commissariat began to improve rapidly. The commander-in-chief repeatedly expresses his warm approbation of the activity, zeal, ability, and general merit of Mr. (afterwards Sir Robert) Kennedy, who was at this time commissary-general to his army.

Another object which Lord Wellington had in view, in fighting the battle of Busaco, was to give time to the people of the country in his rear to comply with the proclamation he had issued, and to remove out of the way of the enemy with their goods and provisions. It was especially important to gain this time for the inhabitants of Coimbra, a populous and wealthy town, which Massena would have entered on the 26th but for the force united on the Serra de Busaco. Unfortunately the proclamation, and the specific orders given, were in many instances ill obeyed. This rendered necessary a recourse to compulsive measures, the British general being determined that his proclamation should not be a dead letter, and feeling that the present sufferings, however great, of a portion of the community were not to be put in comparison with the future welfare and triumph of the whole Portuguese nation. If an absolute want of forage and provisions should fall upon the French, together with a want of lodging and accommodation, at the very time that the rainy season was beginning, their progress must be impeded, their losses augmented, and their stay in the country much shortened. With the intention of providing, by means of English stores, provisions, and money, for the emigrating population behind the lines he had chosen near Lisbon, Wellington would have left all the country as bare to Massena as were the summits of the Serras or jagged mountains. He knew that, on starting from Almeida, the French marshal had given his people bread and biscuit for fifteen days, ordering every man to carry his own stock; but he also knew that the impatient French soldiers, wearied by this great additional weight, had thrown the greater portion away, preferring to trust to chance and plunder, to the cattle they were driving with them, and to the vegetables they might pick up. And, since Massena had begun his march, his soldiers had received meat only, and that was growing very scarce.

On the 28th, the day after the battle, Massena moved a large body of infantry and cavalry from the left of his centre to the rear, and Wellington saw his cavalry marching over the mountains by another road towards Oporto. This road, by the pass of Boyalva to the north of Busaco, completely turned the position of the allies on that iron ridge: the pass had been open before, and Massena might have taken it, but that presumptuous man had preferred risking that engagement which had ended in such terrible loss. The British general now directed Colonel Trant to occupy that pass with his Portuguese division; but a Portuguese general commanding in the north had previously ordered the division to march elsewhere; and, unluckily, when Trant took it upon himself to obey his lordship's orders rather than those of the general, he lost his way in seeking a short road, and arrived too late to arrest the march of the French, who descended into the plains that lie open to the sea-coast, and seized on the road leading from Oporto to Coimbra in the rear of the British. But Massena had only made the march which Wellington expected he would make. The British general had no intention of remaining where he was: his place of strength, his chosen, inexpugnable position, in which Portugal was to be saved, was not in the Serra de Busaco or on the Mondego, but much nearer Lisbon, and thither a good road remained open to him. By the 29th the whole allied army was already in the low country, between the Serra de Busaco and the sea; and on the 30th it was collected on the left bank of the Mondego, and began its retreat towards the Tagus and the capital. On the 1st of October the British rearguard, after some skirmishing with an advanced guard of the French, evacuated Coimbra, accompanied by all the remaining inhabitants, who ought to have removed three or four days (at least) before, and who now ran away with whatever movables they could carry, with the sick, the aged, and the children thrown on carts, mules, and asses, not knowing whither they were going, and incumbering the road to the British rear; while the French were pressing close upon them, and even hovering on the flank. "It was a piteous sight, and one which those who saw it can never forget," adds an officer who had fought at Busaco, and who was now in the rear of our retreating army.* It was like the uprooting and sweeping away of the population of whole provinces, with their flocks and their herds, their household goods and gods, and everything that was theirs: it was a scene such as Europe might have presented at the first irruption of the Huns: it was a scene to make good men curse the restless ambition which had led to it and made it necessary. "I feel," says another eye-witness, "that no powers of description can convey to the mind of any reader the afflicting scenes, the cheerless desolation, we daily witnessed on our march from the Mondego to the lines. Wherever we moved, the mandate which enjoined the wretched inhabitants to forsake their homes, and to remove or destroy their little property, had gone before us. The villages were deserted; the churches, retreats so often (yet so vainly) confided in, were empty; the mountain cottages stood open and untenanted; the mills in the valley, but yesterday so busy, were motionless and silent! . . . . The flanks of our line of march from this place (Thomar) were literally covered with the flying population of the country. In Portugal there are, at no time, many facilities for travelling, and these few the exigencies of the army had very greatly diminished. Rich, indeed, were those in good fortune, as in possession, who still retained a cabriolet, and mules for its service. Those who had bullock-cars, asses, or any mode of transporting their families and property, looked contented and grateful; for respectable men and delicate women, of the second class, might on every side be seen walking slowly and painfully on foot, encumbered by heavy burdens of clothes, bedding,

* A. Vieusseux.

and food."*—"The column of march of the allies," says another officer, "presented an extraordinary scene, the varieties of which it is impossible minutely to describe; but, when it is explained that the route was absolutely and continuously covered during its whole extent, some idea may be formed as to its unusual aspect. It was not alone troops of all arms, attended by the incumbrances and followers of an army; it was not peasantry, removing with their families; it was not the higher orders of society, travelling conformably to their rank; it was not the furniture, grain, cattle of an extensive line of country, passing from one station to another,—but it was all these combined, pressing forward in one varied, confused, apparently interminable mass."† It is to be remarked, however, that, great as might have been the sufferings of this forced emigration, the people must have suffered infinitely more if they had remained in their homes during the French advance and the infernal retreat which followed it. And better had it been for the general cause in the Peninsula if Lord Wellington's proclamation had been in all instances more strictly obeyed. His lordship had given a good deal of time for preparation, having issued his proclamation as far back as the 4th of August, or nearly two months before he commenced his retreat from Coimbra: in advancing from that city, in crossing the Mondego and taking up his position on the barrier of Busaco, his only intentions were to gain time, to try the Portuguese levies, and to show the enemy what stuff the allied army was made of: he never thought of remaining more than a few days at that advanced position, which could not defend Lisbon; and the Portuguese *inhabitants* in his rear were repeatedly warned to remove with their substance. When the French entered the forsaken city of Coimbra, they discovered ample stores of provisions; but, fortunately for the allies, and fatally to themselves, the soldiery pillaged and wasted these stores instead of husbanding them for the future necessities of the army.‡

When the intelligence of these movements reached England, that party which had always represented the glorious struggle as hopeless said that Wellington had gained another victory only to commence another retreat; that it was one of the wildest flights of human presumption to think of defending a country like Portugal, against the vast and victorious armies of Bonaparte, with 25,000 British troops and 30,000 native soldiers; that the predictions of Napoleon, verified everywhere else, must be realised in this particular case,—that the British, or such of them as should escape the ignominy of a capitulation, must be driven back to their ships, *leaving nothing* to England, *after all* the sacrifices of money and of life she had made, but humiliation and disgrace, and an increase of debility which must render her so much the less able to contend with the enemy for her own existence as a nation. But no such raven croaked over the tent of the great commander. The plan of defence which he had formed and matured was still unbroken and entire, and so were his own hopes. He was never so confident as he was a day or two after he began his retreat from Coimbra. Writing to the admiral in the Tagus, he says, "I have very little doubt of being able to hold this country against the force which has now attacked it. There will be a breeze near Lisbon, but I know that we shall have the best of it." And writing to his brother Henry, now ambassador in Spain, he says, "We shall make our retreat to the positions in front of Lisbon without much difficulty, or any loss. *My opinion is, that the French are in a scrape.* They are not a sufficient army for their purpose, particularly since their late loss and that the Portuguese army have behaved *so well*; and they will find their retreat from this country a most difficult and dangerous operation."* In fact, both the British and Portuguese effected their retreat with the greatest ease and regularity; General Hill, with his division on the right, moved by Thomar and Santarem; the centre of the army moving by Leiria and Rio Mayor, and the left by Alcobaça and Obidos. Massena followed in one immense column by the centre or Rio Mayor road, his advanced guard occasionally skirmishing with our gallant light division. On the 7th of October the French van caught sight of the chain of hills, behind which, at the distance of twenty-four miles, lay the city of Lisbon. And now up, Lines of Torres Vedras, and show the lion in the middle path!†

But those lines were already up; and every thing was prepared to keep the French at bay,

"As famish'd wolves survey a guarded fold." ‡

We have mentioned the first conception of this grand defensive scheme, which had more or less occupied the mind of Wellington ever since the campaign of 1808. It had been indispensable to conceal the great project, and to mystify the French as to its existence; and this had been done with astonishing address. Even when most actively engaged in directing the construction of the works, Wellington had the art to make not only the enemy, but also the people of the country, believe that he intended nothing serious there; and it is said that, in order to keep up the illusion, he sometimes spoke of the plan, even to officers of his own army and

* Recollections of the Peninsula.—"The French army found the city of Coimbra, as it had previously done Vizeu, perfectly deserted; the houses closed against them; the inhabitants wandering over the face of the country, or crowding the roads leading to Lisbon. This emigration, produced in great measure by the instructions of Lord Wellington, was of incalculable inconvenience to an invading army, moving without magazines, consequently depending for subsistence on the countries through which it advanced. Instead of beholding a large population, subjected to intimidation and reluctant discovery of the stores in their possession, the bare walls of the houses alone remained; while the depositaries of grain, or provisions of any description, fell but unfrequently and accidentally into its power."—*Leith Hay.*

† Colonel Leith Hay, Narrative.

‡ On moving from Coimbra, Massena left 5000 sick and wounded in that city. Three days after his departure, Colonel Trant, with a part of his rapid Portuguese division, entered the town and captured the whole of the French hospitals, together with some *marines* of the Imperial Guard, who had been left there to protect the sick.

‡ Id. id.

about his own person, as a thing which had flitted through his head, but which had been abandoned. And, even when Massena received better information, he remained in the belief that the works thrown up were little more than field-works, which might easily be turned or overpowered by his own batteries, and that so extensive a line was not defensible by such a force as the British general commanded, but must have several weak points, at some one or two of which, a concentrated, sustained attack, costing perhaps a few thousands in killed and wounded, must eventually succeed. For a complete notion of the lines of Torres Vedras the reader must consult military and scientific books, and Wellington's own dispatches. We can only offer an outline sketch.

The peninsula or promontory, at whose south-eastern extremity Lisbon is situated, is crossed, rather obliquely, by two serras, or chains of mountains, which extend, with various altitudes and various degrees of steepness, but with partial interruptions or openings, from the shore of the Atlantic to the right bank of the Tagus. These two serras run nearly parallel with each other, at a distance of from six to eight miles; the point of the line nearest to Lisbon being close to the Tagus, between Via Longa and Quintilla. Through the passes in these serras, and the low ground bordering the Tagus, four roads, from the interior of the country, lead to the capital. The hand of nature had marked out these two lines of defence, and British science and engineering had been employed for a whole year in strengthening them, and in blocking up the openings which seemed the most accessible. Here redoubts were erected; here the whole face of a mountain was scarped and hewn into the appearance of the facet of some Titanic fortress; here the threads of mountain rivulets (which would be something more than rivulets at the end of October and in November) were collected and brought together into one bed; and here rivers, tributaries of the great Tagus, were dammed up, or were provided with dams which could be used, and with floodgates which could be shut, so as to inundate the country at the foot of the hills on the approach of the invader. The line of defence was everywhere double, while in some parts there was a treble range of batteries and redoubts. The first line, which was twenty-nine English miles in length, began at Alhendra on the Tagus, crossed the valley of Aruda (rather a weak point), and passed along the skirts of Monte Agraça, where there was a large and strong redoubt: it then ran across the valley of Zibreira, skirted the deep ravine of Ruda, to the heights of Torres Vedras, and thence followed the course of the little river Zizandre to its mouth on the Atlantic. The second or inner line, at a distance varying from six to eight, and in some points to ten miles, extended from Quintilla on the Tagus, by Bucellas, Monte Chique, and Mafra, to the mouth of the little river S. Lourenço on the sea-coast, a distance of about twenty-four miles. This was by far the stronger line of the two, both by nature and by art, and, if the first line were forced by any enemy, the retreat of the army upon the second was secure at all times.* Both these lines were secured by breast-works, abattis, and stone walls with banquettes and scarps. Not an opening nor interstice, through which a mountain goat could pass, but was blocked up or guarded. Down the hollows in which the roads ran were pointed the black muzzles of numerous guns, projecting from batteries which could maintain a fire in front and a crossing fire from the flanks. And, to provide for every occurrence, to make sure of a safe and easy passage to our ships of war in the Tagus, there was in the rear of the second line a shorter, closer line, to protect the embarcation of our troops. This innermost line of all was strong enough to check even a brave enemy had there been no other lines before it; it rested at one extremity on a tremendous redoubt, and at the other on the broad ditch and lofty walls of the castle of S. Julian. About 100 redoubts or forts, containing altogether more than 600 pieces of artillery, were scattered along these lines.†

In fortifying such lines as these of Torres Vedras, for the support of a large army in the field, the ordinary practice is to construct batteries and other *points d'appui*, which shall present as imposing a front as may be to the attacking force, but shall be open and defenceless in the rear, and thus useless if once turned. But in the present instance the redoubts thrown up were not of this ordinary nature; they were not so much field-works as regular castles, many of which were capable of containing several hundreds of men, while there was one that required a garrison of 3000. Equally strong in the rear, flanks, and front, these castle-like redoubts were built as if each had been intended to stand a siege of six weeks at the most moderate computation; and they were so placed that they were all, to a certain extent at least, independent of those near them, and well sheltered from the fire of their neighbours, if those neighbours should fall into the hands of the enemy. Supposing the front line to be forced, the forts were still there to interrupt the enemy's communications and cut off their supplies; and our retiring columns had only to march a few miles to the rear, in order to assume ground even more defensible than that which they had abandoned.‡ It was erroneously supposed by some that the regular army, in the event of an attack, would occupy these redoubts, and be wholly engaged and shut up in the works. Nothing was

* It is said that the *front line*, on which the allied army was placed, and on which it had a complete triumph, was at first intended rather as a line of isolated posts, or as a sort of outwork to retard the advance of the French and cool their impetuosity, than as the permanent position; but that, through the long delay of Massena in opening the campaign in Portugal, and in advancing from Almeida, time had been given to the English engineers to render this first line so formidable as to induce Lord Wellington to make his stand upon it.

The highest praise was due, and was given to these engineer officers, whose labours were directed at first by Colonel Fletcher, and afterwards by Captain J. T. Jones, both of the Royal Engineers.

† Dispatches.—A. Vieusseux, Military Life of the Duke of Wellington.—Colonel Leith Hay, Narrative.—Major Sherer, Memoirs of the Life of the Duke of Wellington.—Southey, in Edinburgh Annual Register, and Hist. of Peninsular War.

‡ Marquess of Londonderry, Memoir of the War in the Peninsula.

farther from Lord Wellington's mind: his design was to garrison these strong posts with his artillery, and the militia and least disciplined regiments of the Portuguese, whilst he kept the whole of the British army and the *élite* of the Portuguese free and unencumbered, to be employed as circumstances might require. By this arrangement he secured to himself the double advantage of a movable army and a fortified place. While the immovable part of the force, the artillery, the militia, &c., held the castle-like redoubts, the whole allied regular army, numerous, brilliant in equipment, high in spirit, confident in their great commander, would move, free as the wind, in every direction, to cover the summits of mountains, to descend into valleys, or to rush against any luckless French column that, with diminished numbers, might perchance force a passage through the batteries and redoubts, and the almost impenetrable obstacles of this grand position.

Within the foremost of these lines Lord Wellington and the allied army entered on the 8th of October, leaving the French van behind them in the plain. As soon as the army arrived, and each division took up its assigned quarters, the defences, which were strong enough before, were made still stronger, as if the great leader were determined to take a bond of fate. The powerful British fleet in the Tagus and a flotilla of gun-boats were made to flank the whole of the right of the position; a fine body of English marines occupied the line of embarcation, and Portuguese militia and artillery manned the castle of S. Julian and the forts on the Tagus, and, in conjunction with the respectable armed citizens who had formed volunteer corps, garrisoned Lisbon, into which our ships of war and transports threw everything that was needful. Telegraphs were erected along the two lines, to communicate information from one extremity of the lines to the other and to every part of the position; and these signal-stations were properly put in charge of experienced seamen from the fleet. To complete the barriers, pallisades, platforms, and planked bridges leading into the works, 50,000 trees were placed at the disposal of the engineer department. There was no lack of hands to do the necessary work; 3000 artillerymen and officers of the country were on the spot; 7000 Portuguese peasantry were employed as labourers; and the British engineers, artillerymen, and artificers (the latter recently imported or increased in numbers), were aided by our foot soldiers, who found great excitement and amusement in the occupation. From Torres Vedras to Lisbon the whole country was as busy as bees in the honey season;—it was covered, or constantly traversed, like an anthill in an autumnal evening. Every day, every hour, the whole position, and particularly the first line, was gaining strength from all this unremitting labour. The roads leading up to the position were destroyed; and, as Wellington had gained the inestimable advantage of bringing the French down as the rainy season was setting in, they found an inundated country and a swamp to give them damp welcome.* Within the front line there was made a good broad road to afford easy passage to our troops to every part of that line; and other roads, between the first and the second line, and between the second and the line of embarcation, were either repaired or made, to facilitate communication, to admit the passage of artillery, or to shorten the distance by which the troops had to move for the purposes of concentration or resistance. And again, in case of an almost impossible reverse, all the roads and stone bridges between the outer line and the line of embarcation were undermined. A finer field for manœuvring than that which lay behind the ridge of Torres Vedras could scarcely be desired or conceived.†

The French van halted at Sobral for three or four days, waiting for the arrival of the main body and rear, whose march was impeded by the tremendous rains. This interval was employed by the allies in the manner above narrated. When Massena came up on the 11th he appears to have been taken by surprise at the sight of Wellington's lines; and he employed some days in reconnoitring them from one extremity to the other. He made some demonstrations in order to make the British divisions show out their force. On the 14th there was a little fighting between the town of Sobral and the lines, in which the French were defeated by the English bayonet. They also showed themselves in some force near Villa Franca on the right of the line and close to the Tagus; and here the French general St. Croix was killed by the fire of the English gun-boats. After this no demonstration of any consequence was made. Not a single attempt was ever made to assail any of the works, or to penetrate the outer line in any part of its long range. Those scarped rocks, and those eminences bristling with cannon, smote the heart of Massena with despair; and, by this time, Wellington had united behind that foremost line a force numerically equal to his own. Some reinforcements had arrived from England and from Gibraltar, and the Marques de la Romana had been induced to come from Estremadura and join the allies with a Spanish division 5000 strong. Though, perhaps, indifferent in other respects, these Spaniards might be depended upon behind stone walls and parapets. Lord Wellington counted his British troops, infantry, cavalry, and artillery, at 29,000, and the whole of the regular force of which he could dispose at 58,615. He estimated that Massena had had not less than 70,000 men at the battle of Busaco, but that he

* The weather kept fine until the very day on which Wellington arrived at Torres Vedras. In a dispatch to the Earl of Liverpool, dated 13th October, he says, "On the 8th the rain commenced which usually falls at this season of the year in Portugal, and has continued with great violence ever since. This has probably increased the enemy's difficulties, and delayed his progress."

† "I cannot proceed further without desiring to draw the attention of my brother soldiers in a particular manner, not only to the subject (Torres Vedras) of which I am now speaking, but to the whole plan of this campaign, because I am sure that a British army never took part in one better adapted to instruct it in the art of manœuvring on a great scale, nor, consequently, so well calculated to make efficient officers of those who shared in it, or are disposed to take the trouble of studying it as it deserves."—*Marquess of Londonderry.*

had already lost by war, by disease, and want about 15,000! But 6000 or 7000 of the French army that remained were cavalry, an arm in which the English general continued to be very deficient. Renouncing for the present all hopes of planting the eagles on the towers of Lisbon, Massena put the 2nd and 8th corps partly into the villages and partly in bivouacs in front of the right and centre of the British position, leaving the 6th corps at Otta in his rear. He established his depôt and hospitals in the town of Santarem, and endeavoured to form magazines there. For this last purpose he sent movable columns to scour the country in search of provisions, for he had brought nothing of the sort with him. All this part of the country had been pretty well stripped by the inhabitants, who had either retired to the mountains or within the lines of Torres Vedras; but the French plundered or destroyed what was left, so that for many leagues in Massena's rear the country was reduced to a desert. Nor was this all the woe in that quarter: Colonel Trant, who had carried off the French sick and wounded from Coimbra, was joined by the Portuguese militia under Sir Robert Wilson and Colonel Millar, and all these forces glided in between the army of Massena and the Spanish frontier, cutting off all his communications, and doing other mischief. Trant and Wilson even came down to attack or menace the strong French rear at Otta, obliging Massena to move back a whole division from his front to keep them in check. Towards the end of October, when the privations and the sickness of his army were on the increase, he threw 2000 men across the Zezere to re-open a communication with Spain by way of Castello Branco; and he sent General Foy with a strong escort to find or fight his way as best he could to Ciudad Rodrigo, whence the general was to repair with all speed to Paris, to acquaint the emperor with the real situation of affairs in Portugal. On the 15th of November Massena began a retrograde movement, for the purpose of withdrawing his army from the low wet grounds in front of Torres Vedras and placing it in cantonments for the winter. He established the 2nd or Regnier's corps in and near Santarem in a very strong position; the 8th corps he put into Pernes, the 6th corps farther back into Thomar, and he fixed his head-quarters at Torres Novas. These positions were not to be assailed with impunity; but before the French could reach them they were molested by the British light division and cavalry, who took some prisoners. Lord Wellington, leaving part of the allied army in the lines, moved forward the remainder towards the Rio Mayor, which separated him from the French position at Santarem; and, having placed Hill's division on the bank of the Tagus opposite to Santarem, his lordship fixed his head-quarters at Cartaxo. If his proclamation had been properly obeyed, Massena must have been starved out of the country before the beginning of December. But the Portuguese inhabitants between the Tagus and the Zezere had remained in fancied security, and the French found considerable supplies in Santarem, Pernes, Torres Novas, Golegao, and other towns. Thus provisions were obtained, by the usual processes of force and intimidation, at least for a part of the winter. And, what was worse for the allies, a number of boats had been carelessly or treacherously left at Santarem, to enable the French to cross the Tagus whenever they liked, and to act on

CASTELLO BRANCO.

the flanks of Wellington's army.* The Portuguese regency were far from possessing that authority which an executive government ought to possess; and in activity and ability they seem to have been still more deficient. The business of government requires an apprenticeship as well as all others; these new untried men were very greedy for the popularity which they hoped would prolong their power; and, as Lord Wellington observed, they would not aid in any measure, however beneficial to the real interests of the country, which might be unpopular with the mob of Lisbon.† Instead of strenuously enforcing the proclamation, they had agreed with the unwilling inhabitants in many parts of the country that the measures it prescribed were very distressing, and ruinous and unnecessary; and they had endeavoured to throw all the odium of the proclamation upon his lordship. When Massena's movable columns began to ravage the countries east of the mountains and between the mountains of the Tagus and Zezere, the people felt the folly of the regency and their own lamentable error; but then it was too late. It has been said by one of his companions in arms, that it is not going too far to affirm that a British commander has seldom, if ever, stood in a predicament more harassing and more unsatisfactory than that occupied by Lord Wellington during this campaign of 1810; and that probably not a single individual in the British service could have carried himself through the difficulties arising out of it, except the man who struggled with and overcame them.‡ The Bishop (now patriarch) of Oporto and Principal Souza, who had given so much trouble to Sir Hew Dalrymple during his brief command, and who had now voices potential in the regency (the patriarch being president), had been carrying on an irritating correspondence all through the summer, pretending to know better than the able British general how to manage the war, and constantly interfering with his authority, although, by a decree of the prince regent of Portugal sent over from Brazil, his lordship had been appointed commander-in-chief and marshal-general of the Portuguese army.§ "They give me more trouble in writing letters upon their nonsense," says his lordship, "and make me lose more time than can be conceived. I am responsible, and they are not, for the success of our operations." The fact was that the regency, after the appointment of Principal Souza to be a member of it, conceived that the war could be maintained upon the Portuguese frontier, where Massena might be kept at bay, contrary to the opinion of Wellington and every military officer in the country; and, instead of giving positive orders preparatory to the retreat of the allied army to Torres Vedras, they wasted much valuable time in discussing with his lordship the expediency of adopting another plan of defence—a plan which must have driven their sapient excellencies out of Lisbon, and have left that capital open to Massena. After the sudden fall of their fortress of Almeida, the regency betrayed such a degree of ill-humour as made it seem as if they believed that that fortress alone could have stopped the French, and that Lord Wellington had set fire to the powder-magazine, which blew its works into the air. On the 7th of September, or twenty days before he fought the battle of Busaco, Wellington wrote in firm and indignant language to the British minister at Lisbon, desiring him to put an end at once to these miserable intrigues by informing the members of the regency that he would not stay in the country, and that he would advise the British government to withdraw their assistance, if they interfered in any manner with the operations of his army, or with the appointments Marshal Beresford might choose to make for his own staff. He bade Mr. Stuart remind those gentlemen of the original arrangement and agreement which gave to himself and Beresford the exclusive management of the two armies, and to warn them once more of the dangers which must result from the regency's refusing or delaying to adopt the civil and political arrangements recommended by him, and corresponding with the military operations he was carrying on. His lordship drew a comparison between this ignorant and impatient regency and the central junta of Spain, which had hurried army after army into battle, only to be beaten and sacrificed. He spoke of the Portuguese militia as only fit for the kind of service on which he was employing it; he declared that as yet it was only a part of the regular Portuguese army which could be trusted in the field against French veterans, and that he was the best judge of the qualities and capabilities of the troops under his command. But the fighting patriarch and his sword-bearer, Souza, would neither confess their own ignorance, nor renounce their own plans; and when the retreat from the Mondego commenced they wrote and talked more wordy nonsense. On the 6th of October, when the allied forces were close upon the inexpugnable lines, the creation of which saved Lisbon, Wellington again addressed the British minister, who had the right of sitting in the council of regency. "You will do me the favour," said his lordship, "to inform the regency, and above all, the Principal Souza, that, his British majesty and the prince regent having intrusted me

* His lordship had been repeatedly annoyed by similar acts of remissness or treachery; but at this provocation he spoke out. He threw the principal blame where it was merited—upon the Portuguese regency. To Mr. Charles Stuart (afterwards Lord Stuart de Rothesay), who was residing at Lisbon as our ambassador to that shuffling *pro tempore* government, he poured out his complaints and reproaches, well knowing that Stuart would not mince matters with the gentlemen of the regency. "If," wrote his lordship, "the French can feed in the country, they will stay till they will be reinforced. . . . . The French could not have staid if the provisions had been removed . . . All our military arrangements are useless if they can find subsistence on the ground which they occupy . . . . Then the boats are left at Santarem in order to give the enemy an opportunity of acting upon our flanks. They could not have staid a week if the provisions had been carried off . . . . For aught I know to the contrary, they may be able to maintain their position till the whole French army is brought to their assistance. It is heart-breaking to contemplate the chance of failure from such obstinacy and folly."—*Dispatches.*

† Letter to Charles Stuart, Esq. in Dispatches.

‡ Marquess of Londonderry.

§ Lord Wellington had also been appointed a member of the regency in Portugal, in conjunction with Mr. Charles Stuart, our minister at Lisbon; but this last appointment did not take place till the month of August.

with the command of their armies, and likewise with the conduct of the military operations, I will not suffer them, or anybody else, to interfere with them; that I know best where to station my troops, and where to make a stand against the enemy; and I shall not alter a system formed upon mature consideration upon any suggestion of theirs. I am responsible for what I do, and they are not. I recommend them to look to the measures for which they are responsible, and which I long ago recommended to them, viz., to provide for the tranquillity of Lisbon, and for the food of the army, and of the people, while the troops shall be engaged with the enemy. As for Principal Souza, I beg you to tell him, from me, that I have had no satisfaction in transacting the business of this country since he has been a member of the government; that, being embarked in a course of military operations, of which I hope to see the successful termination, I shall continue to carry them on to their end; but that no power upon earth shall induce me to remain in the Peninsula, for one moment, after I shall have obtained his majesty's leave to resign my charge, if Principal Souza is to remain either a member of the government, or to continue at Lisbon. Either he must quit the country or I shall; and, if I should be obliged to go, I will take care that the world, in Portugal at least, and the prince regent, shall be made acquainted with my reasons.* . . . . . I have but little doubt of success; but, as I have fought a sufficient number of battles to discover that the result of any one is not certain, even under the best arrangements, I am anxious that the government should adopt preparatory arrangements to take out of the enemy's way those persons and their families who would suffer if they were to fall into his hands." Souza was not only a presumptuous, meddling, headstrong blockhead, but a corrupt and rapacious man. On the 30th of November, from his head-quarters at Cartaxo, Wellington addressed a frank, manly letter to the prince regent of Portugal, on the other side of the Atlantic, showing the imperious necessity of turning Principal Souza out of the government. The Council of Regency at Lisbon consented to dismiss or suspend the obnoxious Principal; but he would submit neither to suspension nor dismissal. He appealed to the distant prince regent, and, until his answer should arrive, betook himself to the getting up of a regular anti-English party, which greatly injured the confidence which the government reposed in the British army and its great leader.

At the same time the Portuguese troops and militia left in the lines of Torres Vedras were so badly supplied by their government that the regular soldiers began to desert, and the militiamen to run to their homes, whole regiments at once, in order to escape starvation. Thus starving their own troops, it was hardly to be expected that the regency would provide for Romana and his Spaniards. Wellington, who could not see them perish, was obliged to provide out of his own stores for these 5000 famishing men, as also for another equally hungry and naked Spanish corps of 1200 men, which had now been brought into Portugal by Don Carlos de España. Such were a few of the difficulties which surrounded the British general. He had, however, saved the capital, and reduced the enemy to inactivity. All the north of Portugal was free from the French, as was also the whole of the kingdom south of the Tagus. The fine rich country round Lisbon was untouched. The opulent city of Oporto was as safe as Lisbon; Coimbra, Abrantes, all the large towns were in the possession of the allies, as were also all the fortresses of the country, with the single exception of Almeida. Massena was absolutely master of nothing except of the ground on which the divisions of his army stood: he was hemmed in between the northern bank of the Tagus, the Rio Mayor, and the Estrella mountains, having Wellington in his front, the Portuguese militia in his rear, and his communications with Spain and France intercepted.* "It is impossible," said Lord Wellington, early in November, "to describe the pecuniary and other distresses of the French armies in the Peninsula. All the troops are months in arrears of pay; they are, in general, very badly clothed; they want horses, carriages, and equipments of every description; their troops subsist solely upon plunder, whether acquired individually, or more regularly by the way of requisition and contribution: they receive no money, or scarcely any, from France; and they realise but little from their pecuniary contributions in Spain. Indeed, I have lately discovered that the expense of the pay and the hospitals alone of the French army in the Peninsula amounts to more than the sum stated in the financial *exposé* as the whole expense of the entire French army."† At the end of the campaign the British army was in a finer condition than ever it had been in; its discipline was greatly improved, and so was its

* "All I ask from the Portuguese regency," said Wellington, "is tranquillity in the town of Lisbon, and provisions *for their own troops*." It appears that the regency did not send sufficient provisions; that the English commissariat were obliged to furnish the Portuguese troops and militia; and that, instead of maintaining tranquillity in the town of Lisbon, some of the members of that government excited disturbances. "From the letter of the 3rd instant, which I have received from Dom Miguel Forjaz," adds his lordship, "I had hoped that the government were satisfied with what I had done and intended to do; and that, instead of endeavouring to render all further defence fruitless, by disturbing the minds of the populace at Lisbon, they would have done their duty by adopting measures to secure the tranquillity of the town. *But I suppose that, like other weak individuals, they add duplicity to their weakness; and that their expressions of approbation, and even gratitude, were intended to convey censure.*" His lordship desired Mr. Stuart to communicate the whole of this stinging letter to the Portuguese regency, and then transmit it to the British government.

* These communications must have been very completely intercepted, for Massena wrote only two dispatches to Paris, and they were both seized and carried to Lord Wellington. Later, a Portuguese traitor, a Captain Mascarenhas, who had taken service under the French, and had become aide-de-camp to Junot, was intercepted and seized as he was travelling towards the frontier of Spain, disguised as a Spanish peasant. The dispatches found about his person were carried not to Lord Wellington, but to the regency at Lisbon. They were said to contain an earnest request from Massena that the Emperor Napoleon would be graciously pleased to reinforce his army of Portugal with 40,000 men!

This Mascarenhas was hanged by the regency, but not until nearly a year after his capture.

† Letter to the Earl of Liverpool, in Dispatches.—This last discovery will show the faith to be put in the annual *Compte rendu*, or financial *exposé*, presented by Bonaparte and his ministers.

health, the effective strength in proportion to its total numbers being remarkably high. There was, in fact, no sickness in the army of any importance; above half of those returned as sick were convalescent, and were only waiting in the salubrious atmosphere of Belem to gain strength to bear the fatigues of marching and of their duty in the field.*

The rash and the uninformed, or the unfriendly, in England as well as in Portugal, asked why, under such circumstances, Lord Wellington did not attack Massena and annihilate his army in a grand battle? There were several reasons why his lordship should not make any such rash attempt. The allied army under his command was the only organised body existing anywhere in the Peninsula which could keep the field against the enemy, and, should it be shattered, Spain, as well as Portugal, would remain a *rase campagne* to the French. He had only 30,000 British troops, and in the open field he could depend only upon about 20,000 of the regular Portuguese. Massena, after every loss and deduction, had still 55,000 veteran troops, and the positions which the folly of the regency and of the people had allowed him to take up and maintain on the heights of Santarem, Pernes, Torres Novas, &c., were almost as strong as those which Wellington would have left close behind him at Torres Vedras. He knew the difficulty and the enormous expense of recruiting the English part of his forces; and he had some reason to apprehend that, in the event of any signal disaster, the British government might be forced to withdraw the army altogether from the Peninsula. The ministry was in a very insecure unfixed state, weakened by the retirement of Canning and Castlereagh, by the unfortunate result of the Walcheren expedition, and, in some degree, by the Burdett riots: the king was now in that state which must render the appointment of the Prince of Wales as regent inevitable and lasting, and the Whig party had expectations of returning to office and power. Wellington had not received from home all the support that he and the cause deserved; but from a new Whig ministry he would have still less to expect. Any great reverse would have made him lose the confidence of the Portuguese troops, who, no more than the great body of people, partook in any of the unfriendly feelings entertained towards him by Souza and the Patriarch. If he had not enjoyed more confidence from the soldiery and the people than from the council of regency, the cause must have been lost. Any considerable defeat or loss would discourage the new Portuguese regiments that were in training, and lead to desertion: he could not trust the newer levies, and it was incumbent on him to be very careful of the better part of that native army. Immense advantages, too, must arise from keeping all his army in its present high state of health, and this could hardly be done by keeping it in the field through that terrible rainy season and the coming winter. No attempt could be made to manœuvre upon the enemy's flank or rear; first, because the enemy showed they were indifferent about their flanks or rear, or (since they had found provisions) their communications; and, secondly, because the inevitable consequence of attempting such a manœuvre would be to open some one or other of the roads to Lisbon and to our shipping, of which Massena would be sure to take immediate advantage. "Therefore," said his lordship, "we must carry their strong positions in front and by main force, and consequently with loss; and, in the course of the operations, I must draw my army out of their cantonments; I must expose the troops and horses to the inclemencies of the weather at this season of the year, and must look to all the consequences of that measure in increased sickness of the men and in loss of efficiency and condition in horses. . . . . We should still stand alone in the Peninsula as an army; and, if I should succeed in forcing Massena's positions, it would become a question whether I should be able to maintain my own, in case the enemy should march another army into this country. . . . . But every day's delay, at this season of the year, narrows our line of defence, and consequently strengthens it; and when the winter shall have set in, no number, however formidable, can venture to attack it; and the increase of the enemy's number at that period will only add to their distress, and increase the difficulties of their retreat."* From the middle of November the weather continued to be miserably bad; all the cross-roads were impassable for artillery and very difficult for infantry, and the rivulets were all swollen. This greatly distressed the French, who were obliged to scour the country in search of provisions; but, by spreading and deepening the inundations in front of Torres Vedras, it greatly strengthened that position. Wellington was more determined than ever to make no movement by which he should incur the risk of involving the army in a general action on ground less advantageous than that which he had fixed upon. "The enemy," he said, "can be relieved from the difficulties of their situation only by the occurrence of some misfortune to the allied army; and I should forward their views by placing the fate of the campaign on the result of a general action, on ground chosen by them instead of on that selected by me."†

The Spaniards had got together their cortes at Cadiz; but no immediate benefit had appeared to result from the convocation of that national assembly. To Wellington the cortes appeared to be suffering under the national disease in as great a degree as the other authorities; that is, it appeared that they were boasting of the strength and power of the Spanish nation, till they seriously convinced themselves they were in no danger, and then sitting

down quietly and indulging their national indolence.* They had brought no army into the field, they were depending for the very safety of Cadiz, the seat of their government, upon the British regiments we had sent thither; and, though ten months had passed since the appearance of Marshal Victor, they had neglected to prepare some of the works necessary for their defence, notwithstanding the remonstrances of General Graham and the British officers serving under him.†

It was on the 24th of September that the cortes commenced their proceedings with religious solemnities. The five individuals who had composed the supreme council of regency, to whom the central junta had remitted their authority in the month of February, resigned. The members of the cortes now assembled declared themselves legally constituted as a general and extraordinary cortes, wherein the national sovereignty resided. They acknowledged, proclaimed, and swore anew that Ferdinand VII. of Bourbon was their only lawful king; and declared null and void the cession of the crown which he was said to have made in favour of Napoleon Bonaparte, not only because of the violence and treachery which accompanied that illegal transaction, but principally because the consent of the nation was wanting. They authorised the five members of the council of regency to continue to exercise the executive power till they, the cortes, should appoint a government which they might deem more convenient. But they required the five members of the regency to acknowledge the national sovereignty of the cortes, and swear obedience to such laws and decrees as the cortes should think fit to promulgate; and they drew up a very stringent oath to be taken immediately by the said members of the regency. It was between ten and eleven at night when this decree was passed, and when the members of the regency were summoned to attend. Four of the regents entered the hall of the cortes about midnight and took the oath. But the fifth—the Bishop of Orense—did not come. The lateness of the hour and the infirm state of his health were assigned as the causes of his absence; but it was soon known that the prelate was withheld by stronger motives. He was not prepared to acknowledge the sovereignty of the people—an alarming doctrine to all churchmen—or to swear implicit obedience to a body which was as yet very incomplete, and to laws which were not yet made; and from this hour the Bishop of Orense ceased to act as one of the regency. On the following day, the 25th of September, the cortes decreed, as a consequence of their former decree of sovereignty, that the style in which the cortes was to be addressed should be that of majesty. Highness was to be the style of the executive power. They ordered, also, that the commanders-in-chief of armies, the captains-general of provinces, the archbishops and bishops, the tribunals, provincial juntas, and all other authorities, civil, military, and ecclesiastic, should take the oath of obedience to the cortes, in the same form as the regency.* By another edict they ordered that their installation should be officially made known through all the Spanish dominions, and everywhere celebrated with *Te Deums* and salvos of artillery; and that prayers should be offered up during three days, imploring the Divine blessing upon their councils. On the 26th they declared the regency to be responsible to the nation; but they had hardly decreed the separation of the executive and the legislative functions before they confounded them in their own practice. Several of the deputies of the cortes—the founders of the Spanish republican sect which has since exercised a great influence over the fate of that still unsettled and wretched country—had studied their politics and their general philosophy in the French school, and were supposed to be sufficiently inclined to follow the footsteps, both in matters of state and church policy, of the rash, incapable, and pedantic Girondists, who had ruined all the healthy hopes ever presented by the French revolution. These men had imbibed early prejudices against England and her constitution; and these prejudices did not wholly give way to the hatred of Bonaparte and of the present system of France. For the time this weak minority of republicans and materialists produced no great moral or political effect; but, contrary to the advice of the learned and wise Jovellanos, who had attentively studied the English constitution, the qualification of property in the deputies or members had been dispensed with, and the cortes, instead of sitting in two Houses like the British parliament, or voting as three separate states of nobility, clergy, and commons, like the ancient cortes of Spain, was all jumbled together in one single chamber, and voted altogether in one body, like the constituent assembly of France; and from this one capital blunder, which the Spaniards took as a precedent, and to which they clung with mad tenacity, in the revolution of 1820, have mainly proceeded that over-extension of democratic principle and power, and that anarchy, to which now there seems to be no end except in the reconstruction of the old absolute government, or in a military despotism. The *liberales* were not bold enough to promulgate the doctrine of religious liberty. The cortes, even as Joseph Bonaparte had done in his Statutes of

* Letter to the Right Hon. Henry Wellesley, our ambassador at Cadiz, dated 2nd December.

† Id. "I am afraid," says Wellington, "that the Spaniards will bring us all to shame yet. It is scandalous that in the third year of their war, and after having been more than a year in a state of tranquillity, and having sustained no loss of importance since the battle of Ocaña, they should now be depending upon us for the safety of Cadiz!" At this juncture he was obliged to order General Graham to retain at Cadiz the British troops that Sir John Stuart was sending down from Sicily to reinforce his own army in Portugal. His lordship even spoke of sending some more troops from Portugal to Cadiz.

* The oath ran thus—

"Do you swear to preserve the Holy Catholic Apostolic Romish religion in these realms, without admitting any other? Do you swear to preserve the Spanish nation in its integrity, and to omit no means for delivering it from its unjust oppressors? Do you swear to preserve to our beloved sovereign Ferdinand VII. all his dominions, and, in his failure, to his legitimate successors; and to make every possible exertion for releasing him from captivity, and placing him upon the throne? Do you swear to discharge faithfully and lawfully the trust which the nation reposes in you, observing the laws of Spain, but changing, modifying, and varying such as require to be altered for the general good?"

Bayonne, declared the Roman Catholic the religion of Spain to the exclusion of all others. They voted the liberty of the press (and frantic was the abuse soon made of it), but from this freedom the great subject of religion was excluded.* They passed a sort of law corresponding to our Habeas Corpus Act; but they showed that they themselves, as a governing power, would not be bound by its conditions. The four regents who had taken the oaths found, in less than a month, that the cortes, who held them responsible, interfered with all their measures, and that they could not in this manner carry on the government. They requested to be allowed to resign. Their resignation was accepted; but they were ordered to give in an account of their administration within two months, with a view to their impeachment and trial; and soon after the passing of this decree, the cortes, in a *secret sitting*, came to the resolution of ordering the members of the regency to retire from Cadiz, and fix their abodes in certain remote towns that were named to them. This was nothing less than the relegation process, the arbitrary measure of the old court.† These displaced members of the regency, in their first season of power, had behaved in much the same harsh and arbitrary manner towards the fallen members of the central junta; and thus every triumphant party in Spain trampled upon its defeated rival, losing sight of law or justice, and of the healing and holy influences of moderation. The cortes appointed a new regency, consisting of General Blake, Don Pedro Agar, a captain in the navy and director-general of the academies of the Royal Marine, and Don Gabriel Ciscar, governor of Carthagena. Blake and Ciscar being absent on their military duties, the Marques del Palacio, and Don Jose Maria Puig were appointed to act in their places till they should arrive. The marques entertained the same scruples as the Bishop of Orense. When asked by the cortes if he swore to obey their decrees, laws, and constitutions, he replied, Yes, but without prejudice to the many oaths of fidelity which he had taken to Ferdinand VII. Being called upon to explain this very natural and honourable restriction, the marques said that he was ready to take the oath in the form prescribed, provided those deputies who were versed in theological points would assure him that he might do it without injury to his conscience; that he was quite ready to acknowledge the sovereignty of the nation assembled in its cortes, and that what he meant was more and more to insure the purport of the oath itself, conformably to those which he had taken to Ferdinand. The cortes in a fury ordered the marques into custody; and he was forthwith thrown into a cold damp room, unfurnished and bare. After this arbitrary arrest, the cortes spent three days in debating what should be done with this conscientious nobleman, and who should be temporary regent instead of him. At last they agreed that he should remain a prisoner upon parole in the Isle of Leon; that he should be deprived of his post of captain-general of Aragon; and that the Marques del Castelbar should supply his place in the council of regency. Self-denying ordinances were passed as extravagant as those that were carried by acclamation in the French assembly, the members of cortes binding themselves, during the exercise of their functions, and for a year afterwards, not to solicit or accept for themselves, or for any other person whomsoever, any pension, favour, reward, honour, or distinction, from the executive power which now existed, or from any other government which might hereafter be appointed; and a rigorous law was passed to punish the deputy who solicited any place or employment for a kinsman within the fourth degree. With rather more wisdom, they decreed that a King of Spain could not marry, or alienate his property, or abdicate his throne, without the consent of the nation in cortes assembled: for at this time, according to official French accounts, Ferdinand was still hoping to be adopted by marriage into the family of Bonaparte. It was also reported that the emperor, seeing the hopelessness of crushing the Spaniards by force, was going to remove his brother Joseph and to restore Ferdinand to the throne, but so hampered and enthralled as to be a mere tool or puppet. In the same view, they decreed that all acts and treaties made by a King of Spain in a state of captivity should be null and void. They passed stupendous acts for the levying of new armies, and for their subsistence and equipment; but they could not carry these magnificent schemes into execution, and they scorned to attend to details and to minor operations which they might have effected. Even after they had been assembled for more than four months, Lord Wellington assured his government that the cortes had done nothing to raise, discipline, pay, or support an army; that the distresses of the Spanish forces were worse even than those of the Portuguese; that the army of the poor Marques de la Romana had not a shilling, excepting what he gave them, nor a magazine, nor any one thing to keep them together or enable them to act as a military body. Nearly all round the Bay of Cadiz, under the eyes of the cortes, French detachments were allowed to carry on operations without any interruption. This was also the case on a part of the Mediterranean coast, and particularly at Malaga, where the enemy had collected a number of privateers and gun-boats. As the Spaniards would do nothing, the Governor of Gibraltar risked a detachment in the direction of Malaga; but, unfortunately, he gave the conduct of it to a very incompetent officer, Lord Blayney.

* The 6th article of the Decree regulating the Liberty of the Press declared that all writings upon matters of religion should remain subject to the previous censure of the ecclesiastic ordinances, according to the decree of the Council of Trent. Mexia proposed that the liberty should be extended to religious works, but he was not supported; even Torrero, who had been one of the most strenuous advocates for political freedom of the press, opposed the extension of the principle. They who published upon religious subjects without the licence of the ordinary were declared subject to an arbitrary mulct, besides the punishment which the opinions of the work itself might call for.

† "The conduct of the cortes, in respect to the late regency, is shocking; and I much fear, from all that I see and hear, that, unless I can defeat the enemy, and hold my ground in this country, the whole game in Spain is at an end."—*Lord Wellington to the Rt. Hon. Henry Wellesley; Cartaxo, 31st December.*

This Hibernian peer contrived to run his neck into a noose, to mistake a strong party of French cavalry for Spaniards, and to get made prisoner with about 200 of his men. Major Grant and some 30 or 40 men were killed in the affair of Fiangerolla; but Lord Blayney, who appears to have felt very little grief or shame at his disaster, was carried into France, and to the English dépôt at Verdun, where he wrote, or collected the materials for, a book upon the excellence of French wines and French cooks.*

In other quarters of the world our military operations for the year were of some importance. Lord Minto, now Governor-general of India, sent a force of about 1700 Europeans and 2600 sepoys to reduce the Isle of Bourbon and the Isle of France in the Indian Ocean, which, to the great annoyance of our East India trade, had been left in the hands of the French. The whole expedition was put under the management of Lieutenant-colonel Keating, who, with a fleet of ships of war and transports, arrived early in July off the island of Bourbon. Dispositions were made for an attack on St. Denis, the principal town; but the garrison offered to capitulate; and in two or three days the town of St. Paul and the whole island quietly submitted. But the reduction of the larger island—the Mauritius, or Isle of France—was a work of much greater difficulty, and was not effected by Lord Minto's armament without further assistance. A body of troops, partly drawn from the Cape of Good Hope, commanded by Major-general John Abercrombie, and a fleet under Admiral Bertie, reached this great island in the month of November. On the 29th the troops effected a landing on a very difficult coast. The French skirmished until our artillery was landed, and preparations were made to attack the forts; but then—on the 3rd of December—they capitulated upon terms dictated to them. The garrison was to be sent to France; but the whole of the island, with a vast quantity of stores and produce, 5 large frigates and some smaller ships of war, 28 merchantmen, and 2 captured English East Indiamen, was surrendered. This island, by far the most valuable of the remaining French possessions to the eastward of the Cape of Good Hope, became a permanent British possession. Some frigates were afterwards dispatched to destroy the French factories and batteries on the coast of Madagascar, and to root them out from some other posts on those seas where they chiefly subsisted by privateering. By the opening of the year 1811 there was not left to France a ship on the Indian Ocean, or a strip of land in either of the Indies. Guadaloupe, the last island that remained to them in the West Indies, had surrendered as early as the month of February, 1810, to a combined force under General Sir G. Beckworth and Admiral Sir A. Cochrane. This island was one of the least unhealthy in that part of the world, and might, with proper attention, have been preserved without any great sacrifice of our troops.*

The Dutch lost in the beginning of the year their ancient East India settlement of Amboyna, with its dependent islands; and in the course of the summer they lost the whole island of Banda, the principal of the Spice Islands, which, together with its dependencies, was reduced by Captain Cole of the 'Carolina' frigate.

Early in the year Murat, or King Joachim, whose army had been reinforced, and who had succeeded, not in subduing, but in dispersing, the Calabrian insurgents after the retreat of Sir John Stuart from Ischia, united a great force at Scylla, Reggio, and on the hills which overlook the narrow straits of Messina, threatening Sicily with invasion. For four months the English troops in Messina were kept on the alert and amused by the animated spectacle presented by Murat's camp, whose parades and festivities were occasionally interrupted by the English and Sicilian gun-boat flotillas. On the 18th of September the French King of the Neapolitans embarked the principal body of his army in a long range of boats at Scylla and the Punta del Pizzo, to distract the attention of Sir John Stuart from Messina, by menacing the British left wing which was stationed at and beyond Faro point; and, while these demonstrations were making, General Cavaignac, embarking at Reggio with 3500 men, pushed boldly across the Strait to fall upon the British right. Our cruisers were absent, and the flotilla was not at its post. General Cavaignac effected a landing, at a spot about seven miles to the south of Messina, and threw forward a division which got possession of the heights behind the shore. He had great hopes of winning over the Corsican rangers that were in our service, and he brought over a fine embroidered standard, inscribed as a gift from King Joachim to these brave Corsicans, the subjects of France; and he had two battalions of native Corsicans with him, whose presence was expected to induce the rangers to desert and join them. The rest of the invading force was composed almost entirely of Neapolitans. As soon as Sir John Stuart was aware of this landing he began to reinforce his right; but before the arrival of these reinforcements Colonel G. Campbell had repulsed the enemy with the greatest facility, taking 800 men, a whole battalion of Corsicans, a French colonel and head of staff, a lieutenant-colonel, an aide-de-camp of the commander of this division, and 40 inferior officers. The whole of the troops that had advanced to the heights were either captured at once by Campbell's people, or were seized soon after or cut to pieces by the Sicilian peasantry. The rest in the retreat to their boats suffered severely, both from musquetry and from a fire of fort guns. One of their boats was sunk, and the soldiers in another deserted to the English or to their old king Ferdinand IV. They must all have run away like sheep, for the only injury sustained by

* Narrative of a forced Journey through Spain and France, as a Prisoner of War, in the years 1810 to 1814, by Major-general Lord Blayney. 2 vols. 8vo.; London, 1815.

* Major A. Tulloch, Statistical Report on the Sickness, Mortality, and Invaliding among the Troops in the West Indies.

Colonel Campbell was three men slightly wounded. Murat kept his camp behind Reggio and Scylla for nearly two years longer, but he did not again attempt the experiment of landing in Sicily.*

In Paris "all went merry as a marriage bell." On his return from Vienna, at the close of the preceding year, Bonaparte caused it to be intimated to Josephine that she must prepare to give up the claims of a wife upon his imperial majesty, and to see a younger and more fitting bride put in her place. It is said that Fouché, the police minister, was the first man employed on this delicate task, and that Josephine treated the renegade priest and jacobin as he merited, attributing to him and other *sans culotte* revolutionists like him, the crime of first putting it in her husband's head to divorce her and marry an imperial princess. It appears, however, doubtful whether Fouché or Savary or any chief of that department had anything to do in this business of preparation, and whether it was not Bonaparte himself who first opened the subject to his wife. As soon as he arrived from Vienna, Josephine was observed to be very pensive and sad. It is said by one who knew the truth, if he chose to tell it, that it was on Thursday, the 30th of November, just after dinner, that the emperor, being alone with Josephine, announced the whole of his plan, and was much affected at her grief, saying to the courtier who entered (and who narrates the story), that three days before this Josephine ought to have known from her own daughter Hortense (the wife of Louis Bonaparte, King of Holland) the cruel necessity of state which condemned him to separate from her, and look for an heir to his throne. According to this account, Bonaparte was affected even to tears, and Josephine's fainting was more than half feigned. But we rather suspect the emperor's prefect of the palace of partiality for his master.* It is pretty clear, however, that the widow of the Beauharnais was a vain, frivolous woman, incapable of any very profound emotions, and much more likely to be affected by the loss of state and dignity than by any other consideration. When her husband and the prefect of the palace were carrying her by the shoulders and legs down stairs to her private apartment, seemingly in convulsions and senseless, the prefect says that his sword got between his own legs and nearly tripped him up; that to save himself from falling, he pressed his burden rather closely (he being at the lady's head, and the emperor at her heels), and that thereupon she whispered in his ear, "You squeeze me too hard." † He adds, that the emperor was too much agitated to observe this side-play, and that, as soon as they had laid her upon a sofa in her boudoir, he sent for Corvisart, the physician, Queen Hortense, Cambacérès, and Fouché. On the 15th of December, a fortnight after this scene, at nine o'clock in the evening, there was a grand consultation—*conseil de famille*—in the palace of

* Sir John Stuart, Dispatches in *Gazette*.—Before this attempt another smart frigate action had been fought in the bay of Naples. On the 1st of May, Captain Jahleel Brenton, of the 'Spartan' frigate, and Captain Ayscough, of the 'Success' frigate, chased a squadron of Murat, consisting of one frigate of 42 guns, one corvette of 28 guns, one brig of 8 guns, and one cutter of 10. The Neapolitans succeeded in getting into harbour, behind the mole of Naples and good land batteries, which had been made stronger since the unpleasant visit paid there the year before by Captain T. Staines. Captain Brenton, our senior officer, knowing that they would never leave this place of refuge whilst two British frigates were in the bay, directed Captain Ayscough to sail away to the back of the island of Capri. At daylight on the morning of the 3d of May, the 'Success' being out of sight, and the 'Spartan' all alone and very near shore, the Neapolitan squadron, reinforced by eight gun-boats, carrying long 24-pounders, stole from behind the mole-head, and stood towards her in a close line. Captain Brenton retired, in order to entice the squadron farther out to sea. The poor Neapolitans set up a shout and hoisted all sail, for they thought he was running away from them. Long before their guns were in range they blazed away at the English frigate. The 'Spartan' was as silent as a coffin until the Neapolitan frigate was within pistol-shot; but then with one broadside she strewed the decks of the 'Cerere' with a sad harvest, killing and wounding so many that it quite passed their comprehension. Captain Brenton ran along their line, and cut off their cutter and gun-boats from the body of the squadron. The 'Cerere' wore, and endeavoured to renew her junction, but was prevented by the 'Spartan,' who took her station on her weather-beam. A close and hot contest ensued, the 'Cerere' being aided by 'La Fama' corvette. But, though they fought, the Neapolitans kept their eyes upon the shore; and light and variable winds carried them and their foe into the bay of Pozzuoli, and near to the castle and sea-batteries of Baia. The affair ended in Captain Brenton's capturing and carrying off the brig, and in leaving the frigate and the corvette much crippled under the batteries. He had lost 10 killed and 19 wounded. Nearly all this mischief was done by the gun-boats. Captain Brenton himself received a grape-shot in the hip, and was obliged to be carried below before the action was over. The carnage on board the 'Cerere' was very great, particularly amongst some Swiss troops, who were drawn in ranks from the cat-head to the taffrail in readiness for boarding. The corvette, the brig, and the cutter also suffered greatly in killed and wounded, for the 'Spartan' had fired into all of them from a very short distance, and in very smooth water. Captain Brenton's number of guns was 46, of his men 258; the enemy had 96 guns, and, counting the Swiss troops, in all 1400 men. As soon as she had repaired her damages, or as soon as the wind served, the 'Spartan' with her prize in tow came round into the inner bay of Naples, and stood in triumph directly across, and within four miles of the harbour and the mole-head. If the wind had been as fresh a few hours before he would have captured the frigate or the corvette.—*Captain Brenton, Dispatch, in Gazette.*

There were many brilliant little enterprises carried on along these shores, in the way of boat and cutting-out parties. In more than one of these Captain George Rose Sartorius, then lieutenant of the 'Success' frigate, distinguished himself.

In one of our naval adventures we sustained a severe check and a very serious loss. In the month of August, after the reduction of the isle of Bourbon, but before the conquest of the Isle of France, four of our frigates made rather an inconsiderate dash into Grand Port, the principal harbour of the isle of France, wherein lay two of our captured East Indiamen, which have been mentioned above, four French frigates, a corvette, and a brig, aided and protected by heavy land batteries. Access to the port was very difficult. Two of our frigates ran aground upon shoals, not known to the pilots, and were abandoned and burned by their crews. Our third frigate, the 'Nereide,' Captain Nesbit Willoughby, fought the enemy alone for more than five hours, and drove the whole of the enemy's ships on shore in a heap. But Captain Willoughby, who, before this time, had been much battered about, and had received more desperate wounds than any living man in the service, was awfully mangled, and had his left eye torn out of the socket by a splinter; his first lieutenant lay mortally and his second dangerously wounded, and nearly every man of the crew was either killed or wounded: the 'Nereide's' quarter-deck guns were nearly all dismounted, several of her main-deck guns were dismounted also, the hull of the ship was shattered, she was striking the ground astern, and the frigate which remained afloat, the 'Iphigenia,' could not get to her assistance. Including marines and some artillery of the Madras establishment, the 'Nereide' had on board 281 men: of this number about 95 were killed and 135 wounded. In this condition Captain Willoughby struck to the enemy. By this and some former exploits on these islands he contributed to the conquest of this very important colony. The 'Iphigenia,' closely blockaded, was taken soon afterwards. Thus we lost, in a single enterprize, four frigates; but, through the noble behaviour of Willoughby, and his officers and crew, the defeat was more glorious than many a victory, and the loss of ships was scarcely considered a misfortune.—*James, Naval Hist.*

† "Napoléon prit lui-même les deux jambes de Joséphine pour m'aider à descendre avec plus de ménagement..... Mais dans le moment où je m'embarrassai dans mon épée au milieu du petit escalier, je fus obligé de la serrer davantage pour éviter une chute qui aurait été funeste aux acteurs de cette douloureuse scene, parceque nos positions n'étaient pas la suite d'un arrangement calculé à loisir. Je tenais l'Impératrice dans mes bras, qui entouraient sa taille; son dos était appuyé sur ma poitrine, et sa tête était penchée sur mon épaule droite. Lorsqu'elle sentit les efforts que je laisais pour m'empêcher de tomber, elle me dit tout bas: '*Vous me serrez trop fort.*' Je vis alors que je n'avais rein à craindre pour sa santé, et qu'elle n'avait pas perdu connaissance un seul instant." *De Bausset.* Thanks, O Prefect of the Imperial Palace, for this truly theatrical scene

the Tuileries to settle all about the divorce. It was arranged, and so stated, that the divorce was for the good of the empire, &c., and by the mutual consent of Napoleon and Josephine. The emperor, the now to be ex-empress, the emperor's mother, his brothers Jerome and Louis, his sisters Caroline and Pauline, his brother-in-law Murat, Josephine's son and daughter Eugene and Hortense, Jerome's wife, the Würtemberger princess, the wife of Joseph Bonaparte, in short, all the members of the Bonaparte family, except Elise (Madame Bacciochi), Lucien, who was in disgrace, and Joseph, who was in Spain, were assembled; and Cambacérès, arch-chancellor of the empire, Duke of Parma, &c., and Regnauld de Saint-Jean-d'Angély, minister of state for the imperial family, attended to take the depositions, and to draw up the legal act. Napoleon said a few short words about the necessity of providing a lineal successor, and his great grief in parting with so good a wife. Josephine repeated what had been set down for her, about her being a fond and devoted wife, but ready to make any sacrifice for the happiness of France, even to the annulling of her marriage with the hero who had raised France to her present glory and greatness. Cambacérès, who had been bred to the law, drew up a nice *procès-verbal* of this divorce by mutual consent; and Regnauld de Saint-Jean-d'Angély, who had been a little provincial advocate before the Revolution, and who, in the art of penmanship, bore a striking resemblance to Barrère, penned an act which ran as smoothly as an academical discourse or a senatorial address. All the members of the family put their signatures to this act. There was nothing but signatures of kings and queens and princesses and grand-duchesses, all springing from the once poor Corsican dame Letitia Bonaparte, born Ramolini, who signed *tout court* or succinctly MADAME, in imitation of the formulas of the ancient monarchy of the Bourbons.* Regnauld de Saint-Jean-d'Angély (who had fearfully lengthened and aristocratised his name) was charged with the delicate duty of presenting this act to the senate, and to propose a *senatus consultum* in conformity. His harangue dwelt upon the sacrifices the emperor was making, &c. Strange to say, it was seconded by Josephine's own son Eugene Beauharnais, the viceroy of Italy, who never before had taken a seat in that assembly, but who was forced by his step-father to appear there, and praise him for putting away his own mother.† "Princes and senators," said Eugene, "I feel myself under the obligation of declaring the sentiments of my family in the circumstances in which we are. My mother, my sister, and I owe everything to the emperor! He has been to us a true father; and he will always find in us devoted children and submissive subjects. It is of importance to the happiness of France that the founder of this the fourth dynasty should grow old in the midst of a family of direct descendants, who will be a guarantee to all men, and a pledge of the glory of the country. When my mother was crowned before the whole nation by the hands of her august spouse, she contracted the obligation of sacrificing all her affections to the interests of France: she has fulfilled with courage, nobleness, and dignity this first of duties! Her soul has often been tenderly moved at seeing the painful struggles in the heart of a man accustomed to master and command fortune, and to march with a firm step to the accomplishment of all his great designs. The tears which this resolution has cost the emperor suffice for the glory of my mother. In the situation in which she is going to be placed, she will not be insensible to the happiness resulting to us all from her sacrifice: we shall have her wishes and prayers, and it will be with a self-satisfaction mingled with pride that she will see the happiness which her sacrifices have produced for her country and for her emperor." The princes and senators applauded, as they were bound to do, and voted the *senatus consultum*, which left to Josephine her title of Empress-Queen, an annual revenue of 2,000,000 of francs, and the royal domain of Navarre; and when they had done all this, and had heard another speech from the lawyer of the long name, they agreed to a report, and to an extravagant address, to express their gratitude to the immortal Napoleon for the steps he had taken; to tell the so-called "child and champion of democracy" that thirteen French sovereigns before him had been obliged by their love for their country to divorce their wives; that out of these thirteen divorcing French monarchs there were four of the greatest and most beloved that the French had ever known—Charlemagne, Philip Augustus, Louis XII., and Henri IV.—and to predict that Napoleon, greater than all these, would live to see children and grand-children of his own, who would perpetuate his empire, and the happiness and glory of France.* The august senate also voted an address to the Empress Josephine, thanking her for those great sacrifices which history would keep in eternal memory; assuring her that her heroic self-devotion was worthy of being associated with the immortal glory of the Emperor; and that the French people, who had always revered her virtues and beneficence, would eternally admire her sublime conduct, and render her the homage of their gratitude, reverence, and love. Thus far was smooth and easy work;† but the catholic religion repudiated such divorces as these, and Bonaparte had pretended to re-establish the catholic church, and to submit, and to force others to submit, to its dogmas. No dispensation could now be expected from the

† Three short years after this, when the Bonapartean dynasties were all going to pieces, and when Murat thought he had reason to complain both of the Viceroy of Italy and of the Emperor of France, he bitterly reminded Eugene Beauharnais of this performance, on the occasion of his mother's divorce.—*Letter from Murat to Napoleon Bonaparte, in Colletta, Storia di Napoli.*

* The report of the senate was drawn up by senator Lacépède, the celebrated naturalist, author of 'Histoire Naturelle des Quadrupèdes ovipares et des Serpents,' &c. &c.

† The Conseil de Famille was held and the Divorce Act was drawn up on the night of the 15th of December: the Senatus Consultum was passed on the 16th; and all that business was finished in less than twenty-four hours.

despoiled, imprisoned Pope, nor could any pontiff have decently sanctioned such a breach of the canons of the Roman church. In the eyes of that church marriage was a sacrament; and the union by the civil process, by appearing before a notary and a justice of the peace, as first introduced in the days of anarchy and atheism, was no marriage at all, but a sinful contract between man and woman. Without the assurance that Bonaparte and Josephine had been married by a priest, and according to the forms of the catholic church, Pius VII. would never have consented to perform his part in the grand ceremonial of the coronation in Notre Dame. The difficulty had been got over by a private midnight ceremony, performed by the Emperor's maternal uncle, Cardinal Fesch;* but now, to get rid of a greater difficulty, it was declared that there had never been any religious ceremony, and consequently that there was no tie to break, except the fragile and unholy one of the civil contract. If we are not surprised that this should satisfy French consciences, or be held to be satisfactory by the servants and partisans of Bonaparte, we must still feel astonished at its satisfying the consciences of the Emperor of Austria, his daughter, and the rest of that family, who were generally considered, though not bigots, good, believing, and devout catholics. But the truth appears to be that the conscience of the court of Vienna was entirely overlaid by its fears and its worldly hopes. Josephine set out for Navarre; and Marshal Berthier was appointed to conduct, or rather to conclude, the matrimonial negotiations at Vienna. While Berthier was performing these offices, news arrived of the base and bloody execution of Andrew Hofer, who had perished in his prime, for his patriotism, and his enthusiastic attachment to the Emperor of Austria, who was now bestowing the hand of his own daughter on Bonaparte! There might be even at Vienna, and among its great personages, some who thought that everything done by Bonaparte was well done, and that the death of Hofer was a commendable act of energy; but we believe there was not a man who doubted the fact that the telegraph order which overruled the judgment of the court-martial at Mantua proceeded from Bonaparte himself. Marshal Berthier, however, affected to lament "this unlucky accident," and said, with disgusting hypocrisy, that such a transaction would be matter of serious concern to his master the Emperor, and never would have been permitted if his majesty had been aware of it. On the 11th of March, 1810, Berthier, acting as proxy for Bonaparte, received in the palace of Schönbrunn the hand of the Archduchess Maria Louisa, the fairest of the descendants of the Empress Maria Theresa, and at that time little more than eighteen years of age.† The mob of Vienna, usually so docile and submissive, appear to have had more nationality than the court, and to have felt more deeply the dishonour of this forced alliance, and the danger to which the young princess was going to be exposed by her union with so turbulent and restless a man, and her residence in France, among a people who had so barbarously tortured and guillotined her own aunt, Marie Antoinette, who had once left Vienna as fair and as innocent as her niece now was, but far happier. When Maria Louisa drove away from the home of her fathers, attended by Berthier, Madame Murat, the widow of Lannes, and the other French people appointed by Bonaparte, some of the populace cried aloud that she was sacrificed to political interests and intrigues; that the Emperor Francis ought never to have consented to the sacrifice of his own child; that better, far better, would it have been to continue the war than submit to such a humiliation! At one moment a serious riot was apprehended; but the police and the troops, with the rest of the Austrian machinery, interfered; some of the poor orators were arrested, and the rest of the crowd dispersed. We have described how profoundly etiquette and parade were studied by the vulgar court of the Tuileries on the occasion of the coronation of Napoleon and Josephine. As much or more study was now given to the mode of receiving in France, and conducting through that country, the young imperial bride. In his forced philosophical retirement at St. Helena, Bonaparte affected to talk with contempt of all distinctions of blood and race, and of all court etiquette and ceremonies whatsoever; but so long as he was emperor, and so long as his family were kings and queens and grand-duchesses, he and all of them bestowed the utmost attention upon these several matters, and there certainly never was in modern Europe a more rigid and frigid etiquette than that which was observed at Paris, under this child and champion of democracy and equality, and in Naples under his sister Caroline, the wife of the crowned dragoon Murat, who himself loved not the regimen, but who was obliged to submit to it. In the present instance it was ordered that none of the forms and ceremonies should be omitted which had been practised under the old sovereigns on similar occasions. But from the restrictions of etiquette, and from every other restriction or rule whatsoever, Napoleon held himself personally exempt: all the world was to be slavishly bound by them, save and except only the great man that was above them all; and this made that iron etiquette, disgusting in other respects (as very frequently it was from the want of all grace and dignity in the ill-bred performers), so much the more disgusting and humiliating. Under Louis XIV. the court etiquette was rigid enough, but that monarch himself submitted to its restrictions. After issuing the most elaborate instructions, and the most formal and severe orders, about the reception of his bride, Bonaparte himself received her not as a sovereign would receive the daughter of an emperor, not even as a gentleman would receive a young bride, his equal in rank, fortune, and education, but as an unmannerly trooper

* See ante, p. 139.

† The Archduchess Maria Louisa, the first child of the Emperor Francis by his second marriage with Maria Theresa, daughter of Ferdinand IV., King of the Two Sicilies, was born on the 12th of December, 1791.

would receive a grisette, who was not coming to be his wife, but to be his mistress, and the follower of his camp for a season. After passing a night together in the old country palace of Compiègne, Napoleon and Maria Louisa came to St. Cloud, on the 1st of April, to be married ecclesiastically.* It was every way a mockery to have that ceremony at all, but it was regulated and ordered that the religious part of the performance should give precedence to the civil and lay part. Arch-chancellor Cambacérès, who had been a Jacobin, a Conventionist, a member of the bloody committee of Salut Public, who had voted on the trial of Louis XVI., and on the more horrible trial of Marie Antoinette, read to the niece of that murdered queen the civil Act of the marriage! This Act, in sixteen long pages, still exists in the French Chamber of Peers. Then followed the religious part of the celebration, which was declared by the Parisian critics who saw it to be a downright failure, and a very poor *spectacle*. The salaried clergy of Bonaparte seemed almost ashamed of the scene, and of the part they were taking in what was neither more nor less than an act of bigamy; very few of the cardinals or the prelates would attend it. It is said that there were only two cardinals present, and that the Corsican Emperor, fixing his eyes on the vacant space which ought to have been filled by those princes of the church, muttered spitefully, "The fools! the fools! they brave and insult me still!"

This marriage was scarcely more popular in France than it was in Austria. There was a great party that still loathed the name of hereditary monarchy, and that thought it monstrous that a child of the revolution should ally himself with the old established "corporation of tyrants;" the men of the revolution saw in Maria Louisa another Marie Antoinette; the ex-conventionists could not forget that the same blood flowed in her veins, nor could they believe but that she must inherit the resentments or be eager to avenge the wrongs done to her aunt; the people regarded her with a superstitious fear, it being an old popular belief in France that Austrian marriages were always unlucky, that the princesses of Austria had always brought misfortune upon France. A very sinister accident confirmed the popular superstition. In May, 1770, a grand exhibition of fireworks, &c. was given at Paris to commemorate the marriage of Louis and Marie Antoinette: through some carelessness or mismanagement several hundred persons lost their lives; and this incident was perpetually referred to, when the revolutionary movements began. In July, 1810, Prince Schwartzenberg, the Austrian ambassador at Paris, gave a grand ball and fête, in commemoration of the marriage of Napoleon and Maria Louisa, who were both present at it; a fire broke out in the ball-room; the hostess, the Princess Schwartzenberg, a young and handsome woman, lost her life, several other persons were killed, and a great many more were seriously injured. Others saw in the young bride a foreigner and an enemy, who would assuredly betray both the emperor and the country.* After the fact and its consequences, the French universally admitted that the marriage was a capital fault. "Napoleon," says the best of their republican historians, "quitted his position and part as a parvenu and revolutionary monarch, who had been acting in Europe against the ancient courts as the republic had acted against the ancient governments; he placed himself in a bad situation with respect to Austria, which he ought to have crushed after his victory of Wagram, or to have re-established in her possessions after his marriage with the archduchess. Solid alliances repose only upon real interests, and Napoleon could deprive the cabinet of Vienna neither of the will nor the power to fight him again. This marriage changed also the character of his empire, and separated it still more from the popular feelings and interests; for he now sought after the old French families to decorate his court, and he did all that he could in order to mix and unite together the ancient noblesse and his new noblesse, even as he had mixed royal dynasties."† It has been fancied that Eugene Beauharnais, Joseph, Louis, and Jerome Bonaparte, Murat, and half of the marshals of the empire, were, for selfish reasons, dissatisfied with the divorce from Josephine, and the marriage with a young bride likely to bring Bonaparte children. Eugene was his son by adoption, and had hoped some day to obtain for himself and his own lineal descendants the kingdom of Italy; in the so-called constitution of the empire all Bonaparte's brothers (with the exception of Lucien) were placed, with their children, in regular order of succession to the empire; Murat's children were the emperor's nephews and nieces, and therefore not remote; and, as for those adventurers and fortunate soldiers, the marshals, who had all seen how their present master had obtained a throne, and made an empire, and carved out kingdoms, they were supposed to dream of events and partitions such as occurred on the death of Alexander the Great.

A few weeks after the marriage, Bonaparte, who had made the same journey with Josephine shortly after his coronation, set out with Maria Louisa to

* For a striking, and, as we believe, a perfectly true account of the first meeting of Bonaparte with Maria Louisa, on a rainy day and on the muddy high road between Soissons and Compiègne, and of what passed in the chateau of Compiègne, see *Capefigue, Le Consulat et L'Empire.* From more private sources of information we know that the most revolting part of those details is perfectly true.

* *Histoire Parlementaire*, vol. xxxix.
The writer adds that these fears were not confined to a few men, but that it was a general and public opinion, as can be testified by those who lived in France at that epoch.

† Mignet, Hist. de la Révolution. A certain number of the old noblesse, attracted by the character and dignity of the new empress, moved by their poverty, and following the example of the witty and loose-principled Count Louis de Narbonne (formerly the idol of Madame de Staël), now joined the court and put on Bonaparte's livery as chamberlains, dames d'atours, &c. The Faubourg St Germain was somewhat thinned of its frondeurs; the Mortemarts, the Montmorencis, the Brignolles, the Perigords, the Contades, the Saint-Aulaires, and others of ancient name who had in part composed the court of Louis XVI. and Marie Antoinette, re-appeared in the Tuileries as the salaried courtiers and household of the emperor and empress. But, except their ancient names, these individuals had little to boast of: they had lost all political weight or character, and, though they might improve the manners of the court, they could not bring to Bonaparte the slightest accession of strength.

visit the northern provinces of France, Belgium, and Holland. While at Flushing he decided that the islands of Walcheren, South Beveland, North Beveland, Schouwen, Duiveland, Tholen, &c. should be for ever annexed to the French empire, and formed into a new department under the name of "Department of the Mouths of the Scheldt." He then returned by Brussels, Lille, Dunkerque, Dieppe, and Rouen to Paris, where he arrived on the 1st of June. In the preceding autumn some negotiations had been set on foot by a Frenchman, a private individual, for a general cartel or exchange of prisoners between England and France; but through the disproportionate demands of the French government these negotiations had ended in nothing. During Bonaparte's absence in Holland, Fouché, his Duke of Otranto and minister of police, had taken it upon himself to open an indirect private correspondence with Sir Francis Baring, in the view of obtaining a peace with Great Britain. He sent Ouvrard, a banker, stock-jobber, and contractor of Paris, to Amsterdam, and there Ouvrard was said to have put himself in communication with Sir Francis Baring, who, at that time, had the principal hand in our government loans. Fouché proposed as the basis of negotiations, the undisturbed empire of the continent of Europe to France, without colonies and without a navy; and to England the undisturbed empire of the seas, with all the colonies in the Eastern and Western hemispheres. Nothing is more certain than that no English cabinet could ever have entertained such a proposition; but it is said by the French that Fouché never doubted of success, but hoped to be able very soon to present to his master the basis of a treaty which could not be refused. It was thought that this police-minister and terrible ex-Jacobin believed he should thus secure a solid favour, and cause the new court to forget the part he had taken in the worst acts and crimes of the revolution. But Ouvrard, it is said, betrayed his employer, and Bonaparte was incensed at Fouché's presuming to take the initiative in such a grand matter as a negotiation with England. On his return to Paris he dismissed Fouché from his all-important office, and seized Ouvrard's papers; but in order to dissemble with the public, or perplex them as to the motives of the Duke of Otranto's sudden removal, he named that renegade priest governor of Rome. Savary, now Duke of Rovigo, was installed in the ministry of police on the 3rd of June. But a few days afterwards the nomination of the governorship of Rome was revoked, and Fouché was told that he must quit Paris and retire to and live quietly in his country-house. Many other causes are, however, stated for Fouché's sudden disgrace. Murat afterwards said, and with much apparent truth, that it was the constant practice of his brother-in-law to sacrifice to his suspicions, one after the other, all the men who had been most faithful to him and had done him most service; that thus Talleyrand was made to give place to Champagny, and Fouché to Savary. Besides, the young empress and the newly constituted imperial court could scarcely see without horror a man whose dark history was so universally known as that of Fouché. The police-minister, moreover, had, within the two preceding years, had various altercations with his emperor, both as to home and as to foreign policy or war; and in his gloomier moments this minister of police had been heard to mutter that Bonaparte was strangling the revolutionary principles which had given France the spirit and strength to work such miracles, and that he was producing a crossed and bastardised system which could not possibly last. Through some sympathy or some calculation Fouché had also of late testified a high regard for the repudiated Josephine. All this was enough to account for his removal without any reference to Ouvrard's proceedings at Amsterdam, or to another incident which is confidently stated as a fact in a French work unusually accurate.* This work asserts that he was dismissed and replaced by Savary for having secretly informed Lucien Bonaparte, who was then residing in Italy, that his brother the emperor intended to arrest him—in consequence of which information Lucien fled with his family from the Continent, and eventually came over to England. The emperor, who had now annexed such a large part of Holland to France, had long been carrying on angry discussions with his brother Louis, the nominal king of that country. He had told Louis, in the act of naming him to that new throne, that he must remain a Frenchman, and devoted to the interests of the French empire; but Louis, the most amiable, the mildest and the best of his family, conceived an affection for the people he was sent to govern; he felt really anxious for the welfare and prosperity of his Dutch subjects, who were almost entirely dependent upon commerce, and therefore he never enforced very strictly the Continental system against English commerce. Furious and dreadful were the rebukes he had received from his imperious brother, who told him that he had become a mere Dutchman, that he was sacrificing the interests of France, that he was opposing the ruin of Great Britain, that grand desideratum without which his empire could have no stability, and that, in short, he was forgetting who had made him a king and for what he had been made a king. On the other hand, the Dutch, already impoverished and in good part ruined by the loss of their rich colonies and shipping, and by the stoppage of trade, implored Louis to relax still more the Continental system, and permit or wink at a greater importation of British merchandise and a more free commercial intercourse with other parts of the world. Louis was not made to struggle with such trying difficulties; he was too weak to resist Napoleon's will, but he was too conscientious to submit to it. About the time that his brother returned from Vienna, Louis repaired to Paris to attempt to moderate and conciliate; but he was met only by fresh reproaches and taunts of ingra-

* Biographie Moderne, ou Galerie Historique.

titude. Thereupon he declared that, unless a peace were concluded with Great Britain,* or some important modification of the Continental system allowed in Holland, he would no longer wear that crown, which he found he could not wear without being a means of completing the ruin of a good, interesting, and industrious people. It was in order to make himself sure of the navigation of the Scheldt, which Louis and the Dutch wished to remain free, that the emperor had annexed the Zealand Islands to France in the month of April. After this annexation there was, in fact, no kingdom of Holland, and it could not therefore have cost Louis much to resign his crown. But when Louis returned into Holland he found a strong party sincerely attached to him, who recommended a bold countenance and a firm resistance. He was closely followed by the French general Oudinot, who took possession of Utrecht on the 29th of June, and demanded entrance into the once great trading city of Amsterdam. At first there was some talk of laying the whole country under water, and of fighting for its independence; but Louis and his Dutch ministers and generals soon felt the struggle to be hopeless. Louis next thought of emigrating with his family to the Eastern colony of Batavia, which still remained in possession of the Dutch, but which, together with the whole of the island of Java, was taken from them, or from the French, in the summer of 1811. At last, Louis came to the determination of resigning his crown in favour of his infant son Napoleon Louis. On the 1st of July he signed an act of abdication and a proclamation to the Dutch people; on the third he put these documents into the hands of his ministers, requesting that they might be laid before the Dutch legislative body, and then he fled with his children into Bohemia to seek an asylum in the dominions of the Emperor of Austria. To all this audacity Napoleon replied by a decree, dated July 9th, the first article of which was—"Holland is *re*-united to France!" Oudinot took possession of Amsterdam, which was now declared to be the third city of the empire; in a few months the French administration was fully established, and the whole country was divided into departments of the empire. Bonaparte's ministers thought it an easy task to justify these measures in the eyes of the French; and for the rest of the world they cared nothing. One minister, in his report, said: "Holland is in reality a continuation of France; it may be defined as being formed out of the alluvia of the Rhine, the Meuse, and the Scheldt, which are the great arteries of our empire." Talleyrand's successor, in his report, said: "Holland is nothing but an emanation of the French empire. In order to possess the Rhine fully, your imperial majesty must extend your territory to the Zuyder Zee!" This minister for foreign affairs said also that the Continental blockade had existed everywhere except in Holland; that the Dutch under King Louis had been constantly receiving English merchandise, and that twice France had been compelled to close her custom-houses and prohibit all trade with the Dutch for fear of seeing the city of Paris itself inundated with English goods!* But Bonaparte was not satisfied with the line of the Zuyder Zee as recommended by his ministers; he determined to make his empire reach still farther, and before the year ended—by a senatus consultum dated the 13th of December, 1810—Friesland, Oldenburg, Bremen, all the line of coast to Hamburg, with all the country between Hamburg and Lubeck, were annexed to the French empire like Holland. Ten additional departments were thus constituted, and the last blow was struck at the independence of those ancient trading republics, the Hanse towns. "Bonaparte's passsion for territorial aggrandisement," says his old schoolfellow, Bourrienne, "knew no bounds, and the turn of the Hanse towns had now arrived. By taking possession of those towns and territories he merely accomplished a design which he had formed long previously." The plan, however, was concealed with the usual art until the last moment. Bourrienne, who had been residing three or four years at Hamburg as Bonaparte's political agent to the Hanse towns, received no official information of the dark design. On the 8th of December he received a letter from Champagny stating in flattering terms that he must have obtained, from his long residence, information respecting Hamburg and the north of Germany which would be very useful to the public interest, and that the emperor wished to see him immediately at Paris, in order to consult with him upon various matters relating to Hamburg. Bourrienne, who had known the great emperor, the insatiable devourer of states and kingdoms, when he had scarcely a shirt to his back or a sous in his pocket, began his journey on the 9th, and on reaching Mayence he met the French courier, who was proceeding to Hamburg to announce the union of the Hanse towns with the French empire! "I confess," adds the mortified diplomatist, "that, notwithstanding the experience I had acquired of Bonaparte's duplicity, or rather of the infinite multiplicity of his artifices, he completely took me by surprise on this occasion."†

The French empire now in reality extended from the frontiers of Denmark to the frontiers of Naples, while Naples itself was only a dependency and an appanage in the hands of Murat and Caroline Bonaparte. This vast empire consisted of 130 departments, and contained 42,000,000 of people. Besides this, Napoleon held under his sway the kingdom of Italy with 5,000,000 or

* It is said that Louis had been attempting to open separate negotiations with the British cabinet before this time, and that afterwards —at the very moment of the Fouché-Ouvrard manœuvre—he had sent or had consented to the sending over of an Amsterdam merchant to London to confer with the Marquess Wellesley, or with some friends of our minister for foreign affairs, and that this last step made Napoleon view in a more serious light the conduct of his police-minister.

* Rapports de M. le Comte Montalivet, ministre de l'intérieur, et de M. Champagny, ministre des relations extérieures.

† Bourrienne, Mémoires.

6,000,000 of inhabitants, and Bologna and Rome, the other legations, and the marches of Ancona, which had been torn from the pope; the Illyrian provinces, including Dalmatia, Carniola, a part of Croatia, &c.; Jerome's kingdom of Westphalia, and Murat's grand duchy of Berg, belonged much more to him who had given them than to those who had received them; and the troops and resources of the princes of the confederation of the Rhine, of the king of Wurtemberg, the king of Bavaria, the king of Saxony, were at his disposal or under his control. He had also under his *protection* the Helvetic Confederation, or all the once free republics and cantons of Switzerland; and this confederation, like that of the Rhine, was bound to furnish him with troops and to follow his policy. Prussia, humbled and dismembered, lay at his mercy. In all it was calculated that he gave the law to more than 80,000,000 of people. So great a part of Europe had certainly never been subject to the will of one man since the fall of the Roman empire. The fact seemed incredible; but, nevertheless, so it was: the Emperor Francis was his father-in-law, and Austria was his submissive ally. Russia was keeping up a friendly intercourse with him; Denmark, if not so devoted to his interests as she had been, retained her old animosity against Great Britain; and in Sweden, by a succession of court revolutions and state intrigues, Marshal Bernadotte had been elected crown prince, and, with the throne in succession, was already exercising all the authority of a king, and a great deal more than any native Swedish monarch had been possessed of since the days of Charles XII. To brave this mighty power and to continue the war, which, with the intermission of a few months, had already lasted eighteen years, England had no other allies than Portugal, Spain, Sicily, and Sardinia. Spain seemed bleeding to death, deaf to the councils which would have stanched her wounds and renovated her strength; Sicily was only kept from the grasp of the enemy by the presence of a British army, paid and supplied by the British government, and the court of Ferdinand IV. must have been starved out of that island but for our subsidies. The king of Sardinia was also living on English money, and was constantly requiring the protection of English ships, without being able to furnish a single regiment or anything else except good wishes to his ally. Our best ally was Portugal, for she furnished men that were becoming excellent troops; but England was obliged to pay for those troops as well as for her own army, which was fighting for the liberation of the country. The close of the year 1810 was considered as the period of Bonaparte's greatest power and splendour, as the apogee of his lucky and bright star. Yet those who looked more attentively saw that mists and clouds were gathering on all sides; that he had built up his tower too high, too hastily, and with materials too incohesive, to stand. Those who knew the strong personal antipathies which existed between Bernadotte and Napoleon, and the frequent and violent quarrels which were breaking out between Napoleon and Murat, saw already that the existence of a French-born king in Sweden would not add to the power of France in the north, and that events might arise which would detach Naples in the south. A little sooner or later Russia was sure to resent the usurpations of France in the north of Germany and on the Baltic; and the family alliance with Austria, contracted by force, a record of disgrace, a thing which did violence to all national feeling, must some day be found as weak as a gossamer, as worthless as dicers' oaths. But what most encouraged the hopes of those who longed and sighed for the subversion of the Bonapartean system, was the certainty derived from the knowledge of the character and temper of Bonaparte himself and of the French people, that attempts would soon be made to give a still greater elevation to the already tottering tower; that aggressions would be made upon the great and adroit power of the North, whose strength was unbroken and whose arms were undisgraced, and that these aggressions must ultimately produce not merely a coalition of kings, as former leagues of that sort had been, but a coalition of peoples, a rising and a union of nations. When the downfall and the day of reckoning arrived, the Emperor of the West and his subjects exchanged accusations and reproaches, the French saying that Bonaparte would never rest, and Bonaparte saying that with such a people and with such an immense army it was impossible to rest. Between the two, and in the nature of the system, the impossibility certainly existed. The system itself was like a drunken man who can keep his feet so long as he runs, but who falls when he attempts to stop.

Events had occurred in England from which greater political changes were expected than ever resulted from them. By the non-attendance of George III. at the opening and closing of the session of parliament, and by other indications, it had long been suspected that the king was suffering under his old distressing malady. In the autumn of the preceding year, 1809, when his majesty entered upon the fiftieth year of his reign, it was determined to celebrate the anniversary as a Grand National Jubilee. The government, under Mr. Perceval, took the lead, but the call was eagerly and unanimously responded to by the municipalities of the kingdom, and by other public bodies and societies; and the great mass of the population hailed the 25th of October with every possible demonstration of loyalty, attachment, and respect. It was truly a national festival, and a gay and beautiful one, for that October month was more than usually fine and bright. The jubilee was observed as a holiday in every city, town, village, and hamlet; there was illumination and joy throughout the land; but the joy did not reach the interior of the old monarch's palace, but grief was there, and sickness, and the apprehension of death, and of what was worse than death. The king's mind had

been over-wrought and over-excited by the Austrian war, which had then finished so disastrously, and by the Walcheren expedition, which was then terminating in such failure, and, as it was thought, in such disgrace. The nomination of the Earl of Chatham to that command had been completely a court nomination; and George III. is said to have reproached himself now for yielding to his own and the queen's partialities in favour of an amiable man who had proved himself to be unfit for the command. To an eye predisposed to despondence the whole aspect of affairs abroad was gloomy enough. Other causes of distress and agitation of a more private and domestic nature existed at the time of the jubilee, or were superadded shortly afterwards (materials of which the spirit of faction caught hold, and turned to atrocious uses); but the grief of griefs in the bosom of the old king was the declining health of his youngest child, his darling daughter, the Princess Amelia, who had long been in a very precarious state. The king himself had long been suffering under a disorder of the eyes, and was now well-nigh blind. In the summer of 1810, the Princess Amelia was removed to Windsor, in a state of great suffering. Her fond father visited her every day. When she felt that her end was approaching, the princess ordered a ring to be made, enclosing a lock of her hair, with her name on the inside, and the words "Remember me when I am gone." The mournful token was made and delivered. The next day when the king came to her bedside, and, darkling, held out his hand to her, the princess put the ring on his finger silently. He felt the ring, he understood all that it imported, he controlled his agony; but, when he had quitted that chamber of death, his intellect was found to be quite overset. This was on the 20th or 21st of October, 1810. The Princess Amelia lingered till the 2nd of November; but, though she missed her father's daily visit, she knew not the sad condition into which her fatal present had thrown him. On the 25th of October, the anniversary of the king's accession to the throne, it was publicly announced that his majesty was again attacked by the mental malady under which he had before laboured. Parliament had stood prorogued, *pro formâ*, till the 1st of November, without any intention of its meeting then for the dispatch of business. An order of council had been prepared, directing that it should be further prorogued, and authorizing the chancellor to issue a commission, under the great seal, for this further prorogation; but the state of the king, and his inability to sign the commission, prevented the completion of this order, and both Houses therefore met on the 1st of November, under these singular circumstances, not being summoned for the dispatch of business, and being left to form a course of proceeding for themselves, without having any precedent to guide them. The physicians confidently stated their expectations that his majesty would soon recover; and ministers upon this ground moved an adjournment for a fortnight, which was agreed to, in thin Houses, without a dissentient voice. At the fortnight's end the physicians remained in the same opinion; one of them declared that he perceived the same symptoms which had convinced him two-and-twenty years before that the king was recovering. A second adjournment for a fortnight was moved by ministers. Lord Grenville said he should prefer a shorter adjournment, to be followed by other adjournments, from time to time, if the state of the king should render it necessary; adding, however, that he would rather err on the side of forbearance, delicacy, and delay, than on that of precipitation, and that therefore, and for the sake of unanimity, he would assent to the ministerial motion. Earl Grey assented also, but he expressed serious doubts of the propriety of the proceeding; and he bade the peers reflect that, as there could not be the same prospect of a full and entire recovery as in 1788, they were bound not to shut their eyes to the calculation of probability, and the actual state and condition of the country. In the Commons the opposition were much less decorous. Whitbread, Sir Francis Burdett, Tierney, Lord Archibald Hamilton, and others, said that they had no evidence before them, except the *ipse dixit* of the chancellor of the exchequer; that the constitution was suspended; that the public business could not go on without the king, or the real executive government; that the country would fall into a state of anarchy, and was already in a state of great danger. Mr. Fuller, one of the Sussex members—"honest Jack Fuller"—asked where was this danger? since the enemy could not get a ship to sea, nor could their troops beat Lord Wellington in the peninsula. The adjournment was carried by 343 against 58. After the second fortnight had elapsed, ministers laid before parliament a report of the privy council, containing the examination of the king's physicians, who all still declared their conviction that it was probable that his majesty would recover.* In the Lords the Earl of Liverpool then moved for the delay of another fortnight. Earl Spencer, in opposition to this, moved that a select committee should be appointed to examine the physicians; and he was strongly supported by Lord Holland, Lord Grenville, and others. Lord Grenville said that the proposal for further adjournment was derogatory to the dignity of parliament, hostile to the best interests of the crown, repugnant to every principle of the constitution; that the House was not yet in possession of any fact which they could constitutionally recognize; that, as for the report of the privy council, it signified nothing, since it must have been convened without the sanction, the summons, or even knowledge of the king, who alone was entitled to summon it; that if such courses as these were allowed to be pursued the monarchy would become not a republic, but the most odious and detestable form of aristocracy. On a division, Lord Spencer's amend-

* "Our beloved old king, the physicians declare, is recovering, and they have scarcely a doubt of his being even speedily well, if his restoration be not retarded by some of the circumstances which if he were not a king he would not experience."—*Wilberforce, Diary.*

ment was negatived by 88 against 56; two of the king's sons, the Dukes of York and Cambridge, voting with the ministry, and two, the Dukes of Clarence and Sussex, with the opposition. In the House of Commons the debate was again much more violent. Whitbread spoke of the king's recovery as an impossibility, and of his blindness as an absolute disqualification. Several members repeated the arguments, and almost the very words, which the whigs had used in 1788, in calling for the immediate appointment of the Prince of Wales as regent; but it was noticeable that Sheridan, and some other members of that party, who had been so hotly impatient then, were cold and cautious now. They showed no alacrity, because they entertained no hope. The great champion for the instant regency was General Montague Matthew, who said that, as the third estate was wanting, and as the House could have no confidence in the assertions of ministers, he would vote not only against the adjournment, but for the immediate appointment of the Prince of Wales as regent, with full regal power. That excellent prince, he said, had the voice of his country, which well knew that no one existed so able and likely to reconcile all jars, especially in Ireland, which looked to him with confidence to heal the injuries she had received from the maladministration of the faction which was now ruling. It was a source of happiness to him, and to the country, to know that they had so wise and experienced a prince to supply the defect that had arisen. He therefore recommended the House to withdraw the power as speedily as possible from ministers, and appoint the Prince of Wales to the regency for which he was destined by the Almighty! Mr. Yorke, the present head of the admiralty, spoke as if a change of ministers and of measures must follow the nomination of the regent. "If," said he, "there are inconveniences in our present proceedings, there are also inconveniences on the other side. What if the regent were to be advised to change the whole system of our foreign policy, to withdraw our army from the peninsula, and refuse all further support to Spain and Portugal? Such a case was possible, and would that be no inconvenience?" Mr. Ponsonby moved for a committee to examine the king's physicians; but this was negatived by 230 against 137, and the House once more adjourned for a fortnight. On the 15th of December, when parliament met again, ministers said that, though a considerable degree of amendment had taken place, and the same confident expectations of his majesty's ultimate recovery were still entertained by his physicians, yet the immediate state of his health was not such as could warrant them to propose another adjournment.* With the concurrence of ministers committees were therefore appointed in both Houses to examine the physicians. On the 17th the committees made their reports, which were ordered to be printed.* According to the reports the physicians re-affirmed their hopes of a recovery. But Mr. Perceval moved that on Thursday next, the 20th instant, the House should resolve itself into a committee to take into consideration the state of the nation; his intention, he said, being to submit then to the committee three preliminary resolutions similar to those which had been moved and carried by Mr. Pitt in 1788. On the 20th, the House being in committee, the chancellor of the exchequer presented his three resolutions, which were precisely the same as those which Pitt had laid down, in opposition to the scheme of Fox and his friends.† The first resolution, setting forth the king's present incapacity, was agreed to; the second, declaring the competency of the two Houses of Parliament to supply the deficiency of the executive power, was carried, with the single dissentient voice of Sir Francis Burdett, who said it was perfectly impossible for him to concur in any resolution which called such a parliament as the present, "the Lords spiritual and temporal and Commons of the United Kingdom, lawfully, fully, and freely representing all the estates of the people of this realm." The third resolution, which proposed to proceed to the appointment of the regent by bill, was opposed by Mr. Ponsonby, who moved an amendment to the effect that the proceeding should not be by bill, but by address. [In other words, Mr. Ponsonby would have proceeded as the Irish parliament had done in 1788, and have called upon the Prince of Wales by address to assume the regency as his hereditary and indisputable right; which was the doctrine held by Fox and all the whigs of that day.]‡ The amendment was rejected, and the original resolution carried by 269 against 157. The same three resolutions were carried in the House of Lords by 100 against 74. All the royal dukes voted in the minority, and joined with many other peers in a strong protest against the limitations put upon the power of the regent. Previously to this protest the royal dukes had had recourse to the singular measure of protesting against the intended restrictions in a letter addressed to Mr. Perceval.§ On both sides there was a total want

* "December 9. The king getting better, but with occasional relapses. Perceval said on Thursday, that he was as well then as when Thurlow declared him well, and sealed the commission in 1789. I believe it. I remember that it was then said in private that the king was not quite well."—*Wilberforce, Diary.*

* Sir Samuel Romilly, however, says, in speaking of the report of the committee of the Commons, "The whole of the evidence which the physicians gave does not, however, appear in the report. Several of the questions and answers were expunged by the committee before they made their report. Some of the most important facts so suppressed are, that the cause of the king's insanity in 1801 was the resignation of Mr. Pitt; and the cause of his insanity in 1804, the publication of the correspondence between the Prince of Wales and the Duke of York."—*Diary of Parliamentary Life, in Memoir by his Sons.*

† For Pitt's resolutions, and Fox's scheme of regency, with the debates thereon, see ante, vol. ii. p. 286.

‡ See ante, vol. ii. pp. 283 to 301.

§ The protest was in these words:

"Wednesday night, 12 o'clock, December 19th.

"Sir—The Prince of Wales having assembled the whole of the male branches of the royal family, and having communicated to us the plan intended to be proposed by his majesty's confidential servants to the Lords and Commons for the establishment of a restricted regency, should the continuance of his majesty's ever-to-be-deplored illness render it necessary; we feel it a duty we owe to his majesty, to our country, and to ourselves, to enter our solemn protest against measures we consider as perfectly unconstitutional, as they are contrary to, and subversive of, the principles which seated our family upon the throne of this realm."

To this protest of the royal dukes, which met with almost universal disapprobation, as being an attempt on their part to form themselves into a college of princes, Perceval had replied, for himself and his

of novelty in the arguments used; and perhaps, after the numerous and elaborate debates of 1788-9, it was not easy for either party to hit either upon new arguments or new illustrations. It was, however, to be remarked that the question of the Prince of Wales's *right* to the regency which had been so vehemently supported by Fox, was scarcely urged at all by any member of the present opposition; and it did not behove ministers to agitate that question, the right having been so decidedly negatived in 1788. Sir Francis Burdett and some others complained of the restrictions put upon the exercise of the prerogative in the hands of the regent; but they did not maintain that, by the mere fact of the incapacity of the king, the Prince of Wales, or heir to the throne, became regent without any vote or authority of parliament. Sir Francis said that Pitt's regency bill of 1788 was an act passed by a powerful faction *against* his royal highness the Prince of Wales; that it was an act which never should have had his sanction; an act which put the prince into leading-strings, threw him back into the stage of infancy, and made him a sort of constructive lunatic. He supposed that the same course was now to be pursued by a part of the same faction which had heaped indignity after indignity upon his royal highness! It was also noticeable that the Radical reformers and the remnant of the Foxite, or, as Burke called them, the new Whig party, were far more eager for increasing the powers of the regent than was any other section or party in the House.

On the 30th of December, Mr. Perceval proposed the same limitations and restrictions on the powers of the regent as were passed in 1788. They were contained in five resolutions. The first was carried in a full House by a majority of only 24. The resolution restricting for a time the prerogative of the regent respecting the granting of peerages was carried by a majority of only 16. The third resolution, limiting the power of granting offices in reversion, salaries, pensions, &c., was carried by a majority of only 19. The fourth resolution, for securing the king's private property, was agreed to without a division; and the fifth, relating to the care of his majesty's person, was postponed till the next day.

A.D. 1811. There was no time for keeping Christmas holidays. On the 1st of January, an amendment to the fifth resolution, tending to diminish to a trifling amount the expenses of the king's household, and to curtail the authority of the queen over that household, was carried against ministers by 226 against 213, Lord Castlereagh speaking in favour of it. On the next day Perceval divided the House upon an amendment of his own, which went to restore the fifth resolution to its original state, but he was outvoted by three voices—217 to 214. When these five resolutions were communicated to the House of Lords, the Earl of Liverpool strongly objected to the fifth as it now stood altered. All he asked was, that the disposition of the household should be allowed to remain for twelve months with the queen. He was willing to agree that none of the great officers should be removed by the queen during that time: in this way her majesty would be placed out of the reach of the imputation of making any improper use of her influence. But, after some discussion, Lord Liverpool's motion was negatived by 100 against 97; and so the fifth clause was agreed to as it came up from the Commons. Lord Lansdowne and Lord Grenville thought it hard, unjust, and illiberal, that the regent should be restricted from granting peerages to any persons except such as might perform some signal military or naval exploit; and an amendment moved by Lord Lansdowne, for allowing the regent to bestow the peerage upon deserving civilians, lawyers, &c., was carried by a majority of three (105 to 102), and was accordingly introduced into the second resolution. The third and fourth resolutions, as sent up by the Commons, were agreed to without a division. The Commons readily agreed to the alteration made in the second resolution, which was the only alteration the Lords did make. By the act founded upon these resolutions, it was provided that the restrictions upon the royal authority as exercised by the regent should continue till the 1st of February, 1812, if parliament should be then assembled, and should have been sitting for six weeks previously; otherwise, till the expiration of six weeks from the assembling of parliament after that day.

A deputation from both Houses waited on the prince-regent and the queen, to acquaint them with the resolutions which had been passed. The queen, who was in a manner entrusted with the sole charge of her unhappy husband, promised her most earnest attention to the anxious and momentous charge, and spoke as if she were satisfied with the confidence reposed in her, and with all the arrangements made by parliament. But the Prince of Wales plainly told the deputation, that, though he did not hesitate to accept the office proposed to him, he could not but consider that its powers were to be exercised under too many restrictions and limitations. On the 11th of January the answers of the Prince of Wales and the queen were reported to parliament. Then Lord Liverpool, in the Lords, moved a resolution for putting the great seal to a commission for opening the parliament under the regent. Earl Grey, who had absented himself during all the previous important proceedings, protested against them in very strong language, accusing ministers of flagrant usurpation, and of

colleagues in administration,—"That, deeply as they lamented that the measure which they had thought themselves bound to propose should appear to their royal highnesses to deserve a character so directly contrary to that which it had been their anxious endeavour should belong to it, they must still, however, have the consolation of reflecting, that the principles upon which they had acted obtained the express and concurrent support of the two Houses of parliament in the years 1788 and 1789; that those Houses of parliament had the high satisfaction of receiving, by the command of his majesty, after his majesty's recovery, his warmest acknowledgments for the additional proofs they had given of their affectionate attachment to his person, and of their zealous concern for the honour and interests of his crown, and the security and good government of his dominions; and that the uninterrupted confidence which his majesty was pleased to repose, for a long series of years, in the persons who proposed the measures which were grounded on those principles entitled his majesty's servants, in their judgment, still farther to conclude that those principles and measures had the sanction of his royal approbation."

grossly violating the constitution. The ministers' resolution passed the Lords by 51 against 33. It was afterwards agreed to by the Commons; and then the Houses adjourned until the 15th of January, when the session was to be opened for the dispatch of business under the regency by the commission thus appointed.

The most extensive changes were pretty generally expected to ensue immediately, the restoration of the Whigs to power being considered as a necessary consequence of the prince's old friendships or connexions with that party. It was reported most confidently on the 14th of January that the prince intended to make a sweep as soon as possible; and Wilberforce observes in his 'Diary' that he could not see how the prince could do otherwise. In the Whig clubs and political circles a list of the new ministry was circulated: but this list was certainly not drawn up by the heads of the party, who alone knew the real state of the case; and the list itself seems to have varied considerably in the course of a very few days. At first Lord Grenville was unhesitatingly set down as premier and first lord of the treasury: but there were difficulties in the way of this arrangement (difficulties which will be presently alluded to); and then, without regard to that other obstacle or serious doubt whether Grenville would accept a secondary post under Grey, it was as confidently given out that Earl Grey would be premier. Grenville according to this version was to be secretary for foreign affairs; Lord Holland, first lord of the Admiralty; the Marquess of Lansdowne, formerly Lord Henry Petty, and chancellor of the exchequer to the All Talents administration, was to be lord-lieutenant of Ireland, in which country he had large estates; Mr. Ponsonby, who for some time had been considered as the leader of the Whig opposition in the Commons, was to be one of the secretaries of state; and Whitbread was to be the third, although no one who knew the two men could believe that Grenville and Whitbread could long agree, for on the vital questions of war and peace and foreign policy, as on every other important point but one, they differed *in toto*. Lord Erskine was to be, not chancellor, as he had been in the All Talents ministry, but speaker of the House of Lords; and the great seal was to be put in commission. Piggott and Romilly were to have their former offices of attorney and solicitor general. Even the minor places were all provided for. Mr. Brougham was to be secretary of the admiralty, in lieu of Mr. John Wilson Croker; and Mr. Francis Horner, a new luminary of the party, and their great financial theorist, was to be secretary of the treasury. All this, however, was but the rumour of a day; other lists were made out by the quidnuncs; and by the end of a week the best informed began to doubt whether either Grenville or Grey would be premier—whether there would or could be any Whig ministry at all. With some this doubt extended far into the future; but with others the hope obtained that, though the Whig party should not get into power just now, their accession to office could not be delayed very long, and that the most the prince-regent would consent or submit to would be the temporary exclusion of his friends. This hope was cherished in some, though not, as we believe, in the heads of the party, who must have known the formidable difficulties that existed, by a correspondence which took place at the beginning of February between the Prince of Wales and Mr. Perceval, in which the prince declared "that the irresistible impulse of filial duty and affection to his beloved and afflicted father," and his dread that any act of the regent might interfere with the progress of his recovery, alone induced him to retain the present cabinet. His royal highness also complained indirectly of the restrictions which the minister had thought fit to put upon the powers of the regency.* Mr. Perceval, in his reply, defended the line of conduct which he and his colleagues had pursued; and, as in other matters of a personal nature the premier on former occasions had opposed the wishes of the prince, and had never (not even now, when he was confirmed in his high office) betrayed any symptoms of a timid, a submissive, or compromising spirit, it was judged by those who pretended to be good judges of human nature, that he must be excessively odious to the regent, and that this odium must render his long continuing in office impossible. They neglected to observe that, though Perceval's steady and decided conduct might have given offence to the prince, it had gained for him many friends both in parliament and in the country, and had warmed the attachment and zeal of the disciples, friends, and admirers of Pitt, who indisputably continued to form by far the strongest party in the nation—a party which in fact could be overthrown or committed only by a compromise and a coalition with their political adversaries. This last was an event not likely to occur; for, if the Pittites, or Tories, had been disposed to try the always dangerous experiment (which they were determined not to try, and which, being conscious of their own unaided superiority of strength, they felt that there was no necessity for them to

* The prince's letter was to this effect:—

"Carlton-house, Feb. 4, 1811.

"The Prince of Wales considers the moment to be arrived which calls for his decision with respect to the persons to be employed by him in the administration of the executive government of the country, according to the powers vested in him by the bill passed by the two Houses of parliament, and now on the point of receiving the sanction of the great seal.

"The prince feels it incumbent upon him, at this precise juncture, to communicate to Mr. Perceval his intention not to remove from their stations those whom he finds there as his majesty's official servants. At the same time the prince owes it to the truth and sincerity of character which he trusts will appear in every action of his life, in whatever situation placed, explicitly to declare that the irresistible impulse of filial duty and affection to his beloved and afflicted father leads him *to dread that any act* of the regent *might, in the smallest degree, have the effect of interfering with the progress of his sovereign's recovery.*

"This consideration *alone* dictates the decision now communicated to Mr. Perceval.

"Having thus performed an act of indispensable duty, from a just sense of what is due to his own consistency and honour, the prince has only to add, that, among the many blessings to be derived from his majesty's restoration to health, and to the personal exercise of his royal functions, it will not, in the prince's estimation, be the least, that that most fortunate event will at once rescue him from a situation of unexampled embarrassment, and put an end to a state of affairs ill calculated, he fears, to sustain the interests of the United Kingdom in this awful and perilous crisis, and most difficult to be reconciled to the genuine principles of the British constitution."

try), they would have encountered a capital impediment at least from Earl Grey, if not from the entire Whig phalanx, who had not yet recovered from [the sad and dishonouring effects of Fox's coalition with Lord North. Even those not friendly to him acknowledged the ability, spirit, integrity, and imperturbable calmness and good humour which Perceval had displayed through all the conduct of this most difficult and trying business. It was said that the regent might be offended at the minister, but that he could not but feel an increase of respect for the man. The reasons assigned by the prince, in his letter to Perceval, for continuing the government as he found it established were no doubt strong and *true* motives, although they certainly were not *all* the motives by which his royal highness was actuated. One of the king's physicians represented to the prince the likelihood of his majesty's recovery; told him that his father frequently made the most anxious inquiries about him; and, affirming that a change of ministers would, in all probability, as soon as it was communicated to the king, produce such an *exacerbation* as might put an end to his life, he very strongly impressed upon his royal highness the reflection that he might come to be considered as guilty of parricide. The queen, too, wrote a letter to her son, saying that the king had been informed of all that had passed during his illness, and was in the highest degree gratified by the manner in which the prince had conducted himself.* All this has been set down by the Whigs as a mere intrigue, carried on with great art, in order to determine the regent not to make any ministerial change; but, as it is not easy to set limits to the uncertainties of the medical science in its most difficult department, or to the fond hopes of an affectionate wife, the conversation and the letter may very well be accounted for without believing in any intrigue whatever; and the physician and the queen may, in perfect truth and sincerity—as they understood the matter—have addressed the regent in the manner they did; nor could the prince have entertained any doubt of the effect which would be produced upon his father by any entire and sudden change in the administration, nor can the physician be accused of much exaggeration in affirming that the appointment of a Grey or a Grenville cabinet would have been a death-blow to the poor blind old king, who had, and who for some months continued to have, lucid intervals, during which he eagerly inquired into the condition of the government, and into the state and progress of the war, of the final result of which he had never, in his better days, doubted, provided only the disciples of Fox, who had all along declared the war to be unnecessary and unjust, were not forced upon him as ministers and counsellors. It is but a perverse ingenuity to get up or imagine intrigues and artful manœuvres to account for what may be explained upon very simple and very obvious grounds. A great deal too much importance has been attributed to the conduct at this crisis of that effete and discredited man Sheridan, and to what is called an intriguing manœuvre which he practised. The prince, who, at one moment, had gone the length of refusing to receive Mr. Perceval at Carlton House, and who had requested Lords Grey and Grenville to make a draft of the answer which he should deliver to the addresses of the Lords and Commons, was not well satisfied with the paper they sent him, and handed it over to Sheridan to make some alterations in it. This said draft was not the production of ministers, or even of men who were agreed as to a ministry to be formed, and the places they were to occupy; Grey and Grenville had been consulted as private individuals; it was premature and irregular in them to seek to identify the regent with themselves and their views, as they did in the draft they presented; and the prince had the indisputable right of submitting their paper to correction, or of rejecting it altogether—which last course would have been the best. Sheridan, who was always ready to do whatsoever the prince might ask from him,—Sheridan, who had long considered himself a disappointed, ill-used man, deprived by the aristocratic pride and the selfishness of the great Whig families of the rewards to which his services and his eloquence entitled him—who had little to hope from Earl Grey, and a good deal to fear from Earl Grenville, whom he had lampooned on various occasions—undertook his present task with alacrity, and materially altered the Grey and Grenville paper. It should appear, however, that the alterations were precisely conformable to the directions of the prince, that others beside Sheridan were employed, and that the Earl of Moira was not a stranger to any part of the business, a sufficiently strong proof that, in the estimation of that high-minded nobleman, there was nothing tricky nor dishonourable in the transaction. If the prince had adopted, without alteration, the Grey and Grenville paper, which sounded like their own opposition speeches, the regency would have commenced with a quarrel with both Houses of parliament. His royal highness sent back their draft in its corrected or altered form to Lords Grey and Grenville, apparently without anticipating any angry remonstrance on their part; but those two noblemen, in a joint letter to the prince, expressed in strong terms their dissatisfaction, telling his royal highness that, as he had not deemed it proper to follow their advice, but had submitted their humble endeavours in his service to the judgment of another person, they must decline taking any further part in the intended arrangements. The regent showed this peremptory letter to Sheridan, who is said to have represented to the prince the miserable state of tutelage in which he must expect to be kept by men who began their lectures and their stately dictation to him even before they were his ministers.* But, weeks before this, it was rumoured that Lords Grey and Grenville could not accord, that

* Sir Samuel Romilly.

* T. Moore, Life of Sheridan.

differences and even dissensions prevailed in the Whig party, or in that coalition of parties which had occupied the opposition benches; and certain facts and circumstances, now known to the whole nation, produced no small degree of indisposition to Lord Grenville, together with the pretty general conviction that his lordship could not take office as first lord of the treasury, and that he had never seriously aimed at doing so. Lord Grenville had held for many years the very profitable patent place for life of auditor of the exchequer; on assuming the premiership in the All Talents administration, being fully determined not to sacrifice his certain income as auditor to his very uncertain salary, power, and patronage as minister, his lordship's friends brought in a bill to allow him to hold both places, arguing that there was no inconsistency or incompatibility in this double tenure, that the auditorship of the exchequer was never intended as a check on the treasury, that the first lord of the treasury might very constitutionally, safely, and appropriately continue to be auditor of the exchequer, &c., the auditorship being little else than a dependency and registry of the treasury. This bill was almost the first measure the Talents entered upon, and it was generally considered to have been carried through parliament with a greedy impatience and indecent haste. Nor was Lord Grenville the only member of his family that had been eager and successful in obtaining a disproportionate share of the public money and of the good things in the gift of government. Until driven from office his lordship had continued to exercise the double functions of first lord of the treasury and auditor of the exchequer, his party being ready at any moment to demonstrate that there was not the slightest impropriety or inconvenience in his so doing. But, when Perceval, then first lord of the treasury, was embarrassed by the king's malady, and by the difficulties and delays attendant on the settling of the regency, Grenville, as auditor of the exchequer, gave a version of the duties of that office altogether different from the one which had been formerly given by his friends, claiming for that office a high degree of authority, and independence, and responsibility, and holding that constitutionally the auditor of the exchequer was intended as a check on the first lord of the treasury: all of which was true, and expressed on the title of the office, but was quite as true in 1807 as now. At the trying and critical moment, when nothing was settled, when there was neither a king nor a regent, issues of money for the army and navy became indispensable. Money had been appropriated by parliament for these services; but it was required by law that the issues should be by orders under the great seal, the privy seal, or the sign manual, or by express authority of an act of parliament. Mr. Perceval conceived that, under all the existing circumstances, it would be best to put the privy seal to the orders for the issues; which could not be long delayed without exposing both army and navy to serious inconvenience, if not to danger and to mutiny. The keeper of the privy seal, Lord Westmoreland, was quite willing to take this responsibility upon himself; but it was found that the signature of the clerk of the privy seal was likewise necessary; and Mr. Larpent, who filled that office, refused to sign, pleading scruples of conscience on account of his oath of office. Upon this Mr. Perceval issued an order from the treasury for the exchequer, holding that it was better for the responsible ministers of the crown to risk the censure, or wait for a bill of indemnity from parliament, than to allow the public service to suffer. But, when these treasury warrants were carried to Lord Grenville, in his capacity as auditor of the exchequer, he required time "to consider the nature and extent of the duties which this new and unexpected course of proceeding imposed upon him;" and requested to know from Mr. Perceval when it was absolutely necessary that the money should be issued. His lordship was informed, "that, according to the usual course of supplying the weekly issues to the navy and army, it would be necessary that sums should be issued for both services, beyond the amount of the existing credit at the exchequer, either on the morrow, or the next day at farthest; but, if an actual issue could be made within six days, no serious inconvenience was apprehended." The noble auditor of the exchequer then demanded that the legal opinions of the attorney and solicitor generals should be taken. These law officers pronounced that they "did not think the warrant of the lords commissioners of the treasury was in law a sufficient authority imperative upon the auditor, nor, consequently, a legal sanction for his proceeding to obey the same; nor that any discretion was left to him by the law on this occasion, for the exercise of which he would not be responsible." In communicating this opinion to Lord Grenville, Mr. Perceval and the lords commissioners of the treasury informed him "that their sense of the mischief to the public service which would arise if any delay should take place appeared to render it indispensable that the warrants should be forthwith complied with, and that they were consequently ready to take upon themselves the responsibility of any act which might be essential for that purpose." Lord Grenville, who, as first lord of the treasury, had been his own auditor of the exchequer, now declared that Perceval's responsibility would not relieve him from his, and that his conscientious scruples as auditor were insurmountable. "If," said his lordship, "I could be satisfied of the propriety of my doing what is required, there is no personal responsibility which I would not readily incur for the public interests; but I cannot persuade myself that I could obey these warrants without a breach of my official duty on that point which is above all others peculiarly obligatory on the person placed in the situation of auditor of the exchequer; nor without a high and criminal violation both of a positive statute, and also of the essential principles

of our monarchical and parliamentary constitution. I am told," he continued, "that I must act on my own discretion, for the exercise of which I must alone be responsible. This responsibility, if it legally attaches upon me, I cannot transfer to any other persons, and least of all to your lordships, whatever willingness you have expressed to take it upon yourselves. My attempting to do so would itself be criminal; tending to confound the official relations in which I have the honour to stand towards your lordships, and to annul those checks which the law has established for insuring the faithful discharge of our respective duties, and thereby the security of the public treasure. [*Where was this check when Grenville was first lord of the treasury and auditor of the exchequer?*] But I beg leave humbly to submit that the law has in truth invested me with no discretion on this subject. The exigencies of the public service, which your lordships have condescended to detail to me in these your warrants, are matters of state, of which, as auditor of the exchequer, I have no knowledge, and can take no cognizance." After repeating that he was compelled to decline, "but with all due respect," a compliance with the requisition contained in the warrants, Grenville recommended that the difficulty should be submitted to the consideration of both Houses of parliament, whose right and duty it was to provide the means of removing it, and to whose pleasure he would entirely submit. Upon this—on the 3rd of January—Perceval laid the whole correspondence before parliament, saying that, but for the difficulty which had been unexpectedly started, he certainly should not have thought it expedient to bring the subject under their immediate notice; that he had, however, always anticipated it as his duty to submit it to their consideration, not for the purpose of obtaining a vote of indemnity beforehand, but, after having incurred the responsibility, for the purpose of calling on the House to determine whether or not ministers had acted justifiably in ordering the issues of money for the services for which that very money had been appointed by the House. He moved a resolution, that the lords of the treasury should issue their warrants for the immediate payment of such sums as were necessary, and that the auditor and officers of the exchequer should obey those warrants. The resolution passed, after a long debate, without a division, and was afterwards agreed to by the Lords. Thus the money was issued to the army and navy, and an end was put to Lord Grenville's scruples and contumacy; but the public discussion, by reviving the memory of what had passed on the occasion of the accession of his lordship to office on the death of Mr. Pitt, inflicted a most serious injury on the Grenville party, which never had enjoyed much popularity. After such public and recent discussion, the most bronze-faced politician might shrink from attempting again to unite and hold the two offices of auditor and first lord of the treasury; and after all that had passed there would have been considerable awkwardness even in his continuing to hold his well-paid patent place along with any other office in the cabinet to which the premiership might have been attached. Now, without the borough influence of Lord Grenville, and of his family and connexions, Earl Grey and the rest of the Whigs, even should they be backed by the entire favour and support of Carlton House, could not hope to maintain themselves in office for a week. It was exceedingly doubtful whether, with all the Grenville influence, and with a conformity of interests, sentiments, and views (which certainly did not exist among them), the Whigs could have secured so much as a minimum parliamentary majority. To give them a chance it would have been necessary to dissolve parliament and throw the whole court influence into the general election. But there was not time to try this experiment: too much time had been already consumed, and public business too seriously obstructed, to allow of a delay of many weeks. Indeed even the shorter space of time which would have been required for the members of the House of Commons who might have taken office to obtain their re-election to their seats was, in itself, a very serious objection to any ministerial change at this moment of crisis. Upon all these, and upon other considerations, the Prince of Wales's Whig partialities, even supposing them to have been decided and strong, might very naturally have given way. But there is little to show that these partialities or predilections were very strong at this time. It was true that the prince, acting as all heirs apparent to the throne since the accession of the House of Brunswick had acted, had courted or coqueted with the opposition; that in his young days he had worn the blue and buff; that he had lived in great intimacy and familiarity with some of the men of wit and humour (and they were decidedly men of pleasure also), who chanced to be Whigs and opposition leaders; that the successive governments of the king his father had thwarted many of his wishes and refused not a few of his demands, and that on all such occasions the parliamentary opposition had stood forward with more or less warmth as his champions and eulogists: but at the very first really vital difference which occurred (that upon the French Revolution), the prince had openly separated himself from the opposition, and, both publicly and privately, in the House of Lords as well as in Carlton House, had strongly declared against the opinions entertained or professed by Mr. Fox and his friends; and it had long been matter of notoriety that not the king himself was more resolutely bent upon continuing the war with France than was the Prince of Wales. On this last point all the royal dukes, with the doubtful exception of one, agreed with the prince, and entertained the same conviction as the king their father, that peace was never to be purchased with dishonourable and dangerous submission to terms dictated by Bonaparte. Now, Lord Grey and his adherents, who considered themselves the

truest representatives of the Foxites, and who had never ceased proclaiming the war to be unnecessary and unjust, were understood to be determined to signalise their return to power by opening negotiations with the Emperor of the French; and Lord Grenville and his friends, though they had not committed themselves so thoroughly to a negotiation and a peace upon any terms, were believed to cherish the notion that England ought to cease altogether from interfering in the affairs of the continent, and from succouring the Portuguese and Spaniards in a hopeless struggle with the French, and limit all her exertions to a defensive war for the protection of her own coasts and her own colonies. There was thus, on the question of war or peace, a considerable difference between Grey and Grenville. But among the mixture of parties which had formed the opposition, and which was now aspiring to the government, there existed other and more extreme divergencies of opinion. Lord Holland, though the nephew and pupil of Fox, whom he closely resembled in many particulars, was very far from agreeing either with Grey or Grenville; for he had travelled in Spain, had resided for a considerable time in that country, had acquired its language, and an acquaintance with its literature, and was enthusiastic in the cause of Spanish independence, and very sanguine as to the final success of the national resistance of the Spaniards. With these feelings, Lord Holland, as minister, would have acted with additional vigour in aid of Spain and Portugal, and in this policy he would have been followed *certainly* by Lord Moira, and *probably* by Mr. Ponsonby. No government could have stood with these irreconcileable differences among its chiefs and members; but, on other subjects, and particularly on that of parliamentary reform, there was an equal want of unanimity in opinion and principle; and it may safely be said that these coalesced parties fully agreed in nothing except in taking a liberal view of the Catholic claims and the great question of religious freedom—a question upon which they could not have commanded a majority, the people of Great Britain being not yet prepared for such principles. Indisputably, the Prince of Wales had entertained a very friendly regard for Fox, but his affection for any other men of that party, or rather of those parties, may be safely reduced to a very small matter; he disliked the tone and manners of Grenville, and he did not much like those of Grey, and his family traditions bore testimony to the annoyances and vexations which his father had suffered from a haughty and imperious minister. The prince retained Sheridan in his society, and admitted him into part, at least, of his confidence; but Sheridan was now scarcely to be considered as a Whig, or as a member of any one of the coalesced parties, considering himself as aggrieved by Grenville and by Grey, and being ready, at any moment, to comply with the wishes of the prince; and, besides, Sheridan had been too ready and unscrupulous in the services which he had rendered or proffered, and had too entirely lost himself in public opinion, either to have any claim on the regent's esteem, or any capability of doing him any further public service. Lord Moira, indeed, was both liked and respected by the prince; but it was said that, although this nobleman had been a steady Whig, and a warm opponent of Perceval as of Pitt, he waited upon the prince, then in a state of painful indecision, and declared that his affection for his royal highness, and his anxiety for the welfare and honour of the country, that his loyalty and patriotism obliged him to say that a calm reviewal of all the circumstances and difficulties of the times had convinced him that a stable Whig ministry could not be constituted out of the discordant materials of the opposition, and that there would be great danger in making the attempt.

Whatever may have been the number or the relative weight of the motives which induced the regent to retain his father's ministry, his decision was certainly acceptable to the great majority of the nation.* The recollections of All the Talents administration were a strong bar to the pretensions of the living men who had formed it; and it was worse than idle for them to talk again (as they had recently been doing) of the incalculable advantages to be derived from the union and blending of great names, great reputations, great and varied abilities, &c. The Burdettites and Radical reformers said that it was as well to retain Perceval and Liverpool as to supersede them by Grey and Grenville; that a ministry formed by these two joint opposition lords would, in reality, have excluded almost all the people's friends—that from those lords the people could have expected nothing.

The ceremony of installing the prince regent was performed in Carlton-house on Wednesday the 6th of February, the prince swearing to be faithful and to bear true allegiance to his majesty King George III.; to execute truly and faithfully the office of regent of the United Kingdom, according to the act of parliament; to administer, according to law, the power and authority vested in him by the said act; and in all things, to the utmost of his power and ability, to consult and maintain the safety, honour, and dignity of his majesty, and the welfare of his people. The lord president of the council then presented the declaration against popery, which was repeated audibly and then subscribed by the prince, as the oaths had been. The privy councillors signed as witnesses; and these instruments were then delivered to the keeper of the records. The prince then delivered to the president of the council a certificate of his having

* As late as the 1st and 2nd of February, Wilberforce makes these curious entries in his Diary:—"No one knows what the prince means to do, whether to change his ministers or not. . . . . Lord Bathurst believes they are all to go out; but Perry, the editor of the Morning Chronicle, told Stephen that the Prince of Wales has examined the physician at Carlton-house as to the state of the king's health, and has determined against changing his ministers. Otherwise, it had been decided that Lord Grenville was to be first lord of the treasury, in spite of his late letter to Perceval. . . . . I am assured that, before the prince determined upon keeping the present ministers, he sent to Mrs. Fitzherbert and Lady H., and that they both advised it."

received the sacrament of the Lord's Supper; and this certificate also was countersigned and handed over to the keeper of the records.

On the 12th of February—six days after the installation of the regent—the session of parliament was regularly opened, not by the prince in person, but by commission. The commissioners were the Archbishop of Canterbury, the Lord Chancellor, the Duke of Montrose, Earl Camden, and the Earl of Westmoreland. The speech they delivered in the name of the regent dwelt upon the success of our armies in the Indian seas, and the repulse of the French and Neapolitans in the attack on Sicily; upon failures that the French had met with in Portugal and at Cadiz; and it expressed the hope that parliament would enable the regent to continue the most effectual assistance to the brave nations of the Peninsula. It was again declared that the best interests of the British empire must be affected by the issue of the contest of these two nations, and that England could not and ought not to think of abandoning their cause. No speech from the throne since the beginning of the war had been more warlike. In the debates on the address, Lord Grenville explicitly declared his conviction that it was impossible to expect success in such a war—that, in a contest so unequal, the money and resources of this country must be expended with certain loss. The address, however, was carried in both Houses without a division, and with far less opposition and oratory than might have been expected.

On the 21st of February, Perceval informed the House that he had been preparing a plan for the establishment of the regent's household, which would have required an additional allowance of 12,000*l.* to 15,000*l.* a-year, but that his royal highness had determined not to add to the burthens of the people, by accepting any addition to his public state. It was stated, however, by one of the prince's legal friends or advisers, that, in case the king should not recover, and the regency should become permanent, this question would be open anew to his royal highness's consideration.*

Soon after his installation it was reported that the Regent intended to restore the Duke of York to the office of Commander in Chief of the Forces. The Perceval administration had zealously defended the duke during the investigation, and the opposition, or all that portion of it which had supported Colonel Wardle, had not conciliated the Prince of Wales by the zeal they had displayed in accusing and decrying his brother. Old Sir David Dundas, who had succeeded within so short a space of time in disgusting or indisposing the whole army, had applied early in the winter for leave to retire from the arduous office; stating that ill health obliged him so to do, and that he had already served his country in different military capacities for half a century. This application had been repeated so frequently and so earnestly that it was indispensable to name some one to succeed Sir David. The universal voice of the army said, Re-appoint the Duke of York; thus seconding or even anticipating the wishes of the Regent. The trials in which Mrs. Clarke had been engaged, and the sad exhibition which Colonel Wardle and his friends had made since the delicate investigation, had gone far to neutralize the popular prejudice and outcry against the duke, and Perceval and his colleagues saw little or no difficulty in complying with the earnest wishes of the regent. Accordingly, on the 25th of May, the Duke of York's re-appointment was gazetted, and without any outcry. Even the opposition newspapers were nearly all silent on the subject. The re-appointment did not, however, pass without some animadversion in parliament. Lord Milton moved in the Commons that it had been highly improper and indecorous in the advisers of the regent to recommend the re-appointment. He was supported by Lord Althorpe, Mr. Wynn, Mr. W. Elliot, Whitbread, and others: but various members retracted the unfavourable opinions they had delivered against the duke during the investigation; declaring that the circumstances which had come to light concerning the evidence and the character of the witnesses, and the conduct of the accusers, caused them to regret the votes which they had then given: some said that the country was ready to acknowledge that the re-appointment of the duke was a great public benefit; that no measure could be more consonant with the feelings of the army; that the army, which would have been degraded and injured by the corrupt practices which had been imputed to him, if such practices had really existed, was, of all parts of the nation, the most highly pleased at the duke's return to power; and upon a division Lord Milton's motion was negatived by an immense majority — 296 against 47. The duke signalized his return to the war-office by establishing regimental schools on the Bell system. The supplies voted for the year amounted to 56,021,869*l.* Out of this sum 20,276,144*l.* were appropriated to the navy, 21,269,940*l.* to the army, 5,012,378*l.* to the ordnance, 2,100,000*l.* to subsidies, &c. for Portugal, and 400,000*l.* as a subsidy to Sicily.

More through our differences with America, and the interruption of our trade with the United States, than through Bonaparte's continental system, a considerable commercial depression was felt at this critical moment, together with a derangement in the money market, in a great measure occasioned by the necessity of constantly sending specie—particularly gold—to the continent, and by the import-

* The regent, shortly after his installation, gave a splendid fête at Carlton-house. Nothing so gay, or so grand, or so gorgeous, had ever been seen in an English palace; but the fête was generally disapproved of by the public as unseasonable. A few weeks after this an incident occurred, which Francis Horner describes in a manner that does credit to his good feeling:—"There was a very affecting proof of the king's melancholy state given last week at the Concert of Ancient Music: it was the Duke of Cambridge's night, who announced to the directors that the king himself had made the selection. This consisted of all the finest passages to be found in Handel descriptive of madness and blindness; particularly those in the opera of 'Samson:' there was one also upon madness from love, and the lamentation of Jephtha upon the loss of his daughter; and it closed with 'God save the King,' to make sure the application of all that went before.' It was a very melancholy as well as singular instance of sensibility, that in the intervals of reason he should dwell upon the worst circumstances of his situation, and have a sort of indulgence in soliciting the public sympathy."—*Letter to his Father, in Memoirs and Correspondence.*

ant circumstance that the price of gold had risen all over the continent, partly owing to the almost total suspension of the supplies of gold from South America (where by this time nearly all the Spanish colonies were in a state of revolt and anarchy), and partly through other potent causes.* A certain school of politicians and economists, taking up the abstract principle that a gold and silver currency (with gold only for a legal tender in all sums beyond a certain low amount) was far preferable to a paper currency; that guineas were better things than bank notes; and, forgetting that there was hardly any gold in the country, that silver was becoming scarce, that there was no immediate prospect of an influx of the precious metals, and that the fate of the country mainly depended upon the credit of its paper money, thought this a proper moment for raising a cry in favour of a speedy return to cash payments. Mr. Francis Horner, who had chosen the bullion question as his *cheval de bataille*, and who seems to have got into parliament chiefly for the purpose of riding it, had obtained during the preceding year the appointment of a committee to inquire into the reason of the high price of gold bullion, and the state of the circulating medium, and of the exchanges between Great Britain and foreign parts. On the 6th of May, Mr. Horner presented the report of the Bullion Committee, in the drawing up of which he had the principal hand. He prefaced it with an elaborate exposition of his own theory and views. The report stated "that there was an excess in the paper circulation, of which the most unequivocal symptom was the very high price of bullion, and next to that the low state of the continental exchanges; that the cause of this excess (of bank notes) was to be found in the suspension of cash payments, there being no adequate provision against such an excess except in the convertibility of paper into specie; and that the unfavourable state of the exchanges originated in the same cause, and was further increased by the anti-commercial measures of the enemy." The report added "that the committee could see no sufficient remedy for the present, or security for the future, except the repeal of the Suspension Act: this they thought could not safely be done at an earlier period than two years from the time of their report; but they recommended that early provision should be made by parliament for this purpose." Four long nights were spent upon the discussion of this report. Mr. Horner, who had thought that his theory must carry conviction to all candid minds, was astonished to find that the majority of the House was blind to its merit, and that many even of his own friends and party differed widely from him, not merely as to the expediency of attempting an impracticable change at a crisis like the present, but as to the soundness of several of his fundamental principles. His opponents insisted that there had been no depreciation of the paper currency, but that gold had risen in value; that a one pound bank note would still purchase twenty shillings' worth of any commodity except minted gold; that the people neither refused, nor thought of refusing, bank notes great or small; and that it ill became the legislature to throw a discredit upon bank paper, or to shake that confidence without which it would be impossible to continue the momentous struggle in which we were engaged. [Many of those who voted with Mr. Horner, or advocated his doctrine out of doors, there can be no doubt, clung to his theory precisely because they saw that its adoption must force the government into a peace with France.] Imagining that some persons, who might agree with him in his general principles, would yet differ from him in the practical conclusion, Mr. Horner divided his resolutions. The theoretical ones were rejected by 151 against 75: the practical conclusion, or the resolution which would have restored cash payments at the end of two years, was thrown out by the still greater majority of 180 against 45. After this Mr. Vansittart, who had been assisted by George Rose and others, moved a series of resolutions, declaring that bank notes were not depreciated; that the political and commercial relations of the country with foreign powers were sufficient to account for the unfavourable state of the foreign exchanges, and the high price of bullion; that it was highly important that the restriction on cash payments should be removed whenever it was compatible with the public interest; but that to fix a definite period earlier than that of six months after the conclusion of peace (which period was already fixed) would be highly inexpedient and dangerous: and after a discussion of three nights more these resolutions were all passed by a very large majority. But the bullionists would not let the matter rest here. Lord King, who prided himself on his descent from the family which produced the philosopher and metaphysician Locke, gave notice to his tenants, in a circular letter, which was printed and widely circulated throughout the country, that he would no longer receive bank notes at par, but that his rents must henceforward be paid either in English guineas, or in an equivalent weight of Portuguese gold coin, or in bank notes amounting to a

* Bonaparte never took the field with the Grand Army without carrying an immense military chest with him, and this chest, from obvious motives of convenience, was always filled and replenished with gold. On starting on a campaign the French officers, and even those of the soldiers who had money, were all eager to convert it into gold; some of which was carried about the person in a belt or girdle, while some was left secreted at home. In France, all cautious persons, apprehending fresh revolutions and changes of fortune and distrusting the imperial bank, accumulated all the gold specie they could, to conceal it and keep it for the evil hour. Nearly all over the continent of Europe the insecurity of property, and the dread of forced contributions and of less regular plunder, had induced the habit of hoarding and hiding; and gold was sought after and bought up at a constantly increasing price, to be buried in the earth or concealed in secret recesses. In this matter, as in others, Europe was returning to her ancient barbarism, or to the condition of the despotic nations of the East, where so large a portion of the precious metals is constantly withdrawn from circulation and kept hidden. In 1812 and 1813 as much as six Spanish dollars could be obtained in any part of the Mediterranean for an English guinea. With such a temptation to send gold abroad, it was not likely that English traders and speculators should be prevented by the inexecutable laws for prohibiting the exportation of gold and for keeping the guineas down to their standard value from sending gold abroad to the best market. Even in England, Scotland, and Ireland the practice of hoarding specie, during the whole of this revolutionary war, was far from being uncommon. Again, every English officer, traveller, or merchant that went abroad endeavoured to carry with him some gold, as a *corps de reserve*, in case of capture by the enemy, or of other accident. Through all these causes united a guinea, half guinea, or seven shilling piece had become a rare sight in Great Britain.

sum sufficient to purchase such an equivalent weight of gold. It was thought at the time, by those who were not partakers in his lordship's political antipathies, that Lord King had no worse motive than the design of enforcing his own opinion as a bullionist, and, perhaps, of annoying the existing ministers, whom he reproached more especially as enemies to religious freedom, and the claims of the catholics and dissenters of all classes; but that, if his aim had been to bring about national bankruptcy, dishonour, and subjugation, he could not have taken more effectual means to attain that object. It was said that, perhaps, no individual whose intentions were not treasonable had ever before committed so mischievous an act. His example was followed by some other landlords, whose motives were generally believed to be much less disinterested than his lordship's. The farmers and tenants of all classes were thrown into consternation, for guineas were not procurable, and the new demand of the landlords would have imposed an increase on their rents of from 25 to 30 per cent. Fortunately the parliament was still sitting. The very eccentric Earl Stanhope, who had figured so conspicuously at the beginning of the French revolution, as a convert to and a propagandist of French principles, had never ceased voting with the opposition and opposing all ministries; but he had his crotchets, and a pet theory of his own about currency, and he was thus induced to stand forward, and boldly combat the practice or proposition by which Lord King intended to enforce his opposite theory. On the 27th of June, when the government seemed strangely blind to the doom which threatened them and the country, Stanhope gave the alarm, and brought in a bill for preventing the current gold coin from being paid for a greater value than twenty-one shillings, or Bank of England notes from being received for any smaller sum than they were issued for; and for staying proceedings upon any distress by tender of such notes. "The bank," said he, "is one of the bottom planks of the ship of England, and woe be to us if we permit it to be bored through!" On the second reading of Stanhope's bill Lord King defended his letter to his tenants, and his intention of proceeding thereon. Lord Holland maintained that he was perfectly justifiable, as he was only dealing fairly for the interests of his own family, and acting according to the laws of the land.* Lords Lauderdale and Grenville opposed Earl Stanhope's bill, and bitterly censured ministers for countenancing it. Grenville spoke of the French revolution, and of the Jacobin club, in a way to revive the recollections of some of Stanhope's past extravagancies, eulogizing at the same time the character of Lord King, his public spirit, his extensive information, his almost unequalled acquaintance with the subject under discussion, his private virtues, his temper, and benevolence. The second reading of the bill was, however, carried by 62 against 36. Lords Grenville, Grey, Holland, Lansdowne, Lauderdale, Essex, Jersey, and Cowper entered their protest against it, as "manifestly tending to the compulsory circulation of a paper currency: a measure necessarily productive of the most fatal calamities."* Ministers thought it expedient to alter the bill, and such was the extent of their amendments that only about five lines of the original bill were left unaltered. The purport and the effect of the bill remained, however, in the main:—it declared that bank notes should be taken only at their professed value, and it deprived the landlord of his summary remedy by distress, wherever tender of payment had been made in bank notes. On the third reading of the thus amended bill, Lord King said that this law would create additional mischiefs and inconveniencies; that landlords would now refuse to grant leases; that the bill could not effect the object which it professed to have in view, or retard depreciation of bank notes, &c. Lord Chancellor Eldon insisted that the claim which Lord King had set forth in his letter to his tenants was oppressive and unjust, and that the bill was necessary to prevent such a grievous oppression. "The Restriction Act of 1797," said Eldon, "interfered so far with individual contracts, as to say that a debtor should not be arrested, if he tendered his debt in bank notes; the justice of that enactment has never been disputed, and is it now to be said, that a tenant shall have his goods or stock seized, because he cannot pay in gold which is not to be procured? . . . . Let us suppose a young professional man, struggling with the world, who has a rent to pay of 90*l.* per annum, and who has 3000*l.* in the bank, in the 3 per cents. His lordship demands his rent in gold, but the bank refuses to pay the tenant his dividend in gold. Would not the tenant have a right to say, 'As a public creditor, I am refused any other payment than in bank notes; but here is a legislator —one of those by whose act of parliament I am thus refused to be paid except in bank notes—insisting upon my paying him his rent in gold, which I cannot procure; and because I cannot procure it my goods are to be distrained?' Would not this be a grievous oppression? Surely so long as it should be expedient to continue the Cash Suspension Act of 1797, this present bill must become a part of it: for otherwise there would be no equality in the situation of different contracting parties, nor would equal justice be dealt out to those who had an equal claim to it; as there could be no justice in leaving the tenant, who had tendered bank notes, exposed to be distrained upon by his landlord, whilst the debtor in other cases, who had tendered bank notes, was exempted from arrest."† Lord Grenville, who had been himself in power, under

* Lord King himself had said in the House, "I saw no course left but to give up my property, or hold it at such value as the bank, in its good pleasure, might put upon it; or to avail myself of the means which the law yet affords me for its preservation."

* Lord Holland added to his protest, that "he made it also, because, in his judgment, the repeal of the Cash Suspension Act was the only means which could cure the inconvenience already felt, and avert the yet greater calamities which were impending, from the present state of the circulation of the country."

† Lord Eldon also said, "I am peculiarly situated with respect to this question, having the official care of twenty-five millions of the property of His Majesty's subjects, and without the means of enforcing the payment of any part of that sum except in bank notes."

his relative Pitt, when the original Suspension Act was passed, declared that he had then considered it as a necessary, but only *temporary*, measure; and, though the necessity was greater now than it had ever been, he renewed his hostility to the present bill. It was however passed, on the 8th of July, by 43 against 16. In the Commons the bill was opposed at every stage by Sir Francis Burdett, Sir Samuel Romilly, Mr. Brougham, Mr. Peter Moore, and others; but it was eventually carried through that House by majorities of about four to one. The bullionist landlords were by this time perfectly well convinced that they must take payment from their tenants in bank notes at par, or get no rent at all; the credit of the bank was not injured; and things went on as before, all cool and rational men believing that it would be soon enough to talk of the resumption of cash payments when the country should get specie to make them, or when the war should be well finished. But on the continent the report of the Bullion Committee, the letter of Lord King to his tenants, and the discussions thereon in parliament and in the public prints, made impressions which were thought to be, and which probably for a time were, very injurious to the credit and the *prestige* of England. Warned by two or three of the most enlightened or the most honest of his advisers, struck by an appearance of discontent even in France, besieged by importunities and representations from Naples, Leghorn, Genoa, Holland, the Hanse towns, and the whole of the north of Germany, which all agreed in representing that they were sinking fast into poverty, and that his continental system was doing far more hurt to the continent than to Great Britain; and being at the same time startled at the altered and almost menacing tone of his late friend and admirer the Emperor Alexander, who was compelled by the interests of his nobility and landholders, whose superabundant produce could be sold to advantage only in the English markets, to set his face against the Berlin and Milan decrees; the Emperor Napoleon had seriously thought of abandoning, or at the least relaxing, his unhappy system. But now he took fresh heart; and, taking our parliamentary reports and debates as good evidence to the facts, he thought that England was only two fingers' breadth from her ruin—*à deux doigts de sa perte*—that she had suffered far more than the continent, and that another year or two's perseverance must witness her bankruptcy and the triumph of his system, when it would be an easy and simple operation to invade her shores, march an invincible French army into London, change the selfish and anti-social constitution of the country, and declare that the dynasty of Brunswick had ceased to reign. Long before this the members of the parliamentary opposition, and the opposition newspapers, had assured the world that Great Britain was altogether incapable of continuing a struggle which was draining all her resources—that Great Britain was exhausted and impoverished, and that every effort she made against the power and the will of France only hurried on her final ruin; but it might be said, as it had been said, that this was but the voice of a faction, and the hackneyed argument of their paid journalists. But here was a voice of another kind; here a committee of the House of Commons, composed of men of name and reputation, and some of whom had recently belonged to the ministry, had declared in a report to parliament and to the whole country that the paper currency was depreciated, was becoming every day more and more like the assignats of the French revolutionists, and that the only remedy that could be proposed was the impracticable, impossible resumption of cash payments; here a noble lord, who was lately prime minister, supports the principles laid down in the report of the committee; here another noble lord tells his tenants that he will not take depreciated bank notes as payment for rent, and repudiates the paper currency, and finds other peers ready to back him, and support the argument that a national bankruptcy is imminent and inevitable: these men have a large stake in the country; these men must know better than we the real state and prospects of their country. *Allons*, then! let us persevere a little longer; let us burn all British merchandise wherever found; let us punish as traitors all those who attempt to introduce British goods into any part of the continent; and, for the triumph of this great system, which is now working its effects, let us brave and despise the remonstrances and the enmity even of the Czar Alexander! The perfidious Albion has built upon a foundation of credit which has crumbled under her: she has trusted to paper, and presently it will be as easy to rend her in pieces as to tear up one of her flimsy bank notes. At the same moment Bonaparte certainly found another encouragement to persevere, in the rage and hostility of the United States against Great Britain. In his metaphorical way he talked of the leopards of England being chased from the seas by the eagle of France and the stripes and stars of America. Yet, after all, the bullionists may be said, without perhaps intending it, to have done a fatal injury to the Emperor of the French: for, through them, and the discussions they provoked, he was encouraged to persevere, and even to attempt to coerce the czar, and hence followed the Russian campaign, and the disastrous retreat from Moscow.

The debates on Catholic emancipation—a subject which was again agitating Ireland in the most violent manner—will be noticed in our Chapter on the history of Religion.

Parliament was prorogued by commission on the 24th of July. The speech expressed the regent's warm approbation of the wisdom and firmness which the two Houses had manifested in enabling him to continue the exertions of the country in the cause of our allies, and to prosecute the war with increased activity and vigour.

Acting at their own discretion, and on their own responsibility, our ministers had sent out reinforcements and other succours to Lord Wellington, at the moment when nothing was settled, and when it

seemed doubtful whether they might not be displaced in four-and-twenty hours by their opponents, who had certainly induced people to believe that their first important proceeding would be the recal of our army from the Peninsula. In many particulars Perceval was not to be considered as a good war minister, and his cabinet was censurable for delay and indecision, and a proneness to adopt half measures; but their manly conduct at this critical moment entitles them to the admiration and gratitude of those who believe that it would have been disgraceful and ruinous to abandon the Spaniards and Portuguese, and that the only chance, not only for the continent of Europe, but also for England herself, lay in the prosecution of the war. If the contest in the Peninsula, which was draining the life-blood of France, had been given up at the beginning of 1811, there would have been no Russian war in 1812; the Emperor Alexander would have temporized, and would have endeavoured to avert hostilities by complying with the will of Napoleon.

Lord Wellington's difficulties, with respect to the wilful Portuguese regency, and the provincial and other constituted authorities acting under it, had increased rather than diminished. The prince regent, who knew little at Rio Janeiro of what was passing at Lisbon, and who had never been distinguished by perspicacity or political wisdom, seemed inclined to take the part of Principal Souza, with whom his lordship had declared he could not act, and, at the same time, to drive from the Lisbon regency the only man in it with whom Wellington had reason to be satisfied. The ill humour and pique of these incompetent statesmen were betrayed in a variety of petty annoying acts, which would scarcely be credible if not related by the British general himself. Wherever they could they thwarted Lord Wellington, and insulted the troops he commanded, though these troops and this general were the only real defences of the country, and though the British government was sending millions of money to the Portuguese. If, during the inclement weather, the English soldiers cut down a few trees to convert into fuel to cook their meat, or to warm and cheer them in their dreary bivouacs, the regency, who had engaged to furnish the army with these and other comforts and indispensable materials, but who actually furnished nothing, raised a clamour almost as loud and fierce as that which proceeded from the poor peasants when the French army swept through the country, ravaging and ravishing, plundering or burning, or otherwise wantonly destroying, whatever lay in their way; and, when Wellington was advancing from his winter cantonments to drive Massena back into Spain, these gentlemen of the Portuguese regency pestered the English general with complaints about the soldiers having cut some firewood in the prince regent's park, in Salvaterra, and about some olive-trees having been cut down, several months before, on the estate of a Portuguese, at Bucellas—the said olive-trees having in fact been used in the making of abattis for those lines of Torres Vedras which had saved Lisbon from invasion and plunder, and the members of the regency from captivity or a flight across the Atlantic.* At the beginning of the year his lordship saw good grounds for believing that that very perverse and troublesome man the Patriarch of Oporto was assisting Souza in getting up an anti-English party, not only in Lisbon and Oporto, but also in other towns of the kingdom, which had been preserved solely by English armies and English money from French conquest and devastation; and on the 5th of January he expressed to our ambassador at Lisbon his decided opinion that there was a regular plot on foot against the English, and that at the head of it were the patriarch and Souza, who wanted to be able to show that they protested against the pretensions of his lordship and Marshal Beresford to command the Portuguese army. His lordship thought also that the continued absence of Souza and the patriarch from the councils was a consequence or rather a branch of this plot. These two men, who counted upon popular support, withdrew the very day the regency agreed to re-model and increase the taxes, and to introduce various economical reforms into the various departments of government, by discharging some of those swarms of *employés* who were living in absolute idleness in Lisbon, by curtailing the salaries of others, &c., in order to employ the money thus saved in the defence of the country. But the capital ground of quarrel and hatred was the appropriation of the English subsidies, the regency claiming the entire control and distribution of that money, and Lord Wellington insisting that it should be under the control of the English ambassador, who should see that it was strictly applied to the purposes for which parliament had voted it, namely, to pay and support the Portuguese army of 30,000 men. The subsidy this year was raised from one to two millions; and an additional sum of 130,000*l.* per annum was granted to make up a certain amount of additional pay to

* Colonel Gurwood, Wellington Dispatches; two dispatches to Charles Stuart, Esq., dated 16th March.

In one of these letters to our ambassador, who was almost as much embarrassed by the regency at Lisbon as our general was in his operations in the field, Wellington says, with his characteristic calmness, "In respect to the charge of cutting barren wood in the royal park for firewood, I have to reply, that I suppose his royal highness does not propose that his Majesty's troops shall want firewood in Portugal. It is reasonable that his royal highness, as well as other proprietors, should *be paid* for the wood cut upon his demesnes; but either the troops must be allowed to cut firewood, *paying* for the same, wherever the defence of his royal highness's dominions renders it necessary that they should be stationed, or they must be removed to the places where they can cut firewood, by which his royal highness's interests must suffer. I cannot avoid adverting to the disposition manifested by the Portuguese government to complain of the conduct of the British troops, certainly, in this instance, without foundation. Acts of misconduct, and even outrage, I admit, have been committed, but *never with impunity* in any instance in which the complaint could be substantiated; *but I have not yet been able to obtain the punishment of any individual of this country, be his crimes what they may.* If the British soldiers have committed, as all soldiers will commit, acts of misconduct, they have at least fought bravely for the country. They have besides recently shown commiseration for the misfortunes of the people of this country, *and actually fed the poor inhabitants of all the towns in which they were cantoned on the Rio Mayor river.* Yet I have not heard that the Portuguese government have expressed their approbation of this conduct, very unusual in people of this class and description: nor do I find that their bravery in the field, their humanity, or their generosity, can induce those whom they are serving to look with indulgence at their failings, or to draw a veil over the faults of the few, in consideration of the military and other virtues of the army."

all the officers of the Portuguese army: yet through misapplication of funds, and through other proceedings in the highest degree discreditable to the regency, whole brigades of Portuguese continued to be left very frequently without bread, while the troops who were brigaded with the English, and who ought to have been supplied by their own government (by means of the money which our government sent them), were left to be fed by the English commissariat. It was impossible for the English to see these last brave and faithful companions in arms perish with hunger by their side, and so long as the English fed them the regency seemed determined to take no heed. "I do not believe," says Wellington, a few months later, "that there is any peculation amongst the heads of the government, but there is a gross misapplication of funds. The junta de viveres (board for regulating provisions) and the junta of the arsenal are connected, possibly in trade, but certainly by friendship or acquaintance, with all the merchants and dealers of Lisbon, and those who could best afford to wait for their money are and have been invariably paid regularly; while the dealers in the country and the officers and troops wait, and the former are never paid. . . . I have not leisure to read long papers, which are called documents, but which contain not one syllable of truth. I have no money to give to the Portuguese government, and I believe it was never intended by our government that they should have the increased subsidy, till they shall make the necessary alterations in their military system to render it efficient."* At the same time the co-operation or the diversion which was to be made by the Spaniards proved any thing rather than effectual. In the course of two months the Spaniards lost, without sufficient cause, three strongly fortified cities, together with various towns and posts of less consequence; and in the same period Marshal Soult, whose army of Andalusia did not then exceed 30,000 men, took or destroyed above 22,000 Spanish troops.† Nor did failure and disgrace produce any modesty or humility: the Spanish generals, with the single and very honourable exception of Castaños, appear to have occupied themselves in criticising the military conduct of Lord Wellington, instead of improving their own, or in making rhodomontades worthy of so many Sacripanti, or in intriguing against one another: to improve the discipline of their troops, to study themselves the art of war, or any one of the arts connected with it, seemed to be held as an occupation unworthy of a Spanish Don.

During the months of January and February, the armies of Lord Wellington and Massena in Portugal remained in the same respective positions; the low lands being flooded, so as to render field operations almost impossible, and the English general being determined to husband the health and strength of his men and horses. The French marshal was reinforced by the ninth *corps d'armée*, under General Drouet, who entered Portugal by the valley of the Mondego, bringing with him a large convoy of provisions. About the same time Soult received direct orders from Bonaparte to act in concert with Massena by attacking Portugal south of the Tagus; and a new French army was formed in the north of Spain, consisting of about 70,000 men, and placed under Marshal Bessières, who was ordered to support and furnish all necessary assistance to the army of Portugal. "Make a bridge across the Tagus, and let Massena and Soult form a junction: in the mean time keep the English in check, and make them lose men every day by engagements of advanced guards: their army is small, and they cannot afford to lose many men; besides, people in London are much alarmed about their army in Portugal; and when the season becomes favourable let the main operations be carried on on the south bank of the Tagus." Thus privately and confidentially wrote the Emperor of the French to his marshals, as if he had yet to learn that Lord Wellington would not waste away his army in affairs of advanced guards, or in any useless skirmishes or operations whatever, and that, with his good generalship and with such men, the small British army was equal to the duties of a very large one. All the reinforcements which Perceval and Lord Liverpool had determined to send at their own peril did not exceed 7000 men, and these did not arrive until the beginning of March.

Leaving a large force to maintain the blockade of Cadiz, and other forces under Sebastiani to keep the ground which had been won on the side of Granada and Murcia, Soult moved with 20,000 men towards the southern frontier of Portugal; but, before crossing that frontier, he deemed it indispensable to reduce Badajoz, which otherwise would have been left in his rear with a considerable Spanish garrison. Soult, who began to move nearly two months before Lord Wellington received his reinforcements, captured the fortress of Olivença on the 22nd of January, marched forward for Badajoz, defeated a Spanish army under General Mendizabal on the 19th of February, and then, without further hindrance, sat down to besiege Badajoz. Massena's army had so eaten up the country that he could not remain where he was. His troops too were sadly demoralised (in the military sense of the word); above 10,000 of them were sick; and, counting what remained of the convoy which Drouet had brought, there were no more provisions than would serve during a quick retreat to the frontiers of Spain. Massena therefore moved his sick and baggage by degrees to the rear, and, after demonstrations made in other directions, all the divisions of his army filed off in the direction of Pombal. Santarem was evacuated in the night of the 5th of March, and was the next morning entered by the English. But Massena had got a good start, and his army was not overtaken till the 10th, when it was concentrated on a table-land in front of Pombal. There was

* Dispatches; Letters to Charles Stuart, Esq., written in May.
† Id.; Letter to the Earl of Liverpool.

some skirmishing with our foremost light division; but the French, having gained time for their baggage to file off, retreated on the 11th through the town of Pombal. They were closely followed. On the next day, the 12th of March, the English advance found Ney with Massena's rear-guard posted on a high table-land in front of the village of Redinha.* The French—some of the choicest troops in the service of Bonaparte—were greatly favoured by the nature of the ground, which, besides being steep in front, was flanked by some woods, which prevented the English from discovering the real amount and disposition of the force. As Ney seemed disposed to make a stand, Lord Wellington attacked the wooded heights upon his right flank with a brigade of the light division, headed by Sir William Erskine, and ordered Picton to ascend the heights upon his left flank; and, when both Erskine and Picton had completely succeeded in their movements, as Ney continued to keep his ground, his lordship formed a great mass of troops in line, and pushed on to the attack in front. The French now made one general discharge of musketry, which hid them in smoke, and thus veiled they fell back in full retreat through the village of Redinha, and joined, that evening, their main body at Condeixa, whence there branch off two roads, one leading to Coimbra, and another ascending the valley of the Mondego. Massena had sent Montbrun to secure the bridge of Coimbra, intending to seize that city, and, if possible, Oporto also, and there wait until he should be joined by reinforcements from Spain. But Lord Wellington had foreseen his plans, and had ordered Colonels Robert Wilson and Trant with the Portuguese militia to protect Oporto, and to abandon the line of the Mondego, which river was fordable in many places, and to retire across the Douro. This Wilson and Trant did, taking care to remove all the boats and rafts to their own side of the river. Coimbra thus seemed abandoned to the French retreating army; but before quitting that place Trant destroyed one arch of the bridge, placed guards at the fords, and a small force in the town, calculating that if Coimbra could but parry a *coup de main*, Massena, with Wellington close at his heels, would not venture to stay long on the left bank of the Mondego. Montbrun appeared in the suburb of Santa Clara and made an attempt to force the bridge of Coimbra, but he was repulsed by grape-shot, and believing that the Portuguese militia had been reinforced by some English troops sent by sea, he gave up the attempt in despair. Upon this failure Massena changed his plan, and began to retreat along the left bank, by the rough road which leads to Ponte de Murcella. Thus was Coimbra as well as Oporto preserved. From this moment the retreat of the French was hurried and disastrous: their left was all but turned by Picton's division, which crossed the mountains of Ancião by a path which in other days would have been considered impassable; their stragglers were cut off by the vindictive peasantry; their rear was often arrested and sometimes thrown into confusion by the British advance. They augmented the already boundless fury of the Portuguese by the merciless measures they adopted. In order to stop the British artillery and train, Ney, who was still in the rear, set fire to several towns and villages; but our light division, pressing forward through flames and smoke, or avoiding the conflagration by quitting the road and crossing fields and groves, pressed hard upon the retreating enemy, and penetrated between their columns. On a hill near Casal Nova, Ney attempted once more to check the pursuit; but he was driven from that position to another by Picton and Cole's divisions, and was then beaten from hill to hill, until he came close to the strong defile of Miranda do Corvo, where the main body of the French army was already posted. Massena, apprehending that the two British divisions were getting behind that strong defile,* set fire to the town of Miranda by night, and passed the river Ceira, an affluent of the Mondego. "They destroyed at this place a great number of carriages, and burned or otherwise destroyed the ammunition which they had carried; they likewise burned much of their baggage; and the road throughout the march from Miranda was strewed with the carcases of men and animals, and with destroyed carriages and baggage."† But Ney remained behind on the left bank of the Ceira, to gain time for the main army to file off; and, with his usual ability, he took up a strong position in front of the village of Fons de Arronce. Here, on the afternoon of the 15th of March, he was most vigorously attacked by Pack's brigade, Picton's division, a regiment of hussars, the 16th dragoons, and some horse artillery. Ney's people soon gave ground and fell into a panic: many of them were drowned in attempting to discover some fords, and many were trampled to death on a bridge: in all 500 Frenchmen were lost, and our troops took much baggage and some ammunition. Lord Wellington's attack had been delayed by a dense fog; and it was dark night before the French were driven from their last position. Ney succeeded in blowing up the bridge by which he had crossed over; and, leaving a small guard on the bank of the river, he retreated in the track of Massena. The pursuit of the British was stopped by various

* "The whole country," says Lord Wellington, "affords many advantageous positions to a retreating army, of which the enemy have shown that they know how to avail themselves. They are retreating from the country, as they entered it, in one solid mass, covering their rear on every march by the operations of either one or two *corps d'armée*, in the strong positions which the country affords; which *corps d'armée* are closely supported by the main body. Before they quitted their position they destroyed a part of their cannon and ammunition, and they have since blown up whatever their horses were unable to draw away. They have no provisions excepting what they plunder on the spot, or, having plundered, what the soldiers carry on their backs, and live cattle."—*Dispatches; Letter to the Earl of Liverpool, dated Villa Seca, 14th March.*

* Massena's fear was not unfounded. Wellington had as good as turned his formidable position. His lordship says: "Major-general Cole had joined Major-general Nightingall at Espinhal, and this movement, by which the Deixa was passed, and which gave us the power of turning the strong position of Miranda do Corvo, induced the enemy to abandon it in the night."—*Dispatches; Letter to the Earl of Liverpool, dated 16th March.*

† Id., id.

causes: the Ceira was not fordable, the troops had undergone great fatigue for several days, and there was a great want of supplies. Some of the Portuguese who had just joined the main body of the allied army were starving; for the Portuguese regency, in spite of the urgent representations of Wellington and Beresford, had neglected to provide the means for carrying provisions forward along with the army. Nothing could be got from the country where they were acting, for that country had been already ravaged and exhausted by the enemy.* The night of the 15th, and the whole day and night of the 16th, were lost to the pursuit; but on the 17th, having received some supplies, and having constructed a trestle bridge, the British crossed the Ceira, the guard which Ney had left there having withdrawn during the night. Wellington was mortified, and Massena proportionately encouraged, by the intelligence that Badajoz had made a dastardly or treacherous surrender to Marshal Soult. Yet neither did the French general cease from flying, nor did the English general cease from pursuing him. Massena, after destroying the bridge of Murcella, attempted to make a stand on some high ground behind the river Alva, another affluent of the Mondego, which was then swollen by the spring rains. Wellington threw forward three divisions, which traversed mountains by goat-paths, and menaced Massena's flank and line of retreat, and thus compelled him to withdraw hastily, by Moita, towards Celorico. Lord Wellington crossed the Alva, and collected his army near Moita on the 19th; thus compelling Massena to destroy more of his baggage and ammunition, and to forsake the foraging parties which he had sent out. Of these parties above 800 men were intercepted and made prisoners. They were famishing when taken, and their captors had little food to give them. This want of provisions, and the want of draught mules, obliged the main body of the allied army to halt at Moita for several days, to wait the arrival of the provisions which were now coming round by sea from Lisbon to the Mondego. Wellington's light division and cavalry, however, continued to follow the enemy, who reached Celorico on the 21st of March, and re-opened their communications with the garrison they had left at Almeida, and with the Spanish frontier near Ciudad Rodrigo. At Celorico the headlong retreat of the French and the hot pursuit of the allies may properly be said to have terminated. The whole retreat had occupied about a fortnight, and had been attended by an amount of misery, horror, and crime rarely surpassed—by devastation to the country, by destruction to the country people, but by a still more terrible destruction to Massena's troops. It was altogether a more terrific affair than the retreat of 1809, for Marshal Soult had exerted himself in checking the ferocity of the French soldiery, while Massena, himself ferocious and ruthless, had not merely left the demoralised troops to follow their own evil instincts, but had also expressly ordered many of their worst deeds. A vast deal of the mischief committed was wilful and unnecessary. It was by express orders from Massena's headquarters that the town of Leiria and the abbey of Alcobaça, the richest and most beautiful ecclesiastical edifice in Portugal, and one of the rarest and most beautiful in the world, were given to the flames.* "But every horror that could make war hideous attended this dreadful march. Distress, conflagration, death in all modes! from wounds, from fatigue, from water, from the flames, from starvation! On every side unlimited violence, unlimited vengeance!"† Lord Wellington himself bore testimony, in his official dispatches, to the brutality of the French. "Their conduct throughout this retreat," said he, "has been marked by a barbarity seldom equalled, and never surpassed. Even in the towns of Torres Novas, Thomar, and Pernes, in which the head-quarters of some of their corps had been for four months, and in which the inhabitants had been invited, by promises of good treatment, to remain, they were plundered, and many of their houses destroyed, on the night the enemy withdrew from their position; and they have since burned every town and village through which they have passed. . . . . There is not an inhabitant of the country, of any class or description, who has had any dealing or communication with the French army, who has not had reason to repent of it. This is the mode in which the promises have been performed, and the assurances have been fulfilled which were held out in the proclamation of the French commander-in-chief, who told the inhabitants of Portugal that he was not come to make war upon them, but, with a powerful army of 110,000 men, to drive the English into the sea. It is to be hoped that the example of what has occurred in this country will teach the people of this and of other nations what value they ought to place on such promises and assurances; and show them that there is no security for life, or for anything which makes life valuable, excepting in decided resistance to the enemy."‡

On the 25th of March Massena abandoned Celorico, but retained the strong position of Guarda, fondly expecting that Soult, after capturing Badajoz,

* "It is literally true," says Lord Wellington, "that General Pack's brigade, and Colonel Ashworth's, had nothing to eat for four days, although constantly marching or engaged with the enemy."—*Id., id.*

At the same time the mules of the artillery were unable to draw the guns for any length of time through want of food; the baggage mules of the army were nearly all dead of famine, and the drivers had neither been paid nor fed. Many of the Portuguese in Pack's brigade had dropped out of their ranks through hunger and exhaustion: three of them were known to have died of actual famine in one day; and it was supposed that most of those who had lingered behind must perish. "It is still," said his lordship, "a favourite notion with some members of this government, that the Portuguese troops can do with very little or no food! . . . . . This is the state of the army at the commencement of the campaign; and I see clearly that, unless this government change its system, no remedy will be applied, and the whole burden of defending this country will fall upon Great Britain."—*Id.; Letter to Charles Stuart, Esq.*

* For a description of this truly regal monastery and of the magnificent monks who inhabited it, of the exquisitely beautiful country in which it stood, of its earliest Norman cloisters, of its endless corridors, of its panels of jasper and porphyry, its paintings, antique tombs, and fountains—all as they were in the year 1794, before the storm of those French wars burst over Portugal—we refer the reader to *Recollections of an Excursion to the Monasteries of Alcobaça and Batalha, by the Author of 'Vathek,' London*, 1835.

‡ Dispatch to the Earl of Liverpool.

would advance through Portugal, and dreading the responsibility of abandoning that country altogether without orders from his emperor. A quarrel broke out between Massena and Ney: the French garrison left in Almeida was cut off from communication and threatened with destruction by the British and Portuguese; and Ney, after vainly urging an immediate march upon Almeida, threw up his command in disgust and went to Salamanca. On the 29th of March Wellington appeared in force, and moved his columns up the steep hill of Guarda, and manœuvred the French out of that formidable position. Massena went off towards Sabugal without firing a shot, but with his rear-guard in admirable order. On the 2nd of April the British army came up with the French, who were then posted on the right bank of the Coa. The next day there was some hard fighting, which ended, after several vicissitudes, in the enemy's being driven from the bank of the Coa. This was called the combat of Sabugal. Our light division lost about 200 men; but the French suffered far more severely, and were obliged to abandon more of their baggage. Finding that Soult could not come, and that he could not maintain himself even on the extreme frontier of Portugal any longer, Massena retired by Alfayates, Aldea da Ponte, and Aldea Velha, and on the 6th of April crossed the Agueda into Spain.*

Thus terminated the third French invasion of Portugal. Their total loss had been immense: including the sick and wounded, Lord Wellington calculated it at not less than 45,000 men.† Massena, however, still counted 40,000 men when beyond the Spanish frontier, besides the garrison left in Almeida. Having placed his army in cantonments between the Coa and the Agueda, and given his instructions for the blockade of Almeida, Lord Wellington set out for the south to see the state of affairs on the Guadiana and the country near Badajoz. When his lordship first began to follow the retreating army of Massena, he had written to the Spanish governor of Badajoz beseeching him to make a good stand, and promising him speedy assistance. But unfortunately General Menacho, the governor, was killed by a cannon ball; and the command of the garrison devolved upon General Imaz, a man unworthy of the trust. On the morning of the 9th of March, Wellington—who was then at Thomar, and who had caused it to be announced by signal and otherwise that Massena was retreating, and that he had made all the arrangements necessary for detaching a strong relieving force—received accounts of a most favourable nature from Badajoz, which induced him to believe not only that the place was in no danger, but that it was in fact untouched; that its fire was superior to that of the besiegers; that it was in no want of provisions or ammunition; that it had sustained no loss except that of General Menacho, and that General Imaz was a worthy successor to the deceased governor, and enjoyed the full confidence of the Spaniards; in short, that Badajoz, even unaided, was both able and likely to hold out for a whole month, which delay must have proved very disastrous to Marshal Soult. On that very day—the 9th—the French made a breach in the place about eighteen feet wide, but which was by no means practicable: also on the same day Governor Imaz acknowledged by signal the receipt of the message which Wellington sent him; and on the very next day, the 10th of March, he held up the white flag and suspended hostilities. And on the 11th Badajoz was surrendered, the garrison becoming prisoners of war, but having idly bargained to be allowed to march out with the honours of war, honours which they had basely

* The toil which Lord Wellington underwent in following up this retreat of Massena was immense, having been necessarily increased by the strange conduct of some of his general officers, who had chosen a very unseemly moment to plead important private business and to return home. This conduct was resented and criticized as it deserved.

"I assure you," wrote his lordship, "that the departure of the general officers from the army was as much against my inclination as their arrival in England was injurious to the public interests. I did everything in my power to prevail upon them not to go, but in vain; and I acknowledge that it has given me satisfaction to find that they have been roughly handled in the newspapers. The consequence of the absence of some of them has been, that in the late operations I have been obliged to be general of cavalry, general of the advanced guard, and the leader of two or three columns, sometimes on the same day.

"I have requested Colonel Torrens (then secretary to the commander-in-chief the Duke of York) not to allow any general officer to come out in future who is not willing to declare that he has no private business to recall him to England, and that he will remain with the army as long as it shall stay in the Peninsula."—*Private Letter to the Earl of Liverpool, dated 23rd March.*

† A great part of this loss was from the Portuguese peasantry, who killed every straggler whom they could lay their hands upon before the heads of the British columns came up. A writer of ability and unquestionable veracity, then a young officer serving with our light division, a man of humanity and sensibility, whose heart had not been hardened by witnessing many horrors in other countries besides Portugal, has drawn a fearful picture of the scenes he saw with his own eyes during Massena's retreat:—

"The Portuguese peasants killed those who fell behind from sickness, as well as those who straggled for the purpose of marauding or seeking for food; they killed the wounded who were left behind for want of means of transport, as well as those who dropped down from weakness and fatigue; they killed them with their knives, or dashed out their brains with stones, or with the long knobbed sticks which the Portuguese peasantry carry on their shoulders. The appearance of the British advance (for the British army always protected the prisoners) made the Portuguese leave their work of death at times unfinished, and they left their victims, whom they generally left stark naked, to die in the fields right and left of our line of march. The writer of this article, then a very young man, speaks from recollection. It was on the 10th of March, on the road from Payalva to Pombal, that he saw the first dismal traces of the disastrous defeat of the French: bodies of dead soldiers, carts broken down on the road, carcases of horses and mules: and from that time till he arrived at Celorico, on the 29th of March, there was hardly a day on which he did not see numbers of dead bodies scattered about the fields right and left of the road, generally naked, most of whom had no mark of wounds from fire-arms, and had either died of disease, of which many of them bore evidence, or had been finished by the peasantry. One day he remembers counting them, and in a few hours of the march he reckoned between 100 and 200, till he felt too sick to reckon any more. . . . . Some of the poor creatures seemed to have crawled or to have been dragged out of the road to die behind the loose stone walls with which the fields are enclosed; and on looking over the stone walls into the fields, they were seen lying in clusters of three or four, or more, in all sorts of positions. A few were still breathing. It was a horrid sight. He also remembers once or twice seeing Portuguese villagers, men and women, insulting and kicking the bodies of dead Frenchmen on the road, when they were properly reproved and driven away by a British non-commissioned officer. 'A Portuguese farmer in the Estrella showed him the uniforms of four or five Frenchmen whom he had surprised singly and killed in his neighbourhood during the winter. It was chiefly in the mountains of the Estrella that the work of destruction had been carried on during the winter of 1810-11. The French marauding parties went hunting for provisions in those sequestered valleys, and when they fell upon a hamlet or farm-house they showed no mercy to the inmates. Sometimes in the mountains they pounced upon several families huddled together in a cave, with a provision of Indian corn or pulse to last them for the winter. The males were soon dispatched, the females spared for a time, but not in mercy. It happened, however, at times that these marauding parties were small, and were overpowered by the peasantry, who then gave no quarter."—*A. Vieusseux, Military Life of the Duke of Wellington.*

forfeited, and which no capitulation or compact and no earthly power could restore to them after their despicable conduct. Nine thousand Spaniards surrendered to a besieging army which did not at that moment exceed 9600 infantry and 2000 cavalry! The place was still strong, and there was still an abundance of ammunition and artillery. Cowardice and imbecility were not deemed sufficient to account for the conduct of Imaz. The British general had urged him to keep secret the intelligence of Massena's retreat, lest by means of deserters it should reach the enemy, whom his lordship was in hopes of finding engaged in the siege; yet Imaz published the intelligence as soon as he received it, stating moreover that he did not believe it, that it was incredible that Massena should be flying before Wellington, and, going still farther than this, he communicated the news to the French general.* The indignation and astonishment of Lord Wellington were great. Marshal Beresford, who commanded the allied troops in the Alemtejo in the absence of General Hill, who had gone home on leave, was daily expecting reinforcements from our main army, and had prepared for a rapid march which must have forced the French to raise the siege. After the unexpected fall of Badajoz (it was as unexpected to the besiegers as it was to the English), Soult put his troops in motion to cross the Guadiana and the southern frontier of Portugal; but intelligence reached him from Andalusia which induced him to give up the command to Mortier, and to repair with all haste to Seville. And, while Soult had been engaged in Estremadura, General Graham † (now the veteran and venerable Lord Lynedoch) had issued from Cadiz with the greater part of the British and Portuguese garrison, and had embarked with the intention of landing on the Andalusian coast and of throwing himself upon the rear of the French blockading army, which was reduced by the draughts which Soult had made upon it to some 16,000 men. The British and Portuguese, about 4000 strong, got to sea on the 21st of February. Graham had intended to land somewhere between Cape Trafalgar and Cape de Plata on the Atlantic, or at the old and still essentially Moorish town Tarifa, on the straits of Gibraltar; but, finding it impracticable to effect a landing either from the ocean or in the straits, he went farther off, passed through the narrow straits altogether, and, entering the bay of Gibraltar, landed at Algeciras, which town, with its Moorish aqueduct, faces the impregnable rock. From Algeciras Graham had to go back by land to Tarifa. The road between these two old towns, running over mountains and along the edge of precipices, is about as bad as any in Europe—difficult in the winter season even to the traveller who has no other incumbrance than a light portmanteau. As it was impassable for wheeled carriages of any description, Graham sent his artillery stores and provisions back to Tarifa by sea; and they were conveyed in boats, and safely landed by our seamen in spite of wind and weather. A Spanish force 7000 strong, under the command of General Lapeña, came into the straits to co-operate with the English and Portuguese; and after being thrice driven back the Spaniards reached Tarifa, and disembarked on the 27th of February. General Graham consented to yield the superior command to Lapeña, and to serve under him during this expedition. But, with one or two exceptions, it had never yet been found possible for a British commander and British troops to agree with a Spanish general and Spanish troops: differences of opinion arose immediately, misunderstanding of intentions followed, and these evil influences appear to have increased during the march from Tarifa to the neighbourhood of the French positions. The road continued to be execrably bad: after the mountains (high offshoots from the Sierra de Ronda) had been crossed, the army had to traverse a spacious plain, which, in many parts, may be compared to the Pontine marshes, for it is intersected with innumerable streams running in all directions; it has an immense mere (called the lake of Junda), a lake at this time of the year, but in summer, for the greater part, a muddy, slimy, pestiferous bog, across which a highroad runs over an artificial causeway. In this plain, at Veger, about midway between Tarifa and the bay of Cadiz, the French had an outpost of infantry and cavalry; and a little further on, on the road to Medina Sidonia, they had a small fort. Lapeña intended to surprise both these posts; but his measures were so ill taken that there was no surprise at all. The posts were, however, carried by fighting, and at the fort the French lost sixty or seventy men in killed, wounded, and prisoners, and abandoned their two cannons and all their stores. At this point Lapeña was joined by 1600 men from the so-called army of St. Roques. The whole allied force now amounted to 11,200 foot and 800 horse; but, instead of being kept united, it was divided into three or four columns, which pursued different lines of road, or marched at considerable distances from each other. They had twenty-four pieces of artillery; but this good train was divided like the rest of the force. Victor, who was in command of the French army in front of Cadiz, was alarmed at the approach of the enemy on his rear; but this approach was far from being so rapid as it might have been, even after making every allowance for the difficulties of the road; and the French general appears to have had timely notice of the whole plan, and of every movement of the allies. He reinforced General Cassagne, who occupied the town of Medina Sidonia, and he took post himself, with ten battalions, between Medina

* Lord Wellington's Dispatch to the Earl of Liverpool, dated 16th March.

† General Graham had good claim to both epithets veteran and venerable even at this time. In 1811 he was in the sixty-first year of his age. Yet in the battle of Barrosa, and in the dreadful marches which preceded it, he displayed all the activity, all the spirit, of youth, and underwent every hazard and fatigue. In crossing the lake of Junda he dismounted from his horse to guide and encourage the foot soldiers, and traversed the whole of the inundated causeway on foot, with the water to his waist, and at times almost to his chin.

Sidonia and Chiclana. As Victor made this movement, the Spanish camp-marshal, de Zayas, quitted the Isle of Leon, threw a body of troops over the Santi Petri, and menaced the extreme left of the French lines; and, although vigorously attacked by the French general Villatte, de Zayas kept his ground manfully, repulsing his assailants with loss. Upon this Victor marched back towards Chiclana, and ordered Cassagne to join him; for he now expected nothing less than that the allied army, united and led on by Lapeña, would make a concentrated and vigorous attack on the left of his positions, break through his lines, give the hand to de Zayas, receive supplies and further reinforcements from the Isle of Leon and from the city of Cadiz, and thus compel the French to raise their siege, or blockade, for good and all. But an excess of caution made Lapeña slower even than he had been before; much time was lost in crossing the lake of Junda by the narrow wretched causeway, which was then three or four, and in some places more, feet under water; the allied army was not concentrated; and, when General Graham reached the heights of Barrosa, he found them abandoned by a Spanish division which ought to have held them, and in possession of Marshal Victor, who was covering them with 8000 men and a formidable artillery. It was imperatively necessary to recover these heights, for if they remained in the hands of the French there could have been neither an advance nor a safe retreat, but the allied forces must have been involved in one common ruin. Graham therefore boldly marched up the slopes of Barrosa, in the teeth of a terrible fire of artillery and musketry, and, with 4000 British and Portuguese, joined battle on the narrow ridge of the hill with double the number of veteran French troops. The combat was fierce and bloody, but not of long duration: the hill top and the hill sides were swept by the British bayonets; an imperial eagle (the first which the English had taken) was captured from one of the most famed regiments in Bonaparte's army. The French, after being driven down the heights, were pursued across a valley; the reserve which they had formed beyond that valley was broken and completly routed; the French general Ruffin (whose proper name would have been Ruffian) was wounded and taken, General Bellegarde was killed, General Rousseau was mortally wounded, and in less than an hour and a half Victor was in full retreat. The victory had been dearly bought; out of Graham's 4000 men, 1243 were killed or wounded. But the French loss, including 440 that were taken prisoners, was estimated at more than 3000. During this terrible and heroic struggle, Lapeña was lying three or four miles off, and was sustaining a not very formidable attack from General Villatte; the cavalry was engaged at a distance, or was manœuvring in another direction; thus the British received no support from the Spaniards during the unequal combat, and at its glorious termination the want of horse prevented Graham from giving a pursuit which must have proved very destructive to the French.* But, except the honour gained to our arms, no important result followed the battle of Barrosa, which was fought on the 5th of March. Lapeña would undertake nothing against the retreating disheartened French; and Graham, in disgust, marched to the bridge which de Zayas had thrown over the Santi Petri, and retired into the Isle of Leon. Lapeña now professed a great eagerness for action, but he declared that he could do nothing unless Graham should quit the Isla and join him, and he remained in his camp doing nothing at all. In this interval Admiral Keats landed some of his British seamen and marines, and these brisk fellows stormed two French redoubts, and dismantled all the sea-defences and batteries on the bay of Cadiz, from Rota to Santa Maria, except Catalina, which was found too strong to be carried by a *coup de main* by only two or three hundred men. At last Victor, who, after his defeat at Barrosa, had fully expected to be obliged to raise the blockade of Cadiz, or to find all his works destroyed or rendered useless, returned to his old lines; and thereupon Lapeña crossed over to the Isle of Leon, destroyed the temporary bridge which de Zayas had erected, and left the French, without hindrance or molestation, to re-establish the blockade. But, when Soult so hastily quitted Badajoz and the banks of the Guadiana, he saw little prospect of such a termination to the expedition of Graham and Lapeña: from Seville he ordered Sebastiani, who had turned a deaf ear to the entreaties of Victor, to reinforce the blockading army; and he called upon the French government at Madrid, and upon Marshal Bessières in the North, to strengthen, at one and the same time, the forces in Andalusia and in Spanish Estremadura, and the army of Portugal under Massena, who had now retreated as far as Salamanca. Mortier, to whom Soult had left the command of the *corps d'armée* in Estremadura, advanced from Badajoz, crossed the southern frontier of Portugal, and laid siege to Campo Mayor, an old weak place garri-

* Lord Wellington thus expressed his opinion of the battle of Barrosa, in a warm, friendly letter addressed to General Graham on the 25th of March:—"I beg to congratulate you and the brave troops under your command on the signal victory which you gained on the 5th instant. I have no doubt whatever that their success would have had the effect of raising the siege of Cadiz, if the Spanish corps had made any effort to assist them; and I am equally certain, from your account of the ground, that if you had not decided with the utmost promptitude to attack the enemy, and if your attack had not been a most vigorous one, the whole allied army would have been lost. You have to regret that such a victory should not have been followed by all the consequences which might reasonably be expected from it; but you may console yourself with the reflection that you did your utmost, and, at all events, saved the allied armies; and that the failure in the extent of benefit to be derived from your exertions is to be attributed to those who would have derived most advantage from them. The conduct of the Spaniards throughout this expedition is precisely the same as I have ever observed it to be. They march the troops night and day, without provisions or rest, and abusing everybody who proposes a moment's delay to afford either to the famished and fatigued soldiers. They reach the enemy in such a state as to be unable to make any exertion or to execute any plan, even if any plan had been formed; and then, when the moment of action arrives, they are totally incapable of movement, and they stand by to see their allies destroyed, and afterwards abuse them because they do not continue, unsupported, exertions to which human nature is not equal. I concur in the propriety of your withdrawing to the Isla on the 6th, as much as I admire the promptitude and determination of your attack of the 5th; and I most sincerely congratulate you and the brave troops under your command on your success."—*Colonel Gurwood, Wellington Dispatches.*

soned by only a few hundred men. But the commandant, a Portuguese officer of artillery, made a better stand in this weak place than the Spaniard Imaz had made within the strong defences of Badajoz: he defended himself bravely for eleven days, until his few serviceable guns were dismounted and a wide practicable breach made in the walls; and even then he demanded and obtained from Mortier four and twenty hours more to wait for succour, for the true-hearted Portuguese knew that Marshal Beresford was coming fast down to that frontier, and that every day, every hour gained, was of importance. Rapidly as he was moving, Beresford could not arrive in time to prevent the surrender of Campo Mayor; but Mortier had scarcely established himself in that place, when Beresford, having received the reinforcements which Wellington sent him from the north, appeared in the neighbourhood at the head of 22,000 men; and at this unwelcome appearance the French (on the 25th of March) hastily evacuated Campo Mayor and retreated to Badajoz, pursued all the way by the British cavalry. Beresford's orders from Wellington were to invest Badajoz before the French could provision it, and repair and improve its works. His lordship had repeatedly represented to the authorities on either side of the frontier—to the Spaniards as well as the Portuguese—the necessity of collecting boats or materials wherewith to construct a movable temporary bridge across the Guadiana; but these representations had met with the usual attention, and on this account the safety of the whole allied army was repeatedly put in jeopardy. After Mortier and our cavalry in pursuit of him had crossed, the river suddenly rose from three to four feet, thus rendering the fords impassable, and the construction of a trestle bridge more difficult. The neighbouring country too was so bare of timber, that none but small spars could be procured. With almost incredible pains Marshal Beresford did, however, construct a sort of bridge, partly made of boats and block-tin pontoons, and partly of trestles; and on the 5th of April, in the afternoon, the troops began to cross over, a very few men at a time. So slow was this operation, and so precarious the bridge, that it took the army more than three days to get over; for, although there was not an hour's intermission, it was not until midnight on the 8th that Beresford collected all his troops on the opposite bank. If the French had kept their ground or had returned from Badajoz, the operation must have been altogether impracticable, and a part of the allied army must have been captured or destroyed; but the invaders seemed to have lost all spirit and confidence, and just at this moment Mortier withdrew from the contest, and gave up the command to Latour Maubourg. Between the 9th and the 15th of April the British recovered the fortress of Olivença, and two or three important positions on the Valverde river. It was expected that the enemy would have made an attempt either to cover or to relieve Olivença; but they merely gathered at Albuera, and then retired from that ground at the first approach of the British army. It was on the 20th of April that Lord Wellington arrived from the northern frontier at Beresford's head-quarters: he lost no time in reconnoitring Badajoz, and he ordered immediate operations against that place, which must be taken quickly or not at all. The loss of Badajoz (that shameful loss!) had been a most unexpected and very severe blow to his lordship, and he considered its recapture as essential to his future operations; for so long as the French held that fortress the southern frontier of Portugal lay open to them; and his lordship, besides, had formed the plan of advancing boldly into the heart of Spain, so as to force the French to abandon at least Andalusia. He knew the uncertainty and the danger of the siege, but for so important an object something must be risked. While making the necessary preparations for the siege of Badajoz, which he would have directed in person, if it had been possible, Wellington was recalled to the north by the intelligence he received of Massena's movements. Something, though not much, had been expected from the Spaniards, who had a regular army—or what they called such—in Gallicia and Leon, and numerous bands of guerillas in the country behind Salamanca and in other parts of the north-western provinces of their kingdom; and these forces might have been competent to interrupt the arrival of Massena's reinforcement and supplies, and to cause him some loss, if not some serious delay on his march from Salamanca back to Ciudad Rodrigo and the northern frontier of Portugal. But the Spanish forces did nothing, or nothing that was of any avail; and the defeated French marshal, having been allowed to recruit and do what he chose at Salamanca, was now in full and undisturbed march for the ground he had quitted on the Coa, holding it as important to relieve the French garrison left in Almeida as Wellington and Beresford held it to recover Badajoz. The British commander-in-chief was back again on the Coa by the 28th of April, making the best dispositions to prevent the relief of Almeida, and to drive Massena back once more.

On the 2nd of May the French marshal, having been joined by some fresh cavalry sent to him by Bessières, moved from Ciudad Rodrigo, crossed the Agueda, and entered Portugal with 40,000 foot, 5000 horse, and 30 pieces of artillery. He had declared to Bessières that it would be a shame and disgrace to allow Almeida to surrender to the English in the presence of two marshals of the empire. Lord Wellington, fully aware of the intention of relieving Almeida at all hazards, determined to fight another battle rather than give up the blockade of that place. The reinforcements sent down to the south to Marshal Beresford had so weakened our main army, that his lordship had only 32,000 foot and 1200 horse to oppose to Massena. The country, too, near Almeida was in good part very favourable to the operations of cavalry, in which arm Wellington was most defi-

cient. Moreover, in order to maintain the blockade and prevent all access to or egress from the Portuguese fortress, his lordship was obliged to leave a mass of troops under Almeida, and to extend his lines for seven long miles, from the river Turones to the river Das Casas (two affluents of the Agueda), having his left on Fort Concepcion, his centre opposite the village of Almeida, and his right at the village of Fuentes de Onoro. This extended position was on a low and open tableland, between the two parallel streams, the Turones and Das Casas: the river Coa, which had been crossed, flowed in the rear, and there was only one bridge whereby to cross it in case of a retreat —the bridge of Castello Bom. The ground was openest on the side of Fuentes de Onoro, which village soon merited its name—"the Fountains of Honour,"—and there Massena resolved to attack in great force, hoping to gain the village, turn Lord Wellington's right, push it upon its centre, and then drive the whole of that army back upon the Coa and the one narrow and perilous bridge. Towards evening, on the 3rd of May, the French left, under cover of a hot cannonade from a ridge which commanded the village, made a resolute assault upon Fuentes de Onoro. They carried the lower part of the village, and drove the English to the upper part, where the defence was, for a time, confined to a few strong houses and a chapel that stood upon a rock. But Wellington, at the opportune moment, sent down a fresh brigade, and the confident assailants were driven back at the point of the bayonet. Massena fed his column of attack with more and more reinforcements, and the struggle in the narrow streets of the village was tremendous. Repeatedly bayonets were crossed (that very rare occurrence in war), the French and English being occasionally intermixed. But no French troops ever yet stood such a contest; and the assailants were soon driven out of the lower part of the village and across the Das Casas river. Completely foiled in this effort Massena passed all the following day in reconnoitring and in making plans of attack, which were all foreseen by Wellington and provided for. In the course of that day Marshal Bessières, who had joined Massena with a body of Bonaparte's imperial guards, reconnoitred also, declaring to his impatient and irritated colleague, that great caution and circumspection would be necessary against a commander so skilful and troops so steady as those now before them. On the morrow, the 5th of May, as early as three o'clock, the French columns were in motion, and at about six Massena made a grand attack on the British right with the greater part of his army, including the entire mass of his cavalry. In executing some necessary movements upon the open ground the British light division suffered rather severely from the charge of the French horse, led on by Montbrun, and there was one terribly critical moment; but General Craufurd got his division into squares, Montbrun drew his bridle-rein, and the French horse wheeled round on the plain and retired from the compact masses and the murderous fire of the British infantry; and, though Massena commenced a heavy cannonade which did great execution, twelve British guns were plied with such vigour that his fire soon slackened. After this the French marshals were foiled in everything they attempted; no feint, no movement or manœuvre whatsoever, produced any visible effect. All the troops which Wellington considered it necessary to withdraw from his extreme right and centre to concentrate on his right, the object of Massena's grand attack, were withdrawn and concentrated, a new front was formed, and it was so deeply lined with troops as to strike Massena's heart with despair. The village of Fuentes de Onoro, again attacked with excessive fury and obstinacy, was again defended as stoutly as it had been on the 3rd. Again there seemed different shiftings and changes of fortune: early in the contest that noble Highlander, Colonel Cameron, was mortally wounded, and three brave regiments were driven from the lower parts of the village by an attacking column of tremendous strength: at one time the very chapel on the rock above the upper part of the village was abandoned; but Colonel Mackinnon came up with his brigade;—"Wild from the plaided ranks the yell was given;"—the Highlanders rushed on to take vengeance for the fall of Cameron, and the entire village was recovered and cleared of all the French, save their dead and their badly wounded. The battle was prolonged in and round the village till the fall of evening, when the French again crossed the stream and retired the distance of a cannon shot from its bank. Their generals had committed various military blunders, but on the British side there does not appear to have been a single mistake. Our total loss was 235 killed, 1234 wounded, and 317 missing or prisoners. The loss of the French was much greater: 400 of their dead were counted in the village of Fuentes de Onoro alone, strewing the streets or piled upon one another; many prisoners were taken, and intercepted letters showed that as many as 2000 or 3000, or by some accounts 4000, had been wounded either in the attacks on the village on the 3rd or in this more general affair of the 5th. The battle of Fuentes de Onoro was of importance in the eyes of the world and to the military fame of our country, by being a regular pitched battle, fought by the British in a position (forced upon Wellington, unless he left Almeida open to Massena) of no particular strength, and, indeed, weak at one point, and with a very inferior force. A good part of the disciplined Portuguese were away in the south with Beresford, so that the great majority of the troops engaged were British. The British 5th and 6th divisions were posted on the left to protect the blockade, and, being observed all the time by an entire French *corps*, they could take no part in the engagement. There were only four British divisions of infantry, one Portuguese brigade, and about 1000 horse actually engaged against three French corps of infantry and nearly 5000

cavalry; for Montbrun, expecting to decide the battle by that one *coup*, charged with all his squadrons and with almost every horse he had.* Massena fought the battle for the purpose of relieving Almeida, but he failed completely, and, a few days after, that place was evacuated by the French garrison, who blew up some of the works, fled by night, and, getting across the Agueda, joined their main army, though not without the loss of 400 men, the third part of their entire force, and the loss of their artillery, ammunition, baggage, and everything they possessed except the ragged clothes on their backs, their side-arms, and muskets. Many prisoners also were brought in, and, but for some negligence on the part of our blockading divisions, scarcely a man of that garrison could have escaped.† Bonaparte, before this, had become convinced that Massena was not the man to drive Wellington out of Portugal, and he had sent Marshal Marmont to supersede him. The order by which the former favourite of fortune was ordered to give up the command to a much younger and less celebrated officer was harsh, ungenerous, unfeeling; but Massena had but slight claims to the sympathy of any one, and this measure was what was meted by Bonaparte to nearly all his unsuccessful generals. The ex-commander-in-chief of the army of Portugal was allowed to take with him to France only his son and one aide-de-camp.‡ Nearly at the same time Marshal Ney, General Junot, and Loison repaired to Paris, whither King Joseph had gone before them. These generals all left behind them evil names, and carried with them jealousies and fierce recriminations of one another, loud accusations of Joseph's ministers and advisers, softer complaints against the government of Paris and even the emperor himself, and the common determination to excuse, every man of them, his own conduct, by imputing misconduct to others. *La guerre d'Espagne*, a word of ill omen before their return, took a more sinister sound and signification before Massena, Ney, and the very rash and talkative Junot had been a week in the French capital. Marmont had been ordered to take the command of the army of Portugal with a firm hand; but this marshal, finding that he could do nothing more than continue the retreat which Massena had begun after the battle of Fuentes de Onoro, retired to Salamanca, and put the disheartened, half-naked, and half-starving army into cantonments.

As there was nothing more to apprehend on the northern frontier Lord Wellington returned once more to the south. But before he could arrive on the Guadiana great events had taken place, and a battle had been fought far more bloody than that in which he had triumphed on the Coa. A few days after the 25th of April, the day on which his lordship had left him in order to go and meet Massena, Beresford had quitted his quarters on the Valverde and advanced against Badajoz. Latour Maubourg called in all his detachments and outposts; and by the 4th of May Badajoz was invested. But Soult was now marching back from Seville to relieve and then reinforce the garrison of that important place. The departure from Madrid of Joseph Bonaparte had left disposable a considerable French force, which that intrusive king had considered necessary for the protection of his own person and flitting ephemeral government; some troops, too, had been drawn from the corps of General Sebastiani, so that the best or most skilful of the French marshals was bringing a great accession of strength to the army which he had been compelled to leave two months before by the movements of General Graham. In the same interval, however, communications had been opened between Wellington and Beresford and some of the Spanish generals, and a Spanish army had gradually collected in Estremadura to co-operate with Beresford in pressing the siege of Badajoz, clearing that country of the French, and opening the road into Andalusia and the rear of Victor's blockading army. General Castaños had readily and cheerfully agreed to serve under Beresford, and to leave the entire command of the allies to that marshal; but it was understood that Blake and one or two other Spanish generals had none of Castaños's modesty, and that they looked with a jealous eye upon the British officers; and, what was still more discouraging, it was known and seen that hardly any improvement in discipline had been introduced among these Spanish troops. If Marshal Beresford had been properly supplied with the *matériel* and means of pushing the siege vigorously, he might—as the French had then had but little time for preparation—have possibly breached and taken Badajoz before Soult could get near it; but Beresford had hardly anything that was needful except courage and good-will; he had hardly any intrenching tools; his train of artillery was contemptible, his cannon-ball did not fit the breaching-guns which had been furnished to him, the howitzers were too small for his shells,

* Colonel Gurwood, Wellington Dispatches.—Napier, Hist. of War in the Peninsula.—Major Sherer, Memoirs of the Duke of Wellington.—A. Vieusseux, Military Life of Wellington.

A few days after the battle, in a letter addressed to Mr. Perceval, the premier, thanking him for his attention to his recommendation in favour of his friends the Portuguese, "who really deserved the generosity of the people of England," Lord Wellington again mentions the humanity and generosity of his common English soldiery. "My soldiers," says his lordship, "have continued to show them every kindness in their power, as well as to the Spaniards. The village of Fuentes de Onoro having been the field of battle the other day, and not being much improved by this circumstance, they immediately and voluntarily subscribed to raise a sum of money, to be given to the poor inhabitants as a compensation for the damage which their properties had sustained in the contest."

† Lord Wellington was exceedingly annoyed at this negligence or oversight, and he did not fail to express his sentiments to some of the commanding officers, who ought to have been better prepared for the sortie of the French, who had no alternative but to make a desperate attempt to fly by night, or surrender.

‡ On his homeward journey through Spain Massena narrowly escaped falling into the avenging hands of Mina and the fierce guerillas led by that famous chief.

In Navarre, Mina, the most active and able of the guerilla leaders (with the exception perhaps of Porlier), defeated, on the 22nd of May, at the Puerto de Arlaban, near Vitoria, 1200 men, who were escorting a convoy of prisoners and treasure to France. Massena, whose baggage was captured, was to have travelled with this escort, but, disliking the manner of the march, he had remained in Vitoria, to wait a better opportunity, and so escaped. These guerilla bands were almost always merciless: after the fight they murdered in cold blood six Spanish ladies who, in defiance of patriotism, had attached themselves to French officers.—*Colonel Napier, Hist. of War in the Peninsula.*

and it should seem that he had with him no very skilful artillery or engineer officer. The soil was hard and rocky, and Beresford's people, besides being insufficient in number, were but little accustomed to trenching, mining, and the other operations of sieges. In these particulars the whole British army was defective, for it had not at the time a single corps of sappers and miners. [If the government had thought of sending out from England a few hundred of the men called *navigators*, with their proper tools, this work would have been done in perfection and with a rapidity which no soldiers, or sappers and miners, or labourers of any other class or country could have equalled.] Very little progress had been made in the siege, but the allies had lost, through sorties of the enemy and their rash pursuits of them, from 400 to 500 men, when Beresford received intelligence that Soult was rapidly advancing upon Badajoz. This was on the night of the 12th of May; and on the following morning Beresford, far too weak to attend to two objects at once, raised the siege and prepared to fight Soult in a pitched battle and on an open field.

Having removed their artillery, stores, &c., the allies took post on the memorable ridge of Albuera: they were between 7000 and 8000 British infantry, several of the Portuguese brigades which Beresford had so admirably disciplined, and the Spanish corps of Blake and Castaños, and about 2000 cavalry; in all about 27,000 men: but the Spaniards, who formed above 10,000 of this total, had scarcely been disciplined at all, and were but little to be depended upon. Another Spanish brigade, under Don Carlos d'Espagna, arrived at Albuera on the 14th; and on the evening of the 15th, after a day of heavy rain, Soult came up with about 19,000 chosen infantry, about 4000 cavalry, and 50 guns. As at Fuentes de Onoro, the ground was very favourable for cavalry. The French marshal immediately reconnoitred Beresford's position, and determined upon an attack in force on the right flank of the allies, which was occupied by Blake's Spanish corps, the British occupying the centre. At eight o'clock in the morning of the 16th of May the French troops were seen in motion, dense masses of infantry and clouds of cavalry rolling towards Blake's position, while two heavy columns of infantry and some horse, marching out of a wood, pointed towards the front of the allied position as if to attack the bridge and the unroofed, ruined village of Albuera. Other demonstrations were made, as though Soult intended to attack the British centre in front; but Beresford saw that this was but a feint, and he immediately sent orders to Blake to change his front so as to face the French marching upon his right. Blake refused, saying that the real attack of Soult was against the centre by the bridge of Albuera. The truth appears to have been that Blake knew very well that, if he attempted, with his undisciplined rabble, to change front or to make any other movement in the presence of an active and highly disciplined enemy, they would fall into irremediable confusion, and either throw down their arms or fly—to be pursued and cut to pieces. But, when the attempt to manœuvre had become infinitely more difficult than it was when Blake got his orders from Beresford, that presumptuous self-willed man (his pride was greatly increased since his election by the Cortes to be one of the members of the Regency), when the French were actually appearing on the table-land on his right, and getting ready to enfilade nearly the whole position of the allies, consented to change his front, and thereupon his Spaniards gave way in disorder, leaving, for a moment, the British centre entirely exposed, and too truly telling the English soldiers what little assistance was to be expected from such allies. Beresford now ordered the brigades of the 2nd British division to advance to the right and check the assailants. The first of these brigades (General Colborne's), while in the act of deploying, under a heavy fire of French artillery from the ridges of the hill which Blake and his Spaniards ought to have held, was attacked in flank and rear by the French cavalry and the fierce Polish lancers, who committed a dreadful havoc. Wherever these Poles had served the French—whether in Italy, Egypt, Germany, Spain, or Portugal,—they had distinguished themselves, even in armies not remarkable for humanity, by their savage ferocity as much as by their bravery and their skill or address as light cavalry. On the present, as on other occasions, these lancers, with their blood-red flags shaking under the heads of their spears, rode madly over the field to spear the wounded and to finish them where they fell. The tremendous slaughter made upon Colborne's brigade would, however, have been still greater if these Poles had not thus lost their time in gratifying their unsoldierlike appetite for blood and death; or if, instead of scattering themselves over the field, they had kept together with the French dragoons, and pursued their first advantage, which had been chiefly owing to surprise. Two British regiments were almost annihilated; but the 31st regiment, the left of Colborne's brigade of three regiments, escaped the charge, and, under nearly every possible disadvantage, it manfully kept its ground under Major L'Estrange.* Houghton's brigade, the next of the two brigades, which Beresford had ordered forward to recover possession of the ridge on his right, reached the summit soon after, and maintained a most desperate struggle against an immensely superior force and against all arms—artillery, infantry, cavalry, both light and heavy. When we shall see a well-authenticated instance of the troops of any other nation gaining and keeping such a position against such

* In liberally recommending to the Duke of York for promotion a number of officers who had distinguished themselves at Albuera, Lord Wellington says: "But there is one officer, Major L'Estrange, of the 31st, whom I must recommend in the strongest manner for promotion in some way or other. After the other parts of the same brigade were swept off by the cavalry, this little battalion alone held its ground against all the *colonnes-en masse*."—*Colonel Gurwood, Wellington Dispatches.* The major is now General Sir Guy L'Estrange, K.C.B.

fearful odds, then we may qualify or waver in our national faith, that the British infantry is the best in the world. Houghton's men, however, fell fast, and his ammunition began to fail. Beresford began to think of a retreat, which would have been ruinous, when the gallant Colonel Hardinge (now General Sir Henry Hardinge) suggested that General Cole's division should be hurled against the French. An order to this effect was instantly given, and Cole, with the fourth division, which consisted only of the English fusileer brigade and of one Portuguese brigade, promptly advanced to drive the French from all the heights. It was this British fusileer brigade that restored the fight and saved the allied army. While the Portuguese brigade under General Harvey moved round the shoulder of the hill on the right, and some troops under Abercrombie moved round on the left, Cole himself led the matchless fusileers straight up the fatal hill, which was now completely crowned by the French masses and their artillery. Two or three flags of regiments and six British guns were already in the enemy's possession, and the whole of Soult's reserve was coming forward *en masse* to reinforce his columns on the ridge, from which Houghton's thinned brigade seemed on the point of being swept at last. On the ridge and on the slopes the ground was heaped with dead, and the Polish lancers were riding furiously about the captured English guns on the hill top. But General Cole, at the head of his fusileers, moved steadily onward and upward, dispersed those savage lancers, recovered our six guns, and appeared on the summit of the hill and on the right of Houghton's brigade, just as Abercrombie took post on its left. The military historian of these exciting events has given a perfect picture of the scene which ensued. His description has often been quoted; but it would savour of presumption to attempt to give another:—"Such a gallant line, issuing from the midst of the smoke, and rapidly separating itself from the confused and broken multitude, startled the enemy's heavy masses, which were increasing and pressing onwards as to an assured victory: they wavered, hesitated, and then, vomiting forth a storm of fire, hastily endeavoured to enlarge their front, while a fearful discharge of grape from all their artillery whistled through the British ranks. Sir William Myers was killed; Cole, and the three colonels, Ellis, Blakeney, and Hawkshawe, fell wounded, and the fusileer battalions, struck by the iron tempest, reeled and staggered like sinking ships. Suddenly and sternly recovering, they closed on their terrible enemies, and then was seen with what a strength and majesty the British soldier fights. In vain did Soult, by voice and gesture, animate his Frenchmen; in vain did the hardiest veterans, extricating themselves from the crowded columns, sacrifice their lives to gain time for the mass to open out on such a fair field; in vain did the mass itself bear up, and, fiercely arising, fire indiscriminately upon friends and foes, while the horsemen, hovering on the flank, threatened to charge the advancing line. Nothing could stop that astonishing infantry. No sudden burst of undisciplined valour, no nervous enthusiasm, weakened the stability of their order; their flashing eyes were bent on the dark columns in their front; their measured tread shook the ground; their dreadful volleys swept away the head of every formation; their deafening shouts overpowered the dissonant cries that broke from all parts of the tumultuous crowd, as foot by foot, and with a horrid carnage, it was driven by the incessant vigour of the attack to the farthest edge of the hill. In vain did the French reserves, joining with the struggling multitudes, endeavour to sustain the fight; their efforts only increased the irremediable confusion, and the mighty mass, giving way like a loosened cliff, went headlong down the ascent. The rain flowed after in streams discoloured with blood, and 1500 unwounded men, the remnant of 6000 unconquerable British soldiers, stood triumphant on the fatal hill." *

The day was now won, and, Beresford ordering the Portuguese and Spaniards to advance, the French retreated in dismay and confusion across the Albuera river. At three o'clock in the afternoon the firing, which had begun hotly at about nine o'clock in the morning, ceased. The allies had lost in killed and wounded about 7000 men, of whom more than two-thirds were British. The French lost, or were computed to have lost, not less than 9000 men, including two generals killed and three generals wounded. If censure was showered upon the head of Marshal Beresford for his management of this battle, and for his fighting it at all, it was certainly not by his considerate and generous-minded commander-in-chief. Wellington praised Beresford for having raised the siege of Badajoz without the loss of ordnance or stores of any description, and for having collected the troops under his command and formed his junction with Blake and Castaños skilfully and promptly; and he did not hesitate to call the battle of Albuera a signal victory gained by Beresford and his British officers and soldiers in the most gallant manner. He joined to his admiration of it his cordial concurrence in the favourable reports made by Beresford of the good conduct of all. He attributed the great sacrifices which the battle had cost us, and the unmolested condition of the French after they had crossed the river, to the right cause —"it was owing to the Spaniards, who could not be moved." "I should," says his lordship, "feel no anxiety about the result of any of our operations, if the Spaniards were as well disciplined as the soldiers of that nation are brave, and if they were at all movable; but this is, I fear, beyond hope! All our losses have been caused by this defect. At Talavera the enemy would have been destroyed, if we could have moved the Spaniards:

* Colonel Napier, Hist. of War in the Peninsula. "It was observed that our dead, particularly the 57th regiment, were lying as they had fought, in ranks, and that every wound was in front."—*Marshal Beresford's Dispatch to Lord Wellington, dated Albuera, 18th May.*

at Albuera the natural thing would have been to support the Spaniards on the right with the Spaniards who were next to them; but any movement of that body would have created inextricable confusion; and it was necessary to support the right solely with British, and thus the great loss fell upon our troops. In the same way, I suspect, the difficulty and danger of moving the Spanish troops was the cause that General Lapeña did not support General Graham at Barrosa." *

On the evening of the 15th, the day which had witnessed one of the most murderous conflicts of modern times, considering the number of troops engaged, Beresford improved his position; his freshest troops were placed in the first line, and some hundreds of spears and flags, taken from the Polish lancers, who had paid dearly for their barbarity, were planted in defiance along the crest of the hill.† On the morrow, the 16th of May, the two armies remained in their respective positions, and Beresford waited in anxiety for another attack, with hardly British soldiers enough to furnish his piquets and to take care of his thousands of wounded. If Soult, who is said to have acknowledged that in the whole course of his long service he had never seen so desperate a battle, had not seen that the French army was lopped and maimed and spiritless, he would assuredly have renewed the attack this morning before Beresford could be reinforced by any British troops. But the morning passed, and the afternoon, and the evening, and the night, without any movement on the side of Soult; and on the 17th Kemmis's brigade of 1500 English came up and joined Beresford on the ridge of Albuera, and then, late at night, Soult began to move off his wounded under cover of the wood, and to prepare for his retreat upon Seville, which he commenced on the morning of the 18th, leaving behind him 800 soldiers severely wounded to the generosity and humanity of the English. The French marshal had no doubt heard of the approach of Lord Wellington from the north. On the very next day, the 19th, his lordship arrived at Albuera with two fresh divisions, and gave directions to resume the siege of Badajoz. Through our deficiency in cavalry Soult's retreat was not so much molested as it might otherwise have been; but, nevertheless, he lost some hundreds of men, and our weak horse defeated his strong rear-guard of cavalry at Usagne, and killed, wounded, or took about 150 of them. Soult had almost stripped Andalusia of troops, yet, instead of having accomplished the haughty boasts with which he had harangued his men on beginning his march from Seville, he now returned thither with a curtailed army and a diminished reputation.*

Trenches were opened before Badajoz, and on the 5th of June, a breach being made in Fort St. Cristoval, the assault was given. Through various wants and deficiencies † this failed completely, nor did another attempt, which was made on the 9th, prove more successful. Altogether our storming parties lost in killed and wounded

* Marshal Beresford, Dispatch to Lord Wellington.
† "The poverty of the means at Lord Wellington's disposal for carrying on this siege was a subject of much merriment to the soldiers employed. General Picton remarked that 'Lord Wellington sued Badajoz *in formâ pauperis*;' and he was answered that, 'instead of *breaching*, the operations appeared more like *beseeching*. Badajoz.' In fact, everything was wanting to bring the siege to a rapid termination. The means were deficient for the reduction of the place in *any* time; but to do so with expedition appeared, with such a force, to be impossible."—*H. B. Robinson, Memoirs of Lieut. Gen. Sir Thomas Picton.*

BADAJOZ.

more than 400 of our very best men. On the 10th Lord Wellington received certain intelligence that Marmont, the successor of Massena, was marching from Salamanca to the south to join Marshal Soult, with the whole of the so-called army of Portugal, and that Drouet's corps was marching from Toledo, and would probably join Soult that very day. His lordship therefore fell back, and took up a position near Campo Mayor along the frontiers of Portugal. Although the French brought together from 60,000 to 70,000 foot and 8000 horse, and although Wellington, counting Portuguese and some Spaniards, had not more than 56,000, of which only 3500 were horse, the two French marshals would not venture to attack him on these heights; they merely made reconnaissances which were of no use, and feints and demonstrations which never deceived their quick-sighted opponent; and, about the middle of July, Marmont, perceiving that his army of Portugal was not destined to force its way into Portugal by that frontier, and that its presence was required in other quarters, separated from Soult, recrossed the Tagus at Almaraz, where he had crossed it on his advance, and marched back to Salamanca. This rendered indispensable a corresponding movement to the northward on the part of Wellington; and his lordship, leaving General Hill (now returned from England) with one British division and the Portuguese in the Alemtejo, and giving up for the present the siege of Badajoz, crossed the Tagus with the rest of his army, marched to his old line of the Agueda, and established his head-quarters at Fuente Guinaldo. Here he was at no great distance from Ciudad Rodrigo, and, aiming at the recovery of that fortress, he caused it to be watched and surrounded. Towards the end of September, Marmont having dissipated a storm which had seemed brewing in the north of Spain, and having received large reinforcements from France, moved forward upon the Agueda, and by his superiority of numbers, and especially of cavalry, obliged Wellington, after a partial engagement at El Bodon, to withdraw his army, which he did in beautiful order to his old position on the Coa, whither Marmont did not choose to follow him.*

Shortly after these movements in the north General Hill obtained some signal successes in the south. Soult had gone back again to Seville and to Cadiz, to have an eye upon the blockade of the latter city, which seemed as though it would never end. The French general, Girard, was left near the Guadiana, in Spanish Estremadura, at Arroyo Molinos, in the neighbourhood of Caceres; and here, on the 28th of October, he was surprised, surrounded, and completely routed by Hill, who took 1500 men and several officers of rank prisoners, together with the whole of his artillery, ammunition, stores, and baggage, with a loss to himself too trifling to be mentioned. General Hill then advanced to Merida, where he placed his troops in cantonments. Thus the whole of that part of Estremadura was delivered from the enemy, who had no good footing anywhere in the province except within the walls of Badajoz.

No other attempt was made by the French upon or near to the Portuguese frontiers during the remainder of the year 1811. Lord Wellington, in the course of this year, besides having firmly established his complete possession of Portugal, had, by his operations within the Spanish frontiers, given employment to two French armies, and prevented the French from acting with vigour either against Gallicia in the north or against Cadiz in the south. He had more than redeemed his pledge and promise that he would be able to retain possession of Portugal, and to make it a *point d'appui* for future operations against the French in Spain. His confidence was neither greater nor less now than it had been two years ago, or when he first announced (to the scorn and laughter of certain politicians at home) that with a moderate-sized British army and the Portuguese troops and militia he could defend and maintain that kingdom: he never lost sight of the varying chances and disastrous accidents which attend all military plans and operations, and it was never in the power of good fortune to elate him over-much. His wondrous equanimity had as much to do with his final successes as his military genius and sagacity. His chief apprehension this year was that the impatient English public would expect him to do too much at once, and that the perplexed government might be induced to give up the struggle in the Peninsula altogether. In the month of March, when he scarcely knew whether the regent had determined to retain for good his father's administration, or whether the powers of the state would not be intrusted to men decided upon discontinuing our efforts on the Continent, and when he was following Massena's track of retreat and devastation in the midst of burning towns and villages, he wrote to the secretary of state for the war-department: "I shall be sorry if government should think themselves under the necessity of withdrawing from this country on account of the expense of the contest. From what I have seen of the objects of the French government, and the sacrifices they make to accomplish them, I have no doubt that, if the British army were, for any reason, to withdraw from the Peninsula, and the French government were relieved from the pressure of military operations on the Continent, they would incur all risks to land an army in his majesty's dominions. *Then, indeed, would commence an expensive contest; then would his majesty's subjects discover what are the miseries of war, of which, by the blessing of God, they have hitherto had no knowledge; and the cultivation, the beauty, and prosperity of the country, and the virtue and happiness of its inhabitants, would be destroyed, whatever might be the result of the military operations.*"* His lordship

* Colonel Gurwood, Wellington Dispatches; letter to Lord Liverpool, dated 23rd March.
In the same dispatch Wellington adds, "God forbid that I should

was making the Peninsula the battle-field and bulwark of Great Britain; the withdrawing of his army would have led to despair and submission on the part of the Spaniards, and to a re-conquest and almost an extermination of the Portuguese; it would have changed the temper of the Emperor Alexander, and have cast a damp over the popular spirit of all the nations of Europe; and, if we had not maintained our army in the Peninsula—where it was acquiring, in the most active service, an unrivalled degree of perfection,—we must have doubled or trebled our army at home, which could not have found so good a school in mere coast and garrison duty.

With all the encouragement the British could give them, the Spaniards, left to themselves in the eastern provinces of their kingdom, seemed fast succumbing to the French. They had lost one important fortress after another, and not being yet cured of their mania for fighting pitched battles under the most unpromising circumstances, they had been repeatedly beaten in the field. Suchet, who had assumed the command in Catalonia, which several generals of reputation had given up in disgust or despair, was a man of great skill and determination and still greater cruelty. After a siege which lasted three months and which cost the besiegers a great loss, Suchet took Tarragona by storm on the 28th of June, and perpetrated a most atrocious butchery. His soldiery rushed through the breach and through the streets of the bravely defended town, shouting, "*Grace aux militaires, mort aux paysans!*" and, as the place had been mainly defended not by regular troops, or by combatants with uniforms on their backs, but by burghers, the common townspeople, and the peasantry of the neighbourhood, nearly every head within those walls was devoted to destruction; and the massacre, once begun, went on indiscriminately, without regard to military or non-military, age or sex. The total amount of the slaughter has been stated at 6000; and every enormity of which human nature is capable was practised in that hapless city. Attempts have been made, and that, too, in quarters where they ought not to have been expected, to palliate these infernal excesses and the general ferocity which Suchet exercised during his command in Catalonia; but the damning evidence on the other side is too great and positive to allow of any doubt on the subject.

The Spanish regent-general, Blake, whose forces had been so ineffective in Estremadura, at Albuera, marched an army into the province of Valencia, and on the 25th of October encountered Suchet in the open field. Being thoroughly beaten Blake shut himself up in the city of Valencia with the whole of his army, the only Spanish army now on foot; and, being besieged there, he, in the beginning of January, 1812, capitulated with 18,000 soldiers, 23 general officers, and between 300 and 400 guns! Wellington, who had thrown away his arguments on Spanish pride and obstinacy, said there was no man who knew the state of affairs in that province, and had read Suchet's own account of his action with Blake in October, who did not believe that if Blake had not fought that action the city of Valencia would have been safe.* Between Blake's stupid battle and disgraceful capitulation Suchet reduced Murviedro and other fortresses, and established the French authority in Valencia as well as in Catalonia.

In the course of the year the arms of England found occupation in many other parts of the world. In the month of March the unfortunate and humiliated King of Sweden issued a proclamation, signifying that on account of ill health he found it necessary to withdraw from public affairs, and to transfer the whole royal authority to Bernadotte, the crown prince whom the nation had elected. This fortunate, politic, and adroit Gascon—a man of very different temperament and powers to the pacific and timid Louis Bonaparte, and placed in a country stronger and more remote from France than Holland—no sooner found himself the real sovereign of Sweden than he determined to adopt Swedish interests, and to act not as a French marshal and prince of the Napoleonic empire, but as a Swede. At a very early period he entered into some secret negotiations with Russia, his nearest and most formidable neighbour, made indirect overtures to the court of St. James's, and relaxed in his dominions the severity of the Continental system, which Bonaparte had engaged him to carry out rigorously. The gentle and prudent conduct of Sir J. Saumarez, the admiral of our Baltic fleet, encouraged Bernadotte in this line of conduct. During the summer our admiral entered into a negotiation with the Swedish government concerning some detained ships with colonial produce; and in this correspondence it was made apparent that there was a mutual desire of being upon amicable terms. Sir J. Saumarez now permitted the coasting vessels of the country to pass unmolested, and to renew the trade in the Baltic, the suspension of which had caused great distress; and, going still farther than this, our admiral, when danger was to be apprehended, gave the Swedish merchantmen convoy and protection. Thus Sweden, though she had declared war against Great Britain, remained *de facto* in a state of truce. The moment was not yet come for Bernadotte to declare war against his late master; but the interests of the country, the wise policy he had adopted, and his personal hatred of Bonaparte were sufficient pledges of his future intentions.

While this born-Frenchman, this soldier of fortune, aggrandized by the Revolution, this close connexion of the Bonaparte family (for Bernadotte

be a witness, much less an actor, in the scene; and I only hope that the king's government will consider well what I have above stated to your lordship, and will ascertain as nearly as it is in their power the actual expense of employing a certain number of men in this country beyond that of employing them at home or elsewhere; and will keep up their force here on such a footing as will at all events secure their possession, if it does not enable their commander to take advantage of events and assume the offensive."

* Lord Wellington, Memorandum of operations in 1811, as given in Colonel Gurwood's Dispatches.

had married the sister of Joseph's wife), was thus amicably disposed towards Great Britain, the ruler of Denmark, a prince of the old legitimate stock, a nephew of George III. of England, continued firm in his enmity, or more subservient than ever to the will of France. He enforced the Continental system wherever he could; he sent a great proportion of his Danish sailors to enter Bonaparte's service, and the remainder of his seamen were chiefly employed in privateers and gun-boats against the British trade. A political miscalculation had, no doubt, more effect upon him than his antipathy to England: he thought that everything must yield to the Man of Destiny, and that only those nations and governments could be safe which conciliated his good-will. In the month of March he suddenly sent a Danish flotilla with 3000 or 4000 troops on board to recover the small island of Anholt, in the Kattegat, between the shores of Jutland in Denmark and Helmstad in Sweden, of which the English had obtained possession. Our garrison consisted of no more than 350 men; but the Danish commanders conducted their operations so badly that they lost a great many men in fruitless attempts upon the works, and when they re-embarked in despair they left behind them, for want of a sufficient number of boats, some 300 or 400 men who had no provisions, and who were obliged to surrender as prisoners of war.

In the East Indies, the capital of the Dutch East India settlements, Batavia, together with the entire island of Java on which it is situated, was reduced in the month of August by a British and Sepoy army sent over from Madras. The small island of Madura also submitted, and thus not a vestige was left of the once extensive and splendid Eastern dominion of the Dutch—now Gallo-Batavians.

In the West Indies, from which Dutch, Danes, and French had been completely driven, the British governors of islands and commanders of troops and squadrons found work to do in suppressing conspiracies and insurrections, and in checking the very revolutionary spirit which was constantly emanating from the free, independent, and very turbulent negroes of San Domingo, not without encouragement from certain Creoles of partly French extraction. In Martinique the free people of colour joined the negroes in a plot for setting fire to the town of St. Pierre, massacring all the whites, and making a black republic after the manner of San Domingo; but their plot was discovered in time, and, when they began to move, the military and the militia (old French planters and settlers as well as English settlers) were fully prepared to receive them. About 500 slaves, led on by five black chiefs, were defeated outside of St. Pierre, and were dispersed with great loss. Many were taken prisoners, and fifteen of them were hanged.

Although it was only by occasional surprises that the British navy could perform any achievements, there were several brilliant frigate fights and in-shore operations. In the narrow and dangerous Adriatic sea, Captain William Hoste, the pupil of Nelson, and one who bade fair, should opportunity serve, to emulate the fame of that hero, obtained, on the 13th of March, off the island of Lissa, on the Dalmatian coast, with four English frigates, a complete and most brilliant victory over five French frigates and six smaller vessels with 500 land troops on board.* Another desperate action was fought by Captain Schomberg, near Foul Point, Madagascar. The French, unwilling to leave us in undisturbed possession of the Indian seas, had collected three frigates and some land troops on the African coast, in the Mozambique channel, and recovered possession of Tamatava. Schomberg, who had three frigates and a sloop, but who lost the service of one of his frigates by damage done to her masts at the beginning of the action, captured the French commodore's frigate, made another strike, recovered Tamatava, and captured all the vessels in the port, including a 44-gun frigate which had escaped from the action. A glance at our naval history, or at the dispatches and reports printed in the Gazette, will show that 1811 was not an idle year on the seas, and that, counting the conflict which was now beginning with the United States of America, our fleets and squadrons were engaged in all the four quarters of the globe.

In the interior of France, nearly everything, according to outward appearance, still favoured the Corsican emperor. On the 20th of March the Empress Maria Louisa was safely delivered of a son, who forthwith received the names and titles of Napoleon Francis Charles Joseph, Prince of the French Empire, and King of Rome.† Congratulatory addresses were poured in from all the departments, and all the principal cities of France, from Belgium, Holland, the Hanse towns, the Confederated States of the Rhine, and from Italy, albeit in the last country the ominous title of King of Rome, bestowed on the heir of the French empire, irritated those blind and obstinate political dreamers who continued to believe in Bonaparte's promise to separate Italy from France, and to unite her as one great and independent country. On the 16th of June Napoleon opened the session of that constitutional mockery, the *Corps Législatif*, telling those legislators, who could do nothing but record his will and echo his words, that his *son* would answer the expectations of France, and bear to their children the sentiments which his father

* James, Naval History.—Memoirs and Letters of Sir William Hoste, edited by his Widow.

† When Lord Wellington and the British army were watching the miserable retreat of Massena in Spain, they heard a *feu de joie* of 101 guns. This was the royal salute firing for the birth of the King of Rome.

"The child was baptized by Cardinal Maury, who was now in high favour, and had just been named Archbishop of Paris. On this occasion all forms and processes of flattery were exhausted. All the *corps de l'état*, the senate, the council of state, let themselves be presented to the King of Rome, then a few days old; they addressed to him discourses to which his nurse or governess replied; then they defiled before his cradle making their reverences. People in Paris amused themselves much with this scene. The birth of this infant was welcomed with real enthusiasm only by those whose fortunes depended on the empire of Bonaparte; these men saw in it the conservation of the imperial dynasty, and a guarantee to themselves for the future. Nevertheless the child brought with him at his birth the germs of the malady which caused his death. But the world was kept ignorant of this."—*Hist. Parlementaire.*

now bore to them; that the French people must never forget that their happiness and glory were dependant on the prosperity of the throne which he had raised, consolidated, and aggrandized by them and for them; that he desired that this should be properly understood by every Frenchman, and that, happen what might, or in whatever position Providence and his will should place them, the love of France was their first duty. In this session several new members or deputies made their first *triste* appearance. These were Dutchmen from Holland and the other United Provinces, Germans from the Hanse Towns, Swiss from the Valais (now formally incorporated with France), and Italians from the confiscated states of the Church. They had all been named by the French senate, without any election by the people they were sent to represent, and by whom they were reported to be fairly and freely chosen. "Alas!" says a French writer, "we still kept playing farces! but how could we hope to deceive anybody by such fictions and lies as these?" It was pompously reported that France had been augmented by sixteen new departments, containing altogether 5,000,000 of population, yielding 100,000,000 of francs of revenue, and adding 300 leagues of coast. After ministers had presented a budget as fictitious and deceptive as all the rest, and after these hollow shadows of legislators had voted addresses and whatever else was demanded or expected from them (sanctioning, as they had done before, the forestalling of the annual conscription, and the execution of severe laws against such as were shy of the murderous Spanish war, and endeavoured to escape this forced enlistment), the short session was closed on the 25th of July by the Comte de Ségur, counsellor of state. Ségur, in his closing discourse, repeated that France had 800,000 men under arms, and that 350,000 of these troops were in Spain or on the frontiers, ready to act in that country. But in this number the count certainly counted a great many more men than were really effective, while he or his master overlooked the exhaustion, discontent, and downright disaffection which was caused by the merciless conscription. Already, in many of the districts of France, young men and men in the prime and vigour of life had almost disappeared, leaving, to supply their places, only aged and infirm men, children, or beardless boys; and already the practice had become common of seizing mere boys, draughting them into regiments, and sending them across the Pyrenees to perish of fatigue which they had not strength to bear. The great question of the church was another source of distraction and uneasiness. It was found infinitely more difficult to subdue and control the Roman Catholic clergy than to kidnap or imprison the helpless old pope; and all the devout Catholics in Italy, in southern Germany, and even in France, looked with more reverence and obedience to the dungeon of Pius VII. than to the throne of Napoleon. Even his own maternal uncle, Cardinal Fesch, fell from his side in this holy war, and took part with the pope or with the canons of the church. Bishoprics were falling vacant; the pope refused to institute successors, and none but the most discredited of the churchmen would fill the vacant sees without the papal institution. In a moment of wrath Bonaparte spoke of making a schism in the church, saying that he knew he could divide France and turn half or more of it into a protestant or some other community. "Sire," said Comte Louis de Narbonne, who had not lost his wit and causticity in becoming one of Bonaparte's chamberlains, "I am afraid there is not enough religion in all France to stand a division!" There was, however, religion and belief in the south of France, in the Vendée, in many other remote departments, and it certainly lingered still in some corners of all the great towns, not excepting Paris itself, that great Temple of Reason; and such religion as there was was an unmodified fanatic Catholicism. Putting out of the account that scarcely visible minority the Huguenots, or Calvinists, all the Frenchmen who were not bigoted Catholics were atheists, or deists, or materialists, in whose eyes every religious faith was about equally despicable. It was by conciliating the Catholics that Bonaparte had tranquillised the interior of France; and he knew full well that the zealots would relight the flames of civil war and brave his power, great as it was, rather than submit now to receive uncanonical bishops and unordained curés. In the month of June, while his submissive *Corps Législatif* was sitting, Bonaparte assembled what he called a French National Ecclesiastical Council. More than a hundred prelates and dignitaries of the church assembled in the palace of the Archbishop of Paris (Maury), and thence proceeded in solemn procession to the church of Notre Dame, to invoke the celestial spirit to preside over their deliberations. After high mass a sermon was preached, and this was followed by the reading of the decree which convoked the council, and of the profession of faith adopted by the Council of Trent. This over, Cardinal Fesch, who had officiated, and who had been named president, repeated the oath prescribed for bishops, &c., by the bull of Pius IV., which began with these words: "I promise and vow a true obedience to the Roman pontiff," &c. All the archbishops and bishops repeated the oath after him. Three days after this—on the 20th of June—this council proceeded to organize itself and to deliberate, Bonaparte's minister of worships, *ministre des cultes*, being present, to issue, in case of need, the temporal bulls of his master. This lay minister, in fact, opened the deliberations himself by reading an imperial decree, which was but badly received by the churchmen. Cardinal Fesch, as president, read an imperial message, by which the council was called upon to decide on the means of settling canonical institutions. Forthwith a committee was appointed to examine this great question and report upon it. The members of this committee, after various communications with the emperor,

adopted a report *which he himself had dictated.** The majority of the council was not, however, so docile: when the committee presented their report, and the draught of a decree in conformity with it, the council voted that the said decree could be of no avail until sanctioned by the pope. This was on the 10th of July. Immediately an imperial decree came forth dissolving the council, and orders were issued for arresting the bishops of Tournay, Troyes, and Ghent, who had been very energetic in their opposition to the will of the real kidnapper and gaoler of the pontiff. These three prelates were shut up in the castle of Vincennes, and they only obtained their liberty by resigning their sees. Bonaparte then ordered his minister of worships to call together not a council but a commission or a congregation of bishops; but, notwithstanding the timidity or time-serving of a certain number of prelates, nothing could be settled, and the helpless old pontiff, who had been brought from Savona to Fontainebleau, continued from his prison to defy all the threats, violence, and prepotency of the master or dictator of Europe, and his excommunication against all such churchmen as should submit to the will of the lay monarch, and thereby break the canons of the church, was left unrevoked. The tyrant in the Tuileries was checked and humbled by the captive of Fontainebleau; and great were his apprehensions lest some attempt might be made by the faithful to carry off Pius. These thoughts caused Bonaparte much disquietude, as well while he was meditating his Russian war, as when he was absent on that disastrous campaign. If the pope had been carried across the Alps, at a time when nearly every French soldier in Italy, and a great part of the native Italian armies, were drawn out of that country to perish beyond the Vistula, the whole of that peninsula would have been convulsed.

We have incidentally alluded to some of the causes which rendered the continuance of the friendship between France and Russia, or between Napoleon and Alexander, an impossibility. Other causes of rupture existed; nor, excepting the youthful admiration of Alexander for the military genius and success of the great soldier of fortune, would it be easy to discover any good ground for sympathy or good-fellowship. On both sides there was a proneness to trickery and duplicity, the Russian cabinet being quite equal to Corsicans and Frenchmen in a contest of this kind. After promising, or at least inducing the czar to believe that he promised, to leave the sultan to his fate, or not to interfere for the preservation of the Turkish dominions in Europe, Bonaparte had encouraged and assisted the Turks, who continued their war, and, though often beaten, cost the Russians enormous sacrifices. By creating the Grand Duchy of Warsaw, by uniting to it Western Gallicia and Cracow, and (when it suited his purpose) by talking oracularly of the possibility of re-constructing the old and once vast Polish nondescript (it can neither be called a monarchy nor a republic), Bonaparte gave occasion to great distrust and uneasiness; for such a reconstruction of Poland must interpose a barrier between Russia and the civilised nations of Western Europe, and tend to throw her back to her original condition of an Eastern power, with free communications only with semi-barbarous countries. Even if placed in the condition of a truly independent state, strong enough to support herself by herself, and exempt from any foreign dictation, whether from France or from any other power, Poland, from the whole nature of things, and from what had passed in her wars and partitions, could never be the friend or the quiet neighbour of Russia; but the idea of Polish national independence, and of her freedom from French control, was not to be entertained by any rational man for a single moment. Europe was too full of proofs of what Bonaparte meant by the *independence* of the nations or states he protected or created. If he had re-united all the territories, from the shores of the Black Sea to the shores of the Baltic, which once belonged to her, still Poland would have been and could have been only a dependence of France, with a submissive king and government, who must have received their orders and instructions from Paris. Such a reconstruction was impracticable; but, take the Duchy of Warsaw as Bonaparte had constituted it, take the submissive character and habits of the King of Saxony, on whom he had conferred this Grand Duchy, take the decided French predilections of the largest or most stirring part of the Poles, their rancorous hate of the Russians, their readiness to serve in any war wherein Bonaparte might choose to employ them, and the rapture with which they hailed every prospect of an opportunity to serve under him against their hereditary foes, and no surprise need be felt at the fact that this ephemeral state was, as long as it existed, a sharp thorn in the side of Russia. The Grand Duchy of Warsaw was little else than a vast garrison for Bonaparte, or a vanguard to his prodigious armies; or, if it were more than this, it was a centre of intrigues and machinations all hostile to Russia. Bonaparte too had given no slight offence to the czar by dispossessing his near family connexion the Duke of Oldenburg of his territory, contrary to the treaty of Tilsit. But, perhaps, the cause which contributed most of all to the quarrel, or which most hastened on the open rupture, was the Continental System, to which Russia could not submit without ruin, and to which Alexander could not have attempted to adhere without incurring the risk of some of those summary proceedings wherewith the Russians had been accustomed to remedy the mischievous polity of their sovereigns. The nobility and great landholders of the country soon discovered the unchangeable truth that nations cannot sell unless they buy; that this excluding con-

* It is said that Bonaparte resorted to one of his stratagems—that he duped the members of the council's committee by presenting to them a letter (though not signed) from the pope, which seemed to recommend compliance.

tinental system, which prohibited the purchase of British manufactures, colonial produce, &c., shut them out from the best market they had for their own produce, and prevented their exporting by sea what they grew on their own vast estates. The complaints of his powerful subjects had induced Alexander to issue, on the 31st of December, 1810, a ukase, by which colonial and other goods were allowed to be introduced into the ports of Russia, unless they clearly appeared to be the property of subjects of Great Britain. Such a restriction was futile, and was, as a matter of course, intended by the government of Alexander to be so: it was evaded with the greatest ease, and the trade with England might almost be said to be re-opened once more. The conduct of Bernadotte, as crown prince, or *de facto* king, of Sweden, coincided very perfectly with this Russian system, and aggravated the choler of Bonaparte. Complaints uttered by the French ambassador at St. Petersburgh were soon followed by arrogant and most insolent menaces. Some of the Parisian *littérateurs* in the pay of Bonaparte, who had formerly been employed in writing eulogiums of the just and magnanimous Emperor Alexander, were now set to work to traduce him, his whole family, his court, his country, and his people; and, between the autumn and winter of 1811 and the spring of 1812, as many and as atrocious calumnies were produced against the czar as had been issued against the unfortunate Queen of Prussia just before the opening of the Prussian war of 1806. Besides indulging his spite and malice, Bonaparte considered this as a very proper way of preparing the minds of the French people for a tremendous contest. A pretended history of the Russian empire—a revolting libel from the first page to the last—was published in Paris, and widely circulated under the secret auspices of the police. In this once well known book nearly every vice and crime which Suetonius attributes to the Roman emperors were attributed to the Russian czars; and Alexander himself was charged, not merely with being privy and consentient to, but an actor in, the murder of his own father, the crazed Paul. As the French press continued to be in shackles, as nothing was allowed to be printed and published of which Bonaparte and his police did not approve, the Russian Emperor was justified in holding the Emperor of the French responsible for these outrages. They were proof, and more than proof, enough that Bonaparte had fully made up his mind to undertake a Russian war; and some considerable time before the close of the year 1811 most men in France clearly saw that the most gigantic preparations were making for an unprecedented campaign.

Bonaparte had driven from his presence Talleyrand and every other able and acute statesman, together with almost every man that presumed to entertain or express opinions opposite to his own; yet still it is said that a few sensible counsellors, men attached to his interest as it involved their own, ventured gently to remonstrate against his present mad project, to represent the undecided state of the warfare in Spain, the frightful drain made upon the population of France, as well as upon that of Italy and other dependent states, by that warfare, the sullen aspect of all the north of Germany, the spirit displayed particularly by the students in the German universities, the progress making by patriotic political societies in nearly all parts of Germany, the doubtful attitude assumed by Bernadotte, the insecure nature of the tie which bound Austria to him, and the wonderful and sudden influence which might yet be exercised on the continent of Europe by English subsidies. But the Man of Destiny frowned down these prudent advisers, or silenced their remonstrances with tranchant argument or vapid declamation. We look in vain for any new encouragement which he could have found anywhere except in the predicted bankruptcy of England and the now manifested intention of the United States of America to brave the maritime power of Britain, and rush into a war against the country to which they owed their origin, their language, and every high quality which distinguished them as a people. He considered that this American war must inevitably act as a capital diversion in his favour; and he hastened to negotiate an intimate alliance between the United States and France—between the model republic of modern times and the destroyer of republics old and new; between a people who had laid it down as a fundamental principle of their constitution and government that conquest by force of arms was unjustifiable and inadmissible, and a people and a man who had been conquering or overrunning not only their neighbours, but nearly all the countries of Europe for eighteen years.

A.D. 1812. The parliamentary session was opened on January the 7th, with the speech of the prince regent, delivered by commission. The speech dwelt upon the favourable military events of the past year, and upon the circumstances which encouraged hope and perseverance. It applauded the consummate talents of Lord Wellington, the persevering bravery of the Spanish people, and the extension of the guerilla system of warfare. With reference to the subsisting differences between Great Britain and America it was stated that the discussions had not been brought to an amicable close; but that no measure of conciliation should be left untried, which might be found consistent with the honour of the empire, and the commercial and maritime interests of the country. The addresses were carried in both Houses without a division, but not without debate and censure. In the Lords, Grenville and Grey pronounced a sweeping condemnation on all the measures of government at all connected with the war or foreign policy, making new predictions of calamities which must follow any rupture with our brethren beyond the Atlantic. In the other House Sir Francis Burdett declared that Englishmen for the last eighteen years, nay, ever since the war of the American revolution, had been

daily losing their liberty; that a detestation of French liberty had first produced the present war; that nothing had been done for the Spanish people; that, even if the cause of Spain should be honestly undertaken by the British government, it had now become perfectly hopeless; that the victories won by our armies were altogether barren, &c.: and then came the baronet's prescription of parliamentary reform.

The regent's speech had intimated that no change had taken place in the indisposition of the king. On the 16th of January, the House of Commons having resolved itself into a committee to consider the question of the king's household, Mr. Perceval, the premier, laid before it the measures proposed to be adopted. He stated that, according to the opinions of his physicians, the expectation of his majesty's recovery was diminished; and as, according to the regency bill, the restrictions of which were limited to one year, the entire sovereign authority must soon devolve on the prince regent, and with it the civil list, he called attention to the arrangements which it might be proper to make for the royal household. Several objections were taken to the ministerial plan; but, in the end, the two following resolutions were carried—"1. That, for making provision for the due arrangement of his majesty's household, and for the exercise of the royal authority during the continuance of his majesty's indisposition, and for the purpose of enabling the queen to meet the increased expenses to which, in consequence of such indisposition, her majesty may be exposed, there be granted, out of the consolidated fund of Great Britain, the additional yearly sum of 70,000*l.* 2. That it is expedient that provision be made for defraying the expenses incident to the assumption of the personal exercise of the royal authority by his royal highness the prince regent, in the name and on the behalf of his majesty."

The bills framed upon these resolutions, though they underwent some discussion, encountered no very strenuous opposition. Some members urged that any such addition to the queen's income was unnecessary; and that the proposed grant to cover the expenses of the regent, being meant to apply retrospectively, did away with the merit of the prince's having declined burthening the country with any additional charge when he first took the reins of government into his hands. Upon this last point, however, that very important part of the Whig opposition who had been accustomed to call themselves, or to be considered, the Prince of Wales's friends, were quite silent. It was made apparent that there was again a deficiency in the civil list; and, while this was to be made up, it was represented that two courts and households must be maintained, the one for the queen, who would keep together the servants to whom the king was most attached, and one for the regent, who was bound to support the splendour of the throne. Virtually the civil list, chargeable with the additional 70,000*l.* to the queen, was vested in the regent, who was allowed also to retain his revenue as Prince of Wales.*

The bill for prohibiting the grant of offices in reversion being about to expire, Mr. Bankes introduced a new bill in order to render the measure permanent. On the second reading of this bill, on the 7th of February, Perceval, without giving any previous notice of his intention, opposed it, although on former occasions the bill had passed the Commons almost without objection; and it was rejected in a thin House by a majority of two. After this defeat Mr. Bankes proposed a bill for the same purpose, but limited to two years. This met with no opposition in the Commons; and it was carried through the Lords after the rejection of an amendment proposed by Earl Grosvenor for continuing its operation to the year 1840. Early in the session notice had been taken of an appointment conferred upon the regent's confidential servant, Colonel Mac Mahon. The place was that of paymaster of widows' pensions, which had been long held by General Fox, the brother of the deceased statesman Charles Fox, but which had long been considered as a mere sinecure. The reports of two committees of the House of Commons, one as far back as the year 1783, and the other as recent as the year 1808, recommended the abolition of the office, as well as that of a deputy-paymaster, as being unnecessary, the holder of the one having very little to do, the holder of the other nothing at all. Upon the death of General Fox,† it had been recommended to ministers to do away with the office the general had so long held. But, during the recess of parliament, ministers, to gratify the prince, had conferred the paymastership upon Colonel Mac Mahon, with the intimation that the colonel was to hold it subject to any future arrangement by parliament. But the foes to sinecures now represented that the place had not been granted to General Fox for life any more than to Colonel Mac Mahon; yet, that on turning to the report of the committee of 1783, it would be seen that no reason had been given for not immediately abolishing the office, save that it was then held by General Fox. And they argued that, *if* ministers had acted consistently with that recommendation, they would certainly have abolished the place at the general's death, instead of making a new grant of it to the colonel, in whose behalf it might also be pleaded that it would be hard to deprive him of what had been given to him and enjoyed by him. This, they said, was throwing discredit upon the prince regent, and insulting parliament. On the other side, ministers

* Shortly after this settlement the regent, by letter to both Houses, recommended a separate provision for his sisters the princesses; and Perceval, on the 23rd of March, proposed that to each of the four princesses should be granted 9 00*l.* a-year, exclusive of the 4000*l.* a-year from the civil list, which last sum, being payable during pleasure, could not be relied upon with certainty. The minister further proposed that at the death of one of the princesses the allowance to each of the surviving sisters should be raised to 10,000*l.* per annum, that the same should continue when there should be two survivors only, and that the sole survivor should receive 12,000*l.* per annum. A bill granting 36,000*l.* per annum for these purposes was carried without any difficulty.

† General Fox had not died until the 18th of July, 1811, when the preceding session of parliament was within a few days of its prorogation.

praised the character and talent of Mac Mahon; said that his case was that of a person whose services merited public remuneration; that the power of giving pensions instead of sinecures had not yet been granted to the regent, and that, under these circumstances, the *quasi* sinecure having become vacant, it had been given to as worthy an individual as the government could have selected. The House, however, on the motion of Mr. Bankes, refused by 115 against 112 to vote the money to pay the salary of the office. This was equivalent to a vote for the abolition of the said office. Mac Mahon was remunerated by the post of private secretary to the regent. This produced a fresh storm from the opposition benches, whose occupants had now become thoroughly convinced that there was no hope nor chance of the regent's changing the administration, and who were thereby led to change the policy in which they had persevered so many years, of lauding the prince and defending his conduct on all occasions. Mr. Wynne immediately called the attention of parliament and of the country to the novel and extraordinary appointment, of which the representatives of the people knew nothing more than what they learned from the Gazette. He declared that no regent or king had any right to keep a private secretary; that the only proper secretaries were the secretaries of state; that the secretary of state for the home department was the sovereign's private secretary; that William III. had no private secretary, nor George I., nor George II., nor even George III., until after his majesty's deprivation of sight, when Colonel Taylor was employed in that capacity. He asked whether it was proper to have a private secretary to read to the regent the communications of his ministers; and he raised other difficulties in the way of the new appointment. Ministers represented the immense increase of public business, and maintained that the appointment of a private secretary was neither unlawful nor inexpedient, unless the House were prepared to make the regent one of the greatest slaves in his own dominions. The motion for an inquiry was rejected by 176 to 100; but it was thought expedient to adopt the suggestion of Wilberforce, that the private secretary's salary (2000*l.* per annum) should be left to be paid out of the regent's privy purse.

Unfortunately for the opposition, some of their leaders got entangled in the economy web of Mr. Bankes, and in the labyrinth of the anti-sinecure and reforming propositions of the party. The stormy discussions about Mac Mahon's affair were scarcely finished, when Bankes brought in a bill for utterly abolishing many sinecure places; and ministers, who opposed the bill, were left in a minority.* Three days after this, on the 7th of May, Mr. Creevey rose to recommend great savings instead of small ones, and called the serious attention of the House to the tellerships of the exchequer, now and for a very long series of years held by the Marquess of Buckingham and Lord Camden, each of whom was in the receipt of more than 1000*l.* for every 100*l.* that Mac Mahon would have received as paymaster of widows' pensions.* These tellerships were as ancient as the exchequer itself, and, like other offices bestowed by the crown, they conferred upon the holders a vested right, with which, it was held, parliament could not interfere. The emoluments arose out of certain fees charged on the issue of the public moneys, and they increased, of course, with the increase of the public expenditure. Thus every year of this war, which added to the taxation of the country, swelled the emoluments of the two noblemen, who, in the last year, were said to have divided between them the enormous sum of 54,000*l.* A poundage on all sums issued for the army, navy, ordnance, &c., and a fee of 2½ per cent. on pensions and annuities, were charged by the tellers.† Parliament, however, had upon several occasions interfered to a certain extent with these emoluments of the tellers. Thus, quite recently, the annuities conferred on the four princesses had been exempted from the fee of 2½ per cent., and indeed from any deduction whatever to the tellers. The subsidies granted to foreign powers had always in practice been exempted; and, although the tellers had formerly claimed 5*s.* per cent. on all sums issued for the *extraordinary* expenses of the army, parliament on one occasion, when the sum of 100,000*l.* had been granted under this head, stepped in, and reduced the fee to 3*s.* 9*d.* per cent. Upon these grounds Mr. Creevey founded a series of resolutions, the last of which declared: "That it is the duty of parliament, in the present unparalleled state of national expenditure and public calamity, to exercise its rights still farther over the fees now paid out of the public money at the exchequer, so as to confine the profits of the two tellers to some fixed and settled sum of money, more conformable in amount to the usual grants of public money for public services, &c." In their dread of further inroads upon vested rights, and out of other motives apparently unconnected with any particular affection or regard for the two noble tellers, ministers opposed both the original motion, and an amendment proposed by Mr. Brand for appointing a committee to inquire into precedents; and—what seemed stranger—the greater part of the opposition joined the ministers, both Ponsonby and Tierney not only voting but speaking at length on the same side as Perceval. Thus the original motion was lost without a division, and Brand's motion was rejected by 148 against 40. A distinguished member of the opposition, who had voted with the minority, says: "On this occasion Ponsonby, Tierney,

* There voted for the third reading of Bankes's bill 131; against it 123.

* The place which General Fox had held so many years, and which Mac Mahon had held only a few months, was calculated as worth 2700*l.* per annum; but it is doubted whether it afforded 2000*l.* The tellerships of the exchequer had risen to 26,000*l.* or 27,000*l.* per annum each.]

† From a report of the Commissioners of Public Accounts in 1782, it appeared that the profits of this office, which in time of peace had not hitherto amounted to more than 2700*l.* per annum to each of the tellers, had risen to 7000*l.* per annum for each, in consequence of the expenses incurred during the American war. From the report of another committee, made in 1808, it appeared that the emoluments of the tellers amounted at that time to 23,000*l.* per annum each.

and the greatest part of the opposition, joined the ministers. Lord Grenville, indeed, had said that he considered the motion as aimed personally at himself, his family, and his friends; and therefore most of the firm adherents to the opposition party voted accordingly, or staid away. In the minority, however, were Whitbread, General Fergusson, Lord Tavistock, Lord Archibald Hamilton, and Brougham."* What between his own auditorship, and these tellerships, the exchequer was or ought to have been rather fatal to Lord Grenville's patriotism or popularity. One of these tellers, the Marquess of Buckingham, was the Mr. George Grenville, the prime minister of former times, and the uncle of Lord Grenville. The Grenvillites asked whether the opposition would destroy the Whig aristocracy, and the weight of their arguments or of their influence may be judged of by the conduct of that opposition at this critical moment. Ministers, and those who spoke with them against any interference with the vested rights of the two tellers, said that, although their office was certainly obnoxious on account of its enormous profits, it could not continue very long; that one of the holders was above sixty years old, and the other nearly of the same age, so that parliament would, at no very distant period, be enabled to regulate or abolish the office without injustice to individuals. In November of this year the two noble tellers, in a conjoint letter to the chancellor of the exchequer, intimated their intention of contributing to the public service a third of their salary and fees from the 5th of January next to the end of the war. The Marquess of Buckingham died on the 11th of February of the following year. Lord Camden, now the Marquess Camden, is still alive, but in 1814 voluntarily resigned all the extraordinary emoluments of his office, amounting to about 9000*l.* a year, reserving to himself only the salary of 2700*l.*.

Before the session closed an attack was made by the opposition upon another patent place, the emoluments of which seemed disproportionate to the duties and services of the office. In the session of 1810 Mr. Perceval himself had brought into parliament a bill to regulate the office of Registrar of the Admiralty and Prize Courts. This most lucrative office, while his father was first lord of the admiralty, had been granted in reversion to his elder brother Lord Arden (who now enjoyed it), and after Lord Arden's death to Mr. Perceval himself. The regulations proposed in Perceval's bill were not to take place at present, and no reductions of emolument were to be made till after the expiration of the existing present and reversionary interests, or until after the death of Lord Arden and Perceval; and it is said, that no regulations would have been proposed at all, if the subject had not been forced upon the premier by the reports of the finance committee. The bill declared that the registrar should be entitled to only one third part of the fees of his office; and that the remaining two-thirds should go to the consolidated fund. Sir Samuel Romilly objected that, where the fees of an office relating to the administration of justice were too large, the proper course to be taken was to diminish the fees for the benefit of the suitors, and not, as was here proposed, to continue the abuse and let the public in to share the spoils. The bill was, however, carried as Perceval had framed it. But now, in June 1812, another bill for regulating the office of Registrar of the Admiralty and Prize Courts was brought in by Mr. Henry Martin. It was opposed by all the crown lawyers. Sir Samuel Romilly supported the bill, the main principle of which was to prevent the registrar from making profit for his own use of the suitors' money deposited in his hands, and to establish regulations similar to those adopted in the Court of Chancery when the office of accountant-general was created. Sir Samuel said he could have no doubt that an officer of a court intrusted with the suitors' money could not legally make interest of it for his own benefit; that one of the articles of impeachment against Lord chancellor Macclesfield was, that he had encouraged the masters in Chancery to make profit of, and traffic with, the suitors' money; and that if the House rejected this bill they would themselves be guilty of the same crime of which they had formerly accused Lord Macclesfield—they would permit and encourage the registrar to employ and traffic with the money of the suitors. The bill, however, was rejected, in a thin house, by a majority of 38, the numbers being 65 against 27. It was made to appear that Lord Arden, the registrar, whose fees averaged about 12,000*l.* a-year, had made 7000*l.* a-year more by interest and profits of suitors' money, and that he had sometimes above 200,000*l.* of such money employed at interest.* These public revelations injured the effect of the praise for disinterestedness which had been given to the late premier.

The Marquess Wellesley, who was dissatisfied with some of his colleagues, and who was supposed to have contracted some engagements with the opposition, signified his intention of resigning almost as soon as parliament had met. He was induced, however, to remain in office till the expiration of the year to which the restrictions on the regent were limited. But when, on the 18th of February, that period arrived, and the regent still seemed determined to retain the ministers his father had left in power, the marquess declared that, though upon certain principles he would be ready to comply with the regent's wishes and serve *with* Mr. Perceval, he could never serve *under* him. His resignation was accepted on the 19th of February, and thereupon Lord Castlereagh returned to office, and succeeded the marquess as secretary for foreign affairs. Six days before the Marquess Wellesley's resignation, the regent wrote a letter, which was purposely made public, to his brother the Duke of York. The regent began with alluding to the fast approach-

* Sir Samuel Romilly, Diary of Parliamentary Life, in Memoirs.

* Sir Samuel Romilly, Diary of his Parliamentary Life, in Memoirs and Correspondence edited by his sons.

ing expiration of the restrictions; he stated again that motives of filial affection had induced him to continue his father's ministers; he adverted to the success of his first year's administration, and expressed a hope that a new era was arriving. After saying that he had "no predilections to indulge," the prince concluded with these words: "Having made this communication of my sentiments, I cannot conclude without expressing the gratification I should feel, if some of those persons with whom the early habits of my public life were formed would strengthen my hands, and constitute a part of my government. With such support, and aided by a vigorous and united administration, formed on the most liberal basis, I shall look with additional confidence to a prosperous issue of the most arduous contest in which Great Britain was ever engaged. You are authorized to communicate these sentiments to Lord Grey, who, I have no doubt, will make them known to Lord Grenville."

The Duke of York, who had certainly no political partiality for either of the two lords, and who was strongly opposed to them on the great Catholic question, did what he was desired to do, and showed the regent's letter to Grey and Grenville, who flatly refused to join the Perceval administration. The prince's letter, and that of Lords Grenville and Grey to the Duke of York, were published in all the newspapers in the kingdom. From this moment (with the exception of a moment or two of party hope and expectation) the Whigs began to revile the Prince of Wales whom they had so long flattered and applauded, and to applaud the Princess of Wales whom they had so long reviled, or treated with contempt or indifference. On the other side, the Tories seemed to renounce all their old sympathies for the princess, and to be determined to drive that unhappy, ill-advised, and imprudent lady, not only from court and the society of her daughter, but also from the country. The old charge of there being something behind the throne stronger than the throne itself, and subversive of the constitution, was revived, and was pressed with as much vigour, or with as loud an outcry, as ever it had been in the early part of the reign of George III.; and the charge as regarded the regent was made the more odious by the introduction of the name of a lady. Even Earl Grey declared in the House of Lords that the ministry depended for its existence upon an unseen influence which lurked behind the throne —a power alien to the constitution, but become unhappily too familiar to the country—a disastrous and disgusting influence which consolidated abuses into a system, and which prevented either public complaint or honest advice from reaching the royal ear—an influence which it was the duty of parliament to brand with signal reprobation. Within the doors of parliament it was hinted, and out of doors it was openly proclaimed through the opposition journals and other channels, that Lord Castlereagh owed his restoration to office to a certain lady and the auspices of the Hertford family.

On the 19th of March Lord Boringdon in the House of Lords moved for an address to the prince regent, beseeching him to form an administration, so composed as to unite the confidence and good will of all classes of his majesty's subjects. This was asking the regent to do what had never been possible, and what was rendered more than ever impossible by the present state of parties: but Lord Boringdon only meant that the regent should form a Grey and Grenville administration. We have noticed in our account of the transactions of the preceding year some of the causes and obstacles which rendered even this measure an impracticability and a dangerous experiment; and certainly all the causes which kept those two noble lords from taking office either with or under Perceval and Lord Liverpool were not fully stated at this moment, when it was asserted that their refusal proceeded from Perceval's decided hostility to the Catholic claims, from a difference of opinion as to the matters which were involving us in a war with the United States, from a most decided difference of opinion on the subject of bank notes and bullion, and from a great diversity of opinion on the expensive war carrying on in the Peninsula. Lord Boringdon's irregular if not unconstitutional motion was got rid of by an amendment, proposed by Lord Grimstone, which was carried by more than two to one, the numbers being 165 against 72. Every division was about equally unfavourable to the coalesced parties in opposition, and the administration seemed to be gaining strength rather than losing it, when the premier died by the act of a madman.

On Monday, the 11th of May, about five o'clock in the afternoon, as Mr. Perceval was entering the lobby of the House of Commons, a man, bearing the outward appearance of a gentleman, shot at him with a pistol: the ball entered his left breast and pierced his heart: he staggered, fell to the ground, and expired in less than ten minutes. At first there was a terrible consternation, and a half belief in the existence of some political plot to destroy a ministry which had so unexpectedly retained office, and disappointed so many hopes. But the assassin did not attempt to escape; he went calmly to the fire-place, laid down his pistol on the bench beside him, and acknowledged to every one that he was the person who had done the deed, saying that it was perfectly justifiable, and that no man save himself had ever known of his intention. And indeed it appeared immediately that no other person had been concerned with him, and that there was no mixture of political feeling in his motives. The name of the man was Bellingham, his condition that of a decayed merchant and unprosperous Liverpool broker. In a commercial visit to Russia some considerable time ago he had undergone serious losses, which he attributed to violence and injustice; he had repeatedly addressed Lord G. Leveson Gower, who had been our ambassador at Petersburg; and he had presented memorials to the treasury, soliciting a compensation for losses which, not having been incurred in the

course of any public service, were considered as affording him no title to compensation. Perceval had refused, as was his duty, to listen to these applications; "but he could hardly have accompanied his refusal with any harshness, for few men had ever less harshness in their nature than he had; and yet this seems to have been all that had provoked this most savage act."* The murder was committed on the Monday; on the Friday following (it being session time) Bellingham was brought to trial at the Old Bailey, and convicted of the murder; and on the Monday morning of the next week, before nine o'clock, the murderer was hanged, and his body in the hands of the surgeons for dissection, his heart, it was said, still beating faintly. Thus the whole of this dismal tragedy was enacted within one short week. At the bar of the Old Bailey, as in the lobby of the House of Commons, in the secretary of state's office, and in prison, Bellingham was perfectly cool and collected, and the court and jury, who do not appear to have thought of that species of madness which wears, in all its stages, "a reasoning show," could not believe that he was insane—a plea which he himself rejected with scorn, and controverted both with ingenuity and eloquence, even as other madmen had done before him, and others have done since. He urged that he had suffered neglects and wrongs from government which justified what he had done; and he startled Lord G. Leveson Gower, who was present as a witness, by declaring that, if the opportunity had offered, he would have preferred shooting him to shooting Mr. Perceval. His counsel, however, applied to the court to put off his trial, in order to allow time to bring up witnesses from Liverpool, where he had resided, and where his family now were, to prove that he was insane. But, as he had been living for the last four months in London, and as it was held that, if he had been disordered in his intellect, he must during that period have given proof of it, the chief justice (Mansfield) and the rest of the court rejected the application for delay. This, we believe, would not happen in our day, when medical jurisprudence is supposed to be more studied and better understood, and when the preference for rapid trial and summary punishment is much (and some say too much) abated. But a learned lawyer of the day, who took a deep interest in the whole matter, says that, though no person could have heard what the conduct and demeanour of Bellingham had been since he committed the crime, or could have read his defence, without being satisfied that he was mad, yet "it was a species of madness which, *probably*, for the security of mankind, ought not to exempt a man from being answerable for his actions." Such was the opinion of Romilly, who did, and was actually at this moment doing, more than any man to diminish the amount of capital punishments, and clear the statute book of its sanguinary laws. He goes on to say, "There certainly has been no acting in that calmness and steadiness of opinion uniformly manifested by him, that what he has done was perfectly justifiable, and that he has set an example which will be highly useful to mankind. The application, however, to put off the trial was surely very reasonable, and it might well have been postponed, though but for a few days. It was not possible that a letter, giving information of his crime and his apprehension, could have reached Liverpool, where his family and all his friends resided, and an answer to it have been received by the day of his trial."*

The public character of Perceval was much underrated, and his private character little understood. As a minister he had shown courage at a moment when courage was most wanted, and when timidity and hesitation must have brought on the most ruinous and degrading effects. His private character seems to have been not only without a blemish, but rich in some of the high and generous virtues; and, with qualities like these, his public character could not possibly be—what faction represented it—unmanly, vile, treacherous, and every way base. Though bitterly assailed for his steady opposition to the claims of the Roman Catholics, he was so from an honest conviction that the granting of what was termed emancipation would be succeeded by some new and equally stormy agitation for the repeal of the union; and, if his alleged bigotry and intolerance be candidly examined, it would be found to shrink into a very small compass. His disinterestedness seemed to be proved by the poverty in which he died. Romilly, who had known him well, and had associated most intimately with him, was not prevented by a divergency in politics, and by opinions and theories strongly opposite, from paying a generous tribute to the merit of the man.†

* Sir Samuel Romilly, Diary of Parliamentary Life. Romilly, after stating the absence of all political motive in the assassin, adds, "Among the multitude, however, whom the news of so strange and sudden a catastrophe had soon collected in the streets, and about the avennes of the House, the most savage expressions of joy and exultation were heard; accompanied with regret that others, and particularly the attorney-general (Sir Vicary Gibbs), had not shared the same fate." Romilly was induced to think that the English character must have undergone some unaccountable and portentous change. But we cannot believe that the national character was much committed. The savage cries in ... have proceeded from the veriest rabble of Westminster. We remember well walking through the populous streets and suburbs of the capital on that afternoon and evening, and seeing the mixed feelings of horror and pity expressed on almost every countenance. There may possibly have been among the hooting rabble some few individuals above the common condition, whose heads had been turned by inflammatory party harangues, and scurrilous party newspapers, which, if addressed to a more excitable and more sanguinary people, would have induced some men not merely to applaud the deed when it was done, but to have themselves undertaken the assassination of the minister, as a foe to the people, a betrayer of his country, and the meanest and most hypocritical slave that had ever served an immoral, depraved, and tyrannical prince.

* Sir Samuel Romilly, Diary. We have been assured by persons well acquainted with Liverpool, and with Bellingham's family, that positive proofs could have been procured in that city, of the wretched man's madness, and of the taint of insanity having existed in his progenitors. We have also been assured that a son of Bellingham (who with the rest of his family changed his name), after being brought up to the medical profession, without betraying any worse symptoms than those of an occasional eccentricity, became decidedly insane as he approached his father's time of life, and is now, or recently was, living under restraint.

Sir James Mackintosh, who had just returned from India, and who had received a very friendly communication from Perceval the very day on which he was shot, describes Bellingham as "a bankrupt ship-broker in Liverpool, *who had formerly been confined for lunacy in Russia*." *Private Diary, in Life by his Son.*

† "As a private man I had a very great regard for Perceval. We went the same circuit together, and for many years I lived with him in a very delightful intimacy. *No man could be more generous, more friendly, or more kind than he was. No man ever in private life had a*

On the 13th of May, two days after the assassination, a message was delivered by Lord Castlereagh from the regent, who requested to be enabled to grant 50,000*l.* for the children, and an annuity of 2000*l.* for the widow of Perceval for life. This was immediately and unanimously voted, Sir Francis Burdett and his friends quitting the House rather than vote for or against the motion. Wilberforce and some of the best friends of the deceased minister thought that this was liberality enough; but shortly after another pension was moved for Perceval's eldest son, and a monument in Westminster Abbey was proposed for the deceased. This disturbed the unanimity, and provoked some angry discussions; but both propositions were carried by a great majority.

Again some men's hopes were elated, and it was pretty generally believed that the death of Perceval must bring about an entire change of administration. Lord Liverpool, upon whom nearly the whole weight of government fell, was instructed by the regent, not to make new overtures to Lords Grey and Grenville, but to attempt to reinforce the cabinet by bringing back the two former members of it, whose loss had been severely felt. Liverpool accordingly applied to Mr. Canning and to the Marquess Wellesley, who both declined his overtures, alleging the continued difference of opinion upon the Catholic claims, and upon the scale on which the war in the Peninsula ought to be carried on. Many members of both Houses, though hitherto friendly to the existing government, regretted the failure of this negotiation. In the Commons Mr. Stuart Wortley (the present Lord Wharncliffe), who had supported Mr. Pitt's, and afterwards Perceval's, administration uniformly, rose on the 21st of May, and moved, pursuant to a notice given the day before, that the House should address the regent, praying that he would take such measures as would enable him, under the present circumstances of the country, to form a strong and efficient administration. Rather unexpectedly this motion was carried against ministers by a majority of four (174 against 170). Some parliamentary manœuvres were resorted to, to cover this defeat; but they promised no success, and but little honour;* and on the very next day all the ministers tendered their resignations to the regent.

A week passed, and no administration was formed. Lord Wellesley and Lord Moira saw the prince several times, but nothing was settled, or seemed likely to be settled, on the 30th of May. And, although the address of the Commons was presented to the regent the day after it was voted, and although the prince said, in answer to it, that he would take it into his immediate consideration, it was not till Monday the 1st of June that he gave authority to any one to submit to him the plan of a new ministry. The interval had been spent in audiences given to Moira, Wellesley, Eldon, the lord chancellor, and to other members of the *present* or *late* administration. Though willing, and now even anxious, to get back Wellesley and Canning, it was evident that the regent had not the least wish to try the experiment of a Whig cabinet. On the 1st of June he authorised Wellesley to form an administration; but on the 3rd of June that nobleman announced in the House of Lords that he had resigned the commission with which he had been honoured into the regent's hands, without having been able to effect the object of it. It was understood that the Marquess Wellesley had been authorised to make the same sort of overtures to Lords Grey and Grenville which had been made to them by the Duke of York in virtue of the regent's letter; but that the proposition now to be made by Wellesley, under the prince's commands, was more explicit; namely, that the marquess himself should be first lord of the treasury, that the prince should name four members of the cabinet, that four more should be named by the marquess, and four by Lords Grenville and Grey; or, if, upon farther consideration, it should be thought expedient that the cabinet should consist of thirteen members, then that five out of the thirteen should be named by Grenville and Grey. The members to be named by the prince were the Marquess Wellesley, Lord Moira, Lord Erskine, and Mr. Canning. Whatever was the precise proposition, it is certain that Lords Grenville and Grey rejected it. After the failure of the marquess a similar commission to form an administration was given to Lord Moira. It should appear that this old Whig nobleman had employed some propositions or arguments of more avail with the two great Whig leaders than those which had been offered by Lord Wellesley, for Lords Grenville and Grey entertained the project of forming a part of a mixed ministry, until they questioned Moira about the household appointments, and received the assurance that no sweeping changes in that respect could be submitted to by the regent. Though it had not been always or invariably so, Lords Grenville and Grey could show something like an established precedent for the practice that the household of the sovereign was dependent on the ministry, was named by ministers, and was changed when ministers were changed. And it was now upon this ground that the two noble lords placed their refusal to accept office. But, unless Grey or Grenville was

*nicer sense of humour. Never was there, I believe, a more affectionate husband or a more tender parent."—Diary.*

Wilberforce, who had more points of agreement and sympathy with the late minister, but who yet disapproved of much of his policy, says—"Perceval had the sweetest of all possible tempers, and was one of the most conscientious men I ever knew; the most instinctively obedient to the dictates of conscience, the least disposed to give pain to others, the most charitable and truly kind and generous creature I ever knew."—*Private Diary.*

* Lord Yarmouth, George Rose, Bragge Bathurst, and some more friends of ministers, happened to be out of the House at the time of the division (which we should say was clearly hurried on), and came in the moment the doors were unlocked. On seeing this accession of strength, Charles Yorke and Lord Castlereagh endeavoured to defeat the address, by opposing the motion that it should be carried up by such members as were privy councillors. On this division the ministers had a majority of two (176 to 174). "But they were soon ashamed of this kind of victory; or, I believe, some other friends of ours had come into the House, and they saw that ultimately they should be beaten, and they therefore consented to a motion that the address should be carried up by the mover and seconder, Stuart Wortley and Lord Milton."—*Sir Samuel Romilly, Diary.*

to have been premier, and unless there was to have been not a patched-up but an entirely new cabinet—which never was intended—they could scarcely with propriety have claimed the right of dismissing the regent's household and of placing comparative strangers about his person. Lord Moira warmly resented their pretension as unnecessary and presumptuous, and recommended the prince not to yield—nay, not to permit the dismissal of a single member of his household. And other men, less attached to the prince than was Moira, considered it harsh, illiberal, and unwise in Grey and Grenville to attempt or to pretend to attempt to coerce the regent on this delicate point. The time is not come for telling or even understanding the secret court history of the day, which is said to have exercised a commanding influence on all these arrangements and essays and experiments; and we question whether it will ever be a profitable or elevating subject of study and contemplation. Those who have attempted to give explanations have done little more than explain their own party feelings, and have, in the end, lost themselves in a labyrinth of contradictions.* On the 7th of June, after several parliamentary discussions on the failure of Lord Moira, and after various explanations in which Sheridan made a lamentable appearance, Mr. Stuart Wortley (Lord Wharncliffe) pronounced some severe strictures on the conduct of Lords Grenville and Grey, in putting an end to the treaty with them merely on account of a difference concerning the household; and he moved for an address to the regent, expressing the regret of the House that their expectations had not been realised, and entreating his royal highness to form without delay such an administration as might be entitled to the support of parliament and the confidence of the nation. In the course of this debate still more ample explanations were given; and Mr. Canning made several curious statements concerning the last negotiation and the causes of its failure, being authorised so to do, and being fully informed upon all points, by Lord Moira himself. Mr. Stuart Wortley's motion was negatived without a division.

Nothing therefore was left—and perhaps nothing better was desired, not merely in the court, but also in the country (taking the sense of the latter as represented by a great majority),—but for the regent to go on with the old ministers, and to fill the post of premier with one of that body. The warmest of the Whigs were compelled to confess that general opinion was at present decidedly against their party. On the 8th of June the Earl of Liverpool acquainted the House of Lords that the prince regent had been pleased to appoint him first lord of the treasury, and to authorise him to arrange and complete the cabinet. Thus Liverpool became premier in lieu of Perceval. Earl Bathurst succeeded Liverpool in the double and onerous offices of secretary for the colonies and secretary at war: Lord Sidmouth (Addington), who had been so long out of office, and who had once figured as premier, was brought back as secretary for the home department. The Earl of Harrowby became president of the council in lieu of Earl Camden (who, however, remained in the cabinet, without office, and was elevated to the rank of marquess); Mr. N. Vansittart became chancellor of the exchequer; Lord Melville (the son and successor of the old lord who had held that office so long, and on the whole so much to the benefit of the navy) succeeded Mr. C. Yorke as first lord of the admiralty; the Earl of Buckinghamshire took Lord Melville's place of president of the board of control; Lord Castlereagh remained secretary for foreign affairs; Earl Mulgrave master-general of the ordnance; and Lord Eldon lord high chancellor. In the non-cabinet appointments and in the law appointments there were several changes: George Rose, that steady and tenacious placeman, made room for Mr. F. Robinson as treasurer for the navy and vice-president of the board of trade; Castlereagh's friend Lord Clancarty became president of the board of trade; Sir Vicary Gibbs, who had had the felicity of irritating or displeasing all parties, was succeeded as attorney-general by Sir Thomas Plumer, whose previous post of solicitor-general was filled by Sir William Garrow. In the ministry of Ireland the Duke of Richmond continued lord-lieutenant, and Lord Manners lord high chancellor; but the chief secretaryship, which had been held by Mr. W. Wellesley Pole, was now conferred upon Mr. Robert Peel. Some of these changes and arrangements were not completed until some time later; but this was the construction of the Liverpool cabinet in the month of September, when parliament was dissolved.*

On the 17th of June Mr. Vansittart, the new chancellor of the exchequer, brought forward the budget, not as his own work or plan, but as that of his lamented predecessor. The plan intimated the design and the determination of giving more

* The Whig opinion, after the failure of the negotiation, was that there had been a depth of intrigue on the part of the court which it was impossible to fathom; that, although the result had probably been an unfortunate one for the country, because an administration with Grenville and Grey included in it might perhaps have brought about successfully some very desirable changes, both in our foreign and internal policy, yet at the same time the public voice would have seconded them so reluctantly in those measures, and would have been so much upon the catch to disappoint them, wherever any difficulty occurred, that neither Grey nor Grenville—without either court favour or a popular cry—could have kept their ground:—that there was a previous determination on the part of the prince that Lords Grey and Grenville should not be in power; that the conduct of Lord Chancellor Eldon, who had been repeatedly closeted with the Duke of Cumberland, proved all along, and beyond the reach of a doubt, that he never thought either of resigning the seals or of witnessing the dismissal of any of his friends or colleagues; that things would have been much worse if Lords Grey and Grenville had not been deterred from taking office by the obstacles which were purposely thrown in their way; that they would have been suffered to remain in the ministry but a very short time; that some pretext would have been anxiously watched for, and eagerly seized, to turn them out with loss of character; or a new cry against popery would have been raised, and they would have been made the victims of that.—*Francis Horner, Correspondence.—Romilly, Diary of Parliamentary Life.*

* On the 18th of June Lord Wellington, then at Salamanca, and ignorant and perplexed about the ministerial arrangements, writes to a private friend:—"Affairs appear to be in a strange state in England; however, I trust that at last some government will be formed. I always detested home politics, and late occurrences have not given me a relish for them."—*Letter to General Sir A. Campbell, in Gurwood Dispatches.*

vigour to the war. In the preceding year the supplies proposed and voted amounted to 56,021,869*l.*; but now the total proposed and voted was 62,376,348*l.* A number of petty new taxes were imposed, and two more enormous loans were raised.

On June the 27th the regent sent a message to each House of Parliament, acquainting them that he had ordered copies to be laid before them of the information received relative to serious riots in the cotton-manufacturing districts of Lancashire and part of Cheshire, the clothing districts of Yorkshire, &c., confiding in their wisdom to adopt the proper measures for restoring tranquillity. These papers were referred to a committee of secrecy in each House; and the result was the introduction by Lord Castlereagh of a severe bill for the preservation of the public peace in the disturbed districts, where much machinery and other property had been destroyed, where many lives had been threatened and a few sacrificed; and where secret societies of men, bound together by oath, were seizing and concealing arms, and training themselves in the use of them, and in military evolutions. Some members denied the extent of the danger, and questioned the policy of this coercive bill; but it was carried through both Houses by large majorities: its duration was however limited to March 25th, 1813. The debates on the Catholic question will be noticed elsewhere. On the 30th of July the parliament was prorogued by commission; and on the 20th of September it was unexpectedly dissolved.

We turn to the conflict of arms, which was more extensive, more terrible, and more decisive than in any preceding year. Great as were the British interests involved in that quarrel, and strange as is the history of the new American war, it was a mere episode in a grand epic, a bye-scene in a busy drama. We shall not therefore depart from the usual order of our narrative, but proceed to the great events passing in the Peninsula.

Lord Wellington, who had found necessary rest and tolerably good quarters for his fatigued troops, put himself in motion as soon as it was time to move. He had not been idle during his stay on the Coa—there might be rest for the army, but there was none for him. During the latter months of 1811 he had been preparing with all possible silence and secrecy the means of re-capturing Ciudad Rodrigo, the possession of which still served the French as a basis of operations on one of the frontiers of Portugal. Under the appearance of repairing and fortifying Almeida, which the French had damaged much less than they intended, he collected there a battering-train and abundant stores. A good portable bridge on trestles was also constructed in the same place; and, still bestowing that attention on the provisioning of his army, without which all armies must be useless or lose their morality and discipline, he effected the formation of a commissariat waggon-train, with several hundred strong but light waggons made for the purpose, in order to supersede the heavy, clumsy, screeching, barbarous carts of the Portuguese which had been hitherto used, but which would have proved altogether insufficient without the services of a large body of Spanish mules and muleteers which followed all the movements of the divisions of the British army.* By the exertions of our engineer officers the river Douro was rendered navigable for boats as far as the confluence of the Agueda, which was forty miles higher than boats had ever before ascended. All this and a great deal more had been done with so little bustle and show, that Marshal Marmont never guessed the intention to fall upon Ciudad Rodrigo in the midst of winter. That general had placed his "army of Portugal" in extensive cantonments about Plasencia and Talavera, and in his pleasant confidence he had detached part of it to the eastward towards La Mancha, and sent two divisions to the north to occupy the Asturias and disperse the guerillas. On the 6th of January Wellington suddenly moved his head-quarters forward to Gallegos, and on the 8th part of his army crossed the Agueda and invested Ciudad Rodrigo without encountering any obstacle. An external redoubt called the great Teson was stormed by a party of the light division that very evening, and the first parallel was rapidly established. There were two convents situated outside of the walls, but strong in themselves, and fortified by the French with their usual skill: one of these, Santa Cruz, was taken by surprise on the night of the 13th; the other, San Francisco, was carried by assault on the 14th. The second parallel was then completed and fresh batteries were established. By the 19th two practicable breaches were made, and that very evening orders were given to storm the place. There was no time to lose, for it was known that Marmont was now hastening forward to the relief. But for this circumstance Ciudad Rodrigo might have been reduced with very little loss to the besiegers. As it was, and though the place was carried and the garrison surrendered in less than half an hour from the time the assault commenced, the British suffered a very severe loss. General Mackinnon and many of his brigade were blown up by the accidental explosion of a powder-magazine on the ramparts; General Craufurd, the gallant commander of the light division, was mortally wounded; General Vandeleur and Colonel Colborne were also wounded, as well as Major George Napier, who led one of the storming parties, and who belonged to a brave and intelligent family, who were always forward in the hour of danger, and generally unfortunate in getting wounded. The total loss of the British and Portuguese amounted to about 1000 killed and wounded. The loss of the garrison was about the same, besides 1700 prisoners. A large battering-train and a vast quantity of ammunition and stores were found within Ciudad Rodrigo. Marmont,

* A. Vieusseux. For a sketch of a Portuguese cart, with its rude, solid wheels, see View of Almeida, *ante* p. 443.

who was still a good way off when the place was stormed and taken, said that there was something quite incomprehensible in the matter. The Spanish Cortes, who had frequently criticised his military conduct, and censured delays and measures which they could not comprehend, now unanimously passed a vote of thanks to Lord Wellington, and conferred on him the title of Duke of Ciudad Rodrigo. In England his lordship got a step in the peerage (he was made Earl of Wellington), and an annuity of 2000*l.* annexed to the title, and thanks were voted by parliament to him and his brave army.

Having recovered Ciudad Rodrigo, Wellington resolved to attempt to recover Badajoz also before the French should be in force to oppose him. Here again the greatest secrecy and caution were required. The artillery for the siege of Badajoz was embarked at Lisbon for a fictitious destination, then trans-shipped at sea into small craft, in which it was conveyed up the Setubal river to Alcacer do Sol, whence it was carried by land across the Alemtejo to the banks of the Guadiana. Stores were collected with the same caution. When all was ready, his lordship, leaving one division of his army on the Agueda, marched with the rest from the northern to the southern frontier of Portugal. On the 16th of March, after a rapid and orderly march, the army crossed the Guadiana, and Badajoz was immediately invested. On the 25th the Picurina, an advanced work separated from the body of the place by the small river Ribillas, was taken by storm, and on the 26th two breaching batteries opened on the town. Again expedition and the resolution to achieve a great object, though with important sacrifices, were needful; for Marshal Soult was collecting all his disposable forces at Seville in order to march to the relief of Badajoz; and Marshal Marmont, in the hope of effecting a diversion, had entered Portugal, and was ravaging the country east of the Estrella. The weather, for the most part, was very bad, the battering-train and the besieging-tools were not very good, and the number of troops actually engaged on the siege was but small, as it was necessary to advance several divisions to Llerena and Merida to cover the besiegers. What the energy of man could do with defective means and within a short space of time, was done: on the 6th of April three breaches were reported to be practicable, and Wellington gave his orders for storming the place at ten o'clock that night; but, when the storming parties passed the glacis under a murderous fire, descended into the ditch, and ascended the breaches, they found that their work was but to begin. The French were generally ingenious in extemporizing defences and modes of annoyance; but General Philippon, the governor of Badajoz, seems to have surpassed all that had hitherto been done in this way. Strong planks and beams studded with iron spikes like harrows, and chevaux-de-frise formed of sword-blades and broken bayonets, effectually stopped the way; the ramparts behind the breaches and by the sides of them, and the tall stone houses which overlooked them, were occupied by French light infantry, who poured their volleys upon the narrow strips of ground or of ruins upon which the assailants were crowded and made to pause; shells, hand-grenades, burning compositions, and missiles of every sort were hurled down upon their heads! The loss was becoming so dreadful,—for one storming party followed another till after twelve o'clock at night,—that Lord Wellington ordered the fourth and light divisions to retire to the ground on which they had been first assembled for the attack, finding that success was not to be attained at that point, and learning that General Picton had carried and established himself in the castle. Soon after the last piece of good news General Walker's brigade succeeded in entering the town by escalade in an opposite direction. The other divisions now formed again for the attack of the breaches; and, these being no longer defended by the distracted French, who saw the castle and a good part of the city in possession of the red-coats, the beams and planks were cleared away, our storming parties poured in, and soon the last attempt at resistance ceased. General Philippon, with a few hundred men, escaped across the Guadiana, and threw himself into Fort St. Cristoval, where he surrendered on the following morning. The loss of the allies had been dreadful: including the Portuguese, 72 officers and 963 men were killed, and 306 officers and 3480 men wounded.* Covered as they were, the French lost from 1200 to 1500 men during the siege and in the assault; the rest of the garrison, which Philippon reported to Lord Wellington to have consisted of 5000 men when the siege commenced, surrendered to the British, and gave up from 3000 to 4000 prisoners, Spaniards, Portuguese, and English, who had been collected in Badajoz as a safe depôt. Though our troops spared the conquered foe, or very soon moderated that vindictive fury which generally accompanies assaults and storms, and which never had been provoked by greater loss or crueller sufferings—thousands of men were writhing or shrieking with agony in the deadly breaches or in the ditches below—they made a rush to the wine-cellars, and,

* In writing to Colonel Torrens, the day after this dearly bought triumph, Lord Wellington says:—"Our loss has indeed been very great; but I send you a letter to Lord Liverpool which accounts for it. The truth is that, equipped as we are, the British army are not capable of carrying on a long siege."

This letter to the Earl of Liverpool has not been found; but, from documents in the Ordnance office and from other sources, it appears that it recommended the immediate formation of a corps of sappers and miners; the want of such an establishment with the army being the chief cause of the great loss in our sieges.—*Note by Colonel Gurwood in Wellington Dispatches.*

Colonel Napier has warmly and ably vindicated Lord Wellington's sieges, showing the relation those operations had with other transactions, and with numerous and distant considerations:—"Many of Lord Wellington's proceedings," he observes, "might be called rash, and others timid and slow, if taken separately; yet, when viewed as parts of a great plan for delivering the whole Peninsula, they will be found discreet or daring, as the circumstances warranted: nor is there any portion of his campaigns that requires this wide-based consideration more than his early sieges, which, being instituted contrary to the rules of art, and unsuccessful—or, when successful, attended with a mournful slaughter—have given occasion for questioning his great military qualities, which were, however, then most signally displayed."—*History of the War in the Peninsula.*

in the darkness and confusion of the night and of drunkenness, they disgraced themselves by committing many outrages and some atrocities. It was not until daybreak on the 7th of April that Wellington was completely master of Badajoz. On the 8th Soult had collected his army at Villafranca, between Llerena and Merida; but, hearing of the fall of the place he had intended to relieve, he began, on the morning of the 9th, long before daylight, to retreat once more to Seville. Again the French were warmly pursued by the British cavalry, who cut up Soult's rear-guard at Villa Garcia.*

At another place, where the French were, not the besieged, but the besiegers, they suffered discomfiture and loss, if not shame. Since General Graham's expedition with Lapeña, which had terminated unprofitably, but for the British not ingloriously, at Barrosa, some attention had been paid to garrisoning Tarifa, the old town on the straits of Gibraltar, where Lapeña had with so much difficulty effected his landing. Marshal Victor, who still commanded the army which was so fruitlessly blockading or watching Cadiz, not wishing for another affair like that of Barrosa, and apprehending that another expedition might pass through Tarifa to fall upon his far-extending lines, determined to reduce that place, and to superintend the important operation in person. In the last days of the year 1811, Tarifa was invested by about 5000 men, whose operations were covered by another strong corps posted at Vejer. The place was garrisoned by about 1800 men, under the command of Colonel Skerrett, a distinguished British officer. It appears that about 1000 of the men were British, the rest being Spaniards. There was an old Moorish castle and a weak crumbling wall also originally built by the Moors, who began their conquest of Spain at this point; but contiguous to Tarifa there is a small island, without which the town is (in a military sense) entirely useless; and the French were not supposed to have the means of gaining possession of this isle. The Spanish general Ballasteros had collected some troops in the neighbouring mountains with the object of interrupting Victor's siege; and General Hill, who crossed the Guadiana some months before the siege of Badajoz was commenced, was advancing into Spanish Estremadura with the intention of diverting the enemy's attention both from General Ballasteros and from Tarifa. It therefore behoved Victor to make all speed; and, hoping to carry the place by a vigorous effort, and apparently not reflecting upon the military importance of the small island to which Colonel Skerrett could retire, and from which he could batter the town to pieces, he brought up his heavy artillery, opened a tremendous fire upon the place, and almost immediately effected a breach. On the last day of the year 1811, the French attempted to carry this breach by storm; but, numerous and bold as they were, they were beaten off by the gallant troops within. From that day till the evening of the 4th of January, the French kept up a continual fire: the walls were knocked to pieces, the little town was laid completely open; but they would not venture to try another assault and on the night of the 4th of January they withdrew hastily, humbled and disordered, leaving behind them seven pieces of cannon, two heavy howitzers, and all the carriages and stores collected for the siege. The hurry was chiefly owing to the dismay caused by General Hill's rapid and daring movements in Estremadura, and almost upon the frontiers of Andalusia.*

As soon as he obtained possession of Badajoz (on the 7th of April), Lord Wellington endeavoured to put the place into a good state of defence, greatly fearing that, if anything were left for the Spaniards to do, both Badajoz and Ciudad Rodrigo, "through the habits of indolence and delay in this nation," would be lost again before the summer was over.† But his lordship had short time to bestow upon these cares, for Marmont was making himself strong in the north, and was blockading both the Spanish fortress of Ciudad Rodrigo and the partially ruined fortress of Almeida. Leaving General Hill in the south, his lordship, on the 13th of April, moved the main body of his army back to the north. Upon this Marmont gave up his two blockades, collected his troops within the Spanish frontier, and retreated to Salamanca. By a happy combination of rapidity, daring, and skill, General Hill attacked, and carried, by a brilliant *coup de main*, the strong forts which the French had erected at Almaraz on the Tagus to protect a bridge of boats which secured the communications between their armies of the north and south. By this operation Marmont was cut off from Soult and Soult from Marmont. On the 13th of June Lord Wellington, after the most wearying exertions and many mortifying delays, proceeding from causes which need no explanation, completed his preparations for an advance into Spain, and broke up from his cantonments between the Coa and the Agueda with about 40,000 men, leaving General Hill on the Tagus near Almaraz with about 12,000 more. General Ballasteros had engaged

* Gurwood, Wellington Dispatches.

* Colonel Skerrett was deservedly applauded for his gallant defence of the old town, one of the most Moresque in all Spain, and the one in which we saw more remains of the manners and customs of the Moors than in any other town in Andalusia that we visited.

From the accounts which he had received of that place, it appeared to Lord Wellington quite impossible to defend it, and that the utmost that Skerrett could do would be to hold the island.

Before Tarifa was invested, several brilliant affairs took place between the piquets of the British and Spanish infantry and the French piquets; and Colonel Skerrett, in co-operation with the Spanish troops, made a dashing sortie from Tarifa, in order to oblige the enemy to show their force: and on this occasion the French sustained considerable loss.

† Dispatches.—His lordship had left money to carry on the works at Ciudad Rodrigo, yet on the 28th of April, 1812, we find him complaining that very little had been done since he was there last—that a great deal of valuable time had been thrown away entirely! He says—"I have sent Alava over to the place to point out to the principal officers how much their indolence and their indulgence of the indolence of their men affect the cause; and I have told them that I should give no assistance in English soldiers to work, unless the demand for such assistance should be founded on an acknowledgment that the Spanish officers have not authority over their men to induce them to perform works for their own defence! But the indolence and apathy of their nature is terrible. Yet they boast of their activity and energy."

to co-operate with Hill or to keep up a diversion in his favour in Andalusia; but, when Wellington began his march, he feared that Ballasteros had been already beaten; and from intercepted dispatches his lordship divined that King Joseph had ordered Soult to send a great force to the Tagus, there to join other troops belonging to the army of the centre. As his lordship advanced into Spain he received reports that Marmont had been, or speedily was to be, reinforced by the division of Bonnet, 6270 strong. Even without any such accession in strength Marmont had a decided superiority in numbers, particularly in artillery and cavalry, for his infantry was counted at 44,000, his artillery at more than 3000, and his cavalry at 4000: and, what to his lordship was a more serious consideration than a numerical inferiority, was the indisputable fact that his own cavalry was deficient in tried, prudent, and skilful officers, and altogether, as an arm, vastly inferior to his infantry. Another serious consideration was, that one of his lordship's columns consisted entirely of Spaniards. On the 16th of June Wellington and the whole allied army arrived upon the Val Musa rivulet, about six miles from Salamanca. The enemy showed some cavalry and a small body of infantry in front of the town of Salamanca, and manifested a design to hold the heights on the south side of the Tormes. But their cavalry was immediately driven in by ours, and Marmont evacuated Salamanca in the night, leaving a garrison of about 800 men in some forts constructed on the ruins of the colleges and convents which commanded the bridge that crosses the river Tormes. But that river was fordable in several places above and below the bridge; and therefore on the following morning, the 17th of June, the allies forded the river, got into the rear of the French forts, and entered the town, to the indescribable joy of the inhabitants. "They have now," writes Lord Wellington, "been suffering for more than three years; during which time the French, among other acts of violence and oppression, have destroyed thirteen of twenty-five convents, and twenty-two of twenty-five colleges, which existed in this celebrated seat of learning."* The forts were immediately invested by the division of General Clinton, and, when they had been accurately reconnoitred, it was found necessary to break ground before them. This was done in the night of the 17th.

Marmont retired by the road leading to Toro, as if intending to collect his army on the Duero, between Toro and Zamora. Wellington followed him as far as St. Cristoval, a few miles beyond Salamanca, where he took up a good position. The forts by the bridge and within Salamanca were found even stronger than had been anticipated, and Major General Bowes and 120 men fell in an attempt to carry them by escalade. On the 20th Marmont returned upon his steps, and, arriving in front of the position of St. Cristoval, made a demonstration with his cavalry, which ended in a mere skirmish. The French marshal remained in Wellington's front all that night and all the next day, and on the following night established a post on the British right flank, the possession of which would have deprived Wellington of an advantage which might eventually be of importance. Accordingly, on the next morning, the 22nd, that French post was attacked by the hero of Barrosa, General Sir Thomas Graham, who drove them from the ground immediately with some loss. "Our troops conducted themselves remarkably well in this affair, which took place in the view of every man of both armies."* Marmont retired during that night; and on the following evening the French posted themselves with their right on some heights, their centre at Aldea Rubia, and their left on the Tormes. The object of the enemy in these movements being to endeavour to communicate with the garrisons in the forts at Salamanca, by the left bank of the Tormes, Wellington changed his front, and extended his troops so as to cover Salamanca completely, retaining the power of crossing and re-crossing the Tormes, and of concentrating his army at any point at a short notice. More than once Marmont made a false movement, and exposed his army to attack; but, for the present, his prudent adversary did not think it advisable to avail himself of his opportunities or risk a general action. Every effort that Marmont could make for the purpose of relieving the forts was completely baffled; those forts had all surrendered or been taken by the 27th; and thereupon the marshal retreated once more, and in the beginning of July took up a strong position on the northern bank of the Duero. Wellington followed him, and took up a line on the southern bank of that river, the British and Portuguese facing the French. Marmont, who is taxed with being rather too fond of displaying his skill in directing the movements of large masses of men, changed front repeatedly, marched and counter-marched, and perplexed his own people more than his able adversary by numerous and complicated manœuvres. In the interval the French marshal was reinforced by Bonnet's division, which had marched from the Asturias, but not without loss, having been harassed in the mountains by the guerrillas. On the 11th of July Marmont threw two divisions across the Duero at Toro, when Wellington moved his army to the left to concentrate it on the Guareña, an affluent of the Duero. On the same night the two French divisions re-crossed the Duero where they had crossed it in the morning; and then Marmont ascended the northern bank of the river with his whole army to Tordesillas. Here he again crossed over to the southern bank of the Duero, and thence, making a forced march, assembled at Nava del Rey on the 17th. On the 18th he attempted to cut off Wellington's right; but his troops were repulsed by the charges of the British and Hanoverian cavalry, and the smart advance of the

* Dispatch to the Earl of Liverpool, dated Salamanca, 18th June.

* Wellington, Dispatch.

British and Portuguese infantry. By his manœuvres, however, Marmont had now succeeded in re-establishing his communications with King Joseph and the army of the centre, which was advancing from Madrid to join him. The two armies of Marmont and Wellington were now in line on the opposite banks of the Guareña. But on the 20th the French marshal crossed that stream on Wellington's right, and advanced towards the Tormes, calculating upon cutting off his antagonist's communications with Salamanca and Ciudad Rodrigo, which would materially distress the allies. But Wellington's columns were in motion as soon as Marmont's, and during part of that day's march the two hostile armies moved towards the Tormes in parallel lines, and within half cannon-shot of each other, and in the finest order imaginable.* Occasionally there was an interchange of cannon-balls, and at every moment each army was ready to form in order of battle. Wellington's determinations were to recross the Tormes if Marmont should cross it; to cover Salamanca as long as he could; not to give up his communication with Ciudad Rodrigo; and, above all, not to fight an action unless under very advantageous circumstances, or unless it should become absolutely necessary. He saw there was nothing to be got or to be hoped for by advancing into Castile. The wheat harvest had not yet been reaped; and, even if he had had (what he had not) an abundant supply of money, he could not have procured anything from the country; for he could not follow the example of the French, who were laying waste whole districts in order to procure a scanty subsistence of unripe wheat. To the British general the keeping open of communications was almost everything, while to the French general, who had not to look to legitimate or regular supplies, it was almost nothing. Both Soult and Massena had contrived to live in Portugal when all their communications had been cut off; and now Marmont, for a certain time, could do as much in Spain. Even now he had been surrounded for the last six weeks, and scarcely even a letter had reached him. "But," says Lord Wellington, "the system of organised rapine and plunder, and the extraordinary discipline so long established in the French army, enable it to subsist at the expense of the total ruin of the country in which it has been placed; and I am not certain that Marshal Marmont has not now at his command a greater quantity of provisions and supplies of every description than we have."* By advancing even the short distance which he had advanced into Spain, his lordship had compelled Marmont to abandon the Asturias by calling to his aid Bonnet and every French soldier that was there; he had afforded encouragement to the Spaniards and an opportunity of recruiting fresh armies; he had diverted the attention of the French from several remaining provinces of the kingdom, and had compelled them to leave Madrid in a very weak state. On commencing his advance he was justified in calculating upon a chance of out-manœuvring the French marshal, whose conduct had not been calculated to impress him with any very high notion of his military genius or capacity; and any brilliant success on his part was almost sure to compel Soult to raise the blockade of Cadiz, if not to evacuate the whole of Andalusia.

On the 21st of July both Marmont and Wellington crossed the Tormes, the allied army passing by the bridge of Salamanca, the French by the fords higher up the river. The British general placed his troops in a position the left of which rested on the southern bank of the river and the right on one of two steep hills which from their similarity and contiguity are called Dos Arapiles. The French marshal nearly faced him, stretching his left towards the roads leading to Ciudad Rodrigo. Both armies were still very near Salamanca.†

In the course of the night Lord Wellington received certain intelligence that General Clausel had arrived at Pollos on the 20th with the cavalry and horse artillery of the Army of the North; and his lordship was quite certain that these troops could join Marmont on the 22nd or 23rd at latest. There was therefore no time to be lost; and his lordship determined that, if circumstances should not permit him to attack Marmont on the morrow

* This striking spectacle has been described by several British officers who were eye-witnesses:—

"A sight more glorious and more solemn war does not often present. Ninety thousand combatants marched side by side, as it were, without collision, each host admiring the array of its opponent, all eyes eager in their gaze, and all ears attent for the signal sound of battle."—*Major M. Sherer, Military Memoirs of the Duke of Wellington.*

"When the two armies were thus put in motion, they were within cannon-shot of each other, the French occupying higher ground than the allies; but the space between them was lower than either of the routes, and nothing intervened to obstruct a view of the columns of enemies that thus continued to pursue their course without the least obstacle to prevent their coming into instantaneous contact; for the slightest divergement from either line of march towards the other would have brought them within musketry distance. I have always considered this day's march as a very extraordinary scene, only to have occurred from the generals opposed commanding highly disciplined armies, each at the same time pursuing an object from which he was not for an instant to be abstracted by minor circumstances: the French marshal pressing forward to arrive first on the Tormes, Lord Wellington following his motions, and steadily adhering to the defensive, until substantial reasons appeared to demand the adoption of a more decided conduct. ..... There were occasional slight skirmishes, brought on by the routes approaching each other, or by the anxiety of French and allied stragglers to obtain right of pillage in the unfortunate villages which lay in the intermediate space between the two armies: otherwise, no spectator would have imagined that the two immense moving columns that filled the whole country, and seemed interminable—being lost to the eye in dust and distance—comprised two armies animated with earnest desires for the destruction of each other, but who, although possessed of numerous artillery and cavalry, were persevering on their way, as if by mutual consent refraining from serious hostility, until arrived at the arena destined for the great trial, to which either was now advancing with confidence and without interruption."—*Colonel Leith Hay, Narrative of the Peninsular War.*

* Dispatch to Earl Bathurst (the new secretary-at-war) dated near Salamanca, 21st July.

† The river Tormes was not crossed before darkness had closed in; and our troops had scarcely reached their bivouacs ere a tremendous thunderstorm commenced. The rain fell in torrents, the most vivid flashings of lightning were succeeded by instantaneous peals of thunder;—a more violent crash of the elements had seldom been witnessed. General Le Marchant's brigade of cavalry had halted; the men, dismounted, were either seated or *lying on the ground, holding their* horses, which, alarmed by the thunder, snorted and started with such violence, that many of them broke loose and galloped across the country in all directions. "This dispersion, and the frightened horses passing without riders in a state of wildness, added to the awful effect of the tempest; nor was the situation in which we were otherwise placed one of great brightness."—*Colonel Leith Hay, Narrative of the Peninsular War.*

Salamanca.

(the 22nd), he would move towards Ciudad Rodrigo without further loss of time, as the great difference in the numbers of cavalry might make a march of manœuvre, such as he had been making for the last four or five days, very difficult, and its result doubtful.* Marmont was favoured by some woods, which partially concealed his movements; on the morning of the 22nd some sharp skirmishing took place, and the French succeeded in gaining possession of the more distant Arapiles, by which they would have it in their power to annoy and, perhaps, turn the right of the British, and thus cut them off from Ciudad Rodrigo. This rendered it necessary for Wellington to extend his right *en potence* to the heights behind the village of Arapiles, and to occupy that village with light infantry. After a variety of evolutions and movements on the part of Marmont, which seemed to denote that he had scarcely formed a plan, and which lasted from an early hour in the morning till two o'clock in the afternoon, he opened a very heavy cannonade. This artillery-firing did the allies very little damage, but under cover of it Marmont extended his left, and moved forward his troops, apparently with an intention to embrace, by the position of his troops, and by his fire, the post on that of the two Arapiles which the allies possessed, and from thence to attack and break Wellington's line, or, at all events, to render difficult any movement of the allies to their right. "But," adds Lord Wellington, "the extension of his line to his left, and its advance upon our right, notwithstanding that his troops still occupied very strong ground, and his position was well defended by cannon, gave me an opportunity of attacking him, for which I had long been anxious."* His lordship immediately strengthened his right and made an impetuous attack. This masterly movement, which in reality decided the battle, has been praised, and that almost unanimously, by French military writers. Marmont's extended left was soon turned and beaten on the heights, and his front, being attacked, gave way, and was driven from one height to another. Marshal Marmont, being severely wounded by a shell, gave up the command to General Bonnet. Wherever the French attempted to make a stand they were charged with the bayonet. Bonnet being wounded, the command devolved upon Clausel, who had arrived on the field of battle, and who now withdrew the troops with great skill and formed them into a new position nearly at right angles with their original one. His cavalry was numerous, his artillery very formidable. But Lord Wellington directed a fresh attack, and our 6th division, ascending to Clausel's position under a sweeping fire of artillery and musketry, gained the level ground, and then charged with the bayonet; and, our 4th division coming up at the opportune moment to aid the 6th, the French abandoned the ground in great confusion, and fled through the woods towards the Tormes. They were closely pursued by the 1st and Light divisions, by General W. Anson's brigade of the 4th division, and by some squadrons of cavalry under General Sir Stapleton Cotton; but it was

* Dispatch to Earl Bathurst, dated July 24th.

* Dispatch to Earl Bathurst, dated July 24th.

now dark night, and many of the French escaped under the cover of darkness who must otherwise have been taken. The pursuit was renewed the next morning at break of day and by the same troops, only strengthened by some brigades of cavalry which had joined during the night. The cavalry came up with the French rear of cavalry and infantry near La Serna, and, after a gallant charge made by two brigades of dragoons, the French cavalry fled, abandoning the infantry to their fate; and the whole body of infantry, consisting of three battalions, were made prisoners. During their flight on the 23rd the enemy were joined by the cavalry and artillery of the Army of the North, which, through Wellington's prompt decision, had arrived too late to be of much use. On the night of the 23rd Clausel's head-quarters were at Flores de Avila, not less than ten leagues from the field of battle. Headlong as was this flight, they were, however, followed very closely the whole way from Salamanca to Valladolid. The loss of the French in this remarkable battle was very severe: 3 generals were killed, 4 wounded; 1 general, 6 field officers, 130 officers of inferior rank, and nearly 7000 men were taken prisoners; their total loss in killed and wounded could not be ascertained, but there was no disguising the fact that they left two of their eagles and six colours in possession of the British. They also abandoned 20 pieces of artillery, several ammunition waggons, &c. The field of battle was very thick with dead. The allies alone had 694 killed and 4270 wounded, out of which number 2714 were British, 1552 Portuguese, and all the rest—that is to say—*four*—Spaniards. The proportion of officers was very great; General Le Marchant was killed, and Generals Beresford, Leith, Cole, Spry, and Cotton were wounded.*

Having crossed the Duero, Lord Wellington reached Valladolid the eighth day after the battle, or on the 30th of July, Clausel clearing out of that city on his lordship's approach and continuing his retreat towards Burgos, with almost incredible speed.

VALLADOLID. View by Laborde.

The British general entered Valladolid amidst the rejoicings of the people, and there captured 17 pieces of artillery, considerable stores, and 800 sick and wounded French, left behind by Clausel in his haste. The priests would have made processions and have sung *Te Deum*, as had been done at Salamanca after the battle, but Wellington had no time to spare. King Joseph, with all the troops he could muster at Madrid and pick up on his road (in all he had about 20,000 men), had marched from the Escurial on the 21st of July, the day before the battle of Salamanca, to join Marmont. On arriving at Arevalo Joseph, to his great astonishment and consternation, heard of Marmont's defeat; and thereupon he changed his route, marching off by the right to Segovia to attempt a diversion in favour of Clausel and the retreating army. Lord Wellington, therefore, quitted Valladolid the day after he arrived at it, recrossed the Duero, and marched against King Joseph, leaving

* Wellington Dispatches; Dispatch to Earl Bathurst, before cited. General Sir Stapleton Cotton was neither wounded in action nor even by the enemy: in the darkness of the night he was unfortunately fired upon by one of our own sentries. In a later dispatch to the secretary-at-war (dated July 28th) Wellington says, "It is difficult to judge of the exact loss of the French; but it is said to be, in all, between 17,000 and 20,000 men. They all agree, that, if we had had an hour more of daylight, the whole army would have been in our hands. General Clausel, who is wounded, now commands the army. The only apprehension I have is, that, when the army of Portugal and the army of the king shall have joined, they will be too strong for us in cavalry. *I am convinced that their infantry will make no stand.*"

a force on the Duero to watch Clausel, whose army was clearly rendered incapable of speedily resuming an offensive attitude. His lordship's movements were again retarded by want of supplies;* but by great exertions some provisions were brought up, and on the 6th of August he was enabled to point the heads of his columns towards Madrid, to bar his way to which city there was nothing except Joseph Bonaparte and his weakened army of the centre. Joseph, after falling back upon St. Ildefonso, continued his retreat towards the capital. On the 9th Lord Wellington had his head-quarters at St. Ildefonso; and on the two following days his victorious troops, defiling by the passes of Guadarama and Naval Serrada, crossed the mountains, and descended into the plain on which Madrid is situated. Joseph Bonaparte did little more than flit through that city: followed by the French intruders of all classes and by their Spanish partisans, he was now flying to the left bank of the Tagus, to rally his army between Aranjuez and Toledo.

On the 12th of August Lord Wellington entered Madrid and was received with enthusiastic acclamations. He rode instantly through the town to reconnoitre the defences of the Retiro palace, where Joseph had left a garrison. On the evening of the 13th the outermost fortification of a triple line of defence was forced; on the morning of the 14th arrangements were completed for attacking the second lines, and the French commandant surrendered. The troops found in the Retiro were made prisoners of war, and an arsenal containing 20,000 stand of arms, 180 pieces of ordnance, and military stores of every description, rewarded the victors.

Don Carlos de España, who had long accompanied Wellington in his marches, battles, or sieges, was appointed Governor of Madrid, and the new constitution which the Cortes had made at Cadiz was proclaimed with great exultation and ceremony. The entire population of Madrid poured into the streets and squares; laurels and flowers were scattered about with profusion; tapestry and carpets were hung from the balconies; and, wherever the British general appeared, green boughs and flowers and shawls were strewn before his horse's feet, and the air was rent with shouts of "Long live the Duke of Ciudad Rodrigo! Long live Wellington!" To a deputation of the new council of government who waited upon him a few days afterwards with a congratulatory address, his lordship replied—"The events of war are in the hands of Providence."†

In consequence of this bold movement upon Madrid, Marshal Soult raised the blockade of Cadiz, destroying the works which the French had constructed with an enormous expenditure of money and labour, and, abandoning the whole of western Andalusia, he concentrated his forces in Granada. But the French abandoned these famed lines with so much haste, that they could not destroy the half of their stores and other *matériel;* 30 gun-boats and some hundreds of pieces of ordnance, including some cannon of portentous length which had been cast expressly for the siege of Cadiz, fell into the hands of the Spaniards, and were found to be, in good part, but little injured.* Soult's retreat was very disastrous: his rear guard was attacked by an allied force of English and Spanish, who issued from Cadiz, drove it from San Lucar, and took Seville by assault, although eight battalions had been left to maintain that city. Our portion of the assailing force consisted only of a British regiment under Colonel Skerrett, the hero of Tarifa. In his march to Granada by Carmona Soult suffered further loss from excessive heat, fatigue, scarcity, and the occasional attacks of armed bands of peasantry. General Hill, in the meanwhile, had advanced from the Guadiana to the Tagus, connecting his operations with those of Lord Wellington. On Hill's approach Joseph Bonaparte abandoned the line of the Tagus: and fell back from Toledo to Almanza in Murcia, to keep himself in communication with Soult in Granada and Suchet on the borders of Valencia and Catalonia. By the close of August Hill occupied Toledo, Ypez, and Aranjuez, thus covering the right of the allied main army, and guarding all the roads which led from the south to Madrid.

The situation of Lord Wellington in the Spanish capital was, however, very critical. A very important part of the grand scheme for the year which he had proposed to ministers (who had agreed thereto), and which he had arranged with his usual nice attention to details, had been very imperfectly executed. He had been promised that an Anglo-Sicilian expedition should be sent from Sicily early in the summer to the eastern coast of Spain, and in sufficient force to clear that coast, if not the whole of Catalonia, Valencia, and Murcia. Much less than this would have compelled the French to withdraw altogether to the Ebro. But, after the plan had been settled and agreed to, there arose various misunderstandings and differences of opinion. Lord William Bentinck, now our commander-in-chief in Sicily, would have preferred employing the Anglo-Sicilian expedition on the neighbouring coast of Italy, which had been left weak by the departure of Murat for the Russian campaign, and he could not be brought to expect any successful result from the operations of this army from Sicily on the eastern coast of Spain. This last opinion appears to have been infused into the Anglo-Sicilian forces;

* Between the battle of Salamanca and his lordship's arrival at Valladolid, he stated, in a pressing letter to the noble secretary-at-war, that he was in want of almost everything. After requesting that more medical assistance might be sent out as soon as possible, he says,—"I likewise request your lordship not to forget horses for the cavalry and the artillery—*and money*. We are absolutely bankrupt. The troops are now five months in arrears, instead of being one month in advance. The staff have not been paid since February; the muleteers not since June, 1811; and we are in debt in all parts of the country. I am obliged to take the money sent to me by my brother for the Spaniards, in order to give a fortnight's pay to my own troops, who are really suffering for want of money."—*Letter to Earl Bathurst, dated July 28th.*

† Major Sherer.

* In the summer of 1815 some of these fine, long French guns were lying on the sands at the edge of Cadiz bay. The lazy Spaniards had left them there to honeycomb and spoil.

MADRID.

and when an army starts upon an expedition without hope of success it is pretty sure to fail. Lord William Bentinck, moreover, was very busy in making a constitution for Sicily, for which the Sicilians were scarcely more fit than the Corsicans had been for the constitution framed for them by Sir Gilbert Elliot. Wellington expressed his regret that his lordship should have changed his opinion after the measure had been proposed to government, and frankly told him what he expected from a discouraged army. "If," said he, "I did not hope that General Maitland (the officer who had been appointed to the command) and the staff and other officers of the Sicilian army would alter their opinion upon a nearer view of what they have to accomplish, and its effect upon the whole of this contest, I should despair of any success from persons coming on a service holding such opinions." He knew rather more than Lord William knew of what could be done in Spain by a proper Anglo-Sicilian force adequately commanded and supplied, and he told his lordship that he was quite certain that such an armament could succeed in driving the French out of Tarragona, and in opening through that city a communication between the British fleet and the Spanish army in the east—which in itself would be a service of the highest importance; that he was likewise quite certain that it could take the city of Valencia, and thereby give to the Spaniards and deprive the French of an important resource; that the war would revive again in the province of Valencia, and that if matters were well arranged in that quarter the enemy would never regain possession of the city of Valencia. "But," added Wellington, "if I should be mistaken in my expectation of success in these operations, I cannot be mistaken in their effect upon my own. I have lately beaten Marshal Marmont in a general action, and have pursued him beyond the Duero. The king is at Segovia with a corps of 12,000 or 15,000 men, and my object is to prevent him and Marmont from joining. But either the French must lose all their communications with their troops in the north of Spain, or they must oblige me to withdraw towards the frontiers of Portugal. They cannot effect this last object without bringing against me Suchet's army, or the army of Soult, or both. I cannot but think it very important that the attention of Suchet should be diverted from his supposed operations against me by the operations of the Sicilian army, which will go to such important objects as Tarragona and Valencia. I should think Suchet would be diverted from me by the operations of the Sicilian army, if they are in time, because I find that Sir Home Popham, with a few hundred marines and the guerillas of the north, has succeeded in preventing General Caffarelli from detaching anything to Marmont's assistance, excepting cavalry, notwithstanding the positive order of the king; and that he had obeyed those orders so far as to order troops to march to Marmont, which, upon hearing of Popham's operations, he countermanded. Then, if Suchet's attention should not be diverted from me, and the French should become too strong

for me in Old Castile, I shall at least have the satisfaction of reflecting, while I am retiring, that General Maitland's progress will be unopposed, and that we shall take Tarragona and Valencia."*

Lord Wellington had certainly counted, with as much confidence as he ever allowed himself to place upon arrangements not wholly under his own control, upon this promised co-operation on the eastern coast. The most urgent solicitations for aid had also been sent to the British government from this part of Spain, and none of the Spanish people had proved themselves more valiant in the field and more deserving of assistance than the brave, alert, and persevering Catalonians, who, from the beginning of this war of independence, had been left to struggle for themselves, with no other help than occasional and stinted supplies of arms and money, and the assistance of a few British ships of war. An earlier and more strenuous aid might have prevented the fall of all or most of the fortresses on that coast.

When Wellington wrote his earnest letter to Lord William Bentinck, explaining all that an Anglo-Sicilian expedition might do, an expedition of that kind was not only on its way but within sight of the eastern coast of Spain. But, most unhappily, the force sent down from Sicily was altogether inadequate to the object in view: it consisted of only 6000 men, a considerable part of whom were ill-disciplined Sicilians and such other foreigners as could be enlisted in the Mediterranean; there was no cavalry; the quantity of ordnance was miserably small, and there were neither proper siege implements nor men skilled in the use of them. General Maitland, who led the expedition, could scarcely be called a commander-in-chief, for Lord William Bentinck forbade him to risk the loss of his division lest Sicily itself should be in danger (of which there was not the remotest chance, as the south of Italy and nearly the whole of that peninsula had been almost stripped of troops for the exigencies of the Russian war), and, to avoid mischief from the winter season —such, we suppose, as the loss on the coast of transports and means of returning to Sicily:—Maitland was further instructed by Bentinck to quit the Spanish coast early in the autumn. The slovenly, inefficient state of our transport service might reasonably excite apprehensions. The last legacy of Harry Dundas (Lord Melville) to his country had not been turned to any very good account; for, though a few men-of-war had been converted into troop-ships, with proper officers, and proper discipline on board, the conveyance of troops, stores, &c. was still left to the vessels hired out to government by merchants and private speculators mainly, and the transport board, which ought to have vigilantly superintended these matters, was as indolent and short-sighted, and (through its inferior agents) as corrupt and prone to jobbing as ever; and through these causes, and this disgraceful condition of the transport service, the lives of our troops and the costly materials of war continued to be exposed to frequent peril.*

Towards the end of July, some days before Lord Wellington commenced his march from Valladolid to the Spanish capital, General Maitland and his Anglo-Sicilians arrived at Port Mahon in Minorca, exciting the hopes of the Spaniards and the fears of the French. In the neighbouring island of Majorca a so-called Spanish division had been formed; and it was now determined that this force should be joined to General Maitland's. But such a rabble had scarcely been seen in modern days as this Majorcan division: it was composed of deserters or prisoners taken from the French, of criminals who had been transported from Catalonia and Valencia, of invalids discharged from the hospitals, of runagates who had fled from their colours, and being caught afterwards had been chained or bound and shipped off for the islands. About 4500 of these fellows were reported to be in a state of efficient discipline, and were clothed and armed at our expense, and embarked to accompany Maitland's motley force of 6000 men. From Port Mahon Maitland proceeded to the coast of Catalonia; and on the 1st of August the fleet anchored in the Bay of Blanes near the town of Tosa, where the French had a strong redoubt. On that and the following day demonstrations of landing were made; but Maitland, after some conferences with the Spanish officers and others, deemed it would be rash to land

* Letter to Lord William Bentinck, in Dispatches.

* "I left Palermo on board a large transport, that was conveying a detachment of British troops to Messina. We proceeded well enough with a fair wind and a smooth sea, but on the third evening a contrary breeze obliged us to anchor under the Faro point. At midnight a violent gale caused the vessel to drive, and before sail could be got upon her we were close upon Scylla, and the French batteries were blazing away at us. For three days and nights we were knocking about at the mercy of the winds and waves in the Gulf of St. Euphemia; at times so close to the shore, that we expected the next heave of the sea would dash us on the rocks. Women and children were screaming, passengers lamenting and taking leave of each other, abandoning all hope of safety. The crew, too small for the vessel at any time, worn out with three days and nights of incessant toil, refused to work, and lay down upon deck, saying that they might as well visit his infernal majesty's abode to-night as to-morrow morning. Unfortunately, they were most of them drafted from a man-of-war for the purpose of conveying the vessel round, and, without an officer, were quite beyond control. When all hope was lost a sudden shift of wind saved us, and enabled us to reach Messina in the course of the next day. This was a good lesson for the future, never to trust myself at sea on board a large vessel, with little ballast, sent off in a hurry on what was termed a mere coasting voyage. So light was she that a very moderate breeze placed her on her beam-ends, and this was the cause of *all* our disasters: as I learned afterwards that, could we have safely carried sufficient sail, we might have entered Messina at first without difficulty, instead of coming to anchor. This is only one instance of the mode in which our transport service is conducted. Vessels are permitted to remain in harbour for long periods, and, when their services are required at a moment, it is found that they have not people on board to navigate them, although their owners are pocketing, monthly, the full and exorbitant pay for vessels well found and provided in every respect: thus is John Bull duped of his money, and not only that, but the lives of the troops, and safety of the stores are recklessly risked on board vessels actually unfit for sea. I am told that it is not uncommon for one ship's crew to serve for eight or ten vessels, at the monthly muster by the agent, or, if he happens to be strict and desirous of performing his duty to the government, the captains have the trouble and expense of providing crews for the occasion that are dismissed immediately the inspection is over. The grand point with the transport gentry is to keep well with the agent by performing various little services, such as employing their carpenters in making his furniture, or fitting up his house, presenting him with a boat that may have taken his fancy, &c. &c. This, of course, cannot be considered as bribery, but mere marks of their esteem."

One of our agents for transports was presented with a very handsome yacht of considerable burthen, and was imprudent enough to invite the head of the government to attend the launch, and to request him to name the vessel. The chief, a keen old Scotchman (Sir Thomas Maitland), with a sarcastic smile and a significant look at the craft, said—"Why, Mr....., I think we cannot do better than call her the 'Plunder.'"—*MS. Journal of a Friend.*

in a province where Suchet might soon collect 22,000 well disciplined infantry and several squadrons of good cavalry; and that to attempt the siege of Tarragona, or of any other considerable place, with the means he had would be madness. Admiral Sir Edward Pellew strongly urged a descent, and Captain Codrington, who had long been commanding a squadron off that coast, insisted that Maitland was deceived by false information, that the Spaniards who had communicated with him from shore were traitors. A council of war, however, agreed with Maitland, and that general, after two or three changes of plans or purpose, determined to run down the coast to Alicante in Valencia, an important city, the safety of which was endangered in consequence of a defeat which the Spanish general J. O'Donnel had recently sustained in its neighbourhood, in a rash attempt to drive the van-guard of Suchet's army back upon the Xucar.* The hearts of the Catalonian patriots died within them as they saw the British fleet quitting their shores. The weather was bad, the winds were contrary, and there was some of the usual confusion in the transport service; but on the evening of the 9th of August the fleet anchored in the capacious and safe Bay of Alicante, and on the following day the troops were landed. Suchet now withdrew his van-guard, which was within sight of Alicante, to the Xucar, where he constructed a bridge of boats and a *tête du pont*. Maitland, with his Anglo-Sicilians and his Majorcan division, occupied the country from which the enemy retired; but in less than a week he received intelligence that Suchet had been joined by King Joseph with a part of the army of the Centre, and that Soult was in rapid march with his army of Andalusia to join the king and Suchet; and thereupon he found it necessary to evacuate all the country he had recovered, and to fall back to Alicante. Within that town and some works in front of it the Anglo-Sicilian expedition was cooped up, without the chance of effecting any powerful diversion in favour of Wellington.

There were other potent reasons which rendered his lordship's prolonged occupation of the open capital impossible. Though he was in the centre of Spain, there existed no Spanish force upon which he could depend for field operations. The army of Galicia under Santocildes, which was now considered the most effective of the Spanish corps, after taking Astorga and advancing towards Zamora, had been beaten and driven back by Clausel, with the remnant of Marmont's army of Portugal; Ballasteros, who had kept together a force in Andalusia, haughtily refused to be directed by Lord Wellington; O'Donnel's defeated army was flying through Murcia without equipments, and without discipline, and, on the whole surface of Spain, there was nothing that, by any straining of language, could be called an army, or, at least, a *disciplined* army, in the field. Bands of guerrillas there were, but some of these seemed almost as ready to plunder friends as foes—to fall upon English convoys as upon French.* Lord Wellington, on his first arrival at Madrid, had been hailed with Vivas and expressions of good will, but no active exertions were made in the common cause; and the Vivas grew fainter as the Madrilenos reflected on the possibility of the French returning, and the good will grew cool when they were called upon to furnish supplies and assistance to the allied army. As in every other city of Spain, and as in every place on the Continent where we set foot, it was believed that the English were made of gold, and that wherever they came they must bring not only arms and ammunition, stores, clothing, and food for the armies of the country as well as for their own, but also an inexhaustible fund of gold and silver to scatter among the natives: and now whenever money was asked for from the Spaniards they appear to have thought that the predictions of Bonaparte and of our own opposition were verified, and that England was becoming bankrupt. But, apart from this unfavourable conviction which went to injure our credit, very few of these Castilians had any money to give or lend. Four years of French military occupation and forced military contribution never left full coffers anywhere. The British commander-in-chief could not realize at Madrid, by drafts upon the British treasury, a sum of money adequate to the most pressing wants of his army.† It was therefore in vain to think of remaining at Madrid, where, if the allied army had not first been starved, three or four French armies, a total of more than 100,000 men, must have closed round it and cut off all retreat. The alternative left to Wellington was either to move to the north against Clausel, or to move to the south against Soult. He determined on the first of these movements, hoping that, although Clausel had now received large reinforcements, he should be able to give him some such lesson as he had given to him and Marmont at Salamanca—the doleful remembrances of which battle were known to have taken all their confidence out of the French infantry. Leaving two divisions under Hill near Madrid, his lordship marched with the remainder on the 1st of September back to Valladolid, which he re-entered on the 7th. Continuing his march towards Burgos he fell in with the Spanish army of Galicia, which was found to be less than 10,000 men, undisciplined, ragged, and deficient in equipments. On the 19th of September the allied army entered Burgos, the French falling back to Briviesca, but leaving 2000 men, under General Dubreton, in the castle of Burgos. The possession of that fort was necessary for the security of the allied army in its present advanced and insecure position, and Wellington directed it to be

* In this wretched affair O'Donnel is said to have lost more than 4000 men, and to have seen the fugitives of his army throw away 10,000 muskets in their flight. If he had not risked this battle Alicante would have been in no danger.

* It is related that on the first day of Maitland's march from Alicante towards the Xucar a convoy with six days' supply was attacked by an armed banditti called a guerrilla, and that the convoy was plundered or dispersed and lost.—*Colonel Napier, Hist. of War in the Peninsula.*

† Wellington Dispatches.

Burgos. From Swinbourn's Picturesque Tour in Spain.

invested forthwith, though he was ill furnished with siege artillery, and well knew that the castle, strong by its natural position, had been fortified by the French with great care. A horn-work on a hill which commanded some of the works of the castle was carried by assault. The fort itself was battered, but with little effect. Sapping was then resorted to, with such bad sappers and miners as his lordship had. On the 29th, a breach having been effected in the outer wall by the explosion of a mine, an attempt was made to storm it, but failed. On the 4th of October, another breach having been effected by the same process of mining and exploding, another storm was attempted: this succeeded, but still the besiegers were only established within the exterior line of the works of the castle. In two bold sorties the French materially injured the works of the allies, and thus threw them back in their operations. But what most retarded these operations was a want of ammunition. At last, on the 18th of October, a breach was made by mining in the second line, and orders were given to storm again. The assault was gallantly made and maintained by a detachment of our German Legion and a detachment of the Guards; but the French brought such a fire to bear upon them from the third line and from the body of the castle, and attacked them with numbers so superior, before they could be supported, that the assailants were compelled to retire with considerable loss. Dubreton had made a brave stand, but no bravery or skill could have saved the castle in the face of so bold and so persevering an enemy. But, as Wellington was preparing to renew his assault, the French Army of the North advanced to raise the siege; and at the same moment he learned from General Hill that the armies of the South and Centre, or those of Soult and King Joseph, being united, mustered 70,000 strong, and were advancing from Valencia towards the Tagus, and that General Ballasteros had not assumed a position in La Mancha which the Spanish government, at his lordship's suggestion, had ordered him to take up, in order to retard the enemy's movements towards the Tagus.* The British commander was therefore under the painful necessity of abandoning the siege of the castle of Burgos, and of effecting a retrograde movement in order to draw near to Hill, who at the approach of Soult retired slowly towards Salamanca. On the 21st of October the siege was raised, and the allied army retired in good order to Palencia, where it was joined by a fresh brigade from England under Lord Dalhousie, who had landed at Coruña and marched through the northern provinces. The French army from the north, by this time under the command of Souham, was now close upon the allies, and repeatedly attacked and harassed their rear-guard until they reached the Duero at Tudela, when Souham halted, waiting to be joined by Soult from the south. Wellington halted not, but, crossing the Duero on the 29th of October, continued his retreat to the

* Ballasteros behaved in this shameless manner out of spite and jealousy, or because the Spanish regency and cortes had offered Lord Wellington the chief command of the Spanish armies.—*Dispatch to Earl Bathurst.*

Tormes, being joined, on his way thither, on the 3rd of November by Hill. After getting across the Duero and effecting his junction with Hill, his lordship congratulated himself on his success. "I assure you," he wrote to the secretary-at-war, "that, considering the numbers of the enemy (among whom is Caffarelli's infantry, as well as his cavalry), and considering the state of the Spanish troops, the great proportion of foreign troops in the divisions which I have with me, and their general weakness, and the weakness of our cavalry, I think I have escaped from the worst military situation I was ever in."* By the 8th of November his lordship had taken up his old position on the heights of San Cristoval, in front of Salamanca. On the 10th Souham and Soult joined their forces, which were now estimated at 75,000 foot and 12,000 cavalry, while Wellington's army, counting Spaniards and all, did not exceed 48,000 foot and 5000 cavalry. The two French generals now advanced; and, on the 14th, finding nearly all the fords of the river practicable, they crossed the Tormes in force some three leagues above Salamanca. Lord Wellington immediately broke up from San Cristoval and ordered his troops towards the two Arapiles; and as soon as he had ascertained the direction of the enemy's march from the fords, he moved with the second division of infantry, and all the cavalry he could collect, to attack them, leaving Hill, with some divisions, to protect this movement, and posting the third division in reserve on the Arapiles, to secure the possession of those important positions, the stronger of which had been held by the French in the battle of Salamanca. The enemy, however, were already too strong and too strongly posted to be attacked, so that his lordship confined himself to a smart cannonade of their cavalry, under cover of which he reconnoitred their position. In the evening he withdrew all his troops to the heights of the Arapiles. In the course of that night and the following morning,† having seen that Soult and Souham were determined not to attack him on the ground he had chosen, the field of his former victory, he moved the greatest part of the troops through Salamanca, detaching General Sir Edward Paget, with a division of infantry, to secure the passage of a stream and watch the movements of the enemy, who were expected to make an immediate attempt to cut off his lordship's communications either with Salamanca or with Ciudad Rodrigo. On the morning of the 15th Wellington found the French still fortifying the position they had taken up the preceding day on crossing the Tormes—so cautious had their defeats and reverses rendered them; but they were also moving masses of cavalry and some infantry to their left, as if with the intention of cutting off the allies from Ciudad Rodrigo. Wellington thereupon determined to move rapidly upon Ciudad Rodrigo; and, putting the allied army in march in three columns, and crossing the Zurguen, which Sir Edward Paget had guarded, and then turning and passing the enemy's left flank, he encamped that night on the Valmuza. On the following day, the 16th, the French followed his lordship's movement with immense masses of cavalry, and a considerable body of infantry; but they did not attempt to press upon his rear. On the 17th they took advantage of the ground to cannonade our light division, which formed the rear-guard, and which was now commanded by General Alten, on its passage over the river, and caused it some loss. In the course of the same day Sir Edward Paget, who had ridden to the rear to discover the cause of some delay in the march, was surprised, when on the top of a hill, with a spy-glass in his hand, and was taken prisoner by some Italian cavalry which had followed Joseph Bonaparte from Naples.‡ On the 18th the French kept at a cautious distance, and Lord Wellington, without let or hindrance, established his head-quarters at Ciudad Rodrigo. Soult, in fact, after he had crossed the Tormes, made no serious movement, being called upon by Joseph to send some troops into Old Castile. On the 19th part of the allied army crossed the Agueda; all the rest crossed on the 20th. The main body of the British and Portuguese were then distributed in their old cantonments within the frontier of Portugal, between the Agueda and the Coa; and Hill's corps moved into Spanish Estremadura, into cantonments near Coria, and towards the Tagus.

During the retreat from Burgos the allies had suffered severely from fatigue and privation; for the greater part of the time the rain fell in torrents, and the weather was worse than Lord Wellington had ever seen it; the roads were knee-deep with mud, the rivers and swollen rivulets breast-deep; hardly anything in the shape of provisions could be obtained from that hungry, desolated country; a great part of the army had neither bread nor biscuit, the only sustenance being a scanty ration of lean tough beef, which the men were obliged to eat half raw, from the difficulty of lighting fires in

* Dispatch to Earl Bathurst, dated Rueda, 31st October.

† "On the 15th, at day-light, the whole of our army was in order of battle; our division was posted behind the Arapiles, and every one anticipated a fierce and general engagement. The French had 90,000 men, and nearly 200 pieces of artillery . . . . . Soult, however, had no intention of fighting; he declined the challenge, manœuvred on our right, and, threatening our communication with Portugal, compelled us to retreat. It is evident that Lord Wellington, who, from the 8th to the 15th, kept all his forces concentrated on the Tormes, anxiously desired and expected a general engagement. Indeed, it has been said, and is probable, that on the morning of the 15th, could he have supposed that Soult would refuse fighting, he would himself have been the assailant, and would have marched boldly on the heights of Mozarbes. It was not until ten o'clock in the forenoon that the retreat was ordered, which, had it been the original intention of his lordship, would, no doubt, have been entered upon six hours earlier."—*Recollections of the Peninsula.*

‡ We well knew the Italian officer who had the principal share in this capture. It was Don Marc-Antonio Colonna, son of the Prince of Stigliano, a branch of the most ancient and noble family of the Colonna, long settled in the kingdom of Naples. He discovered, with his glass, an English general officer on the top of a hill, and, galloping to the spot, surrounded the base of the hill. He used to give a graphic and touching account of the behaviour of the stately and gallant veteran, who had already lost an arm, and was very short-sighted. Sir Edward, upon first seeing the dragoons, put spurs to his horse, and would have galloped down the hill, but Colonna cried out that it was surrounded, that escape was impossible, that the attempt might lead to destruction; and, as he closed upon him with several troopers, Sir Edward presented his sword and surrendered.

their wet bivouacs, and from the scarcity of fuel.* Such had been the cleanliness of Spanish quarters, that nearly all our tender-skinned men were bringing back cutaneous disorders, and all the rest were eaten up by vermin even as though they had passed through one of Pharaoh's plagues. The poorest and dullest follower of the camp was sensible of the ill-conduct of the Spanish generals and other authorities, and none could be blind to the care with which the Spanish people concealed their provisions, or to the greediness with which they overcharged every morsel of food or drop of wine they supplied to the troops who were fighting for them. On leaving Salamanca some of our retreating soldiers had been savagely murdered by Spaniards of that town. Many of our men, vowing that their friends were worse than their foes, beat the Spanish peasants and plundered their abodes wherever the opportunity offered; and other and worse irregularities were committed. Lord Wellington, however, had no hesitation in attributing these evils chiefly to the inattention and inexperience of the officers of the regiments; and, a few days after he had taken up his quarters behind the Agueda, he issued a severe admonitory letter to officers commanding divisions and brigades. He herein declared that in the late campaign the discipline of his army had become relaxed to a greater degree than he had witnessed in any army with which he had ever served, or of which he had ever read.† This was exaggerating the fact and being over severe, and it was so felt—and very deeply too—by the whole army; but the severity of the censure (which passed over the common soldiers to fall upon their officers) was evidently calculated to produce a beneficial impression upon many of the "fine gentlemen" of the army, who still considered such details as soldiers' fuel, flesh-pots, and dinner-hours unworthy the attention of such high-bred gallants: and, when the commanding officers, the colonels and majors of regiments, and captains of companies, neglected these duties, they were pretty sure to be neglected by the subalterns, and to be very indifferently performed by the non-commissioned officers.

Apparently, one of the very first men that raised an indecent outcry against Wellington for not keeping Madrid, and for not taking the castle of Burgos, was Ballasteros, whose conduct had made the retreat from the latter place so indispensable, and whose pride and jealousy had gone far to commit the whole of his lordship's army. Fortunately the Spanish government took the command of its army from that arrogant blockhead, and gave it to General Virues; yet Ballasteros was described by Wellington as the only man among the Spaniards who ever did anything! Many people in England, particularly of the opposition party, echoed the outcry of the Spanish general, sat in judgment on the campaign, and, not satisfied with representing it as a ruinous and a disgraceful failure in Spain, derived from it the opportunity of repeating the old prediction that Wellington must be driven out of Portugal. His lordship's own brief and manly words are the best defence or explanation of his conduct. "I am much afraid," said he, "from what I see in the newspapers, that the public will be much disappointed at the result of the campaign, notwithstanding that it is, in fact, the most successful campaign in all its circumstances, and has produced for the common cause more important results, than any campaign in which the British army has been engaged for the last century. We have taken by siege Ciudad Rodrigo, Badajoz, and Salamanca, and the Retiro has surrendered. In the meantime the allies have taken Astorga, Consuegra, and Guadalaxara, besides other places. In the ten months elapsed since January this army has sent to England little short of 20,000 prisoners; and they have taken and destroyed, or have themselves retained the use of, the enemy's arsenals in Ciudad Rodrigo, Badajoz, Salamanca, Valladolid, Madrid, Astorga, Seville, the lines before Cadiz, &c.; and, upon the whole, we have taken and destroyed, or we now possess, little short of 3000 pieces of cannon. The siege of Cadiz has been raised, and all the country south of the Tagus has been cleared of the enemy. We should have retained still greater advantages, I think, and should have remained in possession of Castile and Madrid during the winter, if I could have taken Burgos, as I ought, early in October, or if Ballasteros had moved upon Alcaraz, as he was ordered, instead of intriguing for his own aggrandizement. . . . . I see that a disposition already exists to blame the government for the failure of the siege of Burgos. The government had nothing to say to the siege. *It was entirely my own act.* In regard to means, there were ample means both at Madrid and Santander for the siege

* The English soldier, moreover, has no genius for cooking, and the prescribed mess arrangements of our troops were very bad. The French soldiers, on the other hand, cultivated the science of cookery, the whole of the nation has so decided a genius, and their cooking arrangements were infinitely better than ours. Lord Wellington dwelt upon this difference with some *naiveté* in the circular letter he addressed to commanding officers after the retreat. "In regard to the food of the soldier," said his lordship, "I have frequently observed and lamented in the late campaign the facility and celerity with which the French soldiers cook in comparison with those of our army." And, after this observation, he read the commanding officers a good lesson about a division of labour, in cutting and bringing in wood, in fetching water, in preparing the meat to be cooked, &c. &c. Thus, like a truly great man, he continued to attend to every detail, considering nothing too little for his attention which contributed to the well-being and efficiency of his army.

We fear, however, that, through the total want of the culinary genius, our soldiers still require almost everything to be done for them and to their hands, or almost to have their victuals, ready cooked, put into their mouths.

One little reform, if it has not been adopted, might be found easy. The French soldiers mess by twos and threes, and use small pots or kettles, which are light to carry and easy to make boil: these kettles were all made of copper. The English, at that time, messed by tens, and used large heavy camp kettles made of iron, and which required a large fire.

† See circular letter in Dispatches, dated Freneda, 28th November. —In this circular the commander-in-chief said that the army had suffered no privation which could justify the least irregularity, or account for the losses which had been sustained. An officer serving in General Hill's division says: "I am convinced that his lordship was never made acquainted with the extent of our privations. . . . . Neither were the irregularities, though great, by any means general: there were corps, and many corps, who maintained their discipline, and whose casualties were comparatively trifling and most satisfactorily accounted for."—*Recollections of the Peninsula.*

Another officer, who acted as aide-de-camp to General Hill during this retreat, says that our troops, in Sir John Moore's retreat through Gallicia to Coruña, were never so long without a supply of provisions as were some corps of Lord Wellington's army on the present occasion; but he also says that the marches in the present case were never of an unreasonable length.—*Colonel Leith Hay.*

of the strongest fortress. That which was wanting at both places was means of transporting ordnance and artillery stores to the place where it was desirable to use them. The people of England, so happy as they are in every respect, so rich in resources of every description, having the use of such excellent roads, &c., will not readily believe that important results here frequently depend upon fifty or sixty mules more or less, or a few bundles of straw to feed them; but the fact is so, notwithstanding their incredulity. I could not find means of moving even *one* gun from Madrid. . . . . As for the *two* heavy guns which —— endeavoured to send, I was obliged to send our own cattle to draw them; and we felt great inconvenience from the want of those cattle in the subsequent movements of the army."* As for the security of Portugal his lordship could be under no apprehension. With Badajoz in the hands of the allies, with Hill beyond the Guadiana in Spanish Estremadura, and with no French force in Andalusia, or anywhere in the south, to march against him, the southern frontier of Portugal was safe. With regard to the northern frontier, where his lordship and the main army were stationed, although letters were intercepted from Joseph which ordered Soult to make Portugal the seat of the war, it was clear to a demonstration that that marshal would not again approach the line of the Agueda, or re-enter a country where he, his predecessors and successors, had met with nothing but calamity and loss. The strong place of Ciudad Rodrigo being in our possession, and Almeida being re-established, it was no easy matter for the enemy to penetrate by that great entrance *into* Portugal: his lordship therefore concluded that for the present Soult, notwithstanding his vast numerical superiority, would canton his army in Old Castile, and in the higher valley of the Tagus, there to wait for the arrival of fresh reinforcements and means from France:—and this was what the French marshal did. "I believe," said his lordship, "that the enemy require repose as much, if not more than we do; and that their immense numbers are rather embarrassing to them in a country already exhausted. . . . . I believe that I have underrated rather than overrated their force. They say themselves, at Salamanca, that they have 90,000 infantry and 14,000 cavalry; and their demand for provisions from the country is 140,000 rations daily! I think they must have 90,000 men altogether, including from 10,000 to 12,000 cavalry. . . . . Having abandoned Madrid, and having given up all their communications with the north, solely with a view to collect a still larger force against me, there is no diversion which would at present answer to effect an alteration in our relative numbers, even if I could depend upon the Spaniards to do anything. But I am quite in despair about them."† There was therefore a pause in the war in this quarter, which lasted not only through the remainder of the winter, but through the spring of 1813. The main army of the British and Portuguese being thus condemned to a long inactivity, it was not to be expected that the Spaniards would be very active. They did nothing except by their guerrillas, who harassed Clausel in the north. In the south-east, and on the east coast, where Suchet's army had been greatly reduced by the drafts made upon it, little enterprise was shown, and nothing of any importance was done. The Anglo-Sicilian army—in which there were not 2000 British soldiers*—remained shut up at Alicante. Wellington took it upon himself to order General Maitland to remain on the eastern coast, notwithstanding Lord William Bentinck's instructions, till he should receive the further orders of the secretary of state. The commander-in-chief in the Peninsula also transmitted to Maitland excellent instructions and orders. On the 20th of September, while engaged and perplexed with the siege of the castle of Burgos, he instructed him how to maintain his post at Alicante, how to keep open his communication with the sea and British shipping in an easy and certain manner; and ordered him not to think of embarking till the last extremity. He invited Maitland to place confidence in the gallantry and discipline of the British troops under his command, telling him that he (Wellington) had tried them frequently, and that they had never failed him.† But Maitland knew not how to bring out these fine qualities of the English soldier; he had not the habitude of a separate command. The good part of his little army was almost buried or concealed by the bad, his own health gave way completely under chagrin, and those incessant annoyances which every British officer serving with the Spaniards was doomed to undergo, and which he had not philosophy to bear. But for the determined conduct of Wellington, he would have acted in conformity with Lord W. Bentinck's orders, and have returned to Sicily with his whole force at the beginning of October. Not being able to do this, Maitland resigned early in that month, and soon afterwards General W. Clinton came down from Sicily and took the command. Clinton would have introduced more activity and enterprise, but he was checked by the jealousy and ill-will of the Spanish governor of Alicante, who treated the English as though they were enemies, and, so far from giving Clinton possession of the citadel and the seaward batteries of Alicante, which were necessary to secure his communication with our shipping, and—in case of a reverse—his retreat and re-embarkation (which Clinton, as well

* Dispatch to the Earl of Liverpool, dated Ciudad Rodrigo, 23rd November.

† Letter to the Earl of Liverpool. Wellington also mentioned another important circumstance—the situation of his army. "It has been actively employed since the beginning of last January, and requires rest. The horses of the cavalry and artillery in particular require both that, and good food and care during the winter; and the discipline of the infantry requires to be attended to, as is usual in all armies after so long a campaign, and one of so much activity."

* About 3000 British and German troops left Sicily with General Maitland; but we believe that about one-half of this number were Germans.

† Letter to Lieut.-General F. Maitland, in Dispatches.

as Maitland, was commanded to make sure of), he would not suffer the British to hold even a gate of the town. In the meanwhile Suchet diligently strengthened his fortified camp on the Xucar, entrenched all the passes in his front, dismantled the extensive walls of the city of Valencia, against which Wellington had recommended a movement, and established a good citadel there. On the 2nd of December General Campbell arrived from Sicily with 4000 men, and took the command, thus making the fourth general in chief in the same number of months!—for, in the short interval between the resignation of Maitland and the arrival of Clinton, the chief command at Alicante had been held by General Mackenzie. On acquainting himself with Suchet's formidable position, and with other discouraging circumstances, General Campbell declared that it would not be prudent to attempt anything until the arrival of Lord William Bentinck, who was reported to be coming from Sicily with still more considerable reinforcements; but his lordship never arrived until the 3rd of July, 1813. As the Spanish government made no provision for the subsistence of their motley Majorcan division, and as Campbell could no longer give it rations, it broke up and went marauding into the interior of the country. At the same time many of the Sicilians and Italians whom Bentinck had sent under Maitland deserted, some to join Suchet, who had a considerable number of Neapolitans with him, some to wander along the coast in the desperate hope of finding means to return to their own country. Thus Campbell and his people ate almonds and raisins, and drank Alicante wine, in bodily, if not in mental, repose. The whole matter had been badly managed from the beginning; but still, it is not to be denied that this landing on the eastern coast of Spain was attended with some beneficial effects: it long occupied the whole attention of Suchet, prevented his detaching more troops to Madrid and the united armies under Soult, and perplexed the attention and acted as a drain upon the resources of Bonaparte's government.*

While the Anglo-Sicilian army was thus employed in Spain, many curious events had occurred in the island of Sicily, where Lord William Bentinck finished and set up the constitution which he had so much at heart. A short retrospect is necessary. Ever since the first landing of our troops in 1806 to protect the otherwise defenceless island from the French, there had been abundant causes of complaint against the thoughtless, extravagant, and profligate court of King Ferdinand, and every English general who had held the command had found himself compelled to waste a great portion of his time in making remonstrances to Ferdinand's government, which met them with quibbles, and in writing representations and complaints to his own government, who, out of a too delicate regard to the sovereign rights and independence of their old ally, took no proceedings upon them, or did no more than write an occasional letter of good advice to that Neapolitano-Sicilian government. The expenses Great Britain had incurred were enormous. From the year 1806 till now we had maintained at our own expense a British army varying from 10,000 to 20,000 men; and we had been paying to the court an annual subsidy of 300,000*l.* or 400,000*l.* This money, according to a treaty signed at Palermo, ought all to have been appropriated to the use of the Sicilian marine and land forces; yet the Sicilian army had remained as badly paid, as badly disciplined, as badly fed, as inefficient as before; and the marine, upon which so much depended, had not been raised to any better state.* The common people were docile and well disposed; the mariners and the fishermen of the coast would have made good active sailors, and have managed many flotillas of gun-boats; the peasantry could have been converted into good soldiers; but under such a system, robbed by their own court, robbed by their own officers, oppressed by their barons—some of the worst parts of the feudal system still surviving in Sicily—and ground to the dust by the most monstrous and absurd monopolies and systems of taxation, the poor Sicilians were almost powerless and useless even for the defence of their own country. King Ferdinand, though not devoid of a rude natural wit and sagacity and of good common sense, was, and had all his life been, so prone to indolence and frivolous amusements as to be almost a nullity. Provided he could fish and shoot all the day long, he cared nothing for the affairs of state, and was as happy at Palermo, in his curtailed dominions, as ever he had been at Naples. As had been the case ever since their marriage, he left the cares of government to his wife, with a *Carolina, pensaci tu.*† Carolina of Austria, the sister of the hapless wife of Louis XVI. of France, the friend and almost the idolatress of Lord Nelson, had been in the early part of her life and reign an amiable, kind-hearted, generous princess, fond of amusement and of admiration, but spirited and high-minded when the occasion demanded. But the woes of her sister had made almost as sudden a change on her heart as they had made on Marie Antoinette's hair. She became suspicious, gloomy, savagely vindictive: the Neapolitan blood that was shed on the scaffold after the overthrow of the rickety "Republica Partenopea," and the return of herself and family

* Colonel Napier.

* While we were keeping our own army, and paying 400,000*l.* a-year to the Sicilian court, that court taxed the wine and other supplies for the British army, made us pay 50 or 60 per cent. upon the bread which the English soldiers ate, and actually raised a revenue of nearly 100,000*l.* per annum upon the British army.

Other facts occurred which would stagger our belief if we were not well acquainted with the unblushing conduct of that Neapolitano-Sicilian, or Sicilo-Neapolitan government. When Sir John Stuart, in his expedition of 1809, was at the island of Ischia, in the Gulf of Naples, having several thousand Sicilians with him who received no provisions from their own government, he ordered the English commissariat to supply them with rations. The poor Sicilians came in a short time and begged Sir John to stop this allowance, because their own government, on account of the rations which were thus furnished at our expense, deducted out of their pay a much greater sum than the soldiers could afford, and more than the rations were worth.

† "Carolina, do you think about it." This was old Ferdinand's constant expression.

from Sicily in 1799-1800, was shed to gratify her vengeance, and not to satisfy Ferdinand, who would have forgotten and forgiven; and it was through her that Nelson put an ineffaceable stain upon his glory by allowing the Neapolitan admiral Caraccioli to be tried in a most irregular manner by court-martial on board his own ship, and to be sent to be hanged at the yard-arm of a Neapolitan frigate lying alongside.* Her own subsequent misfortunes and flights, the reverses of the House of Austria and of all her connexions, the apparently resistless conquests of the people who had murdered her sister, the very humiliating straits and difficulties to which she was frequently reduced, and the advance of age, had not contributed to improve her temper. In Sicily she treated every one that suggested the necessity of a reform in the government as a Jacobin and traitor. Capital executions could not well be indulged in, under the protection of an English army commanded by humane and honourable men, who themselves felt and frequently represented the necessity of reform; but many were the individuals whom she persecuted to their ruin; and in the year 1811 the prisons and fortresses of the island were found to be crammed with state prisoners—with persons for the most part arrested merely because they were *suspects* in the eyes of the queen and of the party who nourished her suspicions and passion for vengeance, and led her to her own ruin as fast as evil counsellors could do it. Wounded in her pride at the slightest interference, she began to complain that the king her husband was not master of his own island, that the English encouraged his disaffected subjects, and filled the heads of the Sicilian people with dangerous ideas of change and innovation. It was noticed that these inimical feelings towards her allies and protectors became stronger after the marriage of Napoleon Bonaparte with her niece, and that some French ladies and gentlemen in her service—emigrant royalists and others who had lived upon her bounty and had followed her to Sicily—were at the same time elated with hope. Our officers in command, and even our diplomatists, had the honourable English backwardness and awkwardness in the practices of secret police and the arts of detecting conspiracies; and it should appear that our army was actually surrounded by plots before anything was discovered, and that we were the last to know that by means of these French people and others Queen Carolina was actually carrying on a correspondence with Bonaparte. The queen's hatred and abhorrence of France in its Jacobin state was much mitigated in its present monarchical and imperial state; she knew that the Man of Destiny from Corsica had been the deadliest enemy of the Jacobins and republicans of all classes, and had crushed under his iron heel the men and parties that had led her sister to the block: and this man was now by marriage her nephew. It appears that Bonaparte amused and deluded Carolina with hopes of restoring her husband to his continental dominions, or of carving him out a kingdom elsewhere, as he had proposed doing to Lord Wentworth and Lord Lauderdale in the negotiation which preceded the rupture of the peace of Amiens; that at one time he gave a verbal promise that Ferdinand should have Naples back upon condition of his maintaining the French laws which had been established there, holding his crown as the confederated princes of Germany held theirs, and driving the English out of Sicily by force or by fraud, or by any means that might be found most feasible. Such a project could be entertained only by a person far gone in madness; any sane person must have seen that the Emperor of the French, who would bind himself to nothing and set down nothing in writing, and who, when he had bound himself in the most solemn and explicit manner, had never cared for his engagements when it was profitable to break them, was aiming at nothing else than the expulsion of the British army, which would enable him or his lieutenant, Murat, to seize the island, or than the fomenting of distrusts, jealousies, and finally an open quarrel between the Sicilians and the English, which might lead to the same result: yet it is proved beyond a doubt that Carolina was for a time deluded, and that there existed a plot for delivering over the British army to destruction.

In the summer of 1811 Lord William Bentinck arrived at Palermo in the double capacity of envoy extraordinary and commander-in-chief of our forces. His lordship came with a pretty ample knowledge of the temper of the court and the wretched condition of the country, and such information as he yet wanted was furnished him by some of the Sicilian nobility. Several stormy scenes took place between Lord William and the queen. She said the English government had sent her a hard-hearted German corporal, who would not listen to reason; she insisted that she or the king her husband had the right to govern as they thought fit, and to arrest and imprison without trial as many of the Sicilians as they suspected; and, pointing to her guards, her Sicilian troops, and her bands of Calabrians, she vowed she would resist force by force if the English attempted to use any. Lord William Bentinck immediately returned to England to demand still fuller powers, and to press upon government the necessity of taking vigorous and effectual measures. General F. Maitland (the same whom we have seen employed on the coast of Spain), being left with the command of the forces at this critical moment, informed the English army, in General Orders, that Lord William's sudden departure was in consequence of the most urgent political motives, which highly concerned the honour of Great Britain and the safety and prosperity of Sicily. In the same orders Maitland stated that four persons who had been imprisoned for holding correspondence with the enemy in Calabria were now set at liberty, not because there wanted sufficient proof against them,

* See Southey, Life of Nelson; and Vincenzo Cuoco.

but because the general would not condemn to death, immediately after having assumed the command of the British army, four men who were arrested by his predecessor, whose departure had prevented the pending sentence. The Orders, however, added that this act of clemency would not be renewed at any other time, General Maitland being resolved "to use his utmost means to put an end to the system of espionage and treachery which has been for so long a time, and in a manner so notorious, practised by persons of evil intentions, equally enemies of the Sicilian people and the British; . . . . to watch attentively persons of this description, and from this time forward to bring before a council of war those, whoever they may be, who shall be thus found holding communication with the enemy, and thus placing in danger the British army and this island;"—"and immediately," it was added, "the sentence of that council of war shall be executed." All this made it sufficiently clear that the English general now believed in the existence of an extensive conspiracy. The fact is, an active correspondence had long been carrying on between certain of Ferdinand's officers and others residing in Messina, and Manhes, the French general who commanded Murat's army in Calabria. Most, if not all, of the active agents in this plot were not Sicilians but Neapolitans, who hated the Sicilians, and were anxious to return to their own country with promotion in Murat's army or with other employments, or with pensions, for the important service in hand. A fortunate accident and the loquacity of a Messinese boatman, who had been employed in carrying packets by night across the Faro or narrow strait which separates the island from the continent, put an acute Sicilian on the track, and this Sicilian revealed all he knew and suspected to his friends the English. It is said that he produced evidence to show that the conspirators, as a beginning, had engaged to put Manhes in possession of the Sicilian flotilla of gun-boats which lay at Messina, the Torre del Faro, and other parts of the coast; to assist the French to cross the straits when no British vessels of war should be near, &c. It was the Sicilian and not the English genius that suggested the very cunning and dramatic counterplot which followed these discoveries; and the counterplot could not be completed until a Frenchman was found to play a part in it. The men who came over from Reggio in Calabria, which is almost opposite to Messina, or from the rock of Scylla or other points, as convenience served, to deliver the letters of General Manhes to the conspirators, were bought over; and instead of taking the Frenchman's letters to their addresses, delivered them to officers in our service. A fac-simile was made of every letter thus brought, and forwarded to the conspirators, the original letter being detained as undeniable evidence whenever the time for producing it should arrive. Manhes, though long accustomed to this sort of work—nearly the whole of his military government in Calabria depending on a system of plots and counterplots, espionage, and secret police—did not proceed, in this particular matter, with much skill or caution. After writing sundry epistles without a cypher, he at last wrote to Colonel Costantino de' Filippis, a Neapolitan officer at Messina, that, as there were many points upon which he still wished to communicate, and which could not be explained in a letter, he had determined to send over one of his own aides-de-camp (a young Frenchman), with whom Colonel de' Filippis might freely conclude all the arrangements; and, in order to put the Neapolitan colonel upon his guard, he enclosed the *signalement*, or a complete description of his aide-de-camp's person and features. It now became necessary for the English general to find some one who should personate this French aide-de-camp. This was not very easy: it was in vain to look among the British and Sicilian officers for a man that could speak French so as to pass for a Frenchman; and, besides, it was very doubtful whether any British officer would undertake the necessary but not very honourable work, and it was not every Sicilian officer in our service that could be implicitly trusted. It was, moreover, indispensable that this spy or counterplotter should be a person of address, ability, courage, and confidence, and also a stranger in Messina, and that he should bear some resemblance in stature and countenance to the French aide-de-camp whom Manhes had described. At length such a man was found in one of the foreign regiments in our service. Monsieur A—— de——, a subaltern in the — regiment, which was doing garrison duty at Malta, though educated from his childhood in England, was a Frenchman by birth, the son of a French emigrant of a good family. Having readily undertaken to personate the French aide-de-camp now anxiously expected by the conspirators, he was immediately brought to Messina in disguise, kept concealed till his mustachios had grown to the pattern of his prototype's, and till he received the instruction necessary to enable him to go through the difficult part which he had to act. He was then secretly carried out to sea, and was landed by night from a small boat on an open part of the shore, as if from the Calabrian coast, wearing the disguise of a sailor's dress, which Manhes had said his aide-de-camp would wear. He was furnished with such credentials as the intercepted materials in General Maitland's hands enabled him to provide, and he had the watchwords which had been agreed upon between Manhes and de' Filippis. Monsieur A—— de —— was led blindfolded into the conspirator's den, in the very heart of Messina. This den was the lodging of Colonel de' Filippis, and here the adroit and strong-nerved Frenchman gained a complete knowledge of everything, with a list of all the persons in Sicily upon whom Manhes might count. There was matter to try his nerves and his wits: he was in imminent danger of being discovered by a Sicilian who had been his brother officer, but who had been turned out of the regiment for misconduct; and some of

the Neapolitan conspirators were personally acquainted with Manhes's real aide-de-camp. But with great art and firmness, and an unchanging countenance, he refused to see the Sicilian and the others who were clamorous for admission, alleging the positive orders of his general to be introduced only to a small and select number—to men whose courage and *honour* could be depended upon. He was led away again, promising the speedy landing and assistance of French and Neapolitan troops, and hearing the muttered exultations of the conspirators, who expected to have the English army in the trap. He departed, as he had arrived, in disguise and by night, embarked in an open boat, put out to the mid strait as if making for Reggio, then, tacking for another point of the Sicilian coast, landed again, and proceeded with a strong escort to the office of the British adjutant-general in Messina. Before daylight the next morning the chief conspirators, or the principal agents in the conspiracy —for there were higher names than theirs concerned in the plot—were seized and safely lodged in the citadel. They were fifteen in number, and among them was the Sicilian or Neapolitan town-major of Messina, whose office it was supposed would have afforded great facilities for getting the enemy into the town and completing a bloody plot. These arrests were made on the 2nd of December, 1811; and a few days after (Lord William Bentinck having arrived from England in this interval with the full powers he had demanded) they were brought to their trial before a court-martial composed partly of British and partly of native Sicilian officers. They were all condemned to death, and the nefariousness of their designs seemed to leave little hope of mercy; yet only one of them was executed, the rest being transported to the solitary islands of Ponza, Ventotene, and Favignano, or sentenced to various periods of imprisonment. As soon as the trial was over, the president of the court-martial, before the eyes of the court, burned the list of the conspirators which Monsieur A—— de —— had obtained, and which comprised a much greater number of names than *fifteen*. During the trial, evidence came out of the participation of Queen Carolina in the plot; it was suppressed from prudential motives; but we have been since assured by more than one person who knew all the facts, and who either sat upon the court-martial or saw the letters and the whole body of proof, that this evidence was clear against the infatuated and vindictive queen.*

Several bold political speculators and unscrupulous correctors of abuses and removers of difficulties, who would have created more than they removed (a class of persons in which England has at no time been wanting), had recommended over and over again, and long before this time, that Great Britain should take possession of the whole island and sovereignty of Sicily as her own, and put old Ferdinand on the shelf, providing for him and his court with a moderate pension, instead of allowing them to waste our annual subsidy of 400,000*l.* and the revenue of the island in extravagance and dissipation, or turn all the surplus of that money in counteracting our good policy and plotting against us. One of their arguments was founded on truth: it was perfectly true that the great body of the Sicilians would have preferred being subjects to King George to being subjects to King Ferdinand; but where would have been our truth, where our honour, where the moral force we exercised upon the nations of Europe, where the countenance and confidence with which we set ourselves against Bonaparte's assaults on the liberty and independence of nations and his treachery against weak allies, if we, following the line of conduct recommended by these English politicians, had turned against a helpless king, who, more than once, had been hurried by us into a state of war with France, and if we had usurped dominions—the sad remnant of all that was left of the once rich and flourishing kingdom of the Two Sicilies—into which we had been invited as friends and protectors, and where such fortresses as existed had been put into our hands, with entire confidence on the part of Ferdinand that we would guard and protect him,—that, even if we should not succeed in restoring him to Naples, we would at least leave him to die in peace in Sicily and preserve that island for his children? Nearly four years before any conspiracy or plotting with the French was discovered, or any suspicion had been cast upon Queen Carolina, the odious recommendation at which we have hinted had been published in English books and pamphlets, and eulogised in certain English reviews and newspapers; but the case was in reality not much altered by the discoveries which had been made: although in his indolence he chose to leave so much of the royal authority to be exercised by the queen, Ferdinand, who knew nothing of the plots which had been in progress, who prided himself on being the stanch

* For many of these particulars we are indebted to private information obtained in Sicily, at Naples, and at home. Carlo Botta gives a very garbled account, and Colletta does not deign to notice the subject. The only rational account given in any foreign work is in '*De la Sicile et de ses Rapports avec l'Angleterre à l'Epoque de la Constitution de* 1812, *par un Membre des différens Parlements de la Sicile*,' 8vo. Paris, 1827. And this account is short and imperfect. Though the publication is anonymous, the author is well known. He says (meaning the queen), "An illustrious personage was said to be implicated." He also says, "*Only one* of the conspirators was executed." Some French writers would make it appear that a holocaust of human lives was sacrificed to British fears and vengeance, and that the court-martial was composed solely of English officers. This Sicilian writer distinctly states that the court consisted of Sicilian as well as English officers; and his whole account shows a remarkable leaning towards mercy. Manhes, whose name in Calabria is still synonymous with "butcher"—Manhes, who deluged those two great provinces with blood and then boasted that he had tranquillised them, on finding how dexterously his plots in Sicily had been counterplotted, attempted a diabolical revenge. Four ruffians who were known to have come over from Calabria were well watched by the Messina police, and were at last surprised in bed. But they were dressed and armed, and they made a desperate resistance. One was killed on the spot, two were severely wounded, the fourth escaped, but he was pursued and soon taken. They were convicted as spies, and two of them, being condemned, confessed, as persons whose death was certain and who could hope for pardon only in the other world, that they had been sent from Calabria by Manhes to assassinate an officer in the British army. This declaration was voluntary, and made in the presence of several English general officers, one of the men repeating, as he said, the very words spoken by the French general upon giving his instructions. Another of these ruffians had been engaged to waylay and murder the courier coming from Palermo, in the hope of getting Lord William Bentinck's first dispatches after his arrival from England.

friend of the English, and who was incessantly repeating that his only hope was in them, his only chance of recovering the dominions he had lost in the downfall of Bonaparte, was not, by any law of nations, answerable for the conduct of his wife, or punishable for her insane doings, while every public act of government went in his name, as well as every treaty of alliance; nor, even if Ferdinand had been as guilty or as mad as Carolina, could the British government sit in judgment upon him or award to themselves the forfeiture of a kingdom which belonged to him and his successors, nor could any abdication, renunciation, or surrender be valid without the free consent of the prince royal and the other princes of his family both in the direct and collateral branches. Colour it as we would, any seizure that we might make must pass in the eyes of Europe, and of the whole civilised world, as an act inferior in infamy and treachery only to that by which Bonaparte got his first footing in Spain and kidnapped Ferdinand's brother and nephews. Dear was the price we paid for keeping Sicily out of the clutches of the French; enormous were the abuses we were compelled to witness, and excessive the provocations we received, during our sojourn there; but better all this, and ten times over, than the guilt and opprobrium we should have contracted by seizing upon the island as our own!

But, after all that had come to light in the course of the summer and autumn of 1811, and on the trial of the Messina conspirators, Lord William Bentinck and the government of Mr. Perceval, which had given him such full powers, thought it expedient and imperative to take some measures which should curb the queen and prevent future mischief. The first grand blow was struck by suspending payment of the 400,000*l.* subsidy. The next important step was taken by the Duke of Orleans, at present Louis Philippe, King of the French. This prince, whose life and adventures will form a volume far more extraordinary than those of Bonaparte himself, after a long residence in England, where he had declared himself to be in heart an Englishman, had come out to Sicily two or three years before this period, and had married the princess Maria Amalia, second daughter of Queen Carolina. As well as Prince Leopold, that queen's second son (he who was sighing and dying for iced water, when he went with Sir John Stuart, in 1809, to recover possession of his father's continental dominions), the Duke of Orleans had put himself forward as a proper regent for the Spaniards during the captivity of his loving cousin Ferdinand. Both these Bourbon princes had even gone to the coast of Spain to recommend themselves personally to the Cortes and people, but their pretensions had been completely thwarted, not without some interference or recommendation of the British government to that effect. Prince Leopold was an easy good-natured young man, but more indolent and careless than his father, and without any of his father's shrewdness: it will be understood that these objections did not apply to the Duke of Orleans, but others of a very different and very serious nature. It was dreaded, in fact, that if Orleans were once made regent of Spain he would end by making himself king of that country. In the recent intrigues and proceedings in Sicily the duke is said to have acted so very cautiously, as to have been suspected by both parties, and to have been feared alike by Lord William Bentinck and by the queen. At the decisive moment, however, when the subsidy had been stopped, the clever son of poor Philippe Egalité sided with the English, and joined Bentinck in urging Don Francesco, the hereditary prince, to step forward. Don Francesco, though more studious and better informed, was not worth much more than Don Leopold, being very inactive, fat, and infirm, and of a very ungainly appearance. The hereditary prince, however, did come forward in this dilemma—no money from England, or no farther authority in the hands of the queen. It appears that the prince's conduct was secretly sanctioned by the king, his father, who saw the ruin into which his wife's violence was precipitating him, and who now did just what he repeated in 1820, when his revolted army and the carbonari of Naples called upon him to accept a constitution like that which the Spaniards had then framed—he made a temporary resignation of the kingly functions, and appointed his beloved son and legitimate successor, Don Francesco, his vicar-general of this his kingdom of Sicily, yielding and transferring to him, with the ample title of Alter Ego, the exercise of all the rights, prerogatives, pre-eminencies, and powers, which could have been exercised by himself. A formal and solemn act to this effect was published on January the 16th, 1812.* Thus all power was supposed to be taken from the queen and her evil advisers, one of the worst of whom appears to have been a French emigrant named St. Clair. It had been a hard fight, but at last the English lord had prevailed over the imperial and imperious daughter of Maria Theresa. The patriotic barons and other state prisoners were forthwith liberated, and returned to Palermo amidst the acclamations of their countrymen, and loud expressions of gratitude to the English, their real liberators. The command of the Sicilian troops, whom we had so long paid for, was given to Lord William Bentinck, and measures were taken for rendering the British and Sicilian forces available to the common cause, and for reforming the abuses under which the country groaned. But the evil genius of Queen Carolina seemed to brood over all these transactions like a fatality: the first use made of the disposable troops was the ill-managed Anglo-Sicilian expedition to the eastern coast of

* Ferdinand was, and continued to be, even down to the night of his sudden death, in 1824, one of the heartiest, robustest men in his dominions; but in the preamble to this act he spoke of "being obliged through bodily indisposition, and from the advice of the physicians, to breathe the air of the country, and to withdraw himself from all serious application." *Serious application!* He had been fifty-three years a king, and had never been known to apply seriously to business for a single hour at a time.

Spain; and the system of civil reform and improvement for the long misgoverned island was run up inconsiderately, and without any proper foundation. Lord William Bentinck, with most of his English and several of his Sicilian advisers, deemed that the proper remedy for all evils would be the *making* a constitution as nearly as possible like that of England, which had not been *made*, but which had grown as it were of itself through six centuries *of* time. Like Naples, Sicily had once had a sort of aristocratic constitution or feudal compact, whereby the power of the crown was circumscribed, the rights of the barons were guaranteed, and the amount of subsidies required by the sovereign was left to be voted by the barons, lay and spiritual, who themselves arranged the quota which each was to pay, or which every town or commune was to furnish. But the only real guarantee lay in the sword and spear of the feudal aristocracy, and, in proportion as the military power of the barons decayed, this feudal constitution decayed also; and, as there was not a rapid rise and increase of the wealth and power of the commons, as in England, as no *tiers état* was created, there was no body of the people to grasp a portion of the power which the barons forfeited, and which was thus all absorbed by the crown. This was the case in France, and in nearly all the countries in Europe, and thus it was that a strong oligarchy was almost everywhere followed by absolute monarchy and the despotism of one. In Sicily, indeed, the feudal rights and immunities, which pressed heavily on the people, had been less affected than in Naples, even as that kingdom was when the French took possession of it, but their political power was almost extinct, and the aristocracy rarely met as a deliberative body, and never, correctly speaking, as a legislature. Of late years the Sicilian nobles had indeed met in what was by courtesy called a *parlamento*, or parliament; but this body, in reality, possessed little more political power or influence than the *Sedili* of Naples, under the tyrannical, oppressive, extortionate government of the Spanish viceroys, when the two kingdoms, to their incalculable detriment, were provinces of Spain, and when the nobility and gentry were never called together except to vote and apportion subsidies, the amount of which was fixed beforehand by the court of Madrid or by the resident viceroy. Unluckily, in laying down sword and spear, the Sicilian barons had not taken up books; with a very few exceptions (we believe they might be counted on the fingers of one hand), they were wofully illiterate and ignorant. Natural good parts and shrewdness they had—for the compliment which the witty Marchese di Caraccioli paid to Naples, his own country, may, with at least equal justice, be applied to Sicily—"Fools are not born under these skies;" and they had also a sort of unreasoning patriotism or instinctive love of country, with spirit and courage, when once excited. But the great majority of them were prone to intrigue and cabal, fierce in their jealousies against one another, extravagant, in debt, and consequently ever greedy for money, and not overscrupulous as to the means of obtaining it. Of civilization they knew little, except its vices: Palermo, side by side with the greatest dissipation, luxury, and splendour, exhibited some of the worst features of semi-barbarism. Through this prevailing extravagance it was almost as difficult to find a nobleman out of debt, as to find a well-informed nobleman: the revenues of a few, but only a very few, families were enormous, but it was precisely these families that were deepest in debt. Many other families had nothing else left to boast of but ancient names or titles, and little to live upon beyond what they might obtain from the court; and not a few were *novi homines*, who not only had little or nothing to support their rank, but actually no hereditary or any other legitimate right to the titles they bore. The number of these *titolati* may be conceived when it is understood that every man who would have figured in England as a squire, or a country gentleman, was in Sicily a baron, count, marquis, duke, or prince.* It was, therefore, impossible to choose a peerage merely by titles, and equally impossible to make a selection without creating jealousies and rabid animosities.

Resolving to follow the British constitution as nearly as he thought it possible, Lord William Bentinck, hoping to secure authority to the king and liberty to the people, separated the legislative, executive, and judicial powers; vesting the first in a parliament of two houses composed of Lords and Commons, the second in the king and his responsible ministers, the last in irremovable, independent judges. His constitution set due limits to the royal prerogative, by not permitting the sovereign to take cognizance of bills in progress, or to interfere in any way either with the freedom of debate, or the freedom of election for the Commons. The peerage, as with us, was to be hereditary; and, in order to render it respectable, titles were to be revised and made inalienable and strictly hereditary; and no person was to be elevated to the peerage that was not already in possession of a fief to which a title had belonged, and of an annual income of 6000 *oncie*, or about 3000*l.* sterling at the least. With respect to the commons the qualifications of members for counties or districts (into twenty-three of which Sicily was divided) were fixed at 300 *oncie* per annum; and of members for towns at half that sum; an exception being made in favour of professors of universities, whose learning was to be accepted in lieu of property. The elective franchise or privilege of voting was limited to such as possessed property to the annual amount of 18 *oncie*, or 9*l.* sterling; but some exceptions were made in favour of such as were in life possession of a public office or were masters of guilds or corporations.

* This abuse of titles of honour, the immunity of usurping them, and the facility with which they were given, had been encouraged by the Spanish government in order to weaken and discredit the old aristocracy. There was one Spanish viceroy of Naples that was said to have given three hundred titles in three months!

Unless it were considered that the fewer the number of members of either house the better (and this, perhaps, would not have been an unreasonable principle, at least at the beginning of the experiment), all these qualifications should appear to have been fixed rather too high. There were scarcely a dozen nobles who, together with the other requisites, possessed a clear unincumbered income of 3000*l.*, and few, very few, were the commons or the untitled that possessed 150*l.* per annum. Unfortunately, too, the majority of the most ancient and noble families who had been *pari*, or peers, under the Norman, Angevin, and Aragonese dynasties, were sunk into poverty. But the pride of these men remained, and so to a very considerable degree did the popular reverence for ancient names and lineages; and these feelings could not but be outraged by the distinctions, with regard to money, which were adopted in this constitution, and by seeing comparatively new men placed over the heads of the old, on account of the accidental possession of a larger revenue. The right of originating every tax was, after the modern practice in England, left to the Commons; but this was very distasteful to the nobles, who had been accustomed to vote the subsidies and who hitherto enjoyed an exemption from many taxes. Perhaps one little incident will perfectly explain what was to be expected from this Sicilian House of Peers. They were, as we have said, nearly all in debt; they had acquired some vague idea of the law which exempts a British member of either House of parliament from personal arrest; but, not quite understanding this arrangement, or thinking it might be improved, almost the first thing they did, when they assembled as a branch of the legislature, was to propose a law that no Sicilian peer should in any way be pursued for his debts![*] But the least promising circumstance of all was the total ignorance and indifference of the great body of the Sicilian people as to this or any other form of government. At first—like their neighbours the Neapolitans a few years later—they thought that *Costituzione* meant "no taxes and cheaper bread," and that it must therefore be a fine thing; but, when they found that they must pay taxes as before, their feeling for it was rather worse than indifference. Such, however, as it was, or such as the unpromising circumstances of the country were, this Sicilian constitution was drawn up and sworn to in the course of 1812, and it came into operation early in 1813.

It is a sad dilemma:—if people are left to groan and degenerate under a despotism and in a state of ignorance, they can hardly fit themselves for the condition of free subjects; and, if they are suddenly, by adventitious circumstances and an extraneous force, raised to the condition of freemen, without enlightenment, without experience, they are sure to abuse and eventually to lose the advantages which they had not obtained for themselves, but which had been conferred upon them. A wise and generous tutorage on the part of England, and a determination to support the experiment by those who had the power to support it, and a series of years of trial and experience, might, with so clever a people, have removed all difficulties, and have established a system truly beneficial to the beautiful country. But our tutorage and support were withdrawn within little more than two years; no adequate security was taken, or probably could have been taken, against the despotic inclinations of the Bourbon princes, and as soon as we had restored them to their continental dominions, and had withdrawn our army from Sicily (King Ferdinand having resumed the sovereign authority, which he had only delegated for a time to his son Francesco), Lord William Bentinck's Sicilian constitution was put down and extinguished for ever by a decree published in the court newspaper—a decree which wanted not only the graces of rhetoric, but the common proprieties of grammar.*

Queen Carolina could not cease from troubling and be at rest. The whole plan of this constitution was odious to her: it revived in her darkened mind the maddening recollections of the French revolution and the fate of her sister, and she was constantly muttering to herself that she felt the edge of the guillotine-knife over her own neck. The king, after making over his authority to the hereditary prince, retired to a delightful country-house a few miles from Palermo, and amused himself as before with shooting, fishing, and planting trees. The queen would have remained in the capital, but, being detected in fresh intrigues, and having more than once nearly succeeded in exciting a popular commotion against the English and their adherents, she was *requested* to retire to Castel-Vetrano, an old hill-town in the interior of the island. But, instead of being quiet, she became more dangerous here than she had been in Palermo, collecting around her lawless or fanatic bands, raising a cry against English heresy—a cry not without danger among so superstitious a people,—and still corresponding, or being shrewdly suspected of corresponding, with the French and others in Calabria and at Naples. At last it was determined to send her out of the island altogether and convey her to Vienna. There was no difficulty in obtaining the concurrence of the old king or his son the prince regent, or vicar-general; but long and arduous was the task to induce her to go quietly.† Finally, however, in the beginning of

* This, however, was no more than the claim formerly maintained by both Houses of our own legislature, and not entirely abandoned till some years after the accession of George III. See Pict. Hist. of Eng. iv. 667.

* Giornale delle Due Sicilie.

† After many other persons had failed, this difficult and delicate task was undertaken, at Lord William Bentinck's earnest request, by the late General Sir Robert Mac Farlane, who was for a considerable time second in command in Sicily. It was not very willingly that the general went upon the mission, which must inevitably be attended with painful scenes and circumstances: but he had enjoyed more than any British officer then on the island the friendship both of the king and queen, and it was thought that he was the only person that had a chance of succeeding in the business.

On approaching the place of Carolina's retirement or relegation, the general left his escort of dragoons behind him at a village and proceeded to Castel-Vetrano, attended only by an aide de-camp and

the summer of 1813, the queen with her favourite son Don Leopold and a small retinue embarked on board an English man-of-war, and left Sicily for ever. To reach Vienna was no easy matter, and, by a direct route, an impossibility. At first she proceeded to Sardinia, where she found a court poorer, but honester, than the one she had had at Palermo. From Sardinia she proceeded to Zante, and then an English frigate conveyed her, her son, and suite to Constantinople, whence they travelled, in a very roundabout, fatiguing way, to the capital of the Austrian empire. Carolina died at Vienna in September, 1814, when the husband of her niece was an exile in the island of Elba, but several months before the restoration of her husband and family to Naples.

In the course of the year 1812 one of the seas which bathe the coasts of the Italian peninsula witnessed a remarkable naval combat, and one very honourable to the native courage of Italian seamen. Great efforts had been made by Bonaparte and his Italian government to render Venice an important naval depôt. Many small vessels of war had been built there by Venetian workmen, and on the 6th of September, 1810, a fine, 74-gun ship, the 'Rivoli,' was launched at the arsenal of Malamocca, about five miles from the city of Venice. A picked crew, mostly Italians and Dalmatians, and several Venetian officers of tried skill and courage, were put on board this ship, but the captain was a Frenchman. The 'Rivoli' put to sea for the first time in February, 1812, but it was only to fall into the hands of the English. On the 21st, only two or three days after leaving port, she was descried by Captain John Talbot, of the 'Victorious,' 74; who was accompanied by the 18-gun brig 'Weazle,' Captain J. W. Andrew. The 'Rivoli' on her side was accompanied by two 16-gun brigs, one 8-gun brig, and two gun-boats, and the French commodore was carrying sail and steering in line of battle for the port of Pola in Istria. The 'Victorious' and the 'Weazle' were presently under all sail in chase, and soon began to gain upon the enemy's squadron. It was, however, between the night and morning of the 22nd before the action began. The 'Weazle' overtook one of the 16-gun brigs, and engaged her within half-pistol-shot distance for about twenty minutes. Then the second of the 16-gun brigs closed upon the 'Weazle;' but, Captain Andrew continuing his close and well-directed fire upon the first brig, she took fire and blew up. The 'Weazle' immediately put out boats to save the lives of her brave foes, but, owing to the darkness, she succeeded in saving only three men, and those three sadly wounded and bruised. After this catastrophe the two other brigs made off, and soon disappeared. As day broke, however, the 'Weazle,' having repaired her much-damaged rigging, and given pursuit, regained sight of the two brigs, and renewed the chase, aiding herself with sweeps on account of the lightness of the breeze. In the meanwhile, the 'Victorious,' 74, arriving within half-pistol-shot, had opened her

an orderly. The old feudal castle which the queen occupied stood behind the town on the top of a steep hill, partially covered with trees and dense thickets of myrtle. As they rode up the spur of the hill, the aide-de-camp cried out, "General, see! There have been bivouac fires here! There *are* certainly troops hereabout." The general looked, and saw right and left of the rough road or path ashes and smouldering embers in several separate heaps—a pretty sure indication that some persons had been bivouacking among the trees. The sight was unpleasant, and that which presently followed was more so. About a dozen ruffianly-looking fellows, whose numbers soon increased to two or three score, showed their high sugar-loaf hats, their grim countenances, and their long-barrelled muskets across the narrow road and above the hedges on either side of it; and two or three of them even levelled their muskets, with terrible oaths that the English had no business there, and that they should not get at the queen. It was easy for a practised eye to discover that these men were a mixture of Sicilian and Calabrian partizans, fellows capable of any daring extremity when excited by loyalty or by fanaticism. It required presence of mind, address, and good arguments to pacify them and win a way through them; but in this the general and his aide-de-camp succeeded, chiefly through telling them that they were Queen Carolina's friends and were carrying an order for money to her. The general found fresh obstacles at the gates of the castle, but the queen upon hearing his name ordered that he should be admitted. The old castle was half in ruins, the servants within seemed half-starved, everything wore the appearance of poverty, misery, and dejection. But the proud daughter of Maria Theresa rallied her spirits and received her English visitor with state and dignity. She asked him what brought him to that barbarous place—said it could hardly be to offer any new outrage, as in that case the British government would have chosen a different and less honourable agent. When the general cautiously and reluctantly opened his commission she flew into a towering fury, and spoke loud and rapidly until her breath and strength were exhausted. She accused Lord William Bentinck of provoking an unnatural family war, of setting up the son against the father, of driving the wife from the husband, of usurping the sovereignty of Sicily, of treating the king like a child, and herself like a common criminal. "Is it for this," said she, "that I have escaped the Jacobin guillotine, and plots, conspiracies, and treasons at Naples? Is it for this that I helped your Nelson to conquer at the Nile? Is it for this that I brought your army into this island? General! Is this your English good faith? *Est-ce que c'est cela votre loyauté Anglaise?*"

When the storm had spent itself in its own fury, and when the general with all possible delicacy made use of arguments to show that she would now be much happier among her own family at Vienna than she could hope to be in Sicily; that nothing but mischief could come of her attempting to stay, she rushed out of the room, screaming rather than saying, "I will never go! Never! I am queen here!" The general then addressed himself to some of the few courtiers and dames of honour who had followed her to this Patmos, and particularly to the Neapolitan Principessa di....., who had adhered to her in all her changes of fortune, and who was devotedly attached to her without partaking in any of her insane notions. He told them, with much less ceremony than he had told her majesty, that the queen *must* go,—that the king and her son, the hereditary prince, both wished it,—that there was in all parties an anxious desire to show respect to her majesty, but that nothing could change their resolution, and that any attempt at resistance could occasion only a scandalous scene, with the loss, perhaps, of a few lives. But the argument of the most weight was this: General Mac Farlane assured them that, if her majesty would but consent to go quietly, there was ready for her a good supply of hard Spanish dollars, which would enable her to pay, in part, her private debts and the arrears of her household, and that more money would be furnished as soon as her majesty embarked. The poor courtiers, who had scarcely seen a dollar for months, and who had scarcely bread to eat, were soothed and charmed by this perspective, and the Principessa di..... felt the cogency of the other arguments. They withdrew to make their representations and prayers to Carolina. In the evening the queen saw the general again; and then, with a solemn protest that she yielded only to force and her desire to avoid bloodshed, she consented to quit the island. But in settling the arrangements for her departure she started other difficulties, and declared more than once, in an agony of passion, that she would not be transported thus from the dominions of her husband,—that, if Lord William Bentinck would remove her, he must first kill her and her few but brave defenders. All this, however, was but the last flash of the thunder-cloud. Before the general left her, his temper, and kindness, and respect, the representations of all those about her, and her own conviction that resistance was indeed hopeless, induced her to give both a verbal and written consent to depart immediately, or as soon as a British man-of-war should be ready to receive her with her son Leopold and suite. The Sicilian and Calabrian partizans who mounted her red cockade, and the old motto of "*Viva la Santa Fede*," wept like children upon being told that the queen was going to leave them.

Carolina's agitated life was closed by an uneasy death. To the Principessa di....., who was with her in her last days at Vienna, and continued her attendance to her last moment, she said that she was troubled by visions of the past and by loud voices speaking to her in her sleep; that she heard, all night long, many angry voices calling upon her to follow; and that, even by daylight, she saw many hands beckoning through the curtains of her bed, while invisible voices whispered "Hist! hist! Carolina, hist!"

Within fifty days after receiving intelligence of her death the king her husband satisfied his own conscience and *the conscience of* a mistress (the widow of a Sicilian nobleman) by going through the ceremony and compromise of what is called a left-handed marriage.

starboard guns upon the 'Rivoli,' who returned the fire from her larboard broadside, but kept her sail up and stood away for shore, making for the Gulf of Trieste. But Talbot kept close to his foe, and a furious engagement ensued between the two line-of-battle ships, interrupted only when the fog or the smoke, for a few minutes at a time, hid them from each other's view. Early in the action Captain Talbot received a contusion from a splinter, which nearly deprived him of his sight. The command of the ship devolved upon Lieutenant Thomas Ladd Peake, who emulated the conduct and bravery of his wounded chief. After three hours' close fighting, the 'Rivoli' had become unmanageable, and could make use of only two quarter-deck guns. Lieutenant Peake, by signal, now recalled the 'Weazle' from her pursuit of the two brigs, in order to have her assistance, in case either of the 74s should get aground, for the 'Victorious' herself was in a disabled state, and both ships were getting into shallow water, and close to the shore. The 'Weazle' coming up stood across the bows of the 'Rivoli,' poured in her broadside when within musket-shot distance, weared or tacked as necessary, and twice repeated this fire; the 'Victorious' all the while maintaining her cannonade. About half an hour after the 'Weazle' had come up, the 'Victorious' shot away the 'Rivoli's' mizen-mast; and in another quarter of an hour the 'Rivoli' fired a lee gun, and hailed the 'Victorious' that she had struck. It was long since any ship under French colours had fought so well; the battle between the two 74s had lasted nearly four hours and a half, and all the time at the closest quarters: out of a crew of about 850 men the 'Rivoli' lost 400 in killed and wounded, including her second captain and nearly all her officers; in addition to her mizen-mast being shot away, her fore and main masts were so badly wounded that they fell over her sides a few days after the action, and her hull was dreadfully shattered. The 'Victorious' counted 27 killed and 99 wounded; her rigging was cut to pieces, her gaff and spanker-boom shot away, her three top-masts and main-mast badly wounded, her boats all destroyed, except a small punt, and her hull struck in several places. The little 'Weazle' had the extraordinary good fortune not to have a man hurt.*

In this same sea (the narrow and difficult Adriatic), and in the Ionian and the Tyrrhenian seas, there were many gallant in-shore affairs, attacks upon convoys, gun-boats, French batteries, &c.; and Lissa, the scene of Captain Hoste's exploit in 1811, witnessed another severe action between three English frigates, and three French frigates, that were accompanied by other craft, the result being the capture of a French 44-gun frigate and of a 26-gun vessel, fitted out as a store ship. Nor were there wanting affairs of light squadrons and single ships in other parts of the world, on the French and Spanish coasts in the Mediterranean, on the coast of Norway in the Northern Ocean, and—in another hemisphere—on the coasts both of North and South America, and among the islands which stud the Gulf of Mexico and the Caribbean Seas; and all the while incessant operations were carrying on by fleets and squadrons in the East Indies and among the great islands of the Indian Ocean. Everywhere victory was steady to our flag, save only in our new contest with the United States of America, in which, through a deplorable mismanagement of means, some dirt was thrown upon our national standard. To this American war we must now direct our attention.

Ever since their fortunate issue from a struggle (their war of independence) which had long seemed so hopeless, and which was in fact nearly as hopeless as ever, when the government of Lord North, dismayed by Lord Cornwallis's surrender, and still more by the strong array of the British opposition, consented to negotiate and to give them all they asked, our American brethren had shown a confidence, a vanity and presumption, very distasteful to all Englishmen who loved their country, and very irritating to all of them who did not despise the display. If there was a brotherhood between us, it had become a brotherhood of Cain. Our descendants, whose population was constantly fed by fresh emigrants and adventurers from the mother country, and whose wastes were partially filled and tilled by these emigrants,—the citizens of the United States, who had no language, no literature, no venerable tradition, no fame as a people, except such as they inherited from Old England, and shared with Englishmen, persisted in the rancorous hatred which had accompanied the war, were the first and foremost to traduce the name of England, to libel the genial cradle from which they sprung, to heap abuse not only upon our national policy and form of government, but generally upon our national character. The French Jacobins themselves did not speak more contemptuously of us as an enslaved king-ridden and priest-ridden people, than did these Anglo-American republicans; nor did Bonaparte himself ever throw more disgusting personalities into a public and a national quarrel. These feelings of animosity, which ought not to have been expected from the party which had been successful in the contest, could not fail of provoking an angry and unwholesome reciprocity from some portions of the English people; but we have the facts confessed, and publicly avowed by more than one of the leaders of the American revolution, who came over to this country after the peace of 1783, to negotiate treaties of commerce, &c., that the British government was desirous and anxious to throw a veil over the past; that, so far from wishing to recover the dominions it had lost, our government, together with the great majority of the nation, were of opinion that those dominions ought not to be accepted even if the Americans were disposed to make a voluntary surrender of them, or to return to their ancient allegiance; that henceforward the two countries

* James, Naval Hist.—Captain Talbot's Dispatch, in Gazette.

would do best apart; that by establishing relations of amity, trade, and commerce, there might be a mutual interchange of advantages; that the most earnest desire of England was to preserve peace, and to give conciliation a fair trial.*

While this was the feeling of successive British ministries and of the great majority of the nation, there was a minority of the people of England, comprising most of the Whig opposition, who professed to rejoice that the Americans had succeeded, and that we had been humbled and defeated in their revolutionary war; who made themselves on all occasions the panegyrists of the tyro-republicans and their newly-created institutions, and who kept pointing to the meteor which had risen in the western world as to a glorious luminary which must shed beneficent light and warmth upon all the countries of the globe, and eventually count many of those countries as its satellites, or as imitative bodies revolving round it and copying its bright example. Civil and religious liberty, according to this minority, had fled from all the antiquated countries of Europe, and was fast flying from the shores of Britain, to seek a shelter beyond the western waves, and to find a home among the primeval forests of North America. For many years the United States were, to the busiest and most emphatic of our writers, more than an Atlantis or a Utopia. Even men of less ardent fancies and of less revolutionary tendencies were interested in watching the working and result of the greatest political experiment made in modern times, and wished that the American system of republicanism should be allowed a fair trial. The reaction came afterwards—long afterwards—but from about the year 1780 to 1790, when the progress of the French revolution distracted and then absorbed attention, all the countries of Europe joined in fostering the self-conceit of the Anglo-Americans. Little was heard but praises, more or less extravagant, of transatlantic virtue, *straightforwardness*, and *simplicity*. The French made an apotheosis for Franklin even while he was living in the flesh among them, and frequenting their *petits soupers*, and their *soirées*, literary, scientific, political, and fashionable, in his plain bob-wig and shoes without buckles. A saying often used by Bonaparte at a later period might have been reversed at this time—*Cette jeune Amérique m'ennuie!*

The citizens of the United States paid the French back in admiration and praises when they overset the kingly government and built up a republic on a foundation of blood and dirt. Feasts were given in the States to commemorate the execution of Louis XVI., who had been their benefactor, and who had hurried on his own destruction by interfering in their quarrel, and by sending his subjects to study in their school. It was, however, not unnatural that a republic should sympathise with a republic, or that the American republicans should seek to draw more closely the ties of friendship with the French when in their republicanized condition: but what seemed to be less in the nature of things was their transferring their affection and reverence from the overthrown French experimentalists to Napoleon Bonaparte, who had cut up that republic and trampled upon many others, who railed against all republican forms of government as selfish, corrupt, slavish, and anarchic. There was, however, such a transference of affection, nor does it appear to us the less strange from its having had a parallel among the ultra-liberal Whigs and sucking republicans of our own country. In their newspapers and books the Americans ran into ecstasies at every victory obtained by Bonaparte; and in those swarming popular conventicles where preachers most preached through the nose and most interfered with, or pretended to interpret, the mysterious ways of Providence, the great Corsican soldier and conqueror was almost invariably represented as the Man of Destiny, appointed to humble the pride of kings and scatter their armed hosts, to regenerate the nations of the old world, and especially to humble the monarchy and aristocracy of Great Britain, and deprive her of the sovereignty of the seas and of every other pre-eminence. Words and texts of Scripture were applied to the new Darius or new Alexander; prophecies were twisted and tortured to make them fit Napoleon Bonaparte and the actual condition of mankind. Opposed to this *French* party, which would be French, let what changes there might take place in France, there was what was called the English party, who would have retained as much as was possible of the institutions and spirit of the mother country, and have looked to England as the best and most natural connexion; who detested the French revolution in nearly all its phases, and who considered Bonaparte as the oppressor of Europe, the sworn foe of liberty, the most remorseless conqueror, and the most insatiate, that the modern world had seen; but this English party, which consisted solely of the superior classes, the wealthier or those most respectable from birth and education, was never very strong, and, after the retirement of Washington from the presidency in 1796, it was overshadowed and oppressed by the French party, and could seldom make its calm reasoning voice heard in the loud roar of the illimitable democracy, and the perennial tempest kept up by incessant elections and universal suffrage. Washington himself, who had vainly attempted to set some limits to democracy, was compelled to confess, with many a sigh, that he could not conceive that America could exist long as a nation without having lodged somewhere a coercive or restrictive power which should pervade the whole Union; that congresses alone would never do; that, when once the spirit of revolution and change begins to act among a people, it is impossible to say where it will stop; that those men who had made the American constitution and formed the confedera-

* This, and a good deal more, is admitted by John Jay in his Correspondence from England with General Washington.

tion had probably had too good an opinion of human nature.

The United States had submitted to numerous insults both from republican and from imperial France, if not without murmurs, yet without any very spirited retaliation. Their French sympathies and predilections made them shrink from the horrors of war whenever France was concerned: it was only a war against England, the country of their forefathers, that was reconcilable to the delicacy of their conscience. The Girondists and Jacobins successively attempted to bully them into an alliance offensive and defensive with France; and, but for the wisdom and moderation of Washington and his party, who succeeded in carrying the resolution that America would remain neutral in that almost universal war, the stripes and stars would have been found in alliance with the *bonnet rouge*. Some of the federated states seemed determined not to be bound by this declaration, and not to be prevented by any act of the central government from *sympathising* with the French republicans. When the Jacobin Genet arrived as ambassador of the République Française he was received by the people with the most extravagant transports of joy. Before proceeding to the seat of the central government,* Genet settled himself for a time at Charleston, in South Carolina, a port whose contiguity to the West Indies would give it peculiar convenience as a resort for privateers against the English trade, and serve as an excellent basis for a system of operations which he had brought out with him. He was received by the governor of that state and by its citizens with an enthusiasm which went to dissipate every doubt he might have previously entertained concerning the disposition of the Americans. He was allowed to fit out and arm vessels in that port, to enlist men, and give commissions and letters of marque to cruize and commit hostilities on Great Britain and her allies, *i. e.* on nations with whom the United States were at peace. The captures made by these cruizers were brought into Charleston port and into some other ports, and the French consuls or commercial agents assumed, under the authority of their ambassador M. Genet, to hold courts of admiralty on them, to try them, condemn them, and authorise their sale.†

On reaching Philadelphia Genet received enthusiastic addresses of congratulation from particular political societies, and from the citizens as a body, who expressed a positive conviction that the safety of the United States must depend upon the firm establishment of the French republic and its triumph over the nations of Europe. In the meanwhile Mr. Hammond, the resident British minister, complained to the American executive of the strange proceedings permitted at Charleston.‡ The prizes so unwarrantably made being within the power of the American government, Mr. Hammond, among other things, demanded from that government the immediate restitution of them. The American cabinet agreed, unanimously, that Genet, by his unprecedented conduct at Charleston, had infringed

* Even when he went to the seat of government, before his introduction to the president and government to which he was accredited, Genet received and answered several addresses from the political societies and private citizens of Philadelphia! This was contrary to all rules of diplomacy—contrary not only to etiquette, but to decency; an outrageous insult to the president of the republic. But, as well in the original appointment as in all the subsequent proceedings of this *ame perdue* of Jacobinism, all the rules observed by civilised nations in their diplomatic intercourse were set at defiance. His appointment was never notified or announced to the resident American ambassador at Paris, nor was a syllable ever mentioned to that American functionary either of M. Genet's mission or of his errand. This irregularity, coupled with the more flagrant irregularities which preceded his introduction to the president, would fully have justified Washington in refusing to receive him or to look at his credentials. Gouverneur Morris, who felt the slight put upon him, said in a letter to Washington, "Perhaps this ministry think it is a trait of republicanism to omit those forms which were anciently used to express good-will." This was the fact, and Genet afterwards took care to elucidate it practically in the States. In his correspondence with the American secretary of state he is continually urging that all ceremonies must be dispensed with as unworthy of two republican nations; and that a new species of diplomacy must be formed more consistent with republican virtue, simplicity, and dignity. "Let us not," he writes to Jefferson, "lower ourselves to the level of ancient politics by diplomatic subtleties." And whenever Jefferson quoted Vatel, or spoke of the opinions of the president and executive, the Frenchman threatened him with an appeal to the plain good sense and magnanimity of the American people.

Gouverneur Morris tells us something about the preceding history of this very promising young diplomatist. M. Genet was a friend of citizen Thomas Paine. He was brother to Queen Marie Antoinette's first woman, and hence his fortune and rise in the world originated. Through the queen's influence he had been appointed *chargé d'affaires* at Petersburg. During the earlier stages of the revolution in France, while M. Montmorin held the portfolio of foreign affairs, he quarrelled with and insulted that minister, and wrote petulant and very revolutionary dispatches, which were left unanswered and unopened at Paris. This hurt the young man's pride, and made him still more revolutionary. But, as success was yet doubtful, he held to the belief that, if the royal party should prevail, his sister would easily make fair weather for him at court. When, however, the doubt was over, and the monarchy was overturned, his letters and dispatches to Montmorin were so many credentials in his favour to the new republican government, and their dearth of men opened his way to whatever he might wish in diplomacy.

He had the more means of being dangerous in America by working upon that turbulent democracy, as he both spoke and wrote the English language with great readiness.

* Judge Marshal, Life of George Washington, second edition, Philadelphia, 1832.

† Still further ground was given for these complaints by the commission of actual hostilities within the territory of the United States. An English merchant-vessel which had been cleared out from Philadelphia was captured by a French frigate within the capes of the Delaware.—*Id. id.*

Gouverneur Morris, the American ambassador at Paris, wrote to his friends at home—"I am informed, in a way that precludes doubt, that the executive council here (*those pure moralists the Girondists were in power at this time*) sent out by M. Genet three hundred blank commissions for privateers, to be given *clandestinely* to such persons as he might find in America inclined to take them. They suppose that the avidity of some adventurers may lead them into measures which would involve altercations with Great Britain, and terminate finally in a war. This appears to me, waiving all question of *honesty*, no very sound measure, politically speaking, since they may, as a nation, *desire greater advantages from our neutrality than from our alliance*.

"But, whatever light it may be viewed in as to the French, *it is, in respect to us, a detestable project!*"

This honest republican recommended that such privateering adventurers should be treated as pirates; that all American citizens should be prevented from engaging in a predatory war contrary to the wishes of their government; that the president should by proclamation enjoin the observance of a strict neutrality, declaring that all those seamen who contravened it should be at the mercy of the party by whom they might be taken, and not entitled to the protection of the United States. "As," said he, "there is nothing more destructive to morals than the spirit of *gambling*, especially when *murder* is placed among the means of gaining the property of others, and as the security and happiness of the United States depend so essentially on the *morals* of their citizens, I feel a more than usual solicitude to prevent a practice inconsistent with all good principles."—*Letter to Thomas Pinckney, dated March the 2nd, 1793, in Life of Gouverneur Morris, by Jared Sparks; Boston, 1832.*

Morris particularly requested Pinckney to communicate this letter to the secretary-of-state (Jefferson) as soon as might be.

Morris was not the man to agree with the rabid democracy of Jefferson. They differed *in toto* in their views of the French revolution. It should seem that private coldness and alienation influenced Jefferson's public conduct in this respect, for in the private letter above quoted we find Morris (ambassador at Paris, and much perplexed by the Parisian madness) complaining that he has no news from America, &c. "Our secretary-of-state," he says, "seems much attached to brevity, and reminds me of an axiom of his predecessor, that least said is soonest mended."

the law of nations; that, the jurisdiction of every independent nation within the limits of its own territory being of a nature to exclude the exercise of any authority therein by a foreign power, the proceedings of which the British minister complained were usurpations of national sovereignty and violations of neutral rights, the repetition of which it was the duty of the American government to prevent. But, upon the question of restitution—or whether the United States were or were not bound to give back the English ships which had been captured, carried into Charleston, and there condemned by Genet's consuls, and bought by American subjects—there was a great difference of opinion in the cabinet; the secretary of state and attorney-general contending that the vessels which had been captured on the high seas, and brought into the United States, by privateers fitted out and commissioned in their ports, ought not to be restored; and the secretaries of the treasury and of war being of opinion that in honour and justice, by every international law and by every law that regulated neutrality, the States ought to make restitution. Washington, who was at this time president, took time to deliberate on the point upon which the cabinet was divided: he could not have a doubt himself as an honest man that every part of the precious system set up by Genet at Charleston was illegal, or that immediate restitution ought be made; but his authority was very limited, and he appears to have shrunk from taking upon himself the responsibility of a measure which must have been very unpopular, seeing that most of the captors, as well as all the purchasers of the English ships and goods were native Americans—free citizens of the moral, model republic. Washington, however, lost no time in communicating to the French ambassador the unanimous sentiment of the cabinet with respect to his usurpation of national sovereignty and violation of neutral rights. The citizen Genet was furious at this decision: he assailed the president, the executive and the whole central government in very intemperate and unmannerly language, quoting the treaties of former days by which America was connected with France, claiming for his own country all that the two nations were restricted from conceding to other countries, thus converting negative limitations into an affirmative grant of privileges to France, and, in short, insisting that the French republicans might do as they chose in the seaports of America. Without resenting the indecorum of his language, Washington replied to Genet that the subject had been reconsidered by the executive, but that no cause was perceived for changing the opinions which had been adopted; and to this was added that, in the *opinion of the president*, the United States owed it to themselves, and to the nations in their friendship, to *expect*, as a reparation for the offence of infringing their sovereignty, that the privateers thus illegally equipped would depart from their ports. Upon this, citizen Genet committed one of the greatest of outrages—an outrage not the less monstrous from the frequency of its practice under all the revolutionary governments of France, from Brissot and Robespierre down to Barras and Bonaparte—he appealed from the president and executive of the United States to congress, and the sense of the American subjects, most insolently and indecently stating that Washington and the cabinet were proposing measures and infractions of treaties, which no power in the nation had a right to enforce, unless the citizens of the United States in congress assembled should determine that their solemn engagements were not binding. Never had Washington, when a colonel of colonial militia, and member of a provincial assembly, suffered an insult half so bad as this from any British governor or other servant of the British government. But he was obliged to digest the affront as best he could, for the American democracy were all labouring under a Gallomania. Brother Jonathan too expected to drive a very profitable trade by privateering or buccaneering among the West India islands, with which he was so well acquainted, under the tricolor flag of France. By what appeared the majority Genet was exhorted not to relax in his endeavours to maintain his Charlestown system of privateering—or, as they delicately phrased it, to "maintain the just rights of the French republic;" and he was assured, by newspapers and by political societies, that he would find a firm and certain support in the warm affections of the American people. It was loudly and more loudly proclaimed, through the medium of these journals, and in these political clubs—and journals and clubs seemed to be assuming in America, as well as in France, the whole power of government—that the French people had rendered services to the free citizens of the States which ought never to be forgotten; that the slavish English, working for fools and tyrants, had inflicted injuries which ought never to be forgiven; that there was a natural hostility between monarchies and republics; that the European coalition of kings against France was a combination against liberty in every part of the world, and that the destinies of America were inseparably linked with those of the young and vigorous French republic.

Notwithstanding his too great anxiety in that particular, it may be questioned whether King George III. was ever half so much disquieted by corresponding societies and political clubs as was citizen-president George Washington. In America their name was Legion, and they took a still more wonderful growth and increase under the benign influence of M. Genet and the indoctrinated French Jacobins he brought with him. It was the voice of these societies that first encouraged Genet to persevere in his projects and to treat with contempt the aged president of the United States, the father and champion of that American liberty. They fraternised with him and he with them. They gave civic festivals to him and the gentlemen of his legation, who were all so many propagandists; and at these festivals the tricolor flag

was entwined lovingly with the stripes and stars, the blood-red worsted nightcap—the well-suiting symbol of French liberty, equality, and fraternity—was passed from head to head, the Marseillese hymn was sung and the Ça Ira, confusion was drunk to all kings and crowned heads; and other toasts and sentiments, for which we may refer the reader to our account of the Parisian Jacobins, were repeated at New York, Philadelphia, and other cities of the Union. Some of these societies laid a claim to the national gratitude and reverence, from having led the way in the revolution and the war of independence; and others had risen since, not to curb the kingly tyranny, which was no more, but to watch, report upon, and dictate to the native republican government. At one time a society, calling itself the German Republican Society, seemed to be as perfect an instrument as could be desired for the production of faction, discontent, and confusion; but it afterwards appeared that the Americans had something to learn in this way from the great anarchs of the world. As if to complete this education, soon after the arrival of citizen Genet, a democratic society, on the model of the Jacobin club in Paris, was formed in Philadelphia. The double system of correspondence and affiliation was engrafted upon this Philadelphian Jacobin club. They had not to seek for motives to assign for their association, nor had they to seek for phrases and logic; they had nothing to do but to translate from the French. Hence their manifestos, resolutions, and by-laws were but a repetition in another language of what had been said and done by the *Société Mère;* hence they professed to be bound together by a generous hatred of all tyranny, inequality, pomp, and power, save only the power of the people, by the love of virtue and liberty, and by an ardent thirst after knowledge and political wisdom. Faithful to their real founder, Genet, these Jacobin societies continued to be, as long as they existed, the resolute champions of all the encroachments attempted by the French on the government of the United States, and the steady defamers of the views and measures of the American executive.*

In pursuance of the determination formed by the American cabinet to stop the Charlestown proceedings and prosecute such persons as offended the laws in that respect, two citizen-sailors of the United States, who had been engaged by Genet in Charlestown to cruize and privateer in the service of France, were arrested by the civil magistrate. The Jacobin ambassador immediately demanded the liberation of these men, citizens Gideon Henfield and John Singletary, whom he described as "two officers in the service of the republic of France, arrested on board a privateer of the French republic." "The crime," said he, "laid to their charge—a crime which my mind cannot conceive, and which my pen almost refuses to state,—is the serving of France, and defending, with the children of France, the common glorious cause of liberty! . . . . They have acquired, by the sentiments animating them, and by the act of their engaging in the privateer service, anterior to any act or law to the contrary, *the right of French citizens, if they have lost that of American citizens.*" At subsequent periods the American government carried out this Jacobin practice with regard to English seamen, and deserters and other English subjects who entered their service were declared to be American citizens, and were employed against their own king and country; and they attempted to justify and to establish Genet's principle, that a man by taking service under a foreign flag became the subject of that state, and was, by the act, freed from his allegiance to his native country: but at present, and with its direct application to their own people, Genet's doctrine was very unpalatable to the American executive. The executive refused to liberate the two Charlestown adventurers, but, instead of resenting conduct which no government can bear without incurring contempt—instead of applying to the French government for the recall of this firebrand of an ambassador, or turning Genet at once out of the States—they wrote to him a very mild, if not humble, letter. And still the American press hallooed with the Jacobin diplomatist. Was it natural, was it a thing to be borne, that American citizens should be prevented from assisting French citizens, their friends and allies, who were fighting for republicanism and the rights of man? What was the meaning of this neutrality which the aristocratic executive had proclaimed? Was there to be no difference made between friends and foes, between monarchists and republicans? Was neither gratitude nor resentment to constitute a feature of the American character? Were the free people of America to be alike friendly to republicanism and to monarchy, to liberty like the French and to despotism like the English?

Pleading private business of a very particular kind, Washington retired for a time, and in very evident vexation, to his estate at Mount Vernon. While he was there another strange transaction took place within the capes of the Delaware; the 'Little Sarah,' another English merchantman which had been captured by a French frigate, was carried up to Philadelphia; there she was completely equipped as a privateer, was Frenchified and Jacobinised by the name of 'Le Petit Democrat,' and was just about to sail on a cruise, with American seamen on board, when the secretary of the treasury communicated the facts to the secretaries of state and of war, who forthwith ordered Governor Mifflin to stop the vessel and institute an inquiry. Dreading to give offence to the representative of the sovereign people of France, the governor of Philadelphia—the Athens of Quakers—entreated M. Genet to relieve him from the painful necessity of employing force, by detaining the said 'Little Democrat' in port, until the arrival of President Washington, who was coming down from Mount Vernon and would soon be on the spot.

* Judge Marshall, Life of Washington.

Genet, who felt his strength and the weakness of the American executive, who knew the manner of men he was dealing with, and who was emboldened by their spiritless submission to many previous insults, flew into a transport of rage, browbeat Governor Mifflin's secretary for delivering him such a message, heaped opprobious epithets on some of the officers of the central government, and contrasted their conduct with the cordial attachment which was expressed by the American people at large for his great and free nation. President Washington, he said, had been misled by some of these officers, who were men of aristocratic principles, pupils of the English school, enemies to liberty and equality and the blessed rights of man, which the illustrious cosmopolite Thomas Paine, who once prided himself in his title of American citizen, had assisted the philosophers and regenerators of France in proclaiming to all the nations of the earth. But Washington must remember that he was not a king but only a president; that he had no hereditary and extensive prerogative; that the power of war and peace rested not with him, but with the American people in congress represented; and that he ought to have assembled the national legislature before presuming to issue his proclamation of neutrality. He threatened to publish his correspondence with the officers of the government, together with a narrative of his own of all the proceedings; and he said that, although he would be warranted in taking an abrupt departure, his regard for the American *people* would induce him to remain until the meeting of congress; and, if that body should agree in the opinions and support the measures of the president, he would instantly return to France, and leave the disputes between the two countries to be adjusted by other means. As for the 'Little Democrat' he peremptorily refused to enter into any engagement for suspending her departure till the arrival of Washington, cautioned them against any attempt to seize her, as she belonged to the *Grande République*, and, for the honour of her flag, would unquestionably meet force by force. On receiving the report of his secretary, Governor Mifflin ordered out 120 militia for the purpose of taking possession of the privateer; but, instead of making these men act immediately, the governor sat down and wrote a long letter to the officers of the executive. Jefferson, who had displayed so much haughtiness and arrogance in his intercourse with British commissioners and diplomatists; who had recently and reluctantly returned from his embassy to Paris (where he had resided more than five years) to assume the high office of secretary of state, waited upon M. Genet the following day, with due humility, and endeavoured to prevail upon him to pledge his word of honour that the 'Little Democrat' should not leave the port of Philadelphia until the arrival of the president. The Jacobin diplomatist was as intemperate with the great Jefferson as he had been with the little secretary; he refused to give any promise about the privateer, and begged that no attempt might be made to take possession of her, as her crew was on board and would fight desperately. But, according to the received American accounts, and Jefferson's own statements, Genet, after this rage, had recourse to a *ruse* or trick, which duped them—ingenuous, simple, unsuspecting men that they were! They assert that the little Jacobin said that the 'Little Democrat' was not quite ready to sail; that she would change her position, and fall down the river a short distance on that very day, but that she would not and could not put to sea just yet; which induced them to believe that the privateer would wait till the arrival of Washington. Not one of these proud republicans appears to have thought of the indelicacy and meanness of making such a question depend upon the personal direct interference of the head of their government. But more than this; we doubt whether any one of them was deceived by Genet, or was bent upon stopping the privateer, vindicating their own insulted honour, or maintaining the law of nations. Mr. Secretary of State Jefferson retained all his venom and rancour against England, was as enthusiastic as any man in America in his admiration of democracy and of the French revolution; he was heart and soul of the ultra-French party; he looked to that revolution as to a millennium; he had gone to France with a strong prepossession in favour of its people, which a more intimate acquaintance had seemed to improve; their sciences, their literature, their cultivation of the arts, their manners and modes of life were all to his taste; there was nothing in the country, on his arriving in it, of which he seriously disapproved, save and except its priests and church, and monarchic form of government, and these things were now almost entirely swept away.* "It is not, therefore, surprising," adds his biographer, "that his partiality for France should have been so strong, and should have influenced his tastes and opinions through the rest of his life." But, besides this strong partiality for the French, and the passionate sympathising in the cause of the *Grande République*, there were other considerations likely to make Jefferson, Governor Mifflin, and the rest of them, wink at the departure of the 'Little Democrat,' and then pretend that they had been deceived by Genet. It was notorious to every man in Charlestown that the captured English merchantman (captured in their own neutral waters) had been converted into a fighting privateer by American shipwrights and other

* Professor G. Tucker, Life of Jefferson. He had displayed by anticipation such a taste for the colour of the red-worsted nightcap, or French cap of liberty, that he clad his nether-man in red breeches. "This," says his biographer, Professor Tucker, with proper solemnity, "indeed, was a part of his official dress when minister to France, at a time when such flaring colours were not proscribed by fashion; but I learn from one who ought to know, that his secretary of legation, Colonel Humphreys, who always loved show and parade, is entitled to the credit of devising this gay diplomatic costume."

We believe at the time "such flaring colours" were proscribed for all nether garments except those for footmen and door-porters. Many were the jokes in which the Parisians and the *corps diplomatique* indulged at the expense of the scarlet breeches of the citizen ambassador of the United States republic.

American artizans; that the far greater part of the crew were American sailors, and that the 120 American militia-men whom the governor had called out would not act hostilely against their own countrymen, their relatives, or their friends, or their comrades. An order to this effect would only have exhibited the weakness and helplessness of the executive officers; and such an exhibition may have been considered more injurious to the honour and character of the government of the American republic than a mean submission to the petulance and insolence of the Jacobin diplomatist.*

In communicating to Governor Mifflin his conversation with M. Genet, Jefferson declared it to be his conviction that the privateer would remain in the river until Washington should arrive and decide on her case. In consequence of this assurance of Jefferson the governor *dismissed the militia* and requested the advice of the heads of departments—or what we should call ministers—as to the course which he ought to pursue. Both the governor and Jefferson stated that Genet had told Mr. Secretary Dallas that he would "appeal from the president to the people." Not trusting our own pen with the recital of these disgraceful, humiliating details, we again make use of the words of an American writer:—"Thus braved and insulted in the very heart of the American empire, the secretaries of the treasury and of war were of opinion that it was expedient to take immediate provisional measures for establishing a battery on *Mud* Island, under cover of a party of militia, with directions that, if the vessel should attempt to depart before the pleasure of the president should be known concerning her, military coercion should be employed to arrest her progress. But, the secretary of state [*i. e.* Jefferson] dissenting from this opinion, *the measure was not adopted.* The vessel fell down to Chester before the arrival of the president, and sailed on her cruize before the power of the government could be interposed."† Power! power of government, forsooth! The whole transaction was little else than a proof that the executive had no power, and that whenever the passions of the American democracy should be inflamed there would be no law in America but mob law, no effective government with which another government could safely treat. The *people* were enchanted at the thus happily commenced cruize of the 'Little Democrat.' If any of them believed that Genet had played Jefferson a trick, they only thought it very *clever* and *smart* in the Frenchman. They fulminated against Washington and the secretaries of the treasury and of war for the opposition which had been made to M. Genet, in which, they said, they could perceive only a settled hostility to France and to liberty, a tame subservience to British policy, and a desire, by provoking France, to engage America in the war as the ally of England, and for the purpose of exterminating republican principles.

By the advice of the attorney-general, who was of opinion that adventurers of this description were punishable for having violated the supreme law of the land, and were also indictable at common law for disturbing the peace of the United States, Gideon Henfield, one of the two American mariners arrested for having enlisted in Charlestown on board a French privateer equipped in that port, was brought to trial. The journalists put forth their "screamers." It was asked what law this deserving citizen of the republic had violated? Under what statute was the indictment laid? Must the free American people give to a proclamation of the president the force of a legislative act? Were they to subject themselves to the will of the executive? Could it indeed be termed an offence to engage with republican France, combating for liberty and equality against the leagued despots of Europe? The jury,—some of whom had probably written these articles, and some of whom formed the militia which Governor Mifflin had made a show of employing *vi et armis* to stop the 'Little Democrat' till President Washington should come—did what might have been expected from them and what would have been done by any other American jury at that moment, *i. e.* they acquitted the prisoner. Their verdict was celebrated with extravagant marks of joy and exultation; and citizen Gideon Henfield was carried in triumph, in the midst of tricolor flags and caps of liberty. The counsel who had defended him had been engaged and paid by Genet. Well might Washington ask what must the world think of all these things and of the government of the United States? On the 11th of July, when the 'Little Democrat' was, as yet, lying at Chester, the president arrived at Philadelphia, and requested that the cabinet ministers would convene at his house the next day. Washington might have been expected to convene them the moment that he arrived and learned that the privateer had slipped down the river; but he fixed nine o'clock on the next morning. This might possibly be owing to the absence of Jefferson, upon whom the president seems to have wished to throw as much of the responsibility as was possible,

* This is not an hypothesis of our own. In the official letter addressed by the American government to Gouverneur Morris, their present ambassador at Paris, and which letter instructed Morris to intreat the French government to recall Genet, there are these conclusive words:—"If our citizens have not been shedding each other's blood, it is not owing to the moderation of M. Genet, but to the forbearance of our government. *It is well known that, if the authority of the laws had been resorted to to stop the 'Little Democrat,' its officers and agents were to have been resisted by the crew of the vessel, consisting partly of American citizens.*"

This degrading letter received the sanction of the president, Washington, both at the time it was written and afterwards when it was communicated by him to congress.

† Marshall, Life of Washington.—Professor Tucker, with all the warm partiality of a biographer, endeavours to show that Jefferson's conduct was not quite so mean and tricky as Washington's biographer, Judge Marshall, represents it; but, to excuse his hero, Tucker is obliged to impute still more meanness to the whole executive government of his country. We prefer the authority and calm good sense of the judge to the authority of the professor; though, for the rest, we care very little whether Jefferson was less contemptible, or the whole American government more so. The leading facts of the case are proved by superabounding documentary evidence, and are not to be concealed or travestied. Substantially, the professor differs from the judge only in saying that Mr. Jefferson did not cause the suspension of coercive measures by telling Governor Mifflin that he felt convinced the privateer would not depart before the arrival of Washington; and that Washington reached Philadelphia four or five days before the 'Little Democrat' sailed.

though probably not more than fairly fell to his share as secretary of state and chief manager of the precious conferences with Genet. Pleading a very sudden indisposition, Jefferson had retired to his country-house, and there, apparently, he stayed until this business was finished. Washington wrote to him—"What is to be done in the case of the 'Little Sarah' now at Chester? Is the minister of the French republic to set the acts of this government at defiance with impunity, and then threaten the executive with an appeal to the people? These are serious questions,—circumstances press for decision;—and, as you have had time to consider them (*upon me they come unexpectedly*), I wish to know your opinion upon them even before to-morrow, for the vessel may then be gone." To this letter Jefferson replied by repeating the assurances which he said Genet had given him that the 'Little Sarah,' or 'Little Democrat,' should not put to sea until the opinion of the president should be made known.* As the privateer had already got below Mud Island, as the battery or batteries which Governor Mifflin had talked of erecting had not been erected, as the militia-men were dismissed from a service in which they would not have acted, it was useless to think of coercive measures.† When the ministers convened at Washington's house on the 12th of July, they determined, not to pursue the 'Little Democrat' and bring her back cost what it might, but to retain in port all privateers of whatsoever nation, or which had been equipped by any of the belligerent powers within the United States. This magnanimous determination was communicated to Genet; but, in contempt of it, the British merchant-vessel which he had converted into a privateer, and had equipped in Philadelphia, proceeded on her cruise. But the decision of Washington and his ministers was made to apply very rigorously to the 'Jane,' an English merchant-vessel, which, like most merchant-vessels in a time of war, carried a few guns for self-defence, and which Genet had alleged to be a privateer. The crew of the 'Jane' had seen English vessels captured by the French in that river; had seen, close alongside, one of those captured English vessels converted into a privateer; and therefore could have no hope of escaping capture themselves in the same neutral river, or in issuing from the capes of the Delaware, except in their own guns and their own courage. Governor Mifflin was requested by the executive to attend to the 'Jane,' and to stop her if he should find she was augmenting her force and was about to depart. The English skipper had done nothing but replace four old gun-carriages by four new ones, and open two new port-holes. He would have been justified in doing a great deal more than this, as the privateer under French colours was ready to pounce upon him, and as no protection was afforded by the American government, even in its own waters. The British consul at Philadelphia requested that the trifling alterations that the 'Jane' had made might be allowed; but this was peremptorily refused, and directions were given by the American government that she should be restored to the precise condition in which she was when she entered the port. And now the American militia were willing and ready to act, and there was a commotion, an activity, and an enthusiasm which sounded like—"Our president is going to war, I guess." Governor Mifflin, who had not fortified Mud Island when Genet's 'Little Democrat' was to be stopped, took measures to fortify it now that the 'Jane' was to be stopped; and so the English merchant-vessel was obliged to discard her four new gun-carriages, and shut up her two new port-holes. In the meanwhile the complaints of the English ambassador were answered by the paltriest equivocations, and no restitution was made of the British vessels which had been seized and condemned by Genet's court of admiralty at Charlestown. In truth, at this time, the little Jacobin Genet was more a ruler in this Israel than was President George Washington. Three days after the arrival of the president at Philadelphia was the glorious 14th of July, the anniversary of the capture of the Bastille, the great national festival of the French republicans; and on that day a grand festival was made in the city of Philadelphia "by citizens of some distinction," at which the governor of Pennsylvania and the ambassador of France were present, as well as the officers of the 2nd regiment of Philadelphian militia. Eighty-five rounds of artillery were fired in honour of the eighty-five departments of France, and sixteen roaring toasts were drunk, each containing some extravagant compliment to the French republic and some insult to the old governments of Europe. Under the very nose of George Washington and his ministers, the Jacobin who had insulted them was feasted and applauded, and all those (meaning more particularly Washington himself) who opposed his wishes and the demands of the French republicans were declared by American citizens to be perfidious Machiavellians, traitors to liberty and their country, villains consigned to everlasting infamy. Washington smarted under these wounds, though he affected to despise them; and, though he considered Genet as a firebrand, he could not, as yet, venture to demand his recall from the French republic. Nor was it merely through the question of fitting out privateers in American ports, and manning them with American seamen, and the insufferable practices of Jacobinising the citizens of the United States, presiding over their anarchic clubs, and appealing to the people at large from the decisions of their government, that this French republican envoy stung the heart of George Washington and his

* Judge Marshall.

† Judge Marshall says that, in consequence of Jefferson's letter to the president, "immediate coercive measures were suspended." But Washington and his ministers must have known the facts which they stated afterwards in their letter to Gouverneur Morris about the recall of Genet, and must therefore have felt their inability of adopting any coercive measures, even if the 'Little Democrat,' instead of being down the river below Chester, had been in the port of Philadelphia and under their own eyes. The order for suspending coercive measures could, therefore, have proceeded only from some faint and now ridiculous hope of saving appearances.

friends, and alarmed all the friends of order, peace, and neutrality. While the executive were complaining of his attempts to convert their harbours and seaport towns into manufactories of privateers, he complained to them of the incalculable mischief they were inflicting upon France by not asserting the right of their flag to cover French property; and lectured them, as if he had been a professor discoursing *ex cathedrâ*, and they had been a set of students, on international law, maritime law, and the rights and immunities of neutral flags and neutral bottoms in a time of war. There was not much that was new in his doctrine: he only carried to extremes the principles which had been announced by the Czarina Catherine as chief organ of the confederation or armed neutrality of the North, which had made a faint effort to deprive England of her naval supremacy towards the close of the war of independence. Genet's doctrine, however, such as it was, was eventually adopted by the Americans, though in opposition to the sentiments of some of the wisest and most honest of their statesmen. The fundamental principle was that free bottoms should make free goods, or that a neutral flag should cover and protect from capture whatsoever goods were shipped under it. As a corollary, no belligerent was to exercise the right of searching a neutral vessel in order to discover and abstract the goods of the enemy that might be in it. Great Britain had always and steadfastly maintained the contrary of these principles, and the Northern coalition and armed neutrality had gone to pieces without forcing her into a treaty, or into any, the slightest surrender or compromise of her assumed maritime right. At the peace of 1783, the United States were too anxious for a cessation of hostilities, and far too weak and far too distrustful of their allies, to risk anything by making a stand upon the claim or pretension of the armed neutrality; they bargained for nothing, they pretended not to establish any general rule even for themselves, and the question was scarcely mooted. They commanded their ministers in Europe not to endanger their future peace by any engagements of this kind. In their single treaty of commerce with France the principle was inserted; but no stipulation on the subject was made with Great Britain. It followed, that, with France, the character of the bottom was imparted to the cargo; but with Britain the law of nations was left to be the rule by which the respective rights of belligerents and neutrals were to be decided—the said old law of nations according with the British system, and opposing the new oracles of which Catherine of Russia had made herself the mouthpiece. Construing the rule as giving security to the goods of a friend in the bottoms or ships of an enemy, and as subjecting the goods of an enemy to capture in the bottoms of a friend or neutral, the British cruizers took French property out of American vessels, and the British courts of admiralty condemned it as lawful prize. Not only at the time of the negotiations for the peace of 1783, but also ten years after, at the beginning of the war of the French revolution, some of the acutest of American statesmen or practitioners in politics doubted whether the United States would not derive more advantage from adhering to the old or English system, than by taking up the new, which had never become a recognised system at all, and which was therefore open to all manner of misunderstandings. These prudent men showed that it was particularly dangerous for a new nation or a new government like that of the United States to attach herself to an innovation in international law, or pledge her faith to an untried theory. "It is my opinion," said Gouverneur Morris, "and it ever has been my opinion, that the maxim, *Free ships make free goods*, is in principle unfounded, will in practice be disregarded, and in its application to us cannot but prove injurious."* He hoped that the Americans would not confine their attention merely to the present moment. When they themselves might be a belligerent power, would they then consent to see the commerce of their enemy secured by a neutral flag, while their own commerce, carried on under their own flag, or in their own ships, was exposed to capture? Could they, as belligerents, allow the goods, the produce, the wealth of their enemy to pass unmolested, because such property was embarked in neutral vessels? Morris directed their consideration to the rich commodities produced by the southern part of their western hemisphere. "These commodities," said he, "taken in the mass, form the most valuable commerce which the nations of Europe possess, and, by the immutable laws of nature, they must be transported, as it were, by our doors. Can it then be wise to preclude ourselves from the right, which we now possess, of taking them when at war with the owners? Let us suppose we were at war with Spain, and then ask whether it would be consistent for us to see a neutral ship of Hamburg take in dollars at Vera Cruz and transport them to the north of Europe, there to purchase naval stores and salted provisions for the purpose of carrying on hostilities against us? Or, if the principle of *free ships, free goods*, be established, let it then be explained how such act could be prevented by us; especially if it should be also admitted that a neutral subject may, by special permission granted during the war, carry on a trade from which he had been previously excluded."† But even this powerful *argumentum ad hominem* was, in the end, thrown away upon American passion, prejudice, and cupidity; the American skippers and traders looked more to the present profits to be derived from making their neutral ships the carriers of France, and of all the countries that were or might be at war with Great Britain, than they looked to the future embarrassments which might arise from their clinging to the new maxim. Possibly there was a mental reservation—probably they thought that they could throw the new maxim overboard, and take up the old

* Letter to George Washington, in Life and Correspondence.
† Ibid.

one, when the old one should be more profitable. Washington's government neither had pledged itself to enforce the new system with all nations, nor had undertaken to protect French property shipped in American bottoms. But Genet, who, like all his school, had thrown to the winds all the old maxims of international law, and all the rules of diplomacy, arrogantly insisted that Washington should do both these things, and declare war against England rather than permit her to take her enemies' goods out of any neutral vessels: and again the political societies, the newspapers, and the rabble at large, sided with the Jacobin envoy, and assisted him in perplexing and browbeating their own president. On the 9th of July, during the heat of the contest respecting the 'Little Democrat,' Genet demanded an immediate answer to the question what measures the president had taken, or would take, to cause the American flag to be respected? Not receiving the immediate answer he demanded, Genet, on the 25th of July, addressed a letter on the same subject to Jefferson, as secretary of state. A more insolent epistle could scarcely have been looked for even from this Jacobin. After some argument, urged in the usual violent and offensive manner, which is not worth quoting, and another appeal from the president and his ministers to the American people, it reminded the latter that the obligations that they had owed to France during their war of independence were incalculable, and that but for Frenchmen they would never have succeeded in establishing their independence and making a republic. In conclusion he told the Americans, that if they did not feel themselves strong enough to maintain their sovereignty, and cause their flag to be respected by England, then the French, who had guaranteed that sovereignty when they were slaves, would know how to guarantee it and render it formidable now that they had become freemen. Jefferson now replied to the first of these two offensive letters: he observed that, by the established law of nations, the goods of a friend found in the vessel of an enemy are free, while the goods of an enemy found in the vessel of a friend or neutral are lawful prize. He said he presumed that it was upon this old principle the British cruizers had taken the property of French citizens from American vessels; and that he knew not upon what principle America could reclaim the property so captured. But this was too close a quotation of English texts to suit this Frenchified American secretary: and therefore he added that the contrary rule would be more conformable with justice, or more convenient for commerce.* No notice was taken by Jefferson of the offensive language which had been used; but to Genet's second and worst letter it appears that no reply was sent. There was another ground of quarrel, on the subject of which the American writers before us are less communicative, and in which the Jacobin envoy should seem to have been less unreasonable. The United States acknowledged a debt to France of about 2,300,000 dollars—the French, we believe, held the debt to be much larger. Genet, in the month of May, shortly after his arrival, had proposed that the States should pay the future instalments of this debt in American produce. In June, after a delay of twenty days, Jefferson had informed Genet that the present resources of the United States did not allow them to do this. Hereupon the Jacobin envoy had expressed, with his ordinary vehemence of language, his astonishment and indignation. He had offered to take produce instead of hard cash; the Americans had rice and corn, as well as tobacco, and they knew that there was a scarcity in France approaching almost to a famine. "Without entering into the financial reason which operates this refusal," said Genet to the American secretary of state; "without endeavouring to prove to you that it tends to accomplish the infernal system of the king of England, and of the other kings his accomplices, to destroy by famine the French republicans and liberty, I attend on the present occasion only to the cause of my country." He then stated that he was authorised to assign the debt due from America to France, in payment of supplies received from American merchants and farmers; and he therefore requested that the president would direct the secretary of the treasury immediately to adjust with him the amount of the debt due to France. In replying to these demands Jefferson had asked for time to deliberate, and to examine the propriety and practicability of the scheme, intimating, however, very plainly, that the American government, upon many accounts, considered Genet's proposition as objectionable. This question about the debt remained *in statu quo*, when Washington resolved to try to get rid of M. Genet.

The Americans call "temperate forbearance," "magnanimous moderation," "generous sympathy," &c., what we should designate by very different words. But, to use their own language, the president could no longer carry out this temperate forbearance, or hope that it would have any effect in bringing the French minister to reason; and, accordingly, Washington convened his cabinet council, for the purpose of adjusting a complete system of rules to be observed by the belligerents in the ports of the United States. On the 3rd of August this council unanimously agreed to a system of rules, which implied that they would faithfully observe all their engagements with France and other countries, and honestly perform the duties of that neutrality in which the war found them, and in which those engagements left them free to remain. With respect to the troublesome minister of the French republic, it was unanimously

* Jefferson, however, endeavoured to propitiate the Jacobin envoy by showing him that France in reality would herself be a gainer by the prevalence of the old rule. After saying that America had modified the old rule in her treaties with France, the Netherlands, and Prussia, but that she had no such stipulation with England, he added, "Nor is France likely to suffer by the rule, for, though she loses her goods in our vessels when found therein by Engand, Spain, Portugal, or Austria, yet she gains our goods when found in the vessels of England, Spain, Portugal, Austria, the United Netherlands, or Prussia; and America has more goods afloat in the vessels of these six nations than France has afloat in our vessels."—*Substance of Jefferson's reply, in Professor Tucker's Biography.*

agreed that a letter should be written to Mr. Morris, the minister of the United States at Paris, desiring him to request the recall of M. Genet from the executive of the French government. On the 16th of August—and not before—Secretary Jefferson wrote a letter to this effect to Morris. It was full of professions of friendship towards the French republic, which was described as a friendly and magnanimous nation who would not do injustice; and it breathed no complaint against any man or anything except citizen Genet; and even his recall was to be *requested*, not demanded. Gouverneur Morris was instructed to present this letter of secretary Jefferson to the French executive, together with copies of the stormy correspondence which had passed between Jefferson and Genet. It appears that a copy of this letter to Morris about his recall was not communicated to Genet, who was then feasting and proselytizing at New York, until the month of September was well advanced. Possibly the tempest which followed the little Jacobin's reception of the announcement had been foreseen, and the American executive had been desirous of shortening the storm by delaying giving him the information of what they had done. The dignified course would have been to have sent Genet out of the country at least three months before this, and to have communicated to the so-called French government the motives of their conduct; but, when they had failed to do this, it does appear disingenuous, and contrary to the rules of diplomacy, if not absolutely dishonourable, to leave Genet more than a month in ignorance of the fact that they had requested his recall from his government, and to correspond with him—as Jefferson did—after that letter had been dispatched for Paris, without hinting that Genet had been denounced to his government.* Upon learning what Gouverneur Morris was to do at Paris, Genet *agitated* New York, and outdid his former self in vituperation. With respect to President Washington, he said that his impeachment before Congress was an act of justice, which the American people, which the French people, which all free people were interested in demanding. All those who agreed with Washington were set down as aristocrats, partizans of monarchy, friends of England, &c. Over Jefferson's backslidings he affected to be pathetic, for Jefferson, he said, had been his personal friend and political tutor, Jefferson had "initiated him into mysteries which had inflamed his hatred against all those who aspire to an absolute power." With the whole democratic press on his side, and with the political societies of New York ever ready to listen to his voice, as to that of the law and the prophets, Genet had no difficulty in carrying on this war, which, at one moment, seemed to threaten the dissolution of all government in the United States. The New Yorkers applauded him the more the more he attacked the executive government, and the more he set at defiance the law of neutrality. The people of Boston, who had played the prelude to the American revolution, were not a whit cooler than the citizens of New York and Philadelphia. An English schooner brought as a prize into the port of Boston by a French privateer, or by Yankee adventurers acting under the commission of Genet and the tricolor flag, was claimed by the British owner, who instituted proceedings at law for the purpose of obtaining a decision on the legality of her capture. The court placed the schooner in possession of its marshal, but an armed force, detached from a French frigate then lying in port, and acting under the authority of the French consul, rescued the schooner from the possession of the marshal. Until the frigate sailed, the English schooner was guarded by a part of her crew, and, notwithstanding the determination of the American government that the French consuls should not exercise a prize jurisdiction within the territories of the United States, M. Duplaine, the popular and applauded consul at Boston, declared his resolution to take cognizance of this case. Here, however, Washington acted with proper spirit, for he instantly revoked Duplaine's *exequatur*, and forbade him further to exercise the consular functions.

But Genet's mission had embraced still wider projects than any that have hitherto been alluded to; he had come doubly armed with projects for a war on land as well as for a war at sea. Some of the United States of America bordered upon and gave easy access to some of the American colonies of the King of Spain. With such facilities, why not attack those Spanish provinces? What was the King of Spain but the ally of King George of England, and one of the coalition of despots who were plotting the extermination of all republics? Why, therefore, not march from the free state of Georgia into the enslaved Floridas, and from the western parts of the United States into Louisiana? The backwoodsmen and squatters, who had long had their eyes turned in those directions, were

* At the cabinet consultation on the 3rd of August, the other ministers recommended peremptory terms to the French government about the recall of Genet; but Jefferson begged that the *request* might be expressed "*with great delicacy.*" Upon the question whether a copy of the letter to Mr. Gouverneur Morris (containing the request for the said recall) should or should not be sent to M. Genet, Jefferson took the negative side, *urging* that "*it would render him* (Genet) *extremely active in his plans, and endanger confusion.*" This was at once a confession of the miserable weakness of the government, and of the power of Genet and the American mob. Professor Tucker tells us that the cabinet agreed that a copy of the said letter should be sent to Genet; but he does not tell us *when* it was sent. The original letter, as we have seen, was dispatched for Paris on the 16th of August. The date of the 18th of September is put to the furious letter which Genet wrote, to abuse Washington, Jefferson, and all the rest of them. Now Genet was far too petulant a man to let his fury sleep for a whole month. If he had received either a copy of the letter to Gouverneur Morris, or any other notification, his pen would that instant have been in his hand. But there is yet another suspicious circumstance. It is pretended that, "by an *accidental miscarriage*," this letter from Genet to the executive, said to have been written on the 18th of September, was not received until the *2nd of December*. If Philadelphia had been as far off as Paris—if oceans had rolled between Philadelphia, to which city the letter was addressed, and New York, where Genet wrote it, we might comprehend this long miscarriage; but, as it is, we are much inclined to doubt whether there has not been an intentional falsification of dates, and whether Genet was not left wholly in the dark as to the dispatch sent off to Gouverneur Morris, until the eve of the assembling of Congress. Congress assembled *on the 2nd of December*. It was impossible to conceal the great diplomatic fact from Congress, and this the cabinet must have felt in the anxious consultations which preceded the meeting of that body.

fascinated by these bold suggestions; volunteers offered their services with muskets and killing rifles all ready, and the principal officers were all engaged, when intelligence of the proceedings reached President Washington and the King of Spain's commissioners. To the remonstrances of these Spaniards Washington replied that the central government of the republic disavowed the enterprise, and would take effectual measures to prevent any such invasion of the friendly territories of Spain; but it is acknowledged that Washington greatly feared that the executive central government would be found too feeble to prevent the execution of the lawless plan. He called upon the governor of Kentucky to co-operate in preventing the improper application of the military resources of his frontier state. But the fierce Kentuckians—those half-horse, half-alligator men—cared as little for the governor of their state as they cared for the central government; they considered themselves more directly interested than any other state of the Union in wrenching from Spain the entire navigation of the Mississippi, which they believed would open to them mines of wealth, and in extending the western frontiers of the republic at the cost of Spain. For some time these Kentuckians, and others of the out-dwellers in the west, had circulated the opinion that an opposition of interests existed between these western states and the eastern states of the Union, that the executive or central government favoured the states of the east, and had shamefully neglected the subject of the Mississippi. The "Democratic Society" of Lexington, in Kentucky, had taken up the matter, and had menaced the partial and remiss president and ministers. After various other proceedings this club of Kentuckian democrats had appointed a committee to correspond with all the inhabitants of the western country, for the purposes of uniting them in these objects, and of preparing a *remonstrance* to the president and Congress, which, they said, was to be expressed "in the bold, decent, and determined language, proper to be used by injured freemen when they address the servants of the people." They claimed much merit for their moderation in not having helped themselves to what they wanted long ago, or, as they phrased it, for having abstained, out of regard to the central government and affection for their fellow-citizens in other states, from making use of the means they possessed in asserting "their natural and unalienable right." They plainly intimated that this forbearance could not be continued much longer; and they called upon the executive to give them the free use of the Mississippi, as if only an act of the will was necessary to insure it to them.* It was made more and more evident every day, and in every direction, that the central federal government was powerless in the federated states whenever the interests or other passions of an uneasy, restless people were inflamed. It was not owing to any power or authority of either president or Congress that Louisiana and the Floridas were not invaded and seized in a time of peace. The forbearance of the people of the west proceeded from other causes. Ten years after these discussions and remonstrances Louisiana was obtained by purchase, Bonaparte, who had extorted the cession of it from Spain, selling it to the United States for 15,000,000 dollars. The frontiers of Florida were never left tranquil, until that country too was occupied by the free democrats of the west. When Jefferson became president he attempted to purchase the province for 2,000,000 dollars; but this negotiation failed, and the glory of the act of incorporation was reserved for General Jackson, who, in 1821, when Spain was again revolutionized and in a state of anarchy and weakness, entered the defenceless province with an army, and by order of the government of the United States annexed it to the republic.

Notwithstanding his outrageous conduct, and all the plots which had been brought to light, Genet was still allowed to remain, and Jefferson, as secretary of state, still kept corresponding with him, and still kept declaring that the only true friend the American republic had, or could hope to have in the world, was France. It was no secret that Jefferson strongly disapproved of Washington's neutrality proclamation, and questioned the right to issue it; and that, upon several other questions, Jefferson could divide the cabinet, and thus weaken the government, although upon some of them he could not command a majority in the cabinet.* Like all other state questions the proclamation of neutrality was discussed in the newspapers, not merely by editors and other journalists, but also by American *statesmen*—by men who were, or had been, and who soon were again, members of the government. Mr. Madison took the same view of the case as Jefferson, and was urged by that secretary of state to Washington to sharpen his pen, and refute and put down the "heresies" of Mr. Hamilton, who was writing under the signature of "Pacificus" in defence of the president's conduct, and of the neutrality. Fierce were the polemics of Madison, who was clearly on the winning side, having the mob and the great majority of the journalists in his favour. Even in this happiest of republics there were some rather serious drawbacks upon human felicity. The yellow fever broke out in Philadelphia, then the seat of government, raged from August to November, carried off some 4000 of the citizens, made one-third of the remainder fly into the country, scattered the members of the cabinet and chiefs of departments, and deranged the whole machinery of government. The chief officers of the government did not re-

* Judge Marshall, Life of Washington.

* "The president," says Jefferson in one of his private letters, "always acquiesces in the majority." This indeed appears to have been the general rule of Washington's conduct. In some important cases, when his cabinet was about equally divided, it was his custom to ask time for consideration, and to put off decision as long as possible. On not a few occasions his conduct—at least to an English mind—appears evasive and spiritless; but the marvel is, how, under such a constitution, and with such jangling ministers, he ever carried on the business of government at all.

assemble until the beginning of November; and then, fearing that the pestilence might still lurk in Philadelphia, they did not meet in that city, but in the little town in its neighbourhood, called German Town. Here, shorn of its beams, the American executive continued till December, when the Congress met at Philadelphia. At the first conference in the cabinet at German Town the president, after an exposition of Genet's past and present conduct, proposed to seize him and send him out of America without waiting for any answer from France. Hamilton and Knox, secretaries of the treasury and of war, gave their decided support to the proposition, but the Jefferson part of the cabinet opposed it, and the president, as usual with him, suspended the decision. Ten days after this the *renvoi* of Genet was proposed again by the president. Jefferson urged in opposition that France was the only sincere friend America had on earth; that the measure was a harsh one, and equivalent to a declaration of war against France; that eighty-four days had elapsed since the dispatch to Gouverneur Morris had left the United States; that an answer might be hourly looked for from the French government, who doubtless would recall Genet; that Congress, which would now meet in a few days, might take offence at so harsh a proceeding against the republican envoy; and finally, that there was a chance that the order of the executive to seize and send off Genet would not be obeyed. The last was the strongest argument of all: in the agitated, fermenting, boiling condition of that fierce and unrestricted democracy George Washington could no more have taken that Jacobin oracle out of the State of New York to ship him off for Paris than he could have taken the crown of George III. out of the Tower of London! There would have been tarring and feathering and worse if the attempt had been made, and the essay could have ended only in exposing still further the powerlessness of the central government, and the omnipotency of mob law. To save his own dignity, or to avoid commotion, the harassed president again suspended the decision; and in the end nothing came of his proposition.* Washington asked Jefferson what he would do, as secretary of state, if Genet should send in his threatened accusation and appeal to Congress to the executive, to be by it communicated to Congress. Jefferson replied, that he would not present them to Congress, but would either send them back to Genet or publish them in the newspapers.

In the meanwhile, having received the dispatch of the 16th of August, the American minister at Paris had lost no time in laying it before the French government, or that confusion of men that then ruled France, having added a few short arguments of his own to show the necessity of their immediately recalling their outrageous envoy. As there was a very lively anxiety to retain the Americans as allies, as the men to whom Genet had owed his appointment were now huddled in state prisons, or were flying for their lives, and as M. Deforgues, who was now holding for a few weeks the post of minister for foreign affairs, had no friendship or connexion with Genet, it was readily enough admitted that that envoy had exceeded his powers, and had insulted the majesty of the American republic; that his conduct was *punissable* and such as excited the liveliest indignation of the French republic; that the president of the United States had done justice to the sentiments of the French in attributing the deviations of the citizen Genet to causes entirely foreign from his instructions; that, so far from the members of the French government having authorised the proceedings and criminal manœuvres (*les démarches et les manœuvres criminelles*) of citizen Genet, their only aim had been to maintain between the two republics the most perfect harmony, &c.* The council of government, though named by the terrible National Convention, and though under the direct control of the most Jacobin *Comité de Salut Public*, instantly assured Morris that Genet should not only be recalled, but also be punished, and the punishment now in fashion in Paris was head-lopping by the guillotine. The American envoy replied to this that the United States had only ordered him to ask his recall, and that he could go no farther. The idea of the French council—who, no doubt, knew, and took into delicate consideration, the powerlessness of President Washington—was to send over a French commission of three or four persons with full authority to arrest Genet and send him over a prisoner. The idea was worthy of the times and of the two republics concerned. We are, however, astonished to find so moderate, and humane, and wise a man as Gouverneur Morris assenting to the proposition, and detaining his advice-boat a whole week, in order to embark the said French commissioners on board her.† But, luckily for Genet, although the powers and instructions were all ready, there arose some embarrassment about the appointment of one of the commissioners, the advice-boat sailed without any of them, other delays occurred, and in a very brief time M. Deforgues and his colleagues, instead of being in condition to bring over and guillotine Genet, were guillotined themselves, or were captives in the Conciergerie, or wretched fugitives. *Sic transeunt!* Thus, in the new strife of factions, Genet was forgotten; and, although a commission was sent out to America in lieu of an embassy, it appears that no orders were given to it for the seizure of the ex-minister.‡ There was no longer any prospect of advancement or even of personal security to Genet in France; his friends of the revolutionary

* Letter from M. Deforgues to Gouverneur Morris, dated Paris, October 10th, 1793, in Life of Gouverneur Morris, by Jared Sparks.

† These are Morris's very words, in a dispatch to Jefferson, dated Paris, October 19th.

‡ The previous character and occupation of the head secretary of this commission were, however, calculated to excite some alarm in M. Genet. This secretary, a M. Leblanc, had lately been *at the head of the Paris police department!—Letter from Gouverneur Morris to George Washington.*

party were overthrown, the court patronage of his sister, the queen's first waiting-woman, could no longer be of any use to him, for the state of doubt and uncertainty was over, the republicans had triumphed, the court was no more, monarchy was no more; Louis XVI. and his queen had perished on the scaffold, and the dauphin, the princess, and the king's sister were pining in the Temple; the Reign of Terror was getting to its height, the activity of the guillotine was appalling; and, therefore, the ex-minister did what was perhaps the best thing he could do,—he settled in the United States, and took up his citizenship there. And we are assured by American writers that he became a worthy citizen of their republic. With a slight change in the order of the words, we would not dispute the fact.

At another cabinet consultation, held at German Town, for arranging the speech with which the president was to open congress, Jefferson hotly opposed the views of Washington and his friends. Hamilton, who appears to have been the most anxious of them all to avoid any close connexion with the turbulent, unprincipled, and sanguinary French republic, and to preserve peace and good fellowship with England, submitted that the president's speech should contain an unequivocal declaration of neutrality, and of the fixed determination of the United States not to join in the war as an ally of France. Jefferson denied the right of the president to declare anything of the sort, or to pledge the country to anything as to the future question of war or peace. The question of neutrality Jefferson treated in the spirit of a pedlar. He denied that a frank and an explicit declaration of neutrality would be for the interest of America. On the contrary, he wished foreign nations to be left in doubt upon this point, in order that they might "*come and bid for our neutrality.*" As on former occasions, Jefferson was backed by Randolph. Three days after this the discordant cabinet met again, and took into consideration two drafts for the president's speech, the one prepared by Hamilton, the other by Randolph, who was but an echo to Jefferson. General Knox, the war secretary, supported Hamilton's draft, Jefferson supported Randolph's, or his own; no agreement could be come to, and Washington, repeating that his great object was to keep the people in peace, came to no decision between the two drafts. At two subsequent meetings Jefferson vehemently opposed the president, and at the last of them submitted the draft of a message to Congress on the subject of France and England, which he had prepared himself, and which was so hostile towards England as to amount almost to a declaration of war. It was viewed in this light by Hamilton, who, in fact, declared that the invidious contrast drawn between France and England did amount to a declaration of hostilities. He also said that the favourable disposition of the American people towards France was a serious calamity, and that it ought not to be nourished by the executive; that the French offers of commercial advantages proceeded from temporary circumstances, which would not last long; and that he could prove that Great Britain showed America more favour than France. Hamilton was again supported by Knox, and, as the president took a more decided tone than was usual with him, the draft of the message was materially altered.

On account of the yellow fever, the president would have convened Congress at some other place than Philadelphia; but Jefferson insisted that he had not the power to convene them at any other place than that to which they had adjourned themselves, and accordingly Congress met at Philadelphia on the 2nd of December. In the awfully long speech, which had at last been agreed upon by the cabinet, and which Washington delivered on the 4th, although the proclamation of neutrality was justified, the spirit of peace and of good will to England was far from being so prominent as Hamilton would have made it. The necessity of placing the country in a condition of complete defence, and for exacting from all nations the fulfilment of their *duties* towards the United States, was strongly urged; the rank due to the United States among nations was dwelt upon, and the States were told that they ought not to indulge the belief that, contrary to the order of human events, they would for ever keep war at a distance. "It must be known," said the president, "that we are at all times ready for war." And these warlike observations were followed by a recommendation to augment the supplies of arms and ammunition in the magazines, and to improve the militia establishment. On the following day the message respecting England and France was delivered to Congress. Though altered from what it had been when submitted by Jefferson to the cabinet, this message affirmed that the representative and executive bodies of France had manifested generally a friendly attachment to America, had given advantages to her commerce and navigation, and had made overtures for placing these advantages on permanent ground. But this was followed by complaints of some recent decrees of the Convention, which were said to be contrary to treaty, and highly injurious to the commerce of the United States and to the rights of her flag. The message also lamented that M. Genet, their minister plenipotentiary, had breathed nothing of the friendly spirit of the French nation that sent him; that the tendency of his conduct had been to involve the United States in a war abroad and discord and anarchy at home. But, that France might not be offended, and that Great Britain might not be too much favoured, there followed complaints of the conduct of the British government in various particulars; and it was very evident that these last complaints found a much readier and louder echo in Congress than the qualified and softened complaints against France. The wrongs committed by the republican government were heard without much emotion, but when the wrongs alleged to

have been committed by Great Britain were mentioned the excitement was tremendous. This difference of feeling, this determination or instinct to palliate the provocations offered by France, and to exaggerate and extend every ground of quarrel with England, continued to mark the conduct of this legislature, even through the whole of the presidency of Washington; but, when he and his friends were removed from office, the feeling became infinitely more violent, and rendered almost impracticable any friendly relations with the British government.

Jefferson, with his eye still directed against England, and against the measures which she had adopted in consequence of the decrees of the French Convention, proposed a series of legislative measures, which should retaliate on other nations the precise restrictions imposed by them on American commerce or navigation. This he followed up by presenting to Congress a recent decree of the National Convention, said to be highly favourable to American commerce. This compliment to the French was his last official act as secretary of state. He resigned on the last day of December, 1793, and retired to the country to cultivate a closer connexion with the democratic societies and the ultra-republican party generally, and to bide the time when the death or retirement of Washington and the progress of his own principles should open his way to the presidency.* The English or moderate party felt and confessed that, but for the personal influence of Washington, and the respect in which he was still held by the great body of the people, it would not have been found possible, even at the beginning of 1794, to prevent a war with England and the closest alliance with the French Jacobins and Robespierre—for with that great "Incorruptible," and with Saint-Just and Couthon, the moral republicans of the United States must now have treated.

Madison, who remained at his post, and who worked out in Congress the projects and views of Jefferson and the French party, took up that series of retaliatory measures which Jefferson had suggested, and he recommended their immediate adoption, although they should lead to a war with Great Britain, or to the interruption of all communication with a nation which had conducted itself so *atrociously* (for such was the gentle language employed by this party in regard to England). The federalists, or the president's party, opposed the resolutions which Madison moved, and exposed the glaring inaccuracy of his facts; but nevertheless some of the resolutions were carried by a small majority, and the French and war party again hailed the prospect of an immediate declaration of hostilities against England. Washington, however, would not yield to the storm, and he induced his cabinet to agree to send Jay, now the chief-justice of the republic, as minister to England, there to negotiate for some amicable arrangement. But before Jay took his departure an embargo was laid upon all the British shipping in American ports, and all intercourse with Great Britain was prohibited until her government should make full compensation for all injuries, &c. In the debates which preceded the voting of these measures, the Hall of Congress wore a pretty close resemblance to the National Convention or to the Jacobin Club at Paris: the French and English parties lost all command of temper and of tongue, and the mob in the galleries took part in the debate. Some historical truths were expressed which went to lower the glory of their revolution and war of independence, and to moderate—if anything could moderate—the overweening vanity of the American people. A member of the federal party said that everything was sacrificed to France and to French partialities; that the measures now proposed had *French* stamped upon the very face of them. This roused the fury of a Colonel Parker, a disciple of the Jefferson and Madison school. The colonel wished there was a stamp on the forehead of every man, to designate whether he was for France or for Britain. For himself, he would not be silent and hear that nation abused to whom America was indebted for her rank as a nation. He was firmly persuaded that, but for the aid of France in the last war, those gentlemen now on the floor, who prided themselves in abusing her, would not have had an opportunity, in that place, of doing it. This produced a tremendous clapping and cheering in the galleries; the mob thus assenting to the indisputable truth, that it was not American arms that had achieved American independence.

* In his retirement at Monticello, which lasted about three years, Jefferson gathered round him all those who opposed the federal policy, and the general policy of Washington, all the ultra-republican party in Congress, most of the members of Congress from Kentucky, Virginia, and the Southern States. Among his most frequent visitors were Madison and Munro. It was here that most of the measures of the party in opposition to Washington were concocted, and that most of their bills, resolutions, reports, &c. were written. It was here that it was settled that the government, which Washington had aristocratised, must be greatly democratised before the United States could figure as a free and perfect republic, and champion of the rights o man.

Disguise it as he would, all Jefferson's hopes centred in the success of the French anarchists, and his fears, as well as his partialities, led him to cling to France, inasmuch as he had philosophically convinced his own mind that, if France fell, the American republic must fall also! In a letter to an American citizen of Philadelphia he says: "Over the foreign powers I am convinced they (the French) will triumph completely; and I cannot but hope that that triumph, and the consequent disgrace of the invading tyrants, is destined, in the order of events, to kindle the wrath of the people of Europe against those who have dared to embroil them in such wickedness, *and to bring, at length, kings, nobles, and priests to the scaffolds which they have been so long deluging with human blood.* I am still warm whenever I think of these *scoundrels*." Warm indeed! Not Robespierre, nor Couthon, nor Marat himself, could have been hotter and in words more bloody. And this was the language of an ex-secretary of state of the American republic—this the Jacobinical rhapsody of one who claimed to be a philosophical statesman, a universal philanthropist. And at what a moment was this uttered? It was at a moment when the French were not invaded, but invaders, when they were overrunning all the countries in their neighbourhood, and labouring to revolutionise every country in Europe by means of propagandists, secret societies, clubs, plots, and conspiracies—when they were every day and every hour infringing the law of nations—when they had declared in their heart that there was no God, and had set up a common prostitute to be worshipped as the Goddess of Reason; when they had tramped upon all that is most sacred to man, and had made a mockery of every domestic virtue; when they had brought to the scaffold not only the king but also the queen, and the almost angelic Princess Elizabeth; when they were murdering nobles and priests by scores and by hundreds at a time; when at Paris every day was witnessing the guillotine *corvées*, and other parts of France were witnessing their *fusilades*, and *metraillades*, their *noyades*, and *mariages republicains*, and when the Vendée was converted into a shambles! Scaffolds and blood, forsooth! Why, between the guillotine *en permanence* and the other processes of destruction, there was blood enough shedding in France to have satisfied the most ravenous appetite of a Nero!

The National Assembly had begun at a very early period to issue decrees, and to make innovations, which demanded retaliatory measures on the part of the British government. True to no principle, old or new, legislating on the spur of the moment, and for the wants or the passions of the moment, frequently contradicting their own axioms, and almost always referring to crudities which they called first principles of the law of nature, these French revolutionists, from Brissot downwards, made an unintelligible *galimatias*, and set it up as the law of nations according to the new light of reason. Thus they declared that corn and other provisions should no longer be considered as articles contraband of war; and thus, on the 9th of May, 1793, the Convention issued a decree authorising their armed vessels to seize and carry into a port all neutral vessels laden with provisions and bound to an enemy's port, or having on board merchandise belonging to an enemy. Such merchandise was to be kept as lawful prize; but the provisions, when proved to be the property of neutrals, were to be paid for, according to the market price in the ports to which they were originally bound. As there was a dearth in France, no time was lost in carrying this decree into operation. Some American vessels, laden with provisions, were seized forthwith. Gouverneur Morris remonstrated, and claimed an exemption in favour of the American flag, by right of the treaty existing between the two countries. Nothing could well be more vexatious than the conduct of the so-called French government. At first they admitted that the decree was contrary to the treaty; and decreed, on the 23rd of May, that the vessels of the United States were not comprehended in the decree of the 9th of May. On the 28th of May they revoked their exempting decree of the 23rd. Hereupon the American minister renewed his remonstrances; but M. Lebrun, the minister for foreign affairs, was *en état d'arrestation*, or on the high road to the guillotine, and the month of June passed without any satisfaction given to Gouverneur Morris. About the middle of June the American ship 'Little Cherub,' having on board a rich cargo, was attacked and taken, near Dunkirk, by the privateer 'Le vrai Patriote,' and a lugger belonging to the French republic. According to Gouverneur Morris's report, the captain and crew were very ill treated, although they made no resistance; and, the French having entire possession of the American ship, one of them seized the second mate by the collar, and without any provocation blew his brains out. To Morris's loud remonstrance on this atrocious affair the bloody *Comité de Salut Public*, which was now directing all affairs, replied that, *if* the statements set forth by the American minister were *true*, then and in that case a flagrant violation of the right of nations, and of treaties concluded with *free* Americans, had been committed, &c.; that it was the part of honour and justice to avenge this atrocious violation of all law, and to give to the captain of the 'Little Cherub' every satisfaction which was due to him; that the privateers had infringed not only the laws of war, but those of hospitality and gratitude; that, besides the ties of fraternity which united the two nations, the French republic had the strongest interest to favour the *free* Americans, and to take their vessels under its special protection; that the United States were becoming more and more the granary of France and her colonies, that they had manifested the best disposition to aid France, and that the courage they had shown in formally recognising the French republic, in spite of the intrigues of England, proved that their friendship for the French was above all political and interested views; and, finally, that from these considerations it was evident that the murder committed on board the 'Little Cherub' ought to be severely punished, that the American captain ought to receive ample indemnity, and that, in conformity with the existing treaty, American vessels should enjoy fully the advantage resulting from their neutrality, "inasmuch as this neutrality facilitates the supplies of provisions to the French republic and her colonies." On the 1st of July another decree was issued, renewing the exempting decree of the 23rd of May: but this decree was again revoked by another dated on the 27th of July; and thus the original decree of the 9th of May remained in full force against the Americans, as against all other neutrals. Gouverneur Morris directed the American consul or agent at Dunkirk to cause a prosecution to be commenced against the murderer of the ill-starred second mate; but, for his interference in the matter, the said American consul or agent was arrested by the Dunkirk patriots and Jacobins, and clapped up in prison as *suspect*. The ruffian who committed the murder was acquitted by a Jacobin jury on the testimony of his comrades and brother privateers, in direct contradiction to the testimony of the American master and crew. Instead of giving indemnities, the French kept the cargo of the 'Little Cherub;' and at nearly the same moment they seized a number of American vessels at Bordeaux. Morris would have remonstrated in a higher tone than he had hitherto done, but he evidently stood in fear of the sanguinary mob that was now ruling France, and the instructions which he was receiving from Jefferson, as secretary of state, were constantly recommending him to be calm and patient, and to preserve at all hazards the friendship of the French republic. Besides, this American minister plenipotentiary was receiving frequent intimations that he was to be superseded by some American citizen of a more democratic turn. Thus Gouverneur Morris submitted to wrongs and insults which ought never to have been borne by the representative of a nation claiming to be free, great, and glorious; and he was either silent altogether or remonstrated in a tone of timidity and indecision.*

It was not to be expected that England should

* Jared Sparks, Life and Writings of Gouverneur Morris. Boston, 1832.

submit to this new maritime code, or that, having the power to prevent it, she should permit the United States to be made the granary of France and her colonies. On the 8th of June, 1793, or a month all but one day after the issuing of the French decree, which we have seen revoked and confirmed, revoked again and again confirmed, all in the space of a few weeks, and which decree was ultimately left in full force, the British government issued an order in council, which, under the title of "Additional instructions to British ships of war," authorised them to stop all vessels loaded with grain and bound for France; and to send them into the most convenient port, in order that their cargoes might be purchased by the British government; to seize all ships attempting to enter ports declared to be blockaded, &c. Jefferson, who had sung in so soft a note with the French, and who had opposed indemnifying us for British ships and property seized in American rivers and roadsteads by privateers which were fitted out in American ports, and which in several instances had nothing French on board except M. Genet's lawless, piratical commission, now roared Stentor-like against the British government as guilty of a monstrous violation of the law of nations and the rights of neutrals. Mr. Hammond, our envoy, replied, in a mild and conciliating, but manly tone, that by the law of nations provisions were articles contraband of war, particularly where the depriving an enemy of such supplies was one of the means intended to be employed for reducing him to reasonable terms of peace; that the actual situation of France, and her avowed principle of hostility against all the established governments of Europe, rendered the principle contained in our order in council particularly applicable to the present case, and the more so from the mode in which trade was carried on by the ruling powers in France, who had decreed that all neutral vessels laden with provisions and bound to an enemy's port should be seized; that our order in council, instead of declaring *all* provisions contraband, as the preceding considerations would have justified, was meant to extend only to *corn*, and even in intercepting this the British government secured to the neutral owner the fair and full value of his corn. But Jefferson insisted that the law of nations was otherwise, that our order in council of the 8th of June was intended to ruin the agriculture and commerce of the United States, and that provisions could not be considered contraband in any case but that of a place actually blockaded by a force sufficient to make the blockade good. The dispute was prolonged in England between Pinckney, the American envoy, and Lord Grenville, then foreign secretary in the cabinet of his relative Pitt; and, in defiance of the good rule that the injuries first committed should be the first to be redressed, the American diplomatists insisted that satisfaction should be given for every American complaint before any English complaint should be taken into consideration. When reminded of the date of the French provision-seizing decree, and of the propriety of pressing first the repeal of that decree, to which our order in council was retaliatory, they took refuge in an anachronism, they affected to confound cause and effect, and they attempted to conceal their truckling to France, their subserviency or their devoted partisanship and republican partiality, by talking of the services which France had rendered to the United States, and of the warm friendship which the mass of the French people were still known to entertain for the citizens of America. Their tone was always on the verge of insolence, and sometimes beyond it. In despotic, king-ridden England they had no ground for that personal fear which so dulcified their tone at Paris.

Another and an inevitable cause of quarrel arose out of our impressment system, and out of the American system of converting, by the shortest and least ceremonious processes, British seamen and other subjects of his majesty into republican citizens of the United States. By the constitution of most of these federal states five years' residence gave the rights of citizenship to every foreigner, and converted any Englishman, Frenchman, Spaniard, German, Dutchman, or native of any other old country into an American citizen. But this five years' residence and probation had become a mere theory: in practice, five months, or weeks, or days, or even hours sufficed for the transmutation, and ingenious crimps employed themselves in seducing British seamen from their ships, from their allegiance, and from their nationality by promising them a few dollars more wages than they obtained in our national or mercantile navy. There was a well-known Yankee adventurer of this description who boasted that he had, within a given time, made more American citizens than had proceeded from all the prolific matrons of the state to which he belonged—and not babes and sucklings, but full-grown able-bodied men, citizens that sprung into life, as the Republic herself had done, in a state of ripeness and perfection, without going through the antecedent stages of existence. In Boston, in New York, in nearly all the large seaport towns of the Union, there were *bureaux*, or register-offices, or manufactories of American citizens, where English deserters and others, upon payment of a small fee, received a certificate of citizenship. In most cases this was done in a barefaced manner, with the sanction or connivance of the local government; but in some cases tricks and jugglings were resorted to in order to save appearances, and perhaps, also, to soothe or cheat the delicate consciences of some of the lawgivers. There was an old woman in one of these seaport towns who was mother or foster-nurse to a host of these Gracchi. She, too, had a conscience, and tried to cheat it and the devil. She kept a big cradle, made for the purpose of rocking full-grown British subjects who were to be converted in a hurry into American citizens, in order that, when testimony should be called for to prove their birth, she might with a safe conscience swear she had known them from their cradle.* To escape

* This piquant anecdote is told by a distinguished English diplo-

from our press-gangs many of our seamen fled from our merchant vessels, where they were liable to be seized, entered American trading-vessels as natives or citizens of the United States, and found skippers and shipmates ready to swear they were such. The common descent and common language of the two nations made discovery very difficult; the English runagates soon picked up a few Americanisms, a few of the common flowers of rhetoric, and the nasal twang was to be acquired in less than five years. But at times it would happen that the reported American citizen would have, on the fleshy part of his arm, those indelible marks which sailors used to love to produce with puncturing and gunpowder—a blue piece of tatoo, giving his real English name and the name of the British ship in which he had served; and it happened still more frequently that among the officers and crew of some English man-of-war searching the suspected American vessel there would be some that could recognise and swear to the identity of the newly and irregularly made American citizen—who could detect in many a Jonathan a real Jack, that had either deserted from the king's service or had transferred himself from our merchant service for the reasons above mentioned or for other reasons equally weighty. Yet, even here a lapse of time or strong resemblances might deceive, and grievous though involuntary mistakes might be committed. And, besides, some of our more hasty officers, irritated by the notorious practices of the Americans and by the frequent desertion of their men, might occasionally be not over-scrupulous in examining identities or in seizing sailors reported to be Englishmen. Our government, however, always disclaimed such practices, and never refused satisfaction when it was fairly proved that the seamen so seized were natives or *bonâ fide* citizens of the United States. Jefferson had been incessantly complaining that the American navigation and commerce were suffering from British violence wrongs which were never offered to their flag by any other nation. He sternly rejected a proposal made by our government, that the true American seamen should always carry about with them certificates of their citizenship. The English minister must have known how such certificates were procured, but, such as they were, he offered to cause them to be respected. Jefferson held that the *simplest* rule would be, that a vessel being American should be evidence that all on board her were Americans also, or that the flag ought to proclaim the citizenship of the whole crew, and not allow of any search or press. This principle was altogether inadmissible. The correspondence and the verbal communications assumed, on the part of the republicans, a very angry tone, and nothing was settled when Jay arrived in London, with such powers as President Washington could give to negotiate a treaty.

matist, who resided a long time in the country, and who was calm and considerate in judging of the government, and of the character and habits of the American people.—See Notes on the United States, by the Right Hon. Sir Augustus Foster, Bart., London, 1841 (Unpublished), as quoted in Quarterly Review, No. CXXXV.

The American envoy found a strong disposition in Pitt to conciliate the irritable republic, and to keep her from joining the French Jacobins in the war.* As Jay, in common with all his party, believed that any closer alliance with the French anarchists would inevitably lead to the entire ascendancy of the ultra-democratic party at home, and to an anarchy in the United States, he met Pitt more than half way, and finally—on the 19th of November, 1794—he concluded a treaty of commerce and amity with Great Britain which, unfortunately, left still unsettled various causes of disagreement.† This treaty arrived in the United States early in March, 1795, and produced among the French and democratic party a storm which is supposed never to have been equalled since. On the 8th of June, Washington, as president, convened the senate for the purpose of considering the treaty; and on the 24th the senators, by the requisite majority, advised its ratification, with the exception of one article which Jay had clearly admitted by mistake, and to rescind which there could have been no unwillingness on the part of the British government. At this juncture some intelligence was received that our cruisers and blockading squadrons were seizing American provisions going to France; and hereupon Washington thought proper to intimate that he would not ratify the treaty if those orders in council continued to be enforced. The senate, with respect to some of its executive duties, lay under the obligation of secrecy; but in spite of this rule a Virginian member of that body, and a partisan of the French, published an abstract of the unratified treaty in a Philadelphian newspaper. Although the articles contained many important concessions on the part of Great Britain, and many advantages for the Americans, among others some relaxation in our Navigation Act, and a privilege to trade, under certain limitations, both with our East and West India dominions—although, in fact, the treaty was for that time, when neither the absolute free trade system, nor the reciprocity system, had found much favour in the eyes of any European statesman, a liberal compact on our side—although Jay, who had negotiated it, declared that it was an offer of conciliation and friendship, that it included satisfaction to American claims of justice, that it was a decided deviation from the old restrictive policy of the English government, and tended to shock the ancient prejudices of the English people, and that it was such a treaty as none but a strong administration like Mr. Pitt's would have ventured upon, the entire democratic party exclaimed with one voice that it tamely and basely surrendered the honour, rights, and interests of the United States at the feet of their most deadly enemy. The Jacobin clubs which Genet had put in operation, and the other self-created political societies which had

* In a private letter to Washington, Jay says, "If there is not a good disposition in the far greater part of this cabinet and nation towards us, I am exceedingly mistaken. I no not mean an ostensible and temporizing, *but a real good disposition*. I wish it may have a fair trial."

† See an account of this treaty, ante, vol. iii. pp. 653, 654.

spread over the country, and which, to use Washington's words, were "labouring incessantly to sow the seeds of distrust, jealousy, and discontent, thereby hoping to effect some revolution in the government," took up the subject of the treaty; popular meetings were called and held in all the large towns, and the demagogues harangued and the newspapers screamed. According to a native writer of the Jefferson school, the hubbub was the louder on account of the successful encroachments and invasions which the French republicans (who, like the American, had renounced and forsworn all conquests), were making upon all their neighbours. "The animosity to England and the attachment to France, who had already begun that career of military success which filled all Europe with astonishment and alarm, were now at their height; and they were of themselves sufficient to insure the condemnation of any treaty with England, however fair or reciprocal."* An American writer of another school honestly confesses that these present passions boded ill for any future friendship between the old mother country and her emancipated colonies; that the sentiments called forth on this occasion demonstrated, that no *possible* adjustment of differences with Great Britain, no *possible* arrangement which might promise a *future* friendly intercourse with that nation, could be satisfactory.† The French and democratic party insisted that any treaty of amity and commerce with England was a degrading insult to the American people, a pusillanimous surrender of their *honour*, an insidious injury to France, an abandonment of the *ancient* ally of the United States, whose friendship had given them independence, and whose splendid victories still protected them, for a close connexion with the natural enemy of that ally, and with the enemy of human liberty and the rights of man! Jay was reviled for having negotiated the treaty; the senators were charged with downright corruption and treason against the people for having conditionally ratified it; and Washington himself only escaped the foul imputation of corruption to be set down as a fool, or as the dupe of the English party who surrounded him. The president, according to his custom, had retired to pause and ponder, at his country house on Mount Vernon. Jefferson, who remained in his retirement at Monticello, did his best to keep up the cry against the treaty, which he called "an execrable thing," an "infamous act," "a treaty of alliance between England and the Anglo-men of this country against the legislature and people." Filled with anxiety and with alarms—the least of which was not his belief that the democrats would induce the French to believe that the treaty was really calculated to favour England at the expense of France—Washington quitted Mount Vernon much sooner than he intended, and hastened to Philadelphia, the seat of the central government. He was cheered by a counter-current which set in from New York, where the merchants, whose prosperity almost entirely depended upon English capital, voted in the Chamber of Commerce resolutions expressive of their approbation of the English treaty. He answered, in a firmer tone than he had hitherto used, the Select Men of the town of Boston who had remonstrated with him against giving his assent to the abominable treaty. He reminded them that the republican constitution had assigned to the president the power of making treaties, with the advice and consent of the senate. Seeing that delay would but swell the popular tempest, he had by this time made up his mind to ratify the treaty without waiting for the revocation of our order in council about provisions. All his cabinet agreed with him except Jefferson's successor, who maintained that during the existence of the said provision order, and during the war between Britain and France, the treaty ought not to be concluded; and on the 12th of August, 1795, the resolution was adopted to ratify the treaty immediately, and to accompany the ratification with a strong memorial against the provision order. This was done; and, to show his earnest wish for a good understanding with the United States, Pitt revoked the order, and the ratifications of the treaty were exchanged.

There was a lull of the storm until February, 1796, when the treaty, in its completed form, was announced to the American nation by a proclamation, a copy of which was sent to Congress, then sitting. The House of representatives, who had previously shown an aversion to the treaty, now complained that they had been treated with great disrespect, and proceeded to question the right of the president and senate to conclude any treaty without the consent of the representatives of the people. The president's friends in that House were outvoted by very large majorities; but the president remained firm, and eventually the representatives voted the appropriations necessary to the treaty without deciding the constitutional question. Jefferson, Madison, and Gallatin threw their whole weight into the scale of opposition, and bitterly assailed Washington after his triumph. It seems to be admitted on all hands that nothing but the personal popularity and the firmness of the president could have carried him through, or could have prevented, even now, the French democratic party from throwing back the treaty into the face of England, and from thus provoking an immediate war. Jefferson wrote a letter to an Italian friend who had resided in America, and who entertained congenial political tastes. In this letter, which was translated and published both at Florence and at Paris (in the latter city it made its appearance in the official Moniteur), and which seems to have been intended by the writer of it to be so published, Jefferson held up Washington and his party to the execration of all true democrats, and liberty and equality men. According to this slave holding Virginian and ex-secretary-of-state, all liberty and republicanism were flying away from America, to give place to an Anglican, monarchical, and aristocratical party, whose avowed object was to draw

* Tucker.
† Judge Marshall.

over the country the substance, as they had already done the forms, of the British government:—against the true republican citizens were ranged the executive, the judiciary, two out of three branches of the legislature, all the officers of the government, all who wanted to become officers, all timid men who preferred the calm of despotism to the boisterous sea of liberty; British merchants, and Americans trading on British capitals; speculators, and holders of stock in the banks and public funds, &c. "It would give you a fever," said Jefferson to his Tuscan democrat, "were I to name to you the apostates who have gone over to these heresies; men who were Samsons in the field and Solomons in the council, but who have had their heads shorn by the harlot England!" This letter was re-translated out of the French of the Moniteur, was published in the English newspapers, and, being wafted across the Atlantic, it found its way into the American papers.

Washington had not overrated the effect which the ravings of the democratic party would produce on the minds of the French, to whom the notion of any treaty between the United States and Great Britain was insupportable. The French executive forthwith accused the American executive of the basest ingratitude, of cunning, reservation, and double dealing; of having sold themselves to the tyrant George III., and of having thus renounced the amity and provoked the resentment of the *Grande République*. These public demonstrations were accompanied by secret designs of a very hostile and pernicious nature. Through a private channel President Washington received information that the special agents of the French executive in the West India islands were about to issue orders for the capture of all American vessels, laden wholly or partially with provisions, and bound for any port within the dominions of the British crown. Now a very important part of the trade of the United States consisted of exports of provisions to our West India colonies. Monroe, who had succeeded Gouverneur Morris as American minister at Paris, was recalled, as being but too likely to second the wishes of the democratic party, and Charles Pinckney, brother of T. Pinckney, the late minister at London, was selected by Washington to succeed him. This appointment was made in the summer of 1796, but Pinckney did not arrive at Paris till the month of November, and before any dispatches relating the insults which had been put upon him could be received in the United States, Washington had ceased to be president. It had been thought that he would stand another election, but in the month of September Washington publicly announced his intention of withdrawing entirely from the toils of office, and put forth a long document which is called his valedictory address to the people of the United States. The two great parties now brought forward their respective chiefs: John Adams the elder, and T. Pinckney, the late minister at London, were supported for the offices of president and vice-president by the English party, or federalists, or Washingtonians; the whole force of the French party was exerted in favour of Jefferson, who, notwithstanding his manifold declarations that he had done for ever with public life, now aspired to be the successor of Washington, to change his entire system, and to bring in one of his own party as vice-president. The contest was excessively sharp, and seemed at one time doubtful, but in the end the federalists proved a trifle stronger than the anti-federalists, and J. Adams, by a majority of three votes over Jefferson, was elected president of the United States. The curious constitution of the republic must be read by those who wish to have a clear notion of the mode of electing the two chief magistrates; but it will suffice here to state that Jefferson, the candidate for the presidency, having more votes than T. Pinckney, the candidate for the vice-presidency, was considered, in conformity with the American constitution, to be duly elected to the latter office. It seemed strange to many, that the political rival of Washington should accept the inferior post and hold office under Adams, one of the most decided of the federalists or Anglo-men; but Jefferson was deeply in debt, and the salary attached to the vice-presidency was an important object in his calculations; and, moreover, if Adams should chance to die during the fixed term of office, the president's chair, with its higher salary and greater prerogatives, would lie open to the acting vice-president. The pains which Jefferson took to mystify some of his friends and conceal his motives can impose only on very credulous minds. There was still another circumstance to render the inferior post he took not unacceptable or unprofitable to the projects he had in view:—the vice-president is, by right of that office, chairman, or speaker, or president of the American senate, having a casting voice, which was then of very great value, as the number of senators was only thirty-two. And in this capacity Jefferson might hope, by his ability and eloquence, and his practised turn for political intrigue, to win over or democratize some of the senators. According to the American system there was nothing anomalous, or any way wrong, in a conflict of opinions and views between the chief magistrate of the republic and his cabinet ministers, or between the president and the vice-president, and therefore Jefferson immediately set himself in opposition to Adams, and thwarted or attempted to thwart nearly all the new president's measures, but most of all those which went to secure the friendship of England and the maintenance of the treaty which Washington had concluded with her. Fancy and fiction have been resorted to in order to describe the pleasant solitudes of Mount Vernon, and the happy, tranquil days which closed the life of the great Liberator; but, if we do not greatly err, the eye of truth would have discovered in that retirement, a proud old man, with his pride wounded and his hopes blighted, with little to please him in the present aspect of affairs, and with nothing but doubt and anxiety for the future fate of his country. At the close of the year 1796, when Washington with-

drew from the stage, there were or there recently had been troubles in the east and troubles in the west, troubles in the north and troubles in the south—fierce insurrections, with gouging and nose-slitting, among the Kentuckians, who wanted extension of territory, and obstinate rebellions against the central government among the Pennsylvanians, who wanted an exemption from taxes. The Pennsylvanian insurgents had fired upon the officers of the law, had besieged the inspector-general of excise and compelled him to surrender and deliver up his papers; had made the marshal promise that he would execute no more processes to the west of the Alleghany mountains; had stopped the mail and broken open the letters to discover the persons who were opposed to them, and had made all such persons fly the country; after which they had called a convention to set both the state government and the central government at defiance. All this had obliged Washington to call upon New Jersey, Virginia, and one or two other states of the union to march 12,000 militia into Pennsylvania. The greatness of the militant force employed is said to have prevented the effusion of blood; but it is certain that, although the disaffected did not venture to assemble in arms, some blood was shed in this civil strife, and that, afterwards, the executive was not strong enough to procure any adequate punishment for some of the leaders of the insurrection who had been arrested and detained for legal prosecution. While the militia were assembling in Pennsylvania the spirit of insurrection showed itself in a part of the neighbouring state of Maryland. Nor was that spirit subdued in Pennsylvania by the marching of the 12,000 militia: a sour and malignant temper displayed itself, and plainly indicated that the people would rise again if that great military force were wholly withdrawn, and President Washington had therefore been compelled to leave a strong detachment in the centre of the disaffected country all through the winter of 1794-5.

When Pinckney reached Paris to deprecate the wrath of the directory which now exercised the powers which had been held in such rapid succession by so many parties, he was treated with a degree of insolence which could scarcely have been exceeded if he had been the agent of some petty conquered state in Italy or on the Rhine. He was told that the French people naturally preferred his predecessor Monroe, who was a friend to France and a foe to England—that foe of all free nations. The directors kept him waiting for an audience like a lackey in an antechamber, and, when they admitted him and inspected his credentials, they haughtily announced to him their determination not to receive another minister plenipotentiary from the United States, until after the redress of grievances demanded of the American government which the French republic had a right to expect. This insulting audience was followed by verbal messages still more insolent, which were intended to sting the American minister out of France; and at last, seeing that Pinckney was not to be driven away by such means, the directors sent him a written order to quit the territories of the French republic within eight-and-forty hours. The American plenipotentiary humbled himself so far as to request to be allowed to remain as a private individual; but the directory refused the request. To complete this hostility American vessels were embargoed in the ports of France, Holland, &c., and were seized by French cruisers or privateers wherever found, and were shortly afterwards all condemned as fair prizes. At the same time the directors did what Monsieur Genet had done before them—they appealed from the American executive to the American people, and laboured hard and ingeniously, and in many modes, to effect a breach between the central government and the citizens. This contemptuous treatment is supposed to have produced an evil effect on the popularity of the French and democratic party in America, where, it is said, the majority of the people would have been found ready to vindicate their insulted dignity by declaring war against France. But the American government proceeded to humble itself still further—to crouch at the feet of the French directory, and only to receive more and more insults. Instead of sending the French minister out of their country, and suspending all diplomatic intercourse as the usual and proper retaliation for the expulsion of Pinckney from France, they sent to France not one but *three* envoys or commissioners—T. Pinckney, Marshall, and Gerry. These illustrious republicans took their departure in the summer of 1797. Early in 1798 dispatches were received by President Adams's government from them—dispatches which excited one general burst of indignation from the federal party, converted some of their opponents, and for a time silenced the favourers and apologists of France.* In short, the directors had treated the triad worse than they had treated the single envoy: they had refused to recognise the envoys, or even to look into their letters of credence; they insinuated that two out of the three being taken from the federal party (which had supported the measures of their own government) furnished just cause of umbrage, as the federalists were prejudiced in favour of Great Britain, &c. While thus refusing to recognise them, the directors, by means of irregular unofficial agents, gave them to understand that the payment of a very large sum of money from the United States to the French republic was the condition which must precede not only any reconciliation, but any negociation whatever! Jefferson well understood his own countrymen when he said that the seat of their sensibility was in their purse. The envoys (who might have remembered that the states still owed money to France) were horror-stricken! They could scarcely believe their ears—they thought there must be some mistake—they hoped that the unofficial agents were making an essay to rob on their own private account; but, upon further inquiry, they obtained sufficient evi-

* Tucker.

dence that the said agents acted by authority of the directors, and that it was really the voice of the executive of the *Grande République* which said —"Millions of Spanish dollars down upon the nail, or no restitution, no compensation, no reconciliation, no treaty!" The three Americans represented that an advance of money by a neutral to a belligerent power would be a departure from neutrality; that such payment might be considered as rendering America tributary to France, and taken as a precedent; and they returned a decided negative to the proposition. The French directors, however, returned to the charge, or their agents endeavoured to work upon the fears of the Americans for their country, and for themselves personally. They described the immense and still increasing power of France, her conquests in Belgium, Holland, Italy, Germany, the humiliation of the house of Austria, the ruin or confusion which had fallen upon every continental power that had dared to oppose the invincible republic; they spoke confidently of the invasion and conquest of Great Britain and Ireland, chuckling over the Irish rebellion which was then breaking out under their auspices, of the suspension of cash payments by the Bank of England, and of the mutinies in our navy at Portsmouth and the Nore; and they asked where, except in the friendship of France, could America look for safety? The three envoys were, moreover, assured that if they believed their conduct would be approved in the United States they were much mistaken, for the means which the directory possessed in those states to excite odium against them were great, and would unquestionably be employed. In a letter addressed to Talleyrand, as the directors' secretary for foreign affairs, the three envoys gave a detailed account of the uniform friendliness of their government to France. Talleyrand replied unofficially, and criminated the American government in his most caustic style; and this letter was in possession of an anti-federalist printer in Philadelphia, who had uniformly supported the pretensions of the French republic, some time before it reached the American government. These were among the means which the directory possessed in the States. Talleyrand had not lived in those states in vain! Though refused recognition, though bearded and trampled upon by some of the vilest secret emissaries of the profligate directory, though put under the surveillance of the French secret police, the American trio remained at Paris as long as they were allowed to do so, petitioning to be heard, and drinking to the dregs the cup of national humiliation. After making sundry intimations to the two of the three envoys who belonged to the federal or Washington party that they were very unwelcome visitors in France, and ought to get them gone, the directors sent them their passports, and commanded them to quit the territories of the French republic forthwith. But, still further to aggravate these wrongs, the directors at the same time acquainted the third, or the anti-federal envoy, that he might remain where he was: and this anti-federalist, this correspondent and fast friend of Jefferson, this Gerry, gladly consented to stay at Paris, and to resume, in an unofficial manner, and as a private American citizen, the discussions which had been broken off. And at Paris, and under the surveillance of Fouché's police, Gerry remained, until the powers supreme thought proper to order him away to Fontainebleau, where he lived for some time as a *détenu*. Well may it be said that history will scarcely furnish the example of a nation, not absolutely degraded, which has received from a foreign power such contumely and insult as were suffered by the United States in the persons of these ministers! *

During these transactions open war continued to be waged by the cruisers of France and her dependencies on American commerce; and a decree was put forth by the directors which made a vessel friendly or enemy according to the hands by which the cargo was manufactured. The new maritime law went to throw all American shipping out of employment, as British bottoms, which alone had the benefit of convoy, would have all the return cargoes from England. The seat of sensibility was again touched; and throughout the American union there was a loud outcry against the decree, and a louder cry of "Millions for defence, not a cent for tribute!" Favoured by the feelings and resentments of the moment, President Adams, in a message to the two Houses of Congress, recommended that the country should be put in a state of defence, and that a commission for reprisals by sea should be issued. Jefferson called this message an "insane message," and recommended that Congress should adjourn, in order to consult their constituents, and in order to gain time enough to allow the descent of the French on England and Ireland to have its effect here, in America, as well as there.† But a considerable majority stood by the president and voted what he recommended. And now, at this moment of general indignation against France, was laid the first foundation of that national armed American navy, which was never employed against the French, but which, fourteen years afterwards, was employed, and upon infinitely less provocation, against England. Resolutions were passed for equipping ships of war and forming a regular naval department; an improved organization was given to the militia, a provisional army of 20,000 men was voted, and Washington was invited from his retirement at Mount Vernon to take the command of this army as soon as it should be ready. A tax on stamps had been previously authorised, and now a direct tax on lands was resorted to.‡

* Judge Marshall.

† Letter from Jefferson to Madison, dated March 1, 1798.

‡ As the anti-federalists and their numerous and libellous journalists were still for preserving amity with France—were constantly asserting that the French were yet the best friends of America, and were only provoked by the conduct of Washington and his party, and by the two federal envoys—were calumniating President Adams, every man connected with his government, and every federalist of mark and likelihood—Adams ventured to propose, and the majority of Congress to pass, a law for punishing all libellous writings against the public authorities. And this was followed by another law for sending

There was a mustering of forces, and a great drumming and trumpeting throughout the land, but nothing came of it. The soldier of fortune from Corsica, returning from Egypt at the close of 1799, overset the directory, and made himself first consul of France. He began to alter nearly everything that the directory had done; and he clearly saw the advantages to be derived from renewing friendly connexions with the United States, and from involving them in quarrels with England. Three more American envoys extraordinary and ministers plenipotentiary were packed off for Paris to negociate with Napoleon Bonaparte, and in due course of time their negociations terminated in what the Americans chose to consider an amicable and satisfactory adjustment of all differences with the French Republic. George Washington did not live to see this renewal of a close and friendly intercourse with France, which for many years he had considered as highly dangerous to the tranquillity, independence, morals, religion, and happiness of his country. He died at Mount Vernon, on the 14th of December, 1799, in the sixty-eighth year of his age; leaving a widow, but no son to succeed him—leaving no issue of either sex. One sensibility was checked by another, or the great seat of American sensibility, the purse, opposed all such honours as cost money. Speeches and eulogiums there were in Congress, funeral orations in all the great towns of all the States, and perhaps there never was a greater outlay of words and long-winded sentences bestowed upon any illustrious man on a similar occasion. Congress voted too, that the president's chair should be covered with black crape, that all the members should wear mourning, that it should be recommended to the people of the United States to wear crape on the left arm for thirty days, that there should be a funeral procession from Congress-hall to the German Lutheran church in Philadelphia, in memory of General Washington; and all this was done accordingly, being cheap to do. But another vote for erecting, at the national expense, a suitable monument, though carried unanimously in Congress, was never carried into execution, for it would have cost much money, and a voice, coming from the seat of sensibility, said that the only proper monument to the memory of a meritorious citizen was that which the people would erect in their affections. This monument in the hearts of the American people did not prevent a very large part of them from heaping obloquy upon his humble grave, by holding up Adams, and the other men who were but pupils of Washington or continuators of his system of policy, as oppressive aristocrats, as foes to the liberties of the populace, as traitors to their country, sold to England; nor did this cease until Jefferson, the political adversary of Washington, was put into the president's chair. It would be too long to describe by what means the mode of electing the president of the United States was altered, and by what toilsome processes and intrigues that right of election to the supreme magistracy was made to devolve upon Congress. But on the 17th of February, 1801, Jefferson obtained the post at which he had been so long aiming, being elected president by ballot by ten of the sixteen states then constituting the Union.*

From this moment commenced the real reign of the democrats upon the American earth. All things underwent a rapid change and transmutation; both the domestic and the foreign policy of the federalists were rapidly altered, and the *vox populi* began to be taken as the voice of the gods. Only, to keep it in tune with his own voice, President Jefferson played all sorts of popular farces, and resorted to the most degrading condescensions towards the mob. Not without a reminiscence of the days when he wore scarlet unmentionables and a gold-laced coat, he now dressed more plainly than a Philadelphia quaker, and assumed almost as slovenly an appearance as a backwoodsman. To preserve some order and decency, some respect for his office, and some little state and dignity to the person of the nominal chief magistrate of the republic, Washington had established a few simple forms and ceremonies. Jefferson began to sweep all these away, as making invidious distinctions between men and men, and as being inconsistent with republican simplicity and republican principles generally. And, accordingly, the house of the president and the hall of Congress began to grow into bear-gardens, and the last remnant of courtesy and politeness soon took its departure from among all those classes who would monopolise the titles of true republicans and true patriots. The gentlemen of the old or Washington school, many of whom had received a classical education in England and had travelled among the politest nations of Europe, were dying off rapidly; the subdivision of property was destroying the class to which they had belonged; the refined and the sensitive shrunk from a jostle and scramble with the unmannerly and ungovernable democracy; and such of the well-educated and polite as aimed at the honours or emoluments of office, or the excitement and fame of public life, were obliged to put on the rude bear-skin in order to captivate and

away all aliens who should be proved to the government to be suspicious or dangerous persons. This law resembled our alien law, and it was far more necessary in the United States than it ever was in England. That country swarmed with French propagandists, Irish revolutionists and other fugitives from the gallows, revolutionary Scotsmen and Englishmen, club-men from all manner of clubs and anarchic societies, and from nearly all parts of the old world; the most numerous or the most turbulent being the natives of the green island, who headed almost every insurrection or riot. A very considerable portion of the obnoxious journalists were Irishmen. It is said that these two laws—the law against libellous writings and the alien law—eventually turned the tide of public feeling, and ruined the Washington party and Adams's administration; but there were innumerable other causes at work, and the nature of the country and its democratic institutions, and the miserable weakness of the central government, rendered this ruin inevitable, and insured the return of angry hostile feelings to England, as soon as the present wrath against France should moderate, or as soon as the French should cease wounding the seat of sensibility.

* The states which voted for Jefferson were New York, New Jersey, Pennsylvania, Virginia, North Carolina, Georgia, Tennessee, Kentucky, Vermont, and Maryland. The four states of New Hampshire, Massachusetts, Connecticut, and Rhode Island voted for Colonel Burr; and the members from South Carolina and Delaware put in blank ballots.—*Tucker.*

win their way with that monster universal suffrage. A few years of the rule of Jefferson and of his counterpart Madison sufficed to alter the whole aspect of American society. The end is not yet come; but ever since the year 1801 there appears to have been a precipitate declension in good manners and in qualities more important than manners.

Jefferson immediately nominated Madison his secretary of state, and Gallatin his secretary of the treasury, not being able to find, even among his own Frenchified party, two men who had a more rancorous hatred of England. Among the first things he did as president was to send an anti-federal ambassador of his own choosing to Paris, there to make sure of the friendship of that true republican Bonaparte, and to invite that English-born subject and renegade, that American-French citizen, Thomas Paine, the author of the 'Rights of Man' and the 'Age of Reason,' to return to America and live upon the bounty of his grateful adoptive country;—to write a very complimentary epistle to Doctor Priestley, who had carried his household gods to Philadelphia, not without abuse of England, or lamentations upon the bigotry in politics and religion which had driven the doctor from his country;—to put affronts upon Mr. Merry, the old English envoy, and particularly upon his wife.

There were many intervenient heart-burnings, and not a few insults difficult of digestion, and which possibly might not have been digested by England if it had not been for the critical state of the war carrying on against Bonaparte; but it was not until the year 1807, when Jefferson was for the second time president, that the war-whoop was again raised against Great Britain. Bonaparte's Berlin decree, against which the Americans had never presumed to offer any serious remonstrance (Jefferson was engaged at the time in a friendly correspondence with the government of the devourer of republics, in order to obtain through his all-commanding means the cession from Spain to the United States of Florida), had, in the eyes of the British government, rendered necessary a retaliation, and had produced fresh orders in council intended to support our maritime rights and commerce, and to counteract Bonaparte's Continental system, the basis of which was the Berlin decree. As on other occasions, the American wrath was kindled, not against the first cause, but against the almost inevitable effect of that cause—not against France, who had made the grand innovations in national law, and who had trampled upon the rights of all neutrals, but against England, who resorted to measures for self-defence, and with the object of abrogating the most monstrous system that ever European conqueror had attempted to impose. But the plain truths are, that Jefferson and all the statesmen of his school entertained much the same feelings with respect to the commercial and naval greatness of England with their friends in France, their understandings being generally of the same character, and their tempers quite as violent; that they had no dread of France, who by this time had lost her commerce, her colonies, and her ships, whose power could never come in contact with their own, and whose resources were devoted to a war in the issue of which they (the Americans) vainly thought that the United States had no interest; that they thus hoped, by condescensions to France, to obtain ingress into all the ports of Europe, and to rival and then annihilate that trade upon which England relied for the prosecution of the war and the preservation of her independence; that the whole democracy of America hated England, her commerce, her power, and pre-eminence, as much as Bonaparte himself did.*

In his Berlin decree the French ruler ventured to declare the British Islands in a state of blockade, and to interdict all neutrals from trading in any commodities whatsoever with a British port. This was a violent infringement of the law of nations; an outrage committed on neutral rights, which called upon all parties to avenge themselves on its original authors, and most loudly of all did it call upon the Americans, a neutral, trading people, who had raised such a clamour about neutral rights. But America neither resisted nor remonstrated, and thus she committed herself with our great enemy; for, if France violated the law of nations, as she unquestionably did by this decree, and if America calmly acquiesced in this outrage on her rights, in common with the rights of all neutrals, it will hardly be denied that she made herself a party in the quarrel which France had with England, combining, in effect, with the common enemy. Before the issuing of the Berlin decree, Jefferson complained of various insults offered to the flag of the United States by Great Britain. These appear to have arisen almost entirely from our determination to shut out the Americans from the blockaded ports of France, and to prevent their carrying articles contraband of war to our enemy. Other violent remonstrances had arisen out of that inexhaustible cause of quarrel which lay in the impressment of seamen, the American practice of turning our sailors into citizens, and the difficulty of distinguishing British from American seamen. An American sailor, too, had been killed by a random shot fired from the British ship 'Leander,' near Sandy Hook; and, though the murder of the second mate of the 'Little Cherub,' and the murders of various other American citizens by the French, had never been avenged in any way, this fact was set down to our account as an unparalleled outrage. Before any attempt was made to negociate, or even to explain, some of the hottest-headed of the anti-federal party proposed in Congress very extreme measures, as—to suspend all importation from any port of the British dominions,—to permit no intercourse whatever between the two countries,—to prohibit the importation in any vessels whatsoever of the produce or manufactures of Great Britain and her colonies. Many specific

* Southey, in Edin. Ann. Regist.

articles, the manufacture of Great Britain, were actually prohibited; and, as if anticipating an immediate war, sums of money were appropriated for fortifying the ports and harbours of America, and for building gun-boats. But news arrived that Pitt, whom the Americans, like the French, considered as *l'ennemi du genre humain*, the arch-enemy of liberty and equality, was laid twelve feet deep under the pavement of Westminster Abbey, and was succeeded by Fox, whose fortune it was (as Burke once remarked) to be exceedingly popular with all the enemies of his country, and whose character was as much extolled by the Americans as it was by the French. Messrs. Monroe and Pinckney were immediately appointed to negociate with the Whig cabinet. Before the negociation had made much progress, Fox was laid to rest by the side of his great rival; but the All Talents ministry survived for a few months; and Fox's nephew and pupil, Lord Holland, conjointly with Lord Auckland, continued the negociation with the two American envoys, and concluded with them a convention (which, in fact, concluded nothing) on the 31st of December, 1806. It was while these discussions in London were in progress that copies of the Berlin decree (the decree was dated on the 21st of November, 1806) were received; and this circumstance ought to have induced our two noble negociators to suspend any convention or treaty until it was known whether the government of the United States would or would not resist the will of Bonaparte. As soon as Jefferson heard of the death of Mr. Fox, he anticipated a change of ministry and a return to power of the Pittite or Tory party, and, as if he were determined to come to an amicable arrangement only with the Whigs, he immediately sent off instructions to Monroe and Pinckney which differed widely from those he had previously given them, and which set forward pretensions and claims which had not been mentioned or hinted at before. If these instructions had reached the two envoys in time, there would have been no *conclusum*, unless our two lords had been content to throw the flag of England at the feet of her revolted colonies. But Jefferson's fresh instructions did not reach London until more than two months after the treaty had been signed. Nothing, therefore, remained for the president to do but to refuse his ratification of the treaty which his chosen envoys had concluded, and this he at once did.

America continued in her almost hostile attitude; but Monroe and Pinckney remained in London. When the All Talents ministry was ousted, and when Mr. Canning became secretary for foreign affairs, under the Duke of Portland, the two American envoys pressed the new claims and pretensions in a very high tone. These were met by Mr. Canning with a tone equally high: he insisted that England had the indisputable right to retaliate upon the French decree; that America, by submitting to the Berlin decree, was pursuing a course which could not be allowed, and that the British government must continue to impress British seamen found on board American vessels, unless the American government could give security against practices that were intolerable at all times, and doubly so at a moment like the present. Still, innovating and showing a contempt for the fundamental rules of diplomacy, Monroe and Pinckney wanted to make the treaty of the 31st of December, which they had signed, and which their government had refused to ratify, the basis of a new treaty. Affairs were in this state when news reached London of a conflict which had taken place in the American seas. On the 23rd of June, 1807, the British 50-gun ship 'Leopard' met off the capes of Virginia the large American frigate 'Chesapeake,' which, though classed as a frigate, was at least equal in force to the 'Leopard.' Knowing that there were several English deserters on board the 'Chesapeake,' whom he had vainly endeavoured to recover by other and amicable means, the captain of the 'Leopard' insisted upon the right of search, as the only process by which the men could be brought back. After some equivocating answers, and an assurance that he knew nothing of the English deserters, the American captain refused to be searched, and made some visible preparations for resistance. Hereupon the 'Leopard' fired a single shot across the 'Chesapeake's' fore foot. This was followed by a second single shot. No effect being produced, and the 'Chesapeake' preparing to return the fire, the 'Leopard' gave her a broadside, and, after a short pause, renewed her fire. The 'Chesapeake' returned a few straggling shot, not one of which hit her opponent; and, in less than a quarter of an hour, just as the 'Leopard' had poured in her third broadside, the heavy American hauled down her colours, and her captain sent his fifth lieutenant on board the 'Leopard,' with a verbal message, signifying that he considered the 'Chesapeake' to be the 'Leopard's' prize. When some of the officers, petty officers, and men of the 'Leopard' went on board the 'Chesapeake,' they could find only one of the five deserters of whom they were more especially in quest. This fellow was dragged out of the 'Chesapeake's' coal-hole, and on being brought to the quarter-deck swore that he was a native American, and that he had never belonged to any English man-of-war. Unfortunately for him, he was well known to the 'Leopard's' purser, who had drafted him into the 'Halifax' British ship of the line, and who was now on the quarter-deck of the 'Chesapeake' to identify him. About fifteen other British subjects were mustered on that quarter-deck, but only the man found in the coal-hole, and three other deserters, were taken out of the 'Chesapeake.' [These four seamen were tried shortly afterwards at Halifax, Nova Scotia. Jenkin Ratford, the coal-hole man, was hanged at the fore-yard arm of the ship from which he had deserted; the other three were sentenced to receive 500 lashes each, but were eventually pardoned.] The fire of the 'Leopard'

had killed three seamen, and had wounded the captain, one midshipman, and sixteen sailors and marines of the 'Chesapeake.' The American captain or commodore again offered to deliver up the frigate as a prize. The English captain replied, that, having fulfilled his instructions, he had nothing more to do but to proceed and join his squadron. He then tendered assistance, which was refused, and, deploring the extremity to which he had been compelled to resort, he pursued his course, and left the 'Chesapeake' to choose hers.

On the 2nd of July, almost as soon as the intelligence of what had happened reached him in the new city of Washington, which for some time had been the seat of the central government, and without waiting for any explanation or commencing any correspondence, the president put forth a proclamation which sounded like a papal excommunication of the middle ages, and which interdicted all British ships of war from entering any of the ports of the United States—ports which then contained, and hospitably entertained, various French ships of war which had there taken refuge from English pursuit. But the French flag, whether surmounted by the red nightcap of the Jacobins or the imperial crown and eagles of Bonaparte, was a pleasant sight in the eyes of the American democrats; while Jefferson so hated the royal flag of England, that the sight of it gave a deeper yellow to his jaundiced face. It was evidently with a rhapsody of delight that the president seized this opportunity of excluding our ships of war. In his proclamation he called the attack of the 'Leopard' an enormity committed without provocation or justifiable cause, for the purpose of taking by force, from a ship of war of the United States, a part of her crew who had been previously ascertained to be *natives* of the States! Such, indeed, was the usual strain of American invective whenever the British were the accused. Not so when the French offended. In the summer of this very same year (1807) the United States sloop of war 'Hornet,' while, lying in the French port of l'Orient, was forcibly boarded by a French officer and a party of men, who seized and carried off five Frenchmen, naturalized citizens of the United States, and who had been several years in the American naval service; but not a murmur was heard on this subject.*

The account of the attack on the 'Chesapeake' reached London on the 26th of July. On the 2nd of August, before any demand for redress had been made by the American envoys in London, Mr. Canning caused to be conveyed to them a disavowal of the right to search ships in the national service of any country for deserters, together with a promise of suitable reparation for the unauthorised act of the 'Leopard.' On the 6th Mr. Monroe transmitted to his government Mr. Canning's note; but on the same or the following day American *newspapers* reached Downing-street, and these papers contained, with appropriate comments, President Jefferson's interdictory proclamation. These screaming journals, or others which soon followed in their track, brought intelligence of the spirit with which many of the sea-coast-dwelling Americans had hailed the proclamation, and had acted up to it. No insult, no outrage had been spared to the British flag; on the shores of the Chesapeake, more especially, everything that was British had been treated with indignity; a war had been made upon the water-casks of our departing ships of war, as if to prevent their carrying away with them that necessary element, and rifle-shots had been fired at some of our men-of-war boats. Moreover, to all this succeeded fresh instructions from Jefferson and Madison to their envoys in London, who consequently assumed a tone more than ever hostile, though pretending all the while to wish to treat with Mr. Canning upon the basis of the treaty concluded by Lords Holland and Auckland, provided only America were allowed to mix up entirely new matter and new principles with that ill-arranged, and by the American government repudiated, treaty. Yet, still persevering in moderation, the British government issued a proclamation recalling and prohibiting seamen from serving foreign princes and states, but declaring that the claim to seize deserters from the *national* ships of other powers would not again be brought forward, though the right of taking such deserters from merchantmen must be retained. They also recalled Vice-Admiral Berkeley, who had given the order to search the 'Chesapeake,' and they liberated and sent back to America two men who had been taken as deserters, but who had been proved to be natives of the United States. It was difficult to go farther, and Jefferson knew how far our government had gone—Jefferson had the Gazette containing the proclamation and other documents of a conciliatory tendency in his possession—when he proposed to Congress to lay an embargo on all vessels of the United States, and to command the trading ships of all other nations whatsoever to quit the American harbours as soon as the act should be notified to them, with or without their cargoes. The subject was discussed in both Houses in secret session, or, as we say, with closed doors. The proposition was warmly opposed by the federalists or Washingtonians, and by some others who foresaw that such a suspension of all trade or intercourse with foreign nations would be more injurious to their country than to England, against whom the measure was directed; but the resolution was, nevertheless, adopted by very large majorities. Thus matters remained from the month of December, 1807, to the declaration of war in 1812, an interval which the American government employed in adding to the number of its gigantic frigates, and which the commercial classes spent in a hopeless struggle against bankruptcy and ruin. Attempts were not wanting on our part to come to a friendly accommodation. In 1808 Mr. (now Sir George) Rose proceeded as our envoy to Washington, for the avowed purpose of restoring

* Boston newspaper, as cited in James's Naval History.

good intelligence; but Jefferson demanded the revocation of our orders in council as a preliminary, with the entire exemption of ships bearing the flag of the United States from any search, or from any question as to the goods they carried. Our envoy returned home, and the embargo was continued, notwithstanding the loud complaints of the north-eastern States of the Union, who were again muttering threats of breaking the federal compact, and setting themselves up as an independent separate republic. In 1809 Jefferson was succeeded as president by Madison. The embargo had, by this time, become so oppressive to a large part of the American community, that the new president, though well inclined to persevere in the system of his predecessor, was compelled to yield somewhat to the popular outcry. He peremptorily refused to take any steps against Bonaparte, who had confirmed and extended his Berlin decree by the issue of his Milan decree, a still more unscrupulous attack on the law of nations and the proper rights of neutrals; but he got an act passed by the legislature which repealed the universal embargo, and substituted a prohibition of intercourse with France and England, with the proviso that, if either of these nations should cease to violate the neutral commerce of the United States, the suspended trade with such state might be renewed; and after this he signed a treaty with Mr. Erskine, which professed to be for the restoration of amity and commerce between the States and Great Britain. This time it was the British government that refused to ratify, alleging that Mr. Erskine had misunderstood his instructions and exceeded his powers. No treaty in fact could subsist while America put England in the same category with France, and kept up her incessant clamour against our orders in council, without doing anything to oppose the Berlin and Milan decrees, which had given birth to our orders. It should appear also that Erskine was over-reached, and was no match for the Americans in their own field of diplomacy. Without waiting for the ratification, without which—as Jefferson himself had so recently proved by his own conduct—the treaty was null, a great number of impatient American merchantmen set sail for the British ports, and for other places. Our government, however, provided that no loss should accrue to such vessels as had proceeded to England in reliance upon the treaty, and that none should be stopped until after a certain interval. In the same year, 1809 (in the month of April), the British government made a modification in the orders in council expressly to favour America, by opening to her trade the German Ocean, the Baltic, the foreign possessions of the Dutch, and part of Italy. In the following year Mr. Jackson, who had been sent out to Washington, on the recal of Mr. Erskine, to explain his mistakes and to renew the negociation, discovered very strong symptoms of a determination on the part of President Madison to brave a war with England. As if for the express purpose of throwing invincible obstacles in the way to any adjustment, the American government now, *for the first time*, complained of our order of blockade of May, 1806, as a violation of neutral rights, an infringement of the law of nations, and as a provocation which justified the Berlin decree; and, *also for the first time*, after four years of busy negociation, Madison put forward a new doctrine about blockades to which England could not have submitted without infinite mischief to herself. The American minister accused Jackson of stubbornness, intemperance of language, and ill will to the republic, and Jackson retorted the charges. The stubbornness of our envoy appears to have consisted in a strict adherence to his letters of instruction, and in a firm determination not to commit the honour and interests of his country. Madison instructed the American minister in London to demand the immediate recal of Jackson as an unfriendly, impracticable man. Our government recalled its envoy, but took good care not to express any displeasure at his conduct or bearing in Washington. The Congress had passed an act, providing that, if either Great Britain or France should modify its edicts so as that they should cease to violate the neutral commerce of the United States, and if the other nation should not, within three months thereafter, do the same, the restriction of intercourse should cease with regard to the first nation, but remain in force with regard to the second. This signified that Madison had been induced to believe that Bonaparte, though preserving the rigour of his edicts against all other neutral nations, and against England, would relax the severity of the Berlin and Milan decrees in favour of the United States exclusively. Backed by the Act of Congress, Madison (in November, 1810) issued a proclamation, importing that the two French edicts had actually been revoked, and that, therefore, from that time forward the American restrictions upon trade were abrogated with respect to France. And, on the same day, Gallatin, his secretary of the treasury, sent letters to the different collectors of the customs to announce the abolition of the restrictions with regard to France, but to declare that these restrictions would all be revived in full force with regard to Great Britain, within three months, unless she revoked her orders in council. By a subsequent letter Gallatin intimated that all British goods arriving subsequently to the 2nd of February, 1811, would be seized and forfeited.

By his Milan decree Bonaparte declared the ships of all neutrals which allowed themselves to be searched by the English—or, which, to use his language, submitted to the tyranny of Britain—to be, by the fact, *denationalized*. This meant that every American or other neutral vessel that submitted to our search should forfeit all the rights of its flag, and be treated as an enemy, and seized and confiscated by the French or the allies of France, wherever found. Nor did the decree remain a dead letter: scores of American vessels were seized in France, in Holland, in the German ports on the

Baltic, and in other dependencies or conquests of the French empire. In Italy they were seized by the French viceroy, Bonaparte's son-in-law, Beauharnais, and by his brother-in-law, Murat, King of Naples. In the Neapolitan ports alone many American merchantmen were embargoed, seized, sold, and, notwithstanding the war declared by the United States against England in 1813, no indemnity or satisfaction had been given when Murat was hurled from his throne in 1815. American consuls and other agents remained for years at Naples as humble supplicants, whose memorials were treated with contempt. But, when the French plebeian king was dethroned and fusilladed, when the old Bourbon king, Ferdinand, was restored to his continental dominions, and when the battle of Waterloo had for ever decided the fate of the man to whom they had so long truckled, then blazed forth the American ire; then were asserted the American rights, power, and dignity, and a republican squadron sailed into the bay of Naples with its stripes and stars, peremptorily demanding from old Ferdinand satisfaction for the wrongs, and indemnity for the injuries, which had been committed by Murat, the usurper of his throne, and threatening or seeming to threaten the defenceless city with a bombardment.* And be it also remembered that, even after the United States played into the hands of Bonaparte by concluding a treaty with him, and by waging hostilities against England, France herself did not give indemnities for the American ships and property she had seized, and that the closing of that long account was only obtained from his present majesty Louis Philippe, through the friendly mediation of the British government. The propositions and proclamations of Jefferson and Madison were little more than a repetition of Bonaparte's principles and of the very words of his decrees; for, in order to have them in the trap where he wanted them, he had said that his measures against neutrals should cease to have any effect with respect to any nation that should have the firmness to compel the English government to respect its flag. The Americans could not commit themselves to one single part of the principles maintained by Bonaparte in his Berlin and Milan decrees without committing themselves to the counterpart and consequences. Now, it was his principle that those who did not resist an injury offered them by either of the belligerents were no longer to be considered as neutrals; that by their acquiescence they made themselves parties to the cause of the enemy, and thereby rendered themselves liable to be treated in the same way as if they had actually declared war against the nation to whose interests they stood opposed. Thus, by the theory they embraced, and by the conduct they had pursued, the Americans had put themselves in an attitude of hostility which would have justified a declaration of war on the part of the English. But the English, having enemies enough upon their hands, wished for no war with them. In March, 1811, Pinckney, the American minister, was recalled from London, in a manner that was almost equivalent to a declaration of war by the United States. And from this moment the Americans acted as if the French edicts against neutrals had been entirely revoked, for they threw open their ports for ships bearing the French flag, and kept them shut against our flag. In the month of May of this same year (1811) open acts of hostility took place upon the seas. The British frigate 'Guerrière,' Captain Samuel John Pechell, took some British sailors out of American vessels, and, by the mistake so easily made, took some two or three men who were natives or citizens of the States. Upon discovering his error Captain Pechell returned all these Americans, except one man who voluntarily entered our service. Forthwith orders came down to the coast from Washington to Commodore Rodgers to protect the coasts and commerce of the States, and to put to sea immediately in *pursuit* of the British frigate (the 'Guerrière'), for her having captured and retained an American citizen. Nothing loth for a brush, and confident in his enormous superiority over the 'Guerrière,' Commodore Rodgers, with officers on board who had come from Washington with letters from President Madison, sailed from the Chesapeake on the 12th of May, with his immense frigate 'President,' which was all in fighting order, and a match for a ship of the line. On the 13th the American commodore was led to believe that he was getting near to Captain Pechell's frigate; and thereupon he got an extra quantity of shot and wads upon the deck and cleared the 'President' for action. The information was, however, incorrect; and, instead of falling in with the 'Guerrière' frigate, the 'President,' on the 16th of May, fell in with a still more unequal antagonist—the British ship-sloop 'Little Belt,' Captain Arthur Batt Bingham. The 'Little Belt' mounted 18 carronades, thirty-two-pounders, and 2 nines; she was a low flushed vessel, and her entire crew, counting boys, was 121. The 'President' was larger than an English 74; she carried 56 guns of high calibre, for 30 of them were long twenty-four-pounders, and 24 of them were forty-two-pounder carronades; her crew amounted to more than 600, of whom 300 were said to be British seamen! Nothing is so clear as that Commodore Rodgers had gone out with a determination to fight the 'Guerrière' frigate, and that, not finding her, he gladly attacked what he found. As he was descending the Chesapeake he questioned his people as to their readiness to fight. It may be presumed that these people were found more willing to fight our little sloop-of-war than they would have been to contend with our frigate, inferior as she was. At first the 'Little Belt' hauled up in chase to discover what the big ship was. At about half-past one

* The principle quoted by the Americans was right, however hard its present application; governments and dynasties pass away, but the country, the state remains, and must be made answerable for the past; but what was complained of at the time was the insolent, impatient manner in which the Americans pressed their demand on the old Bourbon prince, after having tamely submitted for so many years to the injustice and spoliation committed by Murat, under the orders of Bonaparte.

in the afternoon the 'Little Belt' was within ten miles of the 'President,' who then hoisted her ensign and commodore's pendant, and edged away, as if to meet the 'Little Belt.' Our sloop-of-war, at the same time, showed her number, and afterwards the customary signal, calling upon the stranger, if a British ship-of-war, to show hers. As Commodore Rodgers did not answer the signal, Captain Bingham concluded that the 'President' was showing her true ensign, that she was an American frigate, and consequently a neutral; and thereupon he hoisted his colours, wore, and resumed his course. Upon this Commodore Rodgers crowded sail in chase, being, as he afterwards said, desirous of speaking the sloop-of-war, and of ascertaining what she was. Captain Bingham now made the private signal, and, finding it unanswered, he felt assured that the stranger, notwithstanding her chasing, must be an American; and, therefore, he hauled down both ensign and signal, and continued his course. At half-past six in the evening the 'President' got near to the 'Little Belt,' who shortened sail, re-hoisted colours, and hove to, Captain Bingham wishing to remove all remaining doubts on either side, before it grew dark. But, to avoid being taken by surprise, Bingham did what every officer was bound to do in such circumstances—he double-shotted the 'Little Belt' guns, and got all clear for action. The 'President' approaching as if she intended to take a raking position, the 'Little Belt' wore three times. At eight o'clock in the evening the two ships were not above ninety yards apart, the 'Little Belt' being upon the starboard tack. And now Captain Bingham hailed the 'President' in the usual manner. The 'President' returned no answer, the Americans verifying now, as they had done on a previous occasion, the old adage, that there are none so deaf as those who will not hear. Meanwhile the 'President' kept advancing, as if intending to rake the 'Little Belt,' by passing astern of her. But the 'Little Belt' wore a fourth time, and came to on the larboard tack. The 'President' also hove to, and the ships lay within eighty yards of each other. Captain Bingham standing forward on a gun hailed, "Ship a-hoy!" The *neutral* frigate merely repeated, "Ship a-hoy." "What ship is that?" cried Bingham through his speaking trumpet. "What ship is that?" repeated Commodore Rodgers. And at this instant a gun was fired from the 'President,' and was presently answered by the 'Little Belt.' A furious though most unequal engagement ensued, and lasted for nearly half an hour, when the 'Little Belt,' owing to the loss of her after-sail and the damaged state of her rigging, fell off, so that no gun could bear. As she ceased her firing the 'President' ceased hers. Shortly after this Commodore Rodgers hailed, and learned, what he and his officers, and every seaman on board, must have known many hours before, that the vessel he had been fighting with was a British ship, and consequently (as there was no declaration of war between the two countries) a friendly ship. But Rodgers pretended that it was now for the first time that he ascertained the nation and quality of our sloop-of-war! This worthy citizen of the United States then put the question, whether his weak antagonist had struck? Captain Bingham answered with a right good English "No!" Our poor sloop-of-war lay almost a wreck upon the waters: her rigging was cut to pieces; not a brace or a bowline left; her masts and yards were badly wounded; her gaff was shot away; her upper works were riddled; her hull was much battered, and shots were entering her side between wind and water. Nothing but the lowness of her hull in the water, and the close distance at which she had fought, could have prevented her from being sunk by the enormously heavy broadside of the 'President.' And there wanted but this last catastrophe to crown the whole exploit—to put a climax to this first grand deed of the republican navy—to this atrocious attack on a cock-boat in a time of peace. Out of her small crew Bingham's sloop had eleven killed and twenty-one wounded. During the night the 'President' lay to, repairing her trifling damages, and waiting for daylight in order to have a clear and satisfactory view of the effects of her powers. The 'Little Belt' also lay to, getting fresh spars upon deck, and patching up her rigging. As soon as it was daylight (on the 17th of May) the American ship bore up, and to all appearance seemed ready to renew the action. At eight A.M. she passed within hail of the 'Little Belt,' and Commodore Rodgers cried out "Ship a-hoy! I 'll send a boat on board, if you please, sir." Bingham replied, "Very well, sir." The boat went under the command of Rodgers's first lieutenant, who bore a message from the commodore to the English captain. These American officers could plead blindness as well as deafness whenever it suited their purpose. They had kept the 'Little Belt' in sight for hours of broad daylight before the action commenced, they had had her so near, according to Rodgers's own official letter, that those on board the 'President' could measure her low stern and her broadside; they had good glasses on board, and they used them, and one of his officers said that Rodgers very well saw both the colours and the size of the 'Little Belt;' yet now, in his message to Captain Bingham, he professed to lament much "the unfortunate affair," and declared that, if he had known that the 'Little Belt's' force was so inferior to the 'President's,' he would not have fired into her! On being asked why he had fired at all, the American lieutenant replied, that the 'Little Belt' had fired first. This was denied by Captain Bingham, and by all on board the sloop. The lieutenant then, in the name of his commodore, offered assistance—nay, the magnanimity went so far as to suggest that, notwithstanding the total exclusion of the British flag, the shattered 'Little Belt' might be allowed to go into a port of the United States to repair and refit. Better for men who prized the honour of their

country, and who put a right estimate on this American generosity, to run the risk of sinking one and all, with their little ship, and with their own flag flying, than accept these offers! Captain Bingham declined them; the boat returned, the 'President' made sail to the westward, and the 'Little Belt,' as soon as she could do so, kept her own original course to the northward.*

It followed, as a matter of course, that, when President Madison and his congenial government were applied to for explanations, they disavowed any hostile orders, declared that their intention was only "to protect the coast and commerce of the United States," and repeated the monstrous fiction of their commodore, that a vessel not one-fourth equal to her in point of force had provoked, sought, and actually commenced an action with the 'President.' They commended Rodgers for all that he had done, they held him up as a man of spirit and determination, and when the war began in a somewhat more regular manner, they put him forward as their pet champion, and as the proper hero to defend the rights and dignity of their republican flag—which, indeed, we must admit Rodgers was. On the other side, the captain, officers, and crew of the 'Little Belt' received the applause of every generous mind (some in America not excepted), for the spirit they had manifested; and, on the 7th of February, 1812, Captain Bingham was promoted to post rank.

The English government, however, had sent out a new envoy to Washington on the hopeless task of attempting a friendly negociation. This new envoy and minister plenipotentiary was Mr. A. Foster, who had been secretary of embassy to Mr. Merry, in the years 1804-5-6, who knew the United States well, and who had many friends among their natives. Besides these advantages—as they were considered in the eyes of those who appointed him—Mr. Foster had a mild and conciliating temper, a good deal of diplomatic experience and address, and manners that were calculated to please and charm civilized men. But these advantages, or the greater part of them, were really disadvantages in America: Mr. Foster's friends were all of the federal or Washingtonian party, and that party was now crushed by Jefferson's mobocracy, who took his mildness for timidity, his gentlemanly manners for effeminacy, and who delighted to expose him on every possible occasion to that vulgarity and brutishness which were considered as essential parts of republicanism. We do not, however, mean it to be implied that any British diplomatist could now have done more than Mr. Foster did—that is, *nothing*. But, through the fault of our government, Mr. Foster was left doing this down to the moment that President Madison threw the gauntlet in our face.

In every stage of these American troubles our opposition party in parliament, and our Ultra-Whig and Radical newspapers, had so far taken sides with the Americans as to attribute the entire blame, or all the original causes of disagreement, to the folly, imbecility, or wickedness of our own government. And many who did not go to this extreme length, and who considered the quarrel with a more immediate reference to the purse and the commercial prosperity of the country, had maintained all along that in spite of the Berlin and Milan decrees, in spite of the glaring subserviency of America to France, in spite of the consideration, that, if we gave to the flag of the United States all that it claimed, that flag must render the most vital services to our numerous enemies, and at the same time monopolize to itself the trade of nearly all Europe, we ought to revoke our orders in council, and yield every contested point in them, forasmuch as the said orders in council were, particularly since America had closed her ports against us, and had stopped all intercourse of trade with us, far more mischievous to Great Britain than to the United States. Nearly all the political economists—in whose frigid school the warmth of patriotism and nationality seems apt to freeze—were of this opinion, and they were seconded and supported by our manufacturers, who could ill bear the interruption of their great export trade to America. From some of these quarters repeated intimations had been sent across the Atlantic, that, if the Americans would but keep aloof from any engagements with France, the orders in council would either be revoked, as regarded them, or very much modified. A committee was actually appointed by the House of Commons to examine the effects of the orders in council on the commercial interests of the nation, and this committee continued its inquiries during all the agitation which followed the assassination of Mr. Perceval. On the 16th of June (1812), Mr. Brougham (now Lord Brougham), the most eloquent of the advocates for the revocation of the orders, after minutely stating the facts brought out by the committee's inquiries, moved an address to the prince regent, beseeching him to recal or suspend the orders in council, and to adopt such other measures as might tend to conciliate neutral powers, without sacrificing the rights and dignity of his majesty's crown. Lord Castlereagh, now secretary of state for foreign affairs, deprecated the attempt to bring so important a question to a hasty decision, and stated that it was the intention of government to make a conciliatory proposition to the United States. After some demur Mr. Brougham withdrew his motion on the intimation that this definitive proposition was already decided upon in the cabinet, and would appear in the very next Gazette. And, accordingly, on the 23rd of June (1812), there appeared a declaration from the prince regent in council, absolutely revoking the orders in council as far as they regarded America. It had not been until the 20th of May that Mr. Russell, the American chargé d'affaires, transmitted to Lord Castlereagh "a copy of a certain instrument, *then for the first time communicated to this court*, purporting to be a decree passed by the

* James, Naval History.—Bingham's Report, and Court-Martial evidence.

government of France on the 28th day of April, 1811, by which the decrees of Berlin and Milan are declared to be definitively no longer in force in regard to American vessels." This long concealed document, or this document with a French falsified date, which was dated from the Palace of St. Cloud, stated that it was on account of the law passed by the congress of the United States on the 2nd of March, 1811, which ordered the execution of the provisions of the Act of Non-Intercourse with Great Britain, and on account of the resistance to the arbitrary pretensions of our orders in council, and the refusal of the Americans to adhere to a system invading the independence of neutral powers, and of their flag, that the Emperor Napoleon had revoked his decrees with regard to them. The prince regent's revocation contained a proviso, that the present order should be of no effect unless the United States revoked their Non-Intercourse Act. It has been usual to say that the revocation came too late; that, if our government had conceded it only a few weeks or a very few months earlier, there would have been no war with America. Now Madison had been treating with Bonaparte's government ever since the end of 1810; he had agreed to the preliminaries of a treaty with that government early in the summer of 1811; and the whole course of his conduct, and his passionate desire to illustrate his presidency by annexing Canada to the United States, were proofs demonstrative of his determination to brave a war with England. If this had not been his fixed and unalterable resolution in May, 1811, Commodore Rodgers would never have received from Washington the orders under which he had acted. The truth is, that Madison and his party had nicely calculated on which side lay the greater amount of profit to be obtained, or whether the United States would gain more by going to war with England than by putting herself in a state of hostility against Bonaparte and his edicts. As for the cogent logic of fear, or as to any immediate apprehensions from the "invincible" armies of the Man of Destiny, they could now have gone for nothing, for the French had no fleets left to convey great armies across the Atlantic—they could scarcely show a ship at sea anywhere. "Everything in the United States," says the historian of our navy, "was to be settled by a calculation of profit and loss. France had numerous allies; England scarcely any. France had no contiguous territory; England had the Canadas ready to be marched into at a moment's notice. France had no commerce; England had richly laden merchantmen traversing every sea. England, therefore, it was, against whom the deadly blows of America were to be levelled."* In April, 1811, when (according to French authorities) Madison's envoy at Paris got the St. Cloud revocation, and got other assurances from Bonaparte, the great storm gathering in the north, and which was destined to accelerate that conqueror's ruin, was not yet discernible to the eyes of American statesmen; when it became visible to them it was rather too late to retract, if Madison and his party had been inclined so to do; but it should appear that there was no such inclination, and that the president and the whole party felt inwardly convinced that the Man of Destiny, the most extravagant accounts of whose exploits were always the most current and the most admired among these republicans, would prevail over Russia as he had done over Prussia and Austria, and the more surely from Prussia and Austria being now his allies and assistants, and sending, like nearly every country in Europe, their troops to fight under the conqueror's orders. These Americans had cultivated the friendship of Russia; they had sent envoys to Petersburgh, who had fallen down on their knees as if to worship the throne of the czar; they had shown a strong leaning of affection to the Russian legation at Washington, and Jefferson had declared in his most emphatic style, that he firmly believed the Emperor Alexander to be not merely the best of sovereigns (for that were but a poor compliment according to his republican notions), but the best and most virtuous of men—"one enthusiastically devoted to better the condition of mankind"—and one who had "taken a peculiar affection to America and its government;"—but, notwithstanding all this, they believed, and they hoped, that Alexander would be crushed as the Emperor Francis had been, and that Bonaparte would soon date his decrees from Petersburgh as he had done from Vienna and Berlin.* It was believed, too, that the subjugation of Russia would leave Bonaparte without one powerful enemy on the Continent of Europe, and therefore lead to his employing all his means and energies against England. Great encouragement was also found in our temporary commercial panic, in the ill-timed report of our Bullion Committee, and in the parliamentary debates and the newspaper strictures to which it gave rise. Jefferson, for one, believed that the credit of the Bank of England was gone for ever, that the nation was bankrupt: and Jefferson, though no longer president, was still the oracle and tutelary genius of the anti-English and war party.

The moderation of England had allowed the American government to choose its own time. On the 14th of April, at a *secret sitting* of Congress, an embargo was laid on all ships and vessels of the United States, during the space of ninety days. This was intended to lessen the number of trading American vessels that would be at the mercy of England when war was formally declared, and at

* James.

* Sir Augustus Foster noted the democratic incongruity, that, of all the foreign legations at Washington, the one which seemed to be on the best terms with the Americans was the Russian;—"for, strange to say, they have always had a leaning of affection to the most absolute of all governments, and have been publicly as well as individually assiduous in courting the good graces of the autocrat." At a later period Sir Augustus mentions the surprise of the present Emperor Nicholas, at seeing the American envoy, the celebrated republican John Randolph, of Roanoke, drop on his knees to present his credentials. Sir Augustus had the anecdote from the emperor's own lips.

the same time to secure for their leviathan frigates, their privateers, and their other fighting ships, good and numerous crews. As there had been but little trade ever since their Suspension of Intercourse Act, as grass had already begun to grow on the deserted wharves of New York and Philadelphia, it was easy to obtain vessels and men for what they hoped might prove the profitable trade of privateering; and by getting the start, by taking England by surprise, they were pretty sure to make a good harvest in the American seas and among our West India islands. By the end of May most of the fastest sailing ships, brigs, and schooners of their merchant service were fitted, or were fitting out, as privateers; and many lay ready to sail the moment that war should be declared. They had not to wait long.*

The moderate party, which was now joined by a few of the anti-federalists or Jefferson men, made several efforts to avert or retard the breach; and by so doing they exposed themselves to charges of treachery and treason in the newspapers, and to the risk of being torn to pieces, or tarred and feathered by the mob, or cuffed and kicked within the hall of Congress by their furious opponents. On the 29th of May the matter was brought to a decision, by the rejection of a resolution, "That under the present circumstances it is inexpedient to resort to a war with Great Britain,"—which resolution was negatived in the House of Representatives by 62 against 37. On the 1st of June President Madison sent an awfully long message to both Houses of Congress, enumerating all the provocations received from England, commencing from the very beginning of the existence of the United States as an independent nation, reviving differences which had been long since considered as settled, putting in new pretensions and causes of quarrel, inventing some facts, and distorting others, giving a false colour and character to the conduct of the British government, misrepresenting the temper and feeling of the British people, and cleverly jumping over all the provocations, insults, and serious injuries which America had received from republican, consular, and imperial France, and to all of which she had so meanly submitted. On the 4th of June—probably because that day was the birth-day of our poor, old, blind, and distraught king, who had once been his sovereign—Madison laid before the two Houses copies of the correspondence which had passed between his government and Mr. Foster, the English envoy at Washington, intimating that from that correspondence it would appear that Great Britain was determined neither to revoke her orders in council, nor to concede any important point. Stormy and terrible were the debates which followed; loud were the boastings of one party, and dismal the predictions of the other. On the 18th of June, two days after Mr. Brougham's friendly oration in the House of Commons, they came to their resolution and declaration. Quibbling to the last, they did not declare war as it is usual to declare it; but they declared that the United States and Great Britain were, and had for a long time past been, in an actual state of war! This determination was carried in the House of Representatives by 79 against 49. The supporters of war were chiefly from the western and southern states to Pennsylvania inclusive; the advocates for peace were chiefly from the eastern and northern states. The ominous note of disseverance was again heard, the eastern and northern states complaining that their interests were sacrificed to the passions and the interests of their neighbours. When the news reached Boston, that city, though the cradle of the American revolution, put on mourning, and muffled its church bells. The same tokens of distress and grief were displayed in other towns of the east and north; but at Baltimore, where, as in other ports of the southern states, swarms of privateers were all ready to pounce upon the British West India trade, the exulting and furious mob perpetrated cruel atrocities upon some of the opposers of the war.

In those states where men were free to express their pacific sentiments, and their English predilections, many a bold remonstrance was made, and now, as at a later period, the war was set down as impolitic, unjust, iniquitous, and the central government was reminded of the weakness of the ties which bound the east and the north to it, and to the states of the west and south. These men said that, if war could be justified against Great Britain, it could only be on the ground assumed by the president and his government that the French decrees had been actually repealed, if not as far back as November, 1810, at least as far back as April, 1811; that the indiscriminate plunder and destruction of American commerce, the capture of American ships by the cruisers of France, and their condemnation by her courts and by the emperor in person, together with his repeated and solemn declarations that the Berlin and Milan decrees were still in force, and constituted the fundamental laws of his empire, at a period long subsequent to the pretended repeal, furnished a conclusive answer to this question. That this important question, moreover, was now definitely answered from another quarter; that the American people had now learned with astonishment the depth of their degradation—had learned that the French emperor, as if to show to the world that he held the Americans and their government in utter contempt, had reserved till May, 1812, the official declaration of the fact that these decrees were repealed in April, 1811; and then, not in consequence of his sense of their injustice, but because the American government had complied with his conditions and proposals by shutting her ports, and putting herself in a condition of hostility towards England; and that the emperor had since added that this decree of repeal was, when first drawn up, communicated to the American minister at Paris, as well as to his own minister at Washington, to be made known to the

* James, Naval History.

president and government. That, as the previous pledge of Great Britain had given the fullest assurance that she would repeal her orders in council as soon as the French decrees should cease to exist, and as her subsequent conduct left no doubt that she would have been faithful to her promise, they (the American remonstrants) could never too much deplore the long neglect to make known to Great Britain this repeal, whether such neglect were attributable to the French government or to their own. They continued—"If to the former belong the guilt of this duplicity and falsehood, every motive of interest, and every incitement of duty, call loudly upon our administration to proclaim this disgraceful imposition to the American people; not only as it would serve to develope the true character and policy of France, but to acquit our own officers of a suppression too serious to be overlooked or forgiven. But, whatever may be the true state of this mysterious transaction, the promptness with which Great Britain hastened to repeal her orders, before the declaration of war by the United States was known to her, and the *restoration of an immense amount of property, then within her power*, can leave but little doubt that the war, on our part, was premature, and still less that the perseverance in it, after that repeal was known, was *improper, impolitic*, and *unjust*."* These remonstrants drew a striking picture of Bonaparte's despotism in France, and his unprovoked invasions, his conquests and oppressions, in other countries. Admitting that England might have been guilty of many faults, they contended that she was still the most free and best governed country in Europe, the only champion of the independence of the other European nations; and they asked whether it became the free and independent republic of the United States to court the friendship of Bonaparte by rushing into a war with England? If war was to be the portion of these United States, still they must regret that such a moment and such an occasion should have been chosen for the experiment;—"that, while the oppressed nations of Europe are making a magnanimous and glorious effort against the common enemy of all free states, we alone, the descendants of the pilgrims, sworn foes to civil and religious slavery, should voluntarily co-operate with the oppressor to bind other nations in chains; that, while diverting the forces of Great Britain from the mighty conflict, we should endanger the defenceless territories of others." They called attention to the notorious and exasperating fact that Bonaparte had neither restored the American ships and cargoes he had seized, nor had so much as promised any indemnity for them. They said that, if this rash war was undertaken to appease the resentment or secure the favour of France, deep and humiliating must be the disappointment; for, although the emperor was "lavish in his professions of love for the American people," although he applauded their ready self-devotion, and declared "that their commerce and their prosperity were within the scope of his policy," yet no reparation had been made or offered for the many outrages, indignities, and insults he had inflicted on their government, nor for the unnumbered millions of which he had plundered their citizens.*

The aspect of Canada was very tempting. We had few regular troops there; hardly any preparations had been made to meet the coming invasion, though it had been foreseen for some months; our frontier forts and posts were in a poor condition; our dependence was almost solely upon the militia of the country; and the statesmen of Washington and other men hoped that the French Canadians would be enchanted by the warbling of the republican voice, and join the invaders rather than fight against them. As far back as November, 1811—that is to say, nearly eight months before their declaration of war—the central government had ordered that a force of 10,000 men should be collected at Boston. It was no doubt intended that the destination of this force should be kept secret, but the American government could never stop the babbling of American newspapers. Besides, this force, which was to be kept in readiness to march at a moment's notice, could have no other object than the invasion of Canada. Other measures, and particularly the sudden enrolment of 50,000 volunteers by the government of the United States, confirmed the opinion. But our own government was oppressed by the weight of more serious business; our local government in Canada had fallen to the lot of some incompetent men; and both were induced to believe that the United States in the end would shrink from a war which must commit their principles, their interests, and their safety, and—as it was believed—lead to hostilities between states and states, and finally to the dissolution of the federal union. If we look to the tremendous struggle going on in Spain, where the war depended almost solely upon English arms and English money, and in Russia, where English counsel, countenance, and support were required, and then to the war of independence which burst out in Germany, and to the immensity of means required, and the incessant attention demanded from the English government to keep alive the flame that was spreading throughout Europe, we shall comprehend that our ministers were entitled to some excuse for their neglect of American affairs; yet still they will remain amenable to the charge of having been guilty of the folly of too much despising the new enemy arrayed

* *Remonstrance of the Legislature of the State of Massachusetts against the War with Great Britain. State Papers, Historical Register of the United States*, vol. i., *Washington City*, 1814.

* They also dwelt upon the internal danger sure to result from any close connexion with the French, whose interference in the affairs of a foreign country had always ended in intestine dissensions and usurpation. "When we consider," said they, "the mysterious secrecy which has veiled the correspondence of the two governments from our view, and, above all, when we consider that in many instances the most important measures of our government have been anticipated in Paris long before they were known to the American people, we cannot conceal our anxiety and alarm for the honour and independence of our country: and we most fervently pray that the sacrifices we have already made to France, like the early concessions of Spain and Portugal, of Prussia and Sweden, may not be the preludes to new demands and new concessions; and that we may be preserved from all political connexion with the common enemy of civil liberty."—*Ibid.*

against them at this most busy and most critical moment.

Early in the year 1812, months before the hostile declaration, and while Madison was constantly assuring our envoy that he wished to continue amicable negotiations, the van of the invading army assembled near the Detroit frontier. It was 2500 strong, was well provided with artillery, and was under the command of Hull, who passed with the Americans for a great general and strategist. To defend the far-extending frontiers of Upper and Lower Canada, and to do garrison duty in the interior of those extensive provinces, we had only, of regular force, about 4000 men, and some of these were invalids. The Canadian militia then incorporated in the two provinces amounted to about the same number. Sir George Prevost, the commander-in-chief of these forces, was, if not an old woman, assuredly no general. But fortunately we had in the Upper province an officer of energy and ability, the gallant and still-lamented Major-general Brock. This officer, knowing of the gathering of Hull's force on the Detroit frontier, and seeing that war was certain, sent discretionary orders to a British officer in charge of Fort St. Joseph to act either offensively or otherwise against the enemy at Michilimachimac, as he should find advisable; and that officer, on the 17th of July, a month all but a day after the declaration of war at Washington, captured the American place, with its garrison of sixty men and seven pieces of ordnance. This was the first operation of the war, and was attended with very important consequences: it gave confidence to the Indian natives, who had long and almost incessantly been engaged in a cruel war with the people of the United States, and who now joined the British heart and hand; it opened a ready communication with many of their scattered nations or tribes, and it paved the way to the subsequent disasters, and the humiliating catastrophe of the renowned Hull.

In the meanwhile Hull and his 2500 republicans crossed the Detroit frontier, being preceded by a boastful proclamation, in which he spoke of success as certain, and in which he invited and incited the *oppressed* citizens of Canada to throw off their allegiance to a king and become citizens of the republic. Hull's first serious disappointment was to find that his proclamation was laughed at; that the French or French-descended Canadians despised his invitation as much as the British settlers despised it; and that, in short, the loyalty of the Canadians in general was as indisputable as their activity and bravery. Hull took possession of the British village of Sandwich, but made no attempt upon the British garrison of Amherstburgh. As soon as Major-general Brock learned the entrance of the Americans into Canada, he sent Colonel Procter to assume the command at Amherstburgh. Procter's operations were so prompt and judicious that Hull beat a retreat, recrossing the strait, and encamping under the walls of Fort Detroit. Procter, following him, advanced to Sandwich, and raised batteries on the British side. Brave Brock came up with reinforcements; and Hull, reduced to extremities before his appearance, hedged up in a corner, with his retreat and supplies alike cut off, capitulated, on the 10th of August, with 2500 men and 33 pieces of artillery. The fort of Detroit, its ordnance, stores, and a fine American vessel in the harbour, became the prizes of the conquerors. By the same capitulation the whole of the Michigan territory, which separated the Indian country from Canada, was ceded to the British, whose frontier it vastly improved. Leaving Colonel Procter on the Detroit frontier, Major-general Brock moved off like the wind to sweep the Niagara frontier of its republican posts and forts. But, when he was sure of his object, Brock was paralysed by learning that his incompetent commander-in-chief, Lieutenant-general Sir George Prevost, had concluded an armistice with the American General Dearborn, which provided that neither party should act offensively until the government at Washington should ratify or annul the truce. If this unsoldierly knight had wished to serve the Americans, he could not have adopted a more fitting measure. As his armistice did not prohibit them from transporting ordnance, stores, and provisions to their menaced Niagara frontier, all these things were brought up in great quantities and with great haste; and when they had well fortified that frontier, and had assembled an army of 6300 men upon it—and, of course, not until then—President Madison refused to ratify the armistice. And, while this was doing, Sir George did so little for Brock that he was left to meet this new invasion with only 1200 regulars and militia. Being free to choose where they should cross the Niagara, the republicans chose to pass opposite the village of Queenston on that strait; and at daylight on the 18th of October 3000 of them began to effect a landing on the Canadian shore. The only enemy they had to encounter was a British detachment of 300 men posted in the village; but long and obstinately did this gallant little band contest their passage. During the struggle, Brock arrived unattended from Fort St. George, to meet the death of a hero. He fell in the act of cheering on his gallant little band to a charge. Our 300 then retreated, and General Wadsworth, with 1600 of his republicans, established himself on the heights behind the village of Queenston. But short was his triumph; at three in the afternoon he was attacked by 560 British regulars and between 400 and 500 Canadian militia, who broke his line through and through, put his 1600 men completely to rout, and captured, after a very brief contest, 900 men and the republican general himself. Many of those who escaped from the field were drowned in attempting to swim back to their own shore; 400 remained on the field killed or wounded; the whole corps which had crossed the Niagara was, in fact, annihilated. The loss on the side of the British and Canadians in killed and wounded did not exceed 100. Such was the result of Madison's first Canadian cam-

paign; such the first success of his project to make, in his own phrase, "*territorial* reprisal for *oceanic* outrages."

His success on the ocean, where success could scarcely have been hoped for, was somewhat more consoling. His ships, like his armies of invasion, were in the slips, and ready to go at a word or at a signal. Although New York is 240 miles from Washington, Commodore Rodgers received his instructions early enough to get from the harbour of New York on the morning of the 21st of June, the declaration of war having been issued on the afternoon of the 18th. Besides his enormous double-banked frigate (a frigate only by name), Rodgers took with him another ship of the same sort called the 'United States,' a 36-gun frigate, a sloop-of-war, and a brig-sloop. His first object was to get possession of a fleet of about a hundred sail of our homeward-bound West Indiamen, which knew nothing of the war, and were feebly protected by one English frigate and a brig-sloop. Off the Nantucket shoal Rodgers fell in, not with our sugar-ships, but with our tight frigate the 'Belvidera,' Captain Richard Byron, who had been warned a day or two before by a New York pilot-boat that war was declared or was on the point of being declared. Rodgers came up first in his own leviathan the 'President,' which was, or ought to have been, a match for an English 74. Captain Byron's frigate was an ordinary 36-gun frigate. Before the battle began two other frigates of the American squadron were in sight. Yet the 'Belvidera' fought the big 'President' for two hours, at times in a running fight, at other times at rather close quarters, firing upwards of 300 round shot from her two cabin eighteen-pounders alone, and causing more mischief than she received. Commodore Rodgers, who got severely wounded in the leg by the bursting of a twenty-four-pounder, which also wounded fifteen of his crew, fought shyly towards the close, yawed about, and so gave time for the 'Congress' frigate to come up. At about half-past six in the evening the 'Congress,' which carried 50 guns and a picked crew of 440 men with scarcely a boy among them, opened a fire upon the 'Belvidera,' but the distance was too great for even her long guns to take effect, and she presently desisted. Captain Byron, by lightening his frigate, by cutting away three of her anchors, by starting fourteen tons of her water, and by throwing overboard some of her boats—by repairing her injured sails and rigging with admirable alacrity, and by exerting all his good seamanship,—gained way on the American squadron, out-manœuvred them all, and finally escaped. And, what was of still more importance, the 'Belvidera,' by giving Rodgers a fifteen hours' dance, and by leading him far away to the northward, destroyed his chance of getting at our hundred sail of West Indiamen. The republican commodore did not get so much as a spoonful of that sugar to sweeten the cup of his disappointment.*

He got nothing but some floating cocoa-nut shells, orange-peels, and refuse of that sort.* On the 30th of July he steered for Madeira, and thence for the Azores, looking in vain for some good prize. He was so fortunate as to escape falling in with any of our ships of the line; and this luck attended him to the last, although he ran many narrow chances, and was almost constantly in a state of flight and trepidation, as his own letters and the log-book of the 'President' will prove. But, to increase his present vexation, the scurvy broke out among his crews. Having captured six or seven small merchantmen and recovered one American vessel, he returned homeward. His squadron gave chase to a single British frigate, but could not catch her; and he arrived at Boston without one national trophy. Such was the result of what has been humorously called Commodore Rodgers's "maiden cruize." †

More British ships of the line and the largest of our frigates, with full crews and the best appointments, ought to have been sent to the American stations, to increase the chance of capturing or sinking the American leviathans that were afloat under the fictitious name of frigates, but our Admiralty did not take these necessary steps, and left our frigates exposed to very unequal contests. While Rodgers was looking for our West India fleet, the 'Guerrière' frigate, Captain James Richard Dacres, escorted another fleet of our merchantmen on their way home, and having done this duty she was returning alone to Halifax to obtain that refit which could no longer be postponed with any safety, for her bowsprit was badly sprung, her mainmast had been struck by lightning and was in a tottering state, her hull, from age and long service, was scarcely seaworthy, and, not to enumerate other defects, her gunners' stores were deficient, and what remained of her powder had lost its strength from damp and long keeping. "In fact," adds the correct and excellent historian of our navy, "such was the state of general decay in which the 'Guerrière' at this time was, that, had the frigate gone into Portsmouth or Plymouth, she would, in all probability, have been disarmed and broken up."‡ It was in this state that, on the 19th of August, the 'Guerrière' encountered the heavy United States frigate 'Constitution,' Captain Hull, which was seventeen days only from port, in the most perfect condition, with her stores ample, her powder fresh, her full complement of 476 picked men, and with almost everything that could give superiority over the crippled and long cruizing English frigate. In height, in length, the 'Constitution' far exceeded her opponent, and the weight of her broadside was one-half heavier than that of the 'Guerrière.' Moreover the 'Constitution' filled her tops with riflemen, expert marksmen who had

† James.—Rodgers anchored at Boston on the 29th of August, just six days after the safe arrival in the Downs of the 'Thalia' frigate, which, through the admirable conduct of the 'Belvidera,' had been enabled to convoy safely home our hundred West Indiamen.

‡ James.

been drawn from the sportsmen of the country and from the backwoodsmen, whose supplies of animal food in good part depended upon the chase of the deer and wild buffalo, and whose rifles were seldom out of their hands. All the American war ships had men of this kind.* Captain Dacres, however, waited for his antagonist, nothing daunted by her superiority, or by the lamentable state of his own ship and stores. He had only 244 men and 19 boys on board. The battle began at about five o'clock. Through the badness of her powder the 'Guerrière's' shot fell short, while those of the 'Constitution' reached their mark. After availing himself for some time of his apparent advantage at long-shot distance, Captain Hull came to closer quarters. At about six o'clock a twenty-four pound shot carried away the 'Guerrière's' mizen-mast by the board. The mast fell over the starboard quarter, made a large hole in the counter, and caused the ship to bring up in the wind. The 'Constitution' was now enabled to take up an excellent position on the 'Guerrière's' larboard bow; and now the wild riflemen in the tops began their murderous fire upon the British frigate. This was accompanied by a sweeping fire of great guns, to which the 'Guerrière' could reply with only her bow guns. In a quarter of an hour the two ships fell on board each other. The Americans now attempted to board, but the sea was rough, and the motion of the two ships unfavourable to their purpose; and their ardour was moreover cooled by some well-directed shots from our marines (unluckily these brave fellows had only their common muskets), which brought down the first lieutenant of American marines that was leading the boarding party with his riflemen, passed through the body of the first lieutenant of the ship who was at the head of the boarding sailors, and brought down the sailing-master. Giving up his intention of boarding Hull made his riflemen continue their unerring fire from the tops. Captain Dacres was severely wounded by a rifle ball while in the act of cheering his men; but, though suffering excessive pain, he would not quit the deck. At nearly the same moment his sailing-master and the master's mate were wounded by those fierce backwoodsmen, who endeavoured to pick out the officers. In a few minutes after falling aboard the two ships got clear, the 'Constitution' showing no farther disposition to grapple with or lash her adversary, an operation which she might easily have performed, as the 'Guerrière's' bowsprit had got entangled in her rigging. Notwithstanding his fire-eaters in his tops, and his two men to one, Hull preferred availing himself of the immense advantages that were in his favour in a cannonading to a hand to hand fight and the experiment of boarding. As the two ships fell asunder the 'Guerrière' came to a little and brought a few of her foremost guns to bear. Some of her wads set fire to the 'Constitution's' cabin; but the fire was put out before it reached the powder. At this moment the 'Guerrière's' bowsprit, "striking the taffrail of the 'Constitution,' slackened the fore stay of the 'Guerrière,' and, the fore-shrouds on the larboard or weather side being mostly shot away, the mast fell over the starboard side, crossing the main stay: the sudden jerk carried the mainmast along with it, leaving the 'Guerrière' a defenceless wreck, rolling her main-deck guns in the water." At about half-past six, the 'Guerrière,' just after this accumulation of disasters, began clearing away the wreck of her masts, in order to be ready to renew the action. But, just as she had cleared away the wreck, her spritsail yard, upon which she had set a sail to try and get before the wind, was carried away, and the 'Constitution' ranged a-head. The English frigate now lay an unmanageable hulk in the trough of the sea, rolling her main-deck guns under water. But her guns did worse than roll under water, many of them breaking loose, owing to the rotten state of the breechings and of the timber-heads. The 'Constitution' now took a position within pistol-shot; and, it being hopeless to contend any longer, the 'Guerrière' fired a lee gun, and hauled down the Union Jack from the stump of the mainmast. It was within a quarter of seven o'clock when the gallant young Dacres struck. He had fought the big 'Constitution' under almost every possible disadvantage for nearly three hours. A flag thus lowered could carry no honour to the victors. In the English ship there were fifteen killed and sixty-three wounded; in the American, according to Hull's report, there were only seven killed and seven wounded—but American reports were very often not more veracious than French bulletins, and from certain differences of regulations it was easy to conceal the real amount of their wounded.* The republicans were very desirous of carrying the 'Guerrière' into port as a trophy, and as a substantial proof of their vengeance, for the 'Guerrière,' when commanded by Captain Pechell, had been a chief cause of the quarrel which arose about English deserters, which quarrel had led to the severe castigation of the 'Chesapeake' by the 'Leopard;' but the poor 'Guerrière' was so rotten and so shattered in her hull, that by daylight of the morning after the action she was found to be sinking. Having removed the prisoners on board, Hull gave orders to set her on fire; and at half-past three in the afternoon the old frigate blew up. Although they returned to port without their trophy, Captain Hull and his officers and men were applauded to the skies, were honoured with the thanks of the government, and were presented with 50,000 dollars as a reward for their wondrous exploit.

* To collect these expert marksmen officers were sent among the backwoodsmen of the West; and to embody them and give them some necessary drilling, a marine barrack (for the fellows were called marines) was established near Washington city. From this dépôt the American ships were regularly supplied.—*James.*

* Several of the 'Guerrière's' officers, when carried on board the 'Constitution,' counted thirteen wounded, of whom three died after amputation. "In the British service, every wounded man, although merely scratched, reports himself to the surgeon, that he may get his smart-money, a pecuniary allowance so named. No such regulation exists in the American service; consequently the return of loss sustained in action by an American ship, as far as respects the wounded at least, is made subservient to the views of the commander and his government."—*James.*

Not a word was mentioned respecting the vast inferiority of force of the ship which had struck, either by Captain Hull or by the government. The fact was merely put in this shape—a British frigate had struck to an American frigate. It was more satisfactory to American vanity to boast of this rare feat of arms, and of "the genuine worth of the American tar," than to institute any inquiry as to the relative strength and condition of the two ships. As for the Americanism of their tars, nearly one-half of the seamen of the 'Constitution' were natives of England or Ireland—were renegades that might have been disposed to fight the more desperately (as many such deserters and traitors were found to do on other occasions) from their dread of the yard-arm or the gibbet if their present co-mates and brethren should be beaten and they themselves captured. It appeared in evidence on a court martial that these British subjects on board the 'Constitution' were leading men or captains of guns. Several of them were personally known to some of the officers of the 'Guerrière.' Several of them had deserted quite recently from English men-of-war. One fellow had served under Mr. Kent, the 'Guerrière's' first lieutenant. Mr. Kent found him on board the 'Constitution' making buck-shot, to lacerate and mangle his own countrymen. Like the rest, he now went by a new name, or by what the Americans called "a second name." The scoundrel had conscience enough left to blush when his old commanding officer stood before him under the half-deck of the American frigate. In fact, there were on board the 'Constitution' so many men whom the crew of the 'Guerrière' considered as their countrymen, that the American captain became seriously alarmed lest some feeling of compunction and remorse, some natural return of the love of country, should induce the renegades and deserters to join the captured crew of the 'Guerrière,' overpower him and his native Americans, and carry the 'Constitution' as a prize into the British port of Halifax. Hull kept his prisoners manacled and chained to the deck during the whole of the night after the action, and during the greater part of the following day.*

On the 25th of October the 'Macedonian' frigate, Captain Carden, attacked the American frigate 'United States,' Commodore Decatur. Here the disparity of force was equally great: the English frigate was shorter and lower and pierced for fewer guns, and her guns were of lighter calibre; her crew consisted of 262 men and 35 boys, the latter being scarcely worth ship-room; the American, in addition to her fifty-five guns, mounted a brass howitzer in each of her tops, and her crew amounted to 477 men and *one* boy. Yet the 'Macedonian' fought the 'United States' for two hours, and did not strike until she was a complete wreck, with upwards of a hundred shots in her hull, and with her decks strewed with thirty-six killed and sixty-five wounded.†

On the 29th of December, the 'Java' frigate, Captain Lambert, who had been convoying some outward-bound Indiamen, attacked the big 'Constitution,' which was now commanded not by Hull, but by Commodore Bainbridge. Again the vast disparity of force led to the defeat, but not to the disgrace, of the British flag. The 'Java' fought the 'Constitution' for nearly five hours, gave her a tremendous battering both in the hull and masts, and killed and wounded many of her men, in spite of her great height and the amazing strength of her bulwarks. When the battle had lasted more than two hours, Captain Lambert fell mortally wounded by a musket-ball or a rifle-shot from the 'Constitution's' maintop; and the command then devolved upon Lieutenant H. Ducie Chads, who had been severely wounded ever since the commencement of the action, but who had persisted in remaining upon deck. When scarcely a stick was left standing, when the ship was encumbered with wrecks of spars and rigging, and when almost every discharge set her on fire, the crew of the 'Java' lost no heart; and, seeing the 'Constitution' running from them, in order to resort to her "long-shot tactics," and fancying that she was going off altogether, they cheered her to come back, as they could not give chase.* The 'Java,' like the 'Guerrière,' was so thoroughly battered before she

* Captain Brenton, Naval Hist.

† The spirit displayed by our seamen on this occasion had never been surpassed. When, as a last resource, Captain Carden attempted to lay the American frigate on board, every man was on deck, including even the badly wounded, and men who had lost an arm, and they all cheered, "Let us conquer or die!" But an accidental shot struck the 'Macedonian's' fore-brace and prevented her laying the enemy on board. It is to be added that during nearly the whole action the 'United States' carefully shunned close fighting, and fought in a Parthian or retreating manner.—*James.—Marshall.—Brenton.*

* The 'Java' was perhaps the very worst appointed and worst manned ship of war we had afloat. This is saying a great deal, for our Admiralty, obliged to keep at sea in all parts of the world such an immense number of men-of-war, straitened in their finances, and finding it difficult to obtain, at short notices, crews for all these ships, had certainly sent to sea a great many vessels exceedingly ill manned. The 'Java' was a French frigate (originally the 'Renommée') which we had captured. She had been patched up and commissioned only on the 17th of August of the present year. The greatest difficulty was found in providing her, in a hurry, with any crew. There were about 60 Irishmen put on board of her who had never been at sea in their lives, except now when they crossed over from Ireland; about 50 mutinous rascals were drafted from a sloop-of-war lying at Spithead; and the press-gangs and the prison-ships furnished the rest. Captain Lambert remonstrated; but the Admiralty, not being able to give him better men, told him that a voyage to and from the East Indies would turn his landsmen, mutineers, thieves, and pickpockets into good sailors; and so perhaps it might have done if the voyage had not been liable to interruption. Eight tried and excellent seamen were, however, allowed to volunteer from the 'Rodney,' 74. But in all, including most of the petty officers, there were not 50 men that had ever been in action, or that could be called seamen. Eighty-six supernumeraries were shipped, but they were nearly all Marine Society boys; and in the total of 397 persons of every description there were a good many more boys. Next to the 'Rodney's' 8 men, the best men on board were the marines; yet, out of their number of 50, 18 or 20 were raw recruits. Before leaving Portsmouth, Captain Lambert declared to some of his friends that, owing to the ineffective state of his crew, he did not consider the 'Java' equal even to a French frigate if he should chance to encounter one.

The 'Constitution' was rather larger and heavier than Commodore Rodgers's ship the 'President.' Her crew consisted entirely of able-bodied men and practised sailors, there being the usual proportion of deserters from English ships, and of other subjects of Great Britain, whose treason and dread of the gallows disposed them to fight desperately. Her total number of men was 477. "The 'Constitution,'" adds the painstaking and accurate historian of our navy, "captured the 'Java' certainly, but in so discreditable a manner that, had the 'Java' been manned with a well-trained crew of 320 men, no doubt remains in our mind, and we have considered the subject seriously, that, notwithstanding her vast superiority of force, the American frigate must either have succumbed or have fled. Indeed, if American report be worth attending to, Captain Bainbridge, once during the heat of the action, had an idea of resorting to the latter alternative; but his first lieutenant, Mr. Parker (a native of Great Britain, we have been informed), succeeded in dissuading him from the measure."—*James.*

surrendered, that the American commodore set her on fire, as Captain Hull had set fire to the 'Guerrière.' The British 18-gun brig-sloop 'Frolic,' Captain Thomas Whinyates, which had been five years in the West Indies, and had a weak and very sickly crew, which had suffered severely in her masts and rigging in a storm the night before, attacked the United States 18-gun ship-sloop 'Wasp' five days only from the Delaware. In less than ten minutes after the action had commenced, and chiefly through the injuries she had sustained in the storm, which made it impossible for her to carry sail so as to tack, the British sloop lay an unmanageable hulk upon the water, exposed to the whole raking fire of her antagonist, without being able to return it with anything more than one of her bow-guns. The American, who had thirty-three minutes' firing almost entirely to himself, kept on pouring broadside after broadside, in order still further to thin the crew on the 'Frolic's' deck, and so make boarding easy, or in the hope that the 'Frolic' would strike and save him the trouble and the risk of boarding. But, let him blaze away as he would, the 'Frolic' would not haul down her colours, although the whole range of her deck was swept, and her captain was so severely wounded that he could not stand without support. It was but dastardly work to continue his unanswered fire, and to shirk boarding at once so helpless a craft. Boarding would have stopped the carnage; but it was not until the action altogether had lasted forty-three minutes, when they could scarcely see a man alive upon the 'Frolic's' deck, that the Americans boarded her. Americans we call them all, for convenience; but the first fellow among them that attempted to get on board the 'Frolic' was a well-known English sailor named "Jack Lang." No resistance could be offered to the numerous boarders; except the man at the wheel, the captain, and the second lieutenant, who was as badly wounded as the captain, and holding on for support, there was hardly any body left upon deck alive, all the rest being wounded, or in attendance upon the wounded below. Another of her lieutenants and her master were mortally wounded; 15 seamen and marines were killed, and 43 seamen and marines were wounded. In her wrecked and logged state, the 'Frolic,' in fact, had lost nearly half of her crew from the murderous and unanswered fire of the American guns. Here there was a less apparent disparity than in the frigate actions, but still there was a real and great disparity of force, even without taking into account the injuries the 'Frolic' had sustained from the storm, or the sickliness of her crew. The 'Frolic' had only 92 men, the 'Wasp' had 138; the 'Frolic' measured 384 tons, the 'Wasp' measured 434 tons.*

The victor was not permitted to carry his trophy into port, for the British 74 'Poictiers' hove in sight in the course of a few hours after the battle, recaptured the 'Frolic,' and captured the 'Wasp.' The boastful republic did not, however, fail to inscribe the name of Jacob Jones, the captain of the 'Wasp,' on the list of her immortals.*

There is an important lesson to be learned from the history of the rapidly democratized American republic, and of the conflict of its parties, wherein, through the nature of the struggle which had dissevered those states from Great Britain, the nature of the country, and the form and nature of the constitution which they had adopted, victory was sure to remain to the mob, or to the demagogues that pleased and flattered the mob, making it inevitable that presidents like Washington and Adams should be succeeded by chief magistrates like Jefferson and Madison: there is also instruction and admonition to be found in the last days of George Washington the Liberator; and therefore we have given some time and attention to these details, not having before said a word about the United States and their affairs since the time when Great Britain recognised their independence. Those national feelings which, we trust, will quit us only with our last breath, have induced us to go into some details of the causes which produced the new war with Great Britain, of the manner in which that war was conducted, and of the plans and objects which the American government had in view, in entering into that unnecessary conflict.

We showed at the close of the year 1811 the temper and policy of Bernadotte as Crown Prince of Sweden, the disposition of the Russian cabinet, and the fixed determination of Bonaparte to attack the Emperor Alexander in his own vast and remote dominions, because that sovereign would not ruin his country by enforcing the Berlin and Milan decrees, and, perhaps still more, because Bonaparte could no longer bear to hear the power of the Czar compared with his own. He treated Bernadotte like a revolted subject and traitor; he summoned Sweden as a vassal, to enforce his decrees against the British trade; he seized and confiscated fifty Swedish merchantmen; and lastly, in January,

* The crew of the American vessel consisted not of invalids wasted by yellow fever and other endemic diseases, but of young and able-bodied seamen, all fresh from port; there was only one boy or lad among them, and he was seventeen or eighteen years old. As usual, many of the crew were British or Irish. Even the midshipmen, and she had twelve or thirteen of them on board, were full-grown men, chiefly masters and mates of American merchantmen, while the one solitary midshipman on board the English sloop was a boy. The 'Frolic' had indeed eighteen boys in addition to her ninety-two men, but they were children, fit only to be used as powder-monkeys.

* Captain Jacob Jones was possibly of the number of those who liked hard dollars better than fame or immortality. But even in a pecuniary way he was tolerably well rewarded. President Madison's government gave 25,000 dollars to Jones, his officers and crew, and a gold medal to Jones, and silver medals to his officers, "in testimony of their high sense of the gallantry displayed by them in the capture of the British sloop-of-war 'Frolic,' of *superior force.*—*James, Naval Hist.*

It is impossible to read any regular American accounts of any of these maritime transactions without being reminded of "the great type of liars," whom Congreve has made proverbial. They have been disproved by the most honourable and truth-telling of eye-witnesses; they have been controverted by official documents, American as well as English; they have been branded for what they are by mechanical or by other very simple processes, such as measuring the size of the opposing ships, the length and calibre of the guns, weighing the balls used on either side, &c.; and yet the Americans and their admirers, with a brazen impudence, continue to this day to repeat the monstrous flams; and Mr. Fennimore Cooper, the most popular of their romance writers, turning naval historian, repeats nearly all of them without abatement, while to some of them he adds flourishes of his own, the materials of which he must have found in the same purely imaginative faculty which constructed the stories of 'The Red Rover' and 'The Last of the Mohicans.'

1812, he sent Davoust, one of the roughest and most brutal of his generals, to take possession of Swedish Pomerania and the Isle of Rugen. This aggression induced Bernadotte, who had been corresponding with Russia before, to sign a treaty of alliance with the Emperor Alexander. The treaty was signed in March, 1812; and in an interview which took place between the Gascon and the Czar their plan of resistance was settled. Though war was not declared, Bonaparte was pouring troops into Prussia, Pomerania, and the Duchy of Warsaw. The frontiers of this Polish duchy touched the limits of Alexander's dominions, and the Poles, inflamed by their old animosities against the Russians, and not yet disabused of the confidence they had put in the French, were ready to arm and act, and were still dreaming about the re-construction of their ancient nondescript, and about their restoration, by Bonaparte, to a national independence. The Emperor Alexander, therefore, reinforced his armies and awaited the attack.

The astute Fouché once more interposed between Bonaparte and his ruin. He presented a memorial full of facts, arguments, and even eloquence; but, together with other advice from better quarters, it was thrown away upon the pride and conceit of the Man of Destiny, who seemed now but a foredoomed man. "I regulate my conduct chiefly by the opinion of my army! With 800,000 men I can oblige all Europe to do my bidding. I will destroy all English influence in Russia, and then Spain must fall. My destiny is not yet accomplished; my present situation is but the outline of a picture which I must fill up. I must make one nation out of all the European states, and Paris must be the capital of the world! There must be all over Europe but one code, one court of appeal, one currency, one system of weights and measures; I will destroy all Russian influence as well as all English influence in Europe. Two battles will do the business; the Emperor Alexander will come to me on his knees, and Russia shall be disarmed! Spain costs me very dear; without that I should have been master of the world by this time; but when I shall become such by finishing with Russia, my son will have nothing to do but quietly to retain my place."* Such was the rhapsody which this strange being returned to his friendly remonstrants and advisers. Though his head was clear, both head and heart were possessed by a sort of monomania; and, just before the campaign and during its progress, as well as after its fatal termination, he betrayed symptoms of an alienation of mind, and of a disordered state of stomach and of general health.

Before quitting Paris, Bonaparte directed Maret, now Duke of Bassano and minister for foreign affairs, to write a letter to Lord Castlereagh proposing negotiations with England, on the basis of the *uti possidetis*. He now professed to be willing to grant nearly everything that he had refused during the negotiations which preceded the rupture of the Peace of Amiens—to allow Sicily to remain under the Bourbon Ferdinand IV., and Portugal to remain under the House of Braganza; but he still insisted that Spain should be secured to his brother Joseph. At such a moment no statesman could be blind to the motives which dictated this proposition for peace with England, and none but a traitor or an idiot could have entertained the proposition. It was quite enough for Lord Castlereagh to reply, as he did, that our engagements with the Spanish Cortes, acting in the name of Ferdinand VII., rendered our acknowledging Joseph impossible.

Early in May Bonaparte grossly insulted the Russian minister at Paris, and sent him his passports. On the 9th of May the Emperor of the French, with his young Austrian empress, set off for Dresden. Obedient to his summons, the kings of his own making, Bavaria, Würtemberg, Saxony, Westphalia, and other tributary princes, met him in the fair Saxon capital. Thither also repaired the Emperor of Austria, with his empress; and the King of Prussia, who could not bring his queen, for she had been slain by the evil tongue and evil doings of Bonaparte and his agents. His Prussian majesty had been already obliged to sign a treaty which placed 20,000 men of his diminished army at the disposal of Bonaparte. The Emperor of Austria now engaged to furnish 30,000 men to act against Russian Poland. After brilliant festivals, and balls and plays, wherein Talma played to a parterre or pit of kings, Bonaparte quitted Dresden and his wife, and posted to Thorn, where he arrived on the 2nd of June. His immense army was already assembled in Poland, chiefly between the Vistula and the Niemen. Europe had never seen such a condensed host: there were 270,000 French, 80,000 Germans of the Confederation of the Rhine, 30,000 Poles, 20,000 Italians, Lombards, Tuscans, Venetians, Romans, Neapolitans, and 20,000 Prussians! On the 24th and 25th of June this immense army, in three large masses, crossed the Niemen, then the boundary of the Russian empire, and entered Lithuania, without meeting with any opposition. The Russian army, under Barclay de Tolli, 120,000 strong, evacuated Wilna, the capital of the province, as the French approached, retiring slowly and in good order towards the river Dwina. Another Russian army under Prince Bagration, 80,000 strong, was stationed near the Dnieper. On the 28th of June Bonaparte entered Wilna, where he remained until the 16th of July, more and more confident that the Russians would not dare to face him in the field, and that the obstructions of nature must yield to his iron will and the confidence and energy of his army.*

* Fouché.—Abbé de Pradt.

* While at Wilna, Bonaparte received a deputation of Polish patriots from the diet of the duchy of Warsaw, who entreated him to proclaim the union and independence of Poland. His answers were cold, cautious, or enigmatical. He told them that he had guaranteed to his father-in-law, the Emperor of Austria, the part of Poland which he actually possessed; and that for the rest they must depend upon an inscrutable Providence and their own efforts. The effect of this answer, and of the marauding, ruffianly conduct of his army in Poland, and in Lithuania, which had once been a part of Poland, he and that army felt to their cost when they had to fly through those regions from the icy hammer of winter and the sharp spear of the Cossacks.

In the meanwhile the native country of Kosciuszko was treated as the country of an enemy. So enormous a force required supplies commensurate; and, as the armies had always been accustomed to live at large, according to Bonaparte's theory and practice that every war should support itself, the French commissariat was very defective, and the French government averse to making any great outlay for provisions. Those which had been ordered to be collected in Wilna and other places came on but slowly, and the markets of Lithuania, an impoverished country, were but thinly supplied. The Russians, who from the first had determined to retire into the heart of their own country, and to draw the invaders after them, had removed all their stores into the interior. The French and Germans, and we believe we must add the Poles and the very Lithuanians who were following the tricolor flag, went about the country marauding and plundering, feeding their horses on the green corn, violating the women, and killing those who resented such treatment. The preceding year, 1811, had been a year of misery and affliction to Lithuania, for the harvest had been a very bad one: the present year promised a sure augmentation of wretchedness, for, like locusts, these hordes of men destroyed far more than they consumed, wasting the unripe corn, and the only hope for the future. The richest and most fertile of countries could hardly have supported for any length of time such enormous masses of wasteful men; but Lithuania was at all times thinly peopled and miserably poor, and the Russian provinces beyond it were mostly in the same condition. It was madness to think of carrying on war in such regions as it had been carried on in fat Belgium, in fertile Italy, and in the well-peopled and well-cultivated parts of Germany. His long and unavoidable stay at Wilna, which brought him almost a month nearer to the winter, must have been very fatal to Bonaparte's operations, even if they had not been extravagant and all but hopeless from the first. Many symptoms of discouragement were already visible, and some of these were derived from accidents and from the elements. We have seen, even in the fury of the French revolution and of the French atheism, that certain superstitions clung to the unbelieving hearts of the French. This continued. As Bonaparte first reached the bank of the Niemen, in the darkness of night his horse stumbled and threw him on the sand. Some voice instantly said, "This is a bad augury! A Roman would give up the enterprise." When that frontier river was crossed, and when the grand army began to penetrate into the sombre pine forests of Lithuania, their ears were struck by the solemn sounds of distant thunder, which, for a time, were mistaken for the distant firing of artillery: the summer sky was overcast, till the day, in those forests, looked like night; and then the thunder rolled nearer and nearer, and the forked lightning burst over their heads. The hearts of the men were awe-stricken, and many were heard to say that this too was a bad omen. The thunder and lightning were followed by torrents of rain and by gales of wind; and the insupportable heat of the atmosphere was suddenly changed into a distressing cold. As early as this the horses of the army had begun to perish; and a great deal of baggage and camp equipage had been abandoned in the sands of Lithuania, between the Niemen and Wilna. At last enormous droves of cattle—looking when on the march like armies themselves—were collected for the use of the endless host, were driven forward by Polish peasants under the escort of Polish lancers, to be killed and eaten day by day; and the grand army quitted Wilna, followed by a train of baggage waggons, provision waggons, and other vehicles, which seemed to form still another army. But 20,000 men were left behind in badly provided and insecure hospitals; and more than 100,000 men took with them diseases which required the application of remedies not safely used in cold climates and at the wintry season by soldiers, or by any class of persons constantly exposed to the inclemency of the atmosphere. Demoralised and diseased, a very large part of this army of invasion merited as much, at starting, the name of "*une race gangrénée*," as it did when retreating, discomfited and scattered by the angry breath of Heaven, and perishing on the interminable snow-covered plains of Russia.* In their march through Lithuania rather more than less than 100,000 men dropped off from the ranks through death or sickness, through desertion, or through the surprises and captures made by the Cossacks, who had already taken the field: the rain fell in torrents; the roads were execrable; the horses continued to perish; the cattle died off or were wasted to mere skin and bone. According to a high authority in such matters,† the Russian general, Barclay de Tolli, was a chief quite capable of conducting this defensive war successfully; and it appears that de Tolli did not mean to fight at all until Bonaparte should be surrounded by a vast desolation of snow and wilderness, and that the battles which the Russians fought between their frontiers and Moscow were all against de Tolli's opinion. In these engagements, however, the Russian infantry more than maintained their old reputation for steadiness and hardihood; and, all the while that they were retreating, no attempt to disorder them succeeded, and no actual attack made by the French van—though the impetuous Murat charged with it—could make any serious impression.‡ The two

* An eloquent Protestant clergyman of Geneva, in a thanksgiving sermon in the year 1815 for the deliverance of his country from the French, and for the re-union of Geneva to the Swiss Confederacy, described this Grand Army of Bonaparte as "*une race gangrénée, qui n'était plus bonne qu'à mourir!*"

† General Moreau. This exile—once the rival of Bonaparte—while residing in the United States of America, strongly expressed these opinions to our able and amiable diplomatist, Sir Augustus Foster.

‡ "Whenever attacked," said an officer on Murat's staff, "the Russians formed into squares, solid or hollow. We could sometimes knock off a little angle of those squares, but *entamer* those squares we never could. Murat pursued too rapidly to allow of any heavy artillery keeping pace with him; and our light pieces (when we had any), and our charges with sabre, lance, or bayonet, and our fusilading, were all thrown away upon those dark immovable masses."—*Private information from a distinguished Italian officer who served on Murat's staff, and who was scarcely from his side during the whole campaign.*

armies marched almost day and night: every morning the Russian rear-guard seemed to have escaped from Murat; every evening Murat was again close up with it; and nearly every evening he attacked it; but the bold and crowned dragooner always found the Russians well posted, to all appearance fresh and well fed, while his own immense host of cavalry had very often to fight upon empty stomachs.* Neither men nor horses could stand the long continuance of this work: many died, or fell sick or lame, and became useless upon the road; some were killed or wounded in every attempt upon the Russian squares; the loiterers and the disabled were carried away prisoners, or were dispatched to another world by the flying Cossack pulks, or by the armed Russian peasantry and townspeople: and all this fatigue, all these losses were uncompensated by any exciting or brilliant achievement. Dearly as he loved "the rapture of the fight," Murat grew heartily sick of this war, and wished himself back in his sunny city of Naples long before he reached the bleak and dreary town of Smolensk.

After partial engagements at Mohiloff and Witepsk, Barclay de Tolli continued his retreat upon Smolensk. Some of the French generals would have paused; but their chief determined to follow the Russians. He observed that forward marches alone could keep such a vast army together; that to halt or retire would be the signal of dissolution: "We must therefore advance upon Moscow, and strike a blow in order to obtain peace, or winter quarters and supplies." Leaving a body of reserve in Lithuania, and the strong corps of Marshal Macdonald on the Dwina towards Riga, Bonaparte crossed the Dnieper on the 15th of August, the anniversary of his fête, or the day of St. Napoleon —the saint which he had forced into the Roman calendar, and had made the greatest of all saints. And while the army was crossing the river—the ancient Borysthenes, from which, in the decline of the Roman empire, the barbarians had marched to the walls of Constantinople—France and all her dependencies were re-echoing with the salutes fired in honour of the great day or of the great man. Murat and a part of his cavalry were the first to gain footing on the opposite bank, which was partially covered by Cossacks, supported by a beautiful Russian division, formed *en bataillons carrés*, or in the usual impenetrable squares. Murat now hoped to get a handful of laurel, for the Russian division seemed to have the intention of keeping its ground, or of making an attempt to drive the French horse back into the river. Nearly the whole of the grand army was present on the opposite bank as spectator, for it had been concentrated previously to the passage of the river. Murat hurraed and charged, and hurraed and charged again and again; but he could not *entamer* the division without that French artillery for which he had disdained to wait: and he lost in a useless display of bravery a considerable number of men,

* Général Comte de Ségur.

and had once more to gnash his teeth at the steadiness and order and the inexpugnability with which that solid and staunch infantry withdrew towards Smolensk. On this, as on nearly every other occasion, the Russians were enabled to retire peaceably upon their main body. Murat's impetuosity was much censured by the French army, and by Bonaparte himself. They now had entered Russia Proper with about 180,000 men. The day after crossing the Dnieper—on the 16th of August —Bonaparte found Barclay de Tolli waiting for him under the walls of Smolensk. But the Russian general only intended to keep the French in check while the inhabitants were carrying off or destroying provisions and all those things which the enemy most wanted; and after a little hard fighting de Tolli evacuated Smolensk, and continued his retreat upon Moscow. The Russian rear-guard set fire to the town before they quitted it, and the place became a horrid black ruin, incapable of giving shelter to foe or friend. The sight of these flames, and of the universal conflagration that gathered round the invading army as it advanced into Russia Proper—for, either by the inhabitants or by the soldiery and the Cossacks, nearly every town, village, and hamlet was set on fire, and then deserted—was calculated to demonstrate the nature of the resistance, and the hopelessness of the invasion; but Bonaparte obstinately kept his eyes shut, and rushed onwards to his doom. On the 7th of September he fought the bloody battle of Borodino, and gained a victory, but at the cost of nearly one-fourth of his army, or of that part of it which was advancing with him. On neither side were the wounded counted; but 10,000 French and 15,000 Russians lay *dead* on that bloody field. He took scarcely any prisoners or guns; and his loss was much more serious to him than was that of the Russians to them. Whole French battalions had been annihilated almost to a man.* There was no flight, no confusion, no loss of heart, or of a noble military countenance; the Russians continued their retreat the day after the battle, in the greatest order, though the French were treading on their rear. On the 14th of September they traversed the city of Moscow, which most of the inhabitants had already evacuated: and on the same day the French entered into that desolate capital. No Russians were seen in Moscow, except convicts and men of the poorest and most desperate class. That very evening a fire broke out in the town, but it was extinguished during the night. On the next day, the 15th of September, Napoleon took up his quarters in the Kremlin, the ancient palace of the Czars; and pompous bulletins were issued and dated from that spot. On the following night the fire broke out again, and Moscow was in flames in a dozen quarters at once, and at points opposite to and altogether unconnected with each other. The high winds of autumn fanned the flames and

* The Russians had good positions and some formidable redoubts but in number they were certainly not superior to the French. When the battle commenced each army had on the field about 120,000 men.

gradually spread them all over the city. Nothing could now stop or check the conflagration. On the third day of its raging Bonaparte abandoned the Kremlin, where he had run great risk of being blown into the air, as an immense quantity of ammunition had been collected in that palace, and as sparks and fragments of burning matter were flying all about. On the 19th the rage of the fire abated, after having destroyed 7682 houses, or about four-fifths of the city. Lodging might still have been found for the troops, although fires did continue to break out as if by involuntary combustion; but there was no obtaining proper supplies of provisions; and the French were obliged to live chiefly on the flesh of their horses, which was salted down. If he had begun a retreat at once, Bonaparte might yet have saved a very large portion, if not the mass, of his immense army; but he remained among the ruins of Moscow for five weeks, inert and apparently stupified, talking oracular nonsense which could no longer impose upon any rational mind, and sending people to negotiate with Alexander, whose object it was to gain time—who now wanted no other negotiators, and scarcely any other generals, than snow, frost, and famine. At last, on the 19th of October, when the severity of winter had already set in, the *Grande Armée* began its retreat. Their leader knew not which way to lead it so as to have the best chance of obtaining provision and shelter. He attempted to retire by Kaluga, but the terrible reception which the Russians gave him at Malo Yaroslavitz compelled him to take the road by Smolensk, by which he had advanced, and thus to retreat through a country that was now as bare as a desert. Every one is familiar with the astounding loss of life, and the sufferings and horrors that ensued. The starving, diseased, disorganised, and mutinous columns were followed by the Hettman Platoff and his avenging Cossacks; and the Russian grand army was never far distant. The French had left Moscow 120,000 strong, but by the time they reached Viazma on the Wop they were reduced to 60,000 fighting men. On the 6th of November they were overtaken by the Russian winter with all its terrors. They now died like rotten sheep. The survivors at last reached Smolensk, to which place some stores and provisions had been brought up for them. On the 14th of November Bonaparte left Smolensk with about 40,000 men able to carry arms. His rear divisions had now to sustain almost daily attacks from the Russians and Cossacks; but the frost and the snow, the nipping blasts of night which swept over those vast open, treeless, houseless plains, killed more than sword and spear, and bullets and cannon-balls. When he arrived at Oresa, in Lithuania, Bonaparte had only 12,000 men with arms in their hands; and his 40,000 horses had dwindled down to 3000. But, on approaching the river Berezina, he was joined by a corps of reserve of nearly 50,000 men. One-half of the army thus reinforced was lost in effecting the passage of the Berezina; and after that terrible passage there was scarcely the semblance of an army, scarcely a remnant of discipline or of courage to be found anywhere. On the 3rd of December Bonaparte arrived at Malodeczno, whence he issued his famous *Twenty-Ninth* bulletin, which agitated or astounded the whole of Europe. Fiction and invention could no longer be available; the extent of his disaster could not possibly be concealed; and this time—for the first time and the last—he told the whole truth, frankly confessing that except the Guards he had no longer an army! Two days after this—on the 5th of December—he took leave of some of his generals, and stole away from the wretched remains of his troops to commence a rapid flight towards France. He travelled in a sledge, accompanied by Caulaincourt, and was so fortunate as to escape the Cossacks. On the 10th of December, at a late hour, he arrived at Warsaw, where he might be considered safe. During his very short stay in that city, his conversation proclaimed either that his intellect was partially alienated, or that he was the most wretched, heartless, and contemptible despot that had ever trifled with the destinies of mankind. The Abbé de Pradt, then his resident minister at Warsaw, found him at the posting-house warming himself by a smoking wood fire. "Ha! Monsieur l'Abbé," said he, "from the sublime to the ridiculous is but a step! There is but a step from the sublime to the ridiculous!" And he kept striding up and down the smoky room, rubbing his hands, and repeating this *mot*, which Thomas Paine had emitted before the name of Napoleon Bonaparte had been heard in the world, and the idea of which had been enunciated, with slight variation of expression, many times and centuries before the days of Paine. He reached Paris on the 18th of December, at night.* As he stood in the luxurious and splendid apartment of the Tuileries, warming himself before a blazing fire, he said, "Gentlemen, it is much pleasanter here than at Moscow!"† The loss of the French and their auxiliaries, in the whole of the Russian campaign and retreat, is estimated at 125,000 slain in fight; 132,000 dead of fatigue, disease, hunger, and cold; and 193,000 prisoners, including 3000 officers and 48 generals. They had left behind them 900 pieces of cannon, and 25,000 waggons, cassoons, &c.

Ever since the opening of the Russian campaign the eyes of Europe had been turned with intense anxiety to the regions beyond the Vistula and the Niemen. The countries that were groan-

* He had travelled all the way *incognito*, and with amazing rapidity. He arrived at Paris twenty-four hours after the publication in the 'Moniteur' of the famed Twenty-Ninth bulletin which had been written at Malodeczno. His arrival was unexpected: even the Empress Maria Louisa was ignorant of his coming; and all were taken by surprise when he drove up to the Tuileries.

† One who was himself a cynic and an egotist has said, with some point and truth, "The great error of Napoleon, 'if we have writ our annals true,' was a continued obtrusion on mankind of his want of all community of feeling for or with them; perhaps more offensive to human vanity than the active cruelty of more trembling and suspicious tyranny. Such were his speeches to public assemblies as well as individuals; and the single expression which he is said to have used on returning to Paris after the Russian winter had destroyed his army, rubbing his hands over a fire, 'This is pleasanter than Moscow,' would probably alienate more favour from his cause than the destruction and reverses which led to the remark."—*Lord Byron, note to Canto III. of Childe Harold's Pilgrimage.*

ing under French oppression anticipated, from the success or failure of this Sesostris-like expedition, enfranchisement and a restored nationality, or a confirmed slavery. At first every bulletin announced a victory or an unopposed advance, and every courier brought intelligence which seemed to unthinking minds to demonstrate that Russia was incapable of contending with Bonaparte, who led in his train the armies and the princes of nearly all Europe. Others, who better knew the capabilities of the country for prolonging a defensive war, doubted whether the Emperor Alexander would prove true to himself, and whether, after his army had been repeatedly defeated, and after the ancient capital of his empire had fallen into the power of his enemy, he would not be induced to negotiate, and in the end to submit. If others entertained as much anxiety as England—and many countries must have been far more anxious—none could render Russia so much countenance and assistance as England could, and did. The unprofitable war with the Turks was still in progress when Bonaparte determined to invade the dominions of the Czar. At the opportune moment England stepped in as a mediatrix, and Mr. Stratford Canning, then a young diplomatist,* speedily, and with great ability, negotiated a treaty between Sultan Mahmoud and the Emperor Alexander, which enabled Russia to withdraw from the Danube an army of from 30,000 to 40,000 men, and to bring that army to the Berezina, upon the flank of Bonaparte's flying and disorganised forces. It was not the fault of Mr. Stratford Canning that the conquered conqueror was allowed to escape across that freezing Russian river: if the obtuse Russian admiral who commanded that liberated army of the Danube had not loitered on his way, and had not made mistakes as to his lines of march, neither Bonaparte nor a single man belonging to the Grand Army, which had penetrated to Moscow, would have effected the passage of the Berezina. These preliminaries of peace between Russia and Turkey were ratified at Bucharest as early as the 28th of May. But two months before this a treaty of alliance had been signed at Petersburgh between Sweden and Russia, Bernadotte being encouraged thereto by the assurances he had received from the British cabinet. And in the month of July a treaty of peace and amity between Great Britain and Sweden was ratified; and in the month of August, when Bonaparte was penetrating into the heart of the Russian empire, with victory in his van, a treaty of peace and union was ratified at Petersburgh between Great Britain and Russia, which renewed all their ancient relations of friendship and commerce. The Russian fleet, which would have been frozen up and rendered almost helpless if left in its own ports, was sent to winter in England—a measure which was indeed a token of mutual confidence, as well as of the sense of present danger on the part of Russia.†

* Now Sir Stratford Canning, and ambassador to the Ottoman Porte.
† Dr. John Aikin, Annals of the Reign of King George III.

It was chiefly English money or English credit which set the army of the Danube in motion, and which put the other armies and commissariats of Alexander in a better condition than had been usual with them. It was the undiminished and unstained English credit at Petersburgh, Stockholm, and at every trading town on the Baltic Sea—it was the undoubting faith in British bills of exchange and in our home-vituperated bank-notes—that enabled Russia to put on her panoply of war, and that contributed, almost as much as the angry elements, to the destruction of the invading hosts. A French officer who accompanied General Lauriston to the Russian head-quarters once said to us, "We had been led to believe that your credit was gone, that England was bankrupt; but, when I found everywhere that your bills of exchange and bank-notes were received and passed as if they had been gold, I trembled for the result of our daring enterprise!" English aid, both privately and publicly, was promptly given to the Russians who had suffered in the war. We are old enough to have a distinct recollection of the generous sympathy and enthusiasm with which a large subscription was raised in the city of London for the purpose of rebuilding the city of Moscow.

Parliament, with a newly elected House of Commons, assembled on the 24th of November. Its most noticeable measures previous to the Christmas recess were a grant of 100,000*l.* to the Marquess of Wellington, and a grant of 200,000*l.* for the relief of the sufferers in Russia.

A. D. 1813. After some stormy debates in the Commons on the American war, in which the opposition not only blamed the ministry for the negligent manner in which the maritime part of the conflict had been conducted, but also charged them with having been the aggressors, and with having provoked an unnecessary and fatal contest, Lord Castlereagh, on the 18th of February, moved an address to the prince regent, expressing entire approbation of the resistance proposed by his royal highness to the unjustifiable claims of the American government, a full conviction of the justice of the war on our part, and the assurance of a cordial support from that House. The opposition renewed their censures, but they were too weak to try a division: the address was agreed to, *nem. con.*, as was another in the House of Lords to the same effect.

The budget was introduced on the 31st of March. The requisite supplies of the year were stated at more than 72,000,000*l.*, out of which England and Scotland were to furnish more than 68,500,000*l.* This was a larger amount than had been voted in any preceding year; but the American war promised to be expensive, and it was generally felt that at this decisive moment we ought to put forth all our strength, in order to finish the contest in Spain, to prolong our aid to Russia, and to give encouragement and assistance to the other nations of the Continent that should rise and throw off their chains. All the estimates were voted by im-

mense majorities. Among the ways and means were war taxes to the amount of 21,000,000*l.*, a fresh loan to the same amount, and a vote of credit for 6,000,000*l.* On all points the ministerial majorities were stronger than they had been for many years. The Russian campaign, and the annihilation of Bonaparte's immense army, had made many converts in the country, and the conduct of the American republic had inflamed the feelings of nationality. At an early stage of the war Lord Liverpool had predicted that the day might come when an English army should march into Paris, and bivouac in the Bois de Boulogne and on the heights of Montmartre. Though little given to the indulgence of fancy, his lordship had long been laughed at for this prediction; but now the fulfilment of it seemed no longer impossible, or even improbable; and before the year closed Wellington descended from the Pyrenees, and his British army got a firm footing on the soil of France. Our great general had not been deceived in any of the sanguine hopes he had derived from the Russian war. On his side the year 1813 was a year of victories and of the most splendid achievements.

The Russian catastrophe not only prevented Bonaparte from reinforcing his marshals in Spain, but it also obliged him to recall the best of them, and the only one among them whose generalship had cost Lord Wellington any very serious thoughts. This, of course, was Marshal Soult, who, early in the year, was removed from the Peninsula to oppose the Russians, then about to advance through Germany to the banks of the Rhine. Soult, however, took only 20,000 men with him, thus leaving about 70,000 men to oppose Wellington, besides the army of Suchet in the eastern provinces. The Army of Portugal, as it continued to be called, was now placed under the command of General Reille, who had his head-quarters at Valladolid; the Army of the Centre, under Drouet, was distributed round Madrid; and the Army of the South had its head-quarters at Toledo. All these forces were nominally under the command of King Joseph; but, as Joseph was no soldier, and never could learn to be one, he was assisted by Marshal Jourdan, who could only have earned his great reputation of former days by having been opposed to incompetent or unfaithful generals. Generals Clausel and Foy commanded separate divisions in Aragon and Biscay. Before the campaign began, Andalusia and Estremadura in the south, and Galicia and Asturias in the north, were entirely free from the French.

Doing at last what they ought to have done at first, the Spanish provisional government, with the consent and approbation of the Cortes, made Lord Wellington the commander-in-chief of the Spanish armies, and took some measures to improve the discipline and effectiveness of their troops. In the main, however, these things remained but as a good intention, for the regency had hardly any money except what they received from England, the insurrections and wars of independence in the South American colonies stopping at the fountain-head the supplies which Spain had been accustomed to receive from that quarter; and the pride, ignorance, and indocility of the Spanish commanding officers, and the slothfulness and indiscipline of the Spanish troops, were evils not to be remedied of a sudden, or in the course of one trying campaign. And therefore the only army upon which Wellington could rely for field operations consisted of about 63,000 British and Portuguese infantry, and about 6000 cavalry. His lordship commenced active operations about the middle of May, making the allied army enter Spain in three separate bodies; the left under Sir Thomas Graham, the hero of Barrosa, the right under the indefatigable Hill, and the centre under his own immediate command. The combined movements of these three divisions were so well managed that the French were taken by surprise. On the 1st of June they were in full retreat before Graham; and, Graham being joined by Wellington, these two divisions pushed forward for Valladolid. On the 3rd of June Hill effected his junction, and the allied army was also joined by the Spanish army of Galicia, and by a Spanish force from the South. As Lord Wellington advanced, Joseph Bonaparte fled from Madrid, for the last of many times. He was followed by his court and retainers, who hastily packed up what they could carry with them. The French army retired to Burgos, where they had strengthened the works of the castle. But on the 12th of June, Wellington being near at hand, the French abandoned Burgos, blew up the fortifications of the castle, and retreated to the Ebro. This line, so much nearer to their own frontiers, they thought they could defend; and they threw a strong garrison into the fortress of Pancorvo, a little in advance of the river. They were much mistaken. Avoiding the fortress, and everything which rendered the passage of the Ebro dangerous or difficult, and finding out a new road through a rugged country, Lord Wellington completely turned the French position on the Ebro, and drove them back upon Vittoria, after an engagement at Osma. By the 20th of June the whole of the allied army was beyond the Ebro and concentrated near Vittoria.* On the 19th the enemy, commanded by Joseph Bonaparte, having Marshal Jourdan as his major-general and director, had taken up a strong position in front of Vittoria, their left resting upon the heights which terminate at La Puebla de Arganzon, and extending from thence across the valley of the Zadorra, in front of the village of Arinez, the right of their centre occupying a height which commanded the valley to

* The left of the army crossed the Ebro on the 14th of June, by the bridges of San Martin and Rocamunde, and the remainder on the 15th, by those bridges and that of Puente-Arenas. On the 16th they continued their march towards Vittoria. On the 16th and 17th the enemy were rather active; but the rear brigade of a division was cut off by Major-General Charles Alten, who took 300 prisoners, killed and wounded many, and dispersed the rest of the brigade in the mountains. There was some more smart fighting; and between the 12th and the 19th of June the Marquess of Wellington had 153 men wounded, and 27 killed.—*Colonel Gurwood, Wellington Dispatches.*

the Zadorra, and their right being stationed near the town of Vittoria, being destined to defend the passages of the river Zadorra, in the neighbourhood: they had a reserve in rear of their left, at the village of Gomecha. By this disposition the French covered the three great roads from Madrid, Bilbao, and Logroño, which unite at Vittoria. Though few on either side may have thought of them, there were traditions and reminiscences attached to the spot: on the ridges which the French army occupied, or in the country within sight of them, our Edward the Black Prince had fought and won the great battle of Najara, defeating the French army of Bertram du Guesclin. The nature of the country through which the allied army had passed since it had reached the Ebro had necessarily extended its columns; and Wellington halted on the 20th, in order to close them up. He also moved his left to the ground where it was most likely it would be required, and carefully reconnoitred King Joseph's or Marshal Jourdan's positions, with a view to the attack to be made on the following morning, if the French should still remain in them. The enemy kept their ground, and early on the morning of the 21st of June the glorious battle of Vittoria was begun.

The operations of the day commenced by General Sir Rowland Hill obtaining possession of the heights of La Puebla, on which the enemy's left rested. At the moment of Hill's attack Jourdan reinforced his troops stationed on those heights, and, after the heights had been carried by the allies, he made repeated and desperate efforts to recover them; but all was in vain, and Hill's battalions, among whom was a Spanish brigade under General Morillo, kept possession of those important heights throughout the battle. The contest here was, however, very severe, and the loss sustained considerable: General Morillo was wounded, but remained on the field; Lieutenant-Colonel the Hon. H. Cadogan was mortally wounded, but, though he knew that he was dying, he had himself carried to a place whence he could see all the operations.* Under cover of the possession of these well-defended heights, Sir Rowland Hill, with all the rest of his division, successively passed the Zadorra, at La Puebla, and the defile formed by the heights and the river Zadorra, and attacked and gained possession of the village of Subijana de Alava, which also stood on a height. Here, too, the French made desperate efforts to recover possession; but they were not more successful than they had been at La Puebla. Jourdan now ordered the French left to fall back for the defence of the city of Vittoria. In the meanwhile the rest of the allied army had come, or was fast coming, into action, moving on in two other separate columns of attack. The difficult nature of the country prevented the communication between these two columns, and between either of them and Hill's column, which formed our right. For some time Wellington was left in an anxious state of uncertainty, not knowing whether Hill had succeeded, or whether the column under the command of the Earl of Dalhousie had arrived at the station appointed for it. But everything went well, and as he had ordered: the combined movements were all executed with rare precision, both as to place and time. The fourth and light divisions, under General Cole, and forming part of our middle column, crossed the Zadorra by the bridges of Nanclaras and Tras-Puentes, immediately after Sir Rowland Hill had got possession of Subijana de Alava, and, almost as soon as these had crossed, the Earl of Dalhousie's column arrived at Mendoza; and the third division, under Sir Thomas Picton, crossed at a bridge higher up, being immediately followed by the seventh division, led on by Dalhousie in person. As the allied divisions passed the river the scene exhibited to those on the heights was one of the most animating ever beheld by soldiers. "The whole country," says one who was both an actor and a spectator, "seemed to be filled with troops; the sun shone bright; not a cloud obscured the brilliant and glowing atmosphere. From right to left, as far as the eye could reach, scarcely the most diminutive space intervened between bodies of troops, either already engaged or rapidly advancing into action; artillery and musketry were heard in one continued, uninterrupted volume of sound, and, although the great force of French cannon had not yet opened upon the assailants, the fire had already become exceedingly violent."* These four united divisions, now forming the centre of the allied army, were destined to attack the height which commanded the valley of the Zadorra, and on which the right of the French centre was placed, while Sir Rowland Hill should move forward from Subijana de Alava to attack the left. But Jourdan, having weakened his line to strengthen his detachments on the hills,

* "General Morillo had led his attack with his accustomed gallantry, and although twice wounded declined quitting the field, but requested reinforcements. Sir Rowland Hill ordered Colonel Cadogan, with part of the brigade under his temporary command, to ascend and secure the success of the attack. Thus assailed, the enemy, alarmed for the safety of that flank, detached troops from the centre of his line, who meeting the British and Spanish force, now established on the very summit of La Puebla heights, a warm and severely contested action took place. Pressing forward at the head of his brigade, Colonel Cadogan was mortally wounded by a musket-ball. In a hopeless state as to the possibility of recovery, no attempt was made to carry him from the field, where, enthusiastic to the last, he requested removal to a situation from whence he could gaze on the triumphant progress of companions with whom he had so frequently participated in victory. His fall was deeply regretted. . . . . The evening previous to the battle, when informed that it would certainly take place, his exultation was unbounded: going into action as the commender of that noble brigade appeared the climax of his wishes and the forerunner of distinction: before the conflict terminated he was numbered with the dead."—*Colonel Leith Hay, Narrative of the Peninsular War.*

Lord Wellington was deeply affected by the death of the truly noble and brave Cadogan, and by the thought of the deep affliction which his loss must cause to his surviving friends and connections. These feelings are always expressed on similar occasions by his lordship in short but affecting sentences. His sympathy extended to every good and brave officer, whatever might be his rank or name. He could bestow it even upon failure and misfortune when he thought that the failure had proceeded only from error of judgment. It was, in the highest degree, needful for such a man, so placed, to conceal his emotions, and to have his feelings under control; but nothing can be more incorrect than to charge Wellington with insensibility of heart, or a stoical indifference to the loss of friends and brother-soldiers and the other inevitable woes of war! The best corrective of this fallacy is the careful perusal of the duke's own dispatches.

* Colonel Leith Hay, Narrative.—

abandoned his position in the valley of the Zadorra as soon as he saw Wellington's disposition to attack it, and commenced his retreat in good order towards Vittoria. Before retreating the French had met the heads of our advancing columns with a destructive fire; but General Picton's division—the always fighting third—having come in contact with a strong body of the enemy, had driven it back, and had taken its guns.

As Jourdan fell back upon Vittoria, closing up his long lines, which had been far too much extended, our troops continued to advance in admirable order, notwithstanding the difficulty of the ground. In the meantime, while this was passing in front, General Sir Thomas Graham, moving along the road from Bilbao with our left, had attacked the French right, which was posted on the heights beyond the Zadorra, above the village of Abechuco, and had dislodged it from thence, and then, ascending the right bank of the Zadorra towards the Bayonne road, he carried the village of Gamarra Mayor; and at nearly the same time the Spanish division of Longa carried the village of Gamarra Menor, which is on the right bank of the river opposite the Bayonne road, which runs along the left bank, the heights of which were occupied by two divisions of French infantry in reserve. In the execution of these services Graham's divisions, including Spanish as well as Portuguese troops, were closely and desperately engaged; and all behaved admirably, some Portuguese Caçadores particularly distinguishing themselves. The enemy had a division of infantry advanced on the great road from Vittoria to Bilbao in order to keep open the line of retreat to the latter city; and the right of this division rested on some strong heights which cover the village of Gamarra Mayor. Both Gamarra Mayor and Abechuco were strongly occupied as *têtes de ponts*, and could not be carried without great difficulty. It was Major-General Robertson's brigade of the fifth division that most gallantly stormed and carried Gamarra Mayor, advancing in columns of battalions, under a very heavy fire of artillery and musketry, and without firing a shot. Robertson's brigade was, however, assisted by two guns of Major Lawson's brigade of artillery. At this village the enemy suffered severely and lost three more pieces of cannon. The village of Abechuco had been carried by Colonel Halkett's brigade, supported by General Bradford's brigade of Portuguese infantry, and covered by a strong battery, consisting of horse and foot artillery. During the attack at Abechuco the French had made the greatest efforts to repossess themselves of the village of Gamarra Mayor; but they had been gallantly repulsed by the fifth division, under the command of Major-General Oswald.*

When the French had been driven from all their positions, and their main body had been driven through the town of Vittoria, the whole of the allied army co-operated in the pursuit, which was continued by all till after it was dark. The movements of the troops under Sir Thomas Graham, and their possession of Gamarra and Abechuco and of the Bayonne road, intercepted the enemy's retreat by that high road to France. They were, therefore, obliged to turn to the road leading to Pamplona; and they were unable to hold any position beyond Vittoria for a sufficient length of time to allow their baggage, stores, and artillery to be drawn off. The whole, therefore, of the artillery which had not already been taken by Lord Wellington's troops in their successive attacks of positions, together with all their ammunition and baggage, and nearly everything else they had, was captured close to Vittoria. "I have reason to believe," wrote his Lordship, "that the enemy carried off with them one gun and one howitzer only." As darkness set in, the French columns mixed and dispersed, running off in all directions. The intruder Joseph had a very narrow escape;* his travelling-carriage, his papers, were taken, and several of his attendants were captured or cut down, or shot in their flight by the revengeful Spaniards. To the French it was an irremediable, a fatal defeat—it was the most complete defeat they ever experienced in Spain; and few battles anywhere have been more decisive. The immense quantity of artillery introduced by Bonaparte into his armies had made it imperative on Wellington to increase the number of his own guns; and never previously had so large a body of British artillery been engaged as at Vittoria. The French army rallied at no point of its line; nor was there the slightest effort made by them, after passing the city of Vittoria, to check the rapid pursuit of the allies. To escape with nothing but life, and the clothes on their backs, seemed to have become their sole object. Their artillery-drivers cut their traces, left their guns on the uneven rough ground, and galloped off with their horses.† The amount of spoil gathered by the pursuers was immense, and of the most varied description, resembling in many particulars the spoils of an Oriental rather than those of a European army. Joseph Bonaparte—who had been nicknamed by the sober Spaniards "King of the Cooks," "Little Joseph of the bottles"—was a self-indulging, luxurious, sensual, voluptuous man; and wherever he went he carried with him all his luxuries and means of enjoyment. His splendid sideboard of plate, his larder, and his cellar, or its choicest contents, fell into the hands of the conquerors: his fine wardrobe, some of his women, and some of his plunder—including splendid pictures by the old Spanish masters—were taken also. Many of the French officers had followed Joseph's example as far as their means allowed; and thus the finest wines and the choicest

* Col. Gurwood, Wellington Dispatches.

* The 10th Hussars entered Vittoria at the moment that Joseph was hastening out of it in his carriage. One squadron of the tenth, under Captain Wyndham, gave pursuit, and fired into the carriage; and Joseph had barely time to throw himself on a horse and gallop off under the protection of a body of dragoons. The carriage was taken, and in it the most splendid of his trinkets, and some of the most precious articles he had abstracted from the palaces and churches of Spain.

† Colonel Leith Hay.

viands were picked up in profusion. "The wives and mistresses of the officers had gathered together in one house, where they were safe, and from whence they were sent in their own carriages with a flag of truce to Pamplona. Poodles, parrots, and monkeys were among the prisoners. Seldom has such a scene of confusion been witnessed as that which the roads leading from the field of battle presented; broken-down waggons stocked with claret and champagne, others laden with eatables dressed and undressed, casks of brandy, apparel of every kind, barrels of money, books, papers, sheep, cattle, horses, and mules, abandoned in the flight. The baggage was presently rifled, and the followers of the camp attired themselves in the gala-dresses of the flying enemy. Portguuese boys figured about in the dress-coats of French general officers; and they who happened to draw a woman's wardrobe in the lottery converted silks, satins, and embroidered muslins into scarfs and sashes for their masquerade triumph. Some of the more fortunate soldiers got possession of the army chest, and loaded themselves with money. . . . . The camp of every division was like a fair; benches were laid from waggon to waggon, and there the soldiers held an auction through the night, and disposed of such plunder as had fallen to their share, to any one who would purchase it."* "The soldiers of the army," said Lord Wellington, "have got among them about a million sterling in money, with the exception of about 100,000 dollars which were got for the military chest."† Among the innumerable trophies of the field was the baton or marshal's staff of Jourdan. Lord Wellington sent it to the prince-regent, who gave him in return the baton of a field-marshal of Great Britain. Of arms and materials of war there were taken 151 pieces of brass ordnance, 415 caissons, more than 14,000 round of ammunition, nearly 2,000,000 of musket-ball cartridges, 40,668 lbs. of gunpowder, 56 forage-waggons, and 44 forge-waggons.‡ When the battle began the numerical strength of the two armies was about equal. But on the side of the allies the Spaniards, though they behaved better than they had hitherto done, were not to be compared with the French soldiery. The French had in many actions made greater slaughter of a Spanish army, but they had never in any one instance reduced an army, even of raw volunteers, to such a state of total wreck.§ They saved themselves from destruction or from captivity by abandoning the whole *matériel* of the army, and by running like a mob. Only about 1000 of them were taken, for, lightened of their usual burthens, they ran with wonderful alacrity; the country was too much intersected with canals and ditches for our cavalry to act with effect in pursuit; and our infantry, who moved in military order, could not be expected to keep up with a rout of fugitives. Moreover—as Wellington deeply regretted—the spoils of the field occupied and detained his troops; and the money, the wine, and the other luxuries they obtained induced some degree of sluggishness. This has happened in all similar cases. And there still remains to be added that the troops in their long march from the Portuguese frontier had worn out their shoes, and were in good part barefooted; while, owing to the slowness with which his supplies had been sent up, Wellington had no new shoes to give them. The French acknowledged a loss, in killed and wounded, of 8000 men; but their loss was unquestionably much greater. The total loss of the allies was 740 killed and 4174 wounded.* Lord Wellington was liberal and even enthusiastic in his praise of all engaged—of officers and men. He particularly acknowledged his obligations to Generals Graham and Hill, General Morillo, and General the Hon. W. Stewart, Generals the Earl of Dalhousie, Sir Thomas Picton, Sir Lowry Cole; to his quartermaster-general, Sir George Murray, who had again given the greatest assistance; to Lord Aylmer,' the deputy-adjutant-general; and to many others, including Sir Richard Fletcher and the officers of the royal engineers. All the more scientific parts of the army had indeed been vastly improved since the time when Wellington first took the command of our forces in the Peninsula; and the department of the quartermaster-general, upon which so much depends, and the service of the engineers, had been brought from a very defective to an all but perfect condition, by Sir George Murray, Aylmer, Fletcher, and other able and painstaking men. Wellington also mentioned in his dispatch that his serene highness the Hereditary Prince of Orange (now King of Holland) was in the field as his aide-de-camp, and conducted himself with his usual gallantry and intelligence.

The news of this decisive battle of Vittoria gave strength, spirit, and union to the allied armies acting against Bonaparte in Germany, dissipated the last misgivings and indecisions of Austria, broke up the congress assembled at Prague, in Bohemia, which before would have treated with the French, and have left them in possession of many of their conquests; and it gave to the voice of the British government and its envoys a vast increase of consideration and influence. Without this battle of Vittoria and its glorious results in June, there would have been no battle of Leipzig in October.

King Joseph hardly once looked back until he had reached the strong walls of Pamplona, in Navarre, among lofty mountains, the offshoots of the Pyrenean chain. The garrison, which had

* Southey.

† Dispatches. "Even dollars became an article of sale, for they were too heavy to be carried in any great numbers: eight were offered for a guinea—English guineas, which had been struck for the payment of the troops in Portugal, and made current there by a decree of the regency, being the gold currency. The people of Vittoria had their share in the spoils, and some of them indemnified themselves thus for what they had suffered in their property by the enemy's exactions. The city sustained no injury, though the French were driven through it, and though great part of the battle might be seen from every window."—*Southey, Hist. of Peninsular War.*

§ Southey.

* Out of this number the British had 501 killed, the Portuguese 150, the Spaniards only 89; while in wounded the British had 2807, the Portuguese 899, and the Spaniards 464.—*Wellington Dispatches.*

PAMPLONA.

been reinforced and well supplied, and which had orders to husband its provisions and stores, in case of a siege or blockade (and a blockade or siege seemed now inevitable), admitted the runagate king or pretender, but would not open the gates to the flying, disorganised soldiers, who had lost all signs of discipline, and who were starving. The fugitives from Vittoria attempted to force an entrance over the walls of Pamplona; they attacked their countrymen in garrison as if they had been mortal foes, or English, or Spaniards; but they were repulsed by a fire of musketry. After this they continued their flight across the Pyrenees towards France; but, meeting with some supplies, they rallied in the fastnesses of those mountains, and waited there for reinforcements. General Clausel, who was coming up fast from Logroño with about 15,000 men, and would have been on the field of Vittoria if Wellington had lost any time or had delayed his attack, upon learning the issue of that battle, turned hastily back to Zaragoza, and fled rather than retreated thence, by Jaca and the central Pyrenees into France, losing all his artillery and most of his baggage on the road. General Foy, who was with another French *corps d'armée* at Bilbao when the great battle was fought, fell back rapidly upon French territory and the fortress of Bayonne, being warmly pursued by General Graham. A French garrison was left at San Sebastian, which place, as well as Pamplona, was very soon invested by the allies. Except on the eastern coast, where Suchet kept his ground with about 40,000 men, there was not a spot in all Spain where the French could move or show themselves.

Having established the blockade of Pamplona, and directed Graham to invest San Sebastian, Lord Wellington advanced with the main body of his army to occupy the passes of the Pyrenees, from Roncesvalles, so famed in war and poetry, to Irun, at the mouth of the Bidasoa. His lordship's movements were rapid, and would have been much more so if it had not been for Spanish procrastination and poverty, and for his want of proper ammunition and magazines.* By the 25th of June he was near Pamplona, directing the Spaniards how they ought to proceed with the blockade; on the 28th he was at Caseda, on the river Aragon, where he was compelled to remain some days. In spite of his recent triumph, he found the Spanish people and government still torpid—still waiting for everything to be done for them by others, and by the outlay of English money. The conscript fathers at Cadiz, preluding to what has taken place in more recent days, had begun a hot war against the wealthy clergy and monastic orders; and so

* Through some mismanagement, our convoying ships on the coasts of the Peninsula had been diminished. What our government did with this withdrawn force we can scarcely discover, unless they sent the frigates—where our old frigates ought never to have been sent—to the shores and waters of the United States, to run the risk of encountering President Madison's leviathans. Many of our transports and store-ships were taken by French frigates and privateers on the coast of Portugal. In a dispatch to Earl Bathurst, dated the 24th of June, Lord Wellington alludes to his embarrassments, and says, "Ammunition required for the army has lately been delayed at Lisbon for want of convoy; and it is not yet arrived at Santander, and I am obliged to use the French ammunition, of a smaller calibre than our muskets, to make good our expenditure in the late action. The army cannot remain in this part of the country without magazines, notwithstanding its successes; and these magazines must be brought by sea, or they must be purchased with ready money. *For the first time, I believe, it has happened to any British army that its communication by sea is insecure.* Certainly we have not money to purchase in the country all we want. The increase of the naval force on the Lisbon station is likewise necessary, because our money must be transported from Lisbon by sea once a fortnight. We are too far from Lisbon to transport it by land; and the expense would be enormous."—*Colonel Gurwood, Wellington Dispatches.*

From the beginning of this war down to its termination, the marching, manœuvring, and fighting parts of the business were what gave the commander-in-chief the least trouble; but he was obliged to attend to everything himself, and through the negligence or mistakes of others he was often left in very embarrassing and critical predicaments.

absorbed were they by these hostilities, that they seemed to have forgotten that there existed such men as Wellington and Bonaparte. In writing to his brother, Sir Henry Wellesley, his lordship complained bitterly of these things. "The people of the country," said he, "never think of what passes. . . . . The people think of nothing but getting rid of the French, and avoiding to contribute anything towards the support of any army. And, if they can accomplish these two objects, they do not care much about others. If the government or the Cortes cared about the opinion of their ally, or about carrying on this war, I should acquiesce in their measures; but it is heart-breaking to see that they care about neither the one nor the other, and that there is no tie over them. All they appear to care about is the war against the clergy; and it appears as if the measures for carrying on the war against the enemy were incompatible with those for the prosecution of the more favourite hostilities against the priests." *

On the 27th of June Lord Wellington had marched with a detachment from the neighbourhood of Pamplona, to endeavour to cut off the retreat of Clausel; but that general had fled so rapidly, that he arrived at Tudela de Ebro before the English could reach him, and his lordship had then returned and resumed his march towards the Pyrenees frontier, to superintend the operations of the whole allied army. His pursuit had, however, prevented Clausel from marching off to the east to join Suchet. On the 1st of July his lordship was at Huarte; and here he was again obliged to halt for two or three days, by want of magazines of provisions and military stores, and money. In the meanwhile the Spanish general O'Donnel reduced the castle of Pancorbo, on the great line of communication between Vittoria and Burgos, and took the garrison of 700 French prisoners. From Huarte his lordship moved to Ostiz, and began to divide and dispose his troops so as to secure the passes of the Pyrenees and keep open those roads into France. This was no easy operation, for the mountain range to be guarded was not less than sixty English miles in length, the practicable passes were not two or three, but six or eight, and there were other rough roads or paths across the Pyrenees, and running between or turning the greater passes, which might be traversed by an enemy so light and active and so accustomed to mountain warfare as the French. Lord Wellington estimated all the passes, good and bad, at not less than *seventy*. It should seem as if the government at home fancied that he might defend the Pyrenees as he had done the heights of Torres Vedras, without allowing the French to penetrate anywhere; but he showed them beforehand that this was impossible.* A change was now indeed about to take place in the character of the contest. It had already been proved that in a *rase campagne*, or in any situation approaching to an open country, the veterans of France were not a match for the British infantry; but now the allied army was to defend a series of mountain defiles, in a country where neither cavalry nor artillery could be employed; our troops were about to enter into a struggle for which they were unprepared by any former experience; while the system of mountain warfare was one for which the lightness and activity of the French troops peculiarly fitted them, and in which they had hitherto been considered unrivalled.†

Some portions of the allied army went right through the mountain passes in pursuit of the French; and upon the 7th of July the last divisions of the army of Joseph Bonaparte, after being driven from the very defensible valley of San Estevan, descended the reverse of the Pyrenees and entered France. Lord Wellington then became master of the passes of San Estevan, Donna Maria, Maya, and the renowned Roncesvalles; and his sentinels looked down from the rugged frontier of Spain upon the level and fertile plains of France, which lay in sunshine at their feet as if inviting their approach. Thus, in five-and-forty days from the opening of this memorable campaign, Wellington had conducted the allied army from the frontiers of Portugal to the confines of France; he had marched 400 miles, had gained one of the completest of victories, had driven the French through a country abounding in strong positions, had put the intrusive king to a flight which was to know of no return, had liberated Spain from everything but the evil consequences of Spanish folly, impatience, vanity, and presumption; and he now stood as a conqueror upon the skirts of France.‡ We have seen the way in which Bonaparte treated his failing or unfortunate generals. Marshal Jourdan, a soldier of the early Revolution, who had acquired fame when Bonaparte was little more than a schoolboy, was now rated as an old-fashioned pedant, as a follower of worn-out and exploded systems of warfare—as if Massena, and Marmont, and Ney, and any of the men of the new school, had been more successful in their struggles with Wellington. Soult, the best of them all, had repeatedly and notoriously failed; but it was Soult that was now chosen to succeed Jourdan, and to head back the torrent of war which now threatened "the holy territory of France." Bonaparte felt the need of Soult's services in Germany; but, seriously alarmed for the safety of his own southern frontiers, he sent away that marshal from the Grand Army with very extraordinary powers, with a sort of Alter Ego character, and with the title of "Lieutenant of the Emperor." Soult was to take the entire command of the defeated troops, to re-equip them, to gather

* Letter dated Caseda, 29th July, in Colonel Gurwood, Wellington Dispatches.

Even at this moment, this quick and far-sighted man, whose sagacity was hardly ever at fault either in politics or in war, discovered and explained not only his own present embarrassments caused by the mad reformers of Spain, but also the future confusion and anarchy which must result from them. The result we see at the present day, and we have been witnessing it for the last ten years, which have been for Spain years of blood, crime, horror! Nor is there even now any clear prospect of a tranquil settlement.

* Letter to the Earl of Liverpool, dated Lezaca, 25th July, in Dispatches.

† Captain Hamilton, Annals of the Peninsular Campaigns.

‡ Major M. Sherer, Military Memoirs of the Duke of Wellington.

formidable reinforcements, to lead his masses speedily against Wellington, to clear the French frontier and the passes of the Pyrenees, and to relieve Pamplona and San Sebastian, and to drive the allied army behind the Ebro. And all this Soult undertook to do—or he thought it expedient to tell the army that he had undertaken it, and that his hopes were good. He flew through Germany and through France, giving his urgent and imperative orders, and collecting all manner of disposable forces; and on the 13th of July he reached the southern frontier and took the command of the disorganised fragments of Jourdan's army. Soult forthwith issued one of those proclamations or addresses which are necessary with French troops, and which had often been supposed to operate wonders. It was boastful, and flattering to the vanity of the soldiery, who were told that the present lamentable situation of affairs was imputable to others, not to them; and that theirs would be the merit of repairing all that had been done amiss. "I have borne testimony to the emperor," said Soult, "of your bravery and zeal: his instructions are that you must drive the enemy from these heights, which enable them to look proudly down on our fertile valleys, and then chase them beyond the Ebro. It is on the Spanish soil that your tents must next be pitched, and your resources drawn. Let the account of our successes be dated from Vittoria, and let the fête-day of his imperial majesty be celebrated in that city!"*

* Soult paid some very tardy compliments to the British troops and their great commander; but he denied to Wellington any originality of military genius, and he told the French soldiers that it was only from them that the English had at last learned how to fight. "The dispositions and arrangements of their general," said Soult, "have been skilful, prompt, and consecutive, while the valour and steadiness of his troops have been great. But do not forget that it is from you that they have learned these lessons, and that it is to you they are indebted for their present military experience."

When that auspicious day arrived, the 15th of August, Marshal Soult and his army, instead of being at Vittoria, were on the wrong side of the Pyrenees, after having been repeatedly beaten and scattered; and the allied army, instead of having been driven beyond the Ebro, was on the Bidasoa, with a firm footing in France.

Having given the most minute instructions for rendering safe and effectual the blockade of Pamplona, a very strong fortress, wherein were shut up some 4000 French troops, who had more than 200 cannon in battery, Wellington quitted the upper passes of the Pyrenees, and went down to the shores of the Atlantic, to superintend the siege of San Sebastian, with some faint hope of carrying that formidable place before Soult should put himself in motion. But his lordship's means for pressing a siege were, as they ever had been, exceedingly defective, and both the fortress and the garrison were found to be even stronger than he had expected. On the 14th of July batteries were opened against the convent of San Bartolomeo and other outworks. Leaving Sir Thomas Graham to conduct the siege according to a plan which his lordship had drawn up, the commander-in-chief returned to the main body of his army. On the 17th of July the convent and a redoubt were carried by assault; but on the 25th, one of our storming parties was repulsed and hurled back, with the loss of 500 killed and wounded, and 100 taken. Upon this disastrous intelligence Wellington galloped back to the coast; and, finding that even the ammunition was almost exhausted, he gave his orders to suspend the operations of the siege for a time, and to blockade the place and guard the seaward pass, so as to prevent the arrival of any succour from France. The night of this very day,

SAN SEBASTIAN.

as he was riding back to his head-quarters, now established at Lezaca, Wellington received the reports that the great army of Soult, from 70,000 to 80,000 strong, was in rapid motion; that the French had overpowered his troops in two of the mountain-passes on the right of the allied army, had penetrated with overwhelming numbers into the valleys of the Pyrenees, and were pressing onwards for Pamplona. "Well!" said the general to the officer who thus reported, "we must do the best we can to stop them!" And stop them he did, after a whole week of brilliant manœuvres, rapid movements, and almost constant fighting.

Soult, with admirable diligence and ability, had re-organised his army, in nine divisions of infantry, two of dragoons, and one of light cavalry. He had been strongly reinforced, other reinforcements were forming in his rear on the Garonne, and he had been well supplied with artillery, arms, ammunition, and stores. On the evening of the 24th of July he had suddenly collected between 30,000 and 40,000 men on the French side of the Pyrenees, at St. Jean Pied de Port, near the opening of the pass of Roncesvalles. At the same time another column of attack, 13,000 strong, was assembled at Espelette, near the pass of Maya. His plan was to attack at one and the same time the pass of Roncesvalles and the pass of Maya, the roads from which converge on Pamplona. And, accordingly, under cover of some feints and manœuvres, principally made by some thousands of national guards, attached to his regular army, which distracted the attention of the allies towards other roads or paths, the French rushed into those two passes early on the morning of the 25th, Soult leading in person the greater column. In both of the passes, and on the heights above them, there was desperate fighting. They fought on the mountain tops, which could scarcely have witnessed any other combat than that of the Pyrenean eagles—they fought among jagged rocks and over profound abysses—they fought amidst clouds and mists, for those mountain tops were 5000 feet above the level of the plains of France, and the rains, which had fallen in torrents during several preceding days, were evaporating in the morning and noon-day sun, were steaming heavenward, and clothing the loftiest peaks with fantastic wreaths. The British disputed nearly every foot of ground, only yielding at last to the immeasurable superiority of numbers, and then retreating in admirable order to good positions. In the Maya pass alone, where a handful of men opposed for a long time an immense and condensed French column, and where General Stewart never had more than 4000 or 5000 men to bring into action against the 13,000 fighting men of General d'Erlon, the allies lost 1600 men in killed and wounded: of this number 1400 were British troops. All here had fought heroically; but the 92nd regiment suffered most in the unequal contest. The advancing enemy was stopped by the mass of its dead and dying; it never gave way until two-thirds of its men, who were principally natives of Ireland, had fallen to the ground, and even then it rallied on the secondary position. These dauntless Irishmen would indeed have graced Thermopylæ.* D'Erlon had purchased his very imperfect advantage at a dear price: the number of his killed and wounded could not be ascertained, but it was estimated roundly at 1800 men. And, what was of equal importance, was the fact that, after the bloody lesson they had received in the Maya pass—after seeing how a diminutive number of British troops could stand, even when taken by surprise in an isolated position—his men became uncommonly shy of fighting. Marshal Soult's great plan was deranged by the protracted stay of this corps on the Col de Maya, and several ingenious theories have been spun to account for d'Erlon's long delay; but it appears to us that this delay was chiefly, if not wholly, attributable to the discouragement of his troops. In the Roncesvalles pass, General Cole, with 10,000 or 11,000 bayonets, long opposed the 30,000 bayonets of Soult, and when he gave way it was only by a slow and orderly retreat, and to a position where the French did not dare to attack him. Cole lost about 380 men in killed and wounded, and Soult himself acknowledged a loss of 400 men. The French marshal had not gained ten miles of advance, and from the two passes which he had forced the distance to Pamplona was not less than twenty-two miles, with strong defensive positions, and intrepid and increasing enemies between. Upon these considerations, and on account of the immovableness and torpidity of d'Erlon's corps, Soult must indeed have felt that this day's operations were unsatisfactory.† After the two passes had been forced, Picton, with the third and fourth divisions, retired leisurely and in beautiful order before Soult; and on the 27th took up a position, in battle-order, to cover the large Spanish division that was blockading Pamplona, the first great object of Soult's advance. At the same time Sir Rowland Hill fell back and took post at Irurita. Sir George Murray, the quartermaster-general, at the critical moment, had taken upon himself some heavy responsibility; and his movements and arrangements were approved and applauded by Wellington, who on this day joined the main body of the army on the field.‡ The commander-in-chief was received with

* Col. Napier, Hist. of War in the Peninsula.

† Id.

‡ The latter part of Lord Wellington's journey from San Sebastian had been a complete race. Very early on the morning of the 27th he descended the valley of Lanz, without being able to learn anything of the movements of General Picton, who, as was not unusual with him, had acted precipitately and in contradiction to the spirit of his instructions. In a state of painful uncertainty, and at great hazard of being intercepted and taken prisoner, his lordship reached Ostiz, a few miles from Sorauren (both of which places were in a very short time possessed by the fast-advancing French). At Ostiz he found General Long, with a brigade of light cavalry; and here he learned that Picton, having abandoned the heights which he ought to have held, was moving on Huarte. He left Sir George Murray, his able quartermaster-general, at Ostiz, with instructions to stop all the allied troops that were coming down the valley of Lanz. Then, at racing speed, Wellington made for Sorauren. As he entered that village he saw Clausel's divisions on the crest of the contiguous mountain, and concluded that the allied troops in the valley of Lanz must be intercepted if they came down. Therefore he wrote, on the parapet of the bridge of Sorauren, fresh instructions to the quartermaster-general,

enthusiastic cheers by the soldiers, who thus intimated the little doubt they had of being able to drive Soult back across the Pyrenees. There was the same enthusiasm everywhere. On his way to the main body, as he had ridden past the several corps, which were all instantly put in motion, with his own clear orders for their guidance, he was loudly cheered by all the men. The disposable forces of the allies were now concentrated to the right; but their numbers were much reduced by the blockades of Pamplona and San Sebastian. Soult formed his army on the ridge of a mountain, right opposite to the allies; and on the evening of the 27th he moved down and made a partial attack on Wellington's fourth division. The French were foiled and beaten—repulsed even at some points by the Spanish infantry, which they had so long despised. It was made evident that the French veterans who had been engaged in Spain against the British had lost much of their vivacity and confidence, and that a party of Soult's reinforcements consisted of conscripts and new levies, who were hardly equal to a contest with such of the Spanish regiments as had submitted to any degree of discipline. On the other side, the novel sight of the French flying from their levelled bayonets gave the Spaniards great encouragement. But, unluckily, Spanish valour continued to the last to be subject to hot and cold fits; and, through the bad qualities of the great majority of their officers, their discipline could never be perfected. On the following day—the 28th of July, and the fourth anniversary of the battle of Talavera—Soult renewed his attack, and this time in full force. First he fell upon our left, and then he fell on the centre of the British position, which was drawn up on the hills. Nearly the whole brunt of this attack of an army was borne by a single division—by our fourth division, under Sir Lowry Cole, who repulsed the French with the bayonet. In one single instance the French succeeded in overpowering a Portuguese battalion, on the right of General Ross's brigade. This obliged Ross to retire, and thereupon the enemy established themselves for a moment in the line of the allies. But Wellington directed the 27th and 48th regiments to charge them, and the French were presently driven down the hill at the bayonet's point, and with a frightful loss. Soon after the fighting ceased: the French had had more than enough of it. The next day, the 29th, the two armies remained inactive, Soult evidently doubting of his power to break through the allies to relieve Pamplona. He resolved, however, to make one effort more before carrying his tamed eagles back to France; and, giving up all thoughts of forcing Wellington's centre, he moved off a large body on his right with the purpose of turning the British left, by a sudden, heavy, concentrated attack on Sir Rowland Hill. If this attack should succeed entirely, he might be enabled to relieve, by a continued movement to his right, not Pamplona, but San Sebastian; or, if it succeeded but partially, it would open to the French a better line of retreat than any they now possessed, and put him in communication with his strong reserve on the Bidasoa under the command of General Villatte. On the 30th Soult, by manœuvring on the left flank of Hill's corps, obliged that general to retreat from one height to another range about a mile in the rear; but, when the French attacked Hill on that second height, they were repulsed with loss. They repeated their assault upon Hill's front; but Hill was reinforced by troops that marched rapidly from the British centre to the left, and the French brigade was driven down the slopes by the death-dealing bayonets. Every effort of the French ended in the same disaster; and while Soult was vainly throwing his columns against Hill, Wellington attacked the French corps in his own front. These corps had been weakened in order to strengthen their right and dislodge Hill, but they occupied a very strong position between the valley of the Lanz and the valley of the Arga; they were in possession of the strong village of Ostiz, they were protected by rocks and woods, and their ground was lofty, and, to a timid eye, impregnable. But Picton was sent to turn the left of this position by the road of Roncesvalles, and Lord Dalhousie, with the 7th division, was sent across other mountains to turn the right. Our soldiers scrambled over the steep and rugged heights like the goats that were native to them. Picton and Dalhousie turned the two flanks and attacked with the greatest spirit, driving the French out of Ostiz; and, as soon as these flank movements had taken effect, Sir Lowry Cole attacked the enemy right in front with two British and two Portuguese battalions. The French soon gave way, and fled precipitately. They were pursued by Lord Wellington as far as Olague; and here at sunset a halt was called, this part of our army being in the rear of the great French right which had been engaging Sir Rowland Hill, and which had been so well beaten by him. Foiled at all points, every part of the French army began to retreat under cover of darkness; and they kept marching throughout the night. Soult tried no more. At one time his foremost division had been within two short leagues of Pamplona, but he had not been able to do the least thing for that im-

pointing out a safe route by the right, which would bring those allied troops into the rear of General Cole's position. Lord Fitzroy Somerset, the only staff-officer who had been sufficiently well mounted to keep up with Wellington's thorough-bred English chestnut, galloped with these orders out of Sorauren by one road, the French light cavalry dashed into the village by another, and the English general rode alone up the opposite mountain to reach his troops. "One of Campbell's Portuguese battalions first descried him, and raised a cry of joy, and the shrill clamour caught up by the next regiments swelled as it ran along the line into that stern and appalling shout which the British soldier is wont to give upon the edge of battle, and which no enemy ever heard unmoved. Lord Wellington suddenly stopped in a conspicuous place; he desired that both armies should know he was there, and a double spy who was present pointed out Soult, then so near that his features could be plainly distinguished. The English general, it is said, fixed his eyes attentively upon this formidable man, and, speaking as if to himself, said, '*Yonder is a great commander, but he is a cautious one, and will delay his attack to ascertain the cause of these cheers; that will give time for the sixth division to arrive, and I shall beat him.*' And certain it is that the French general made no serious attack that day."—*Colonel Napier, Hist. of the War in the Peninsula.*

portant fortress, the blockaded French garrison of which heard for several successive days the not distant firing, telling them of the desperate efforts made by their countrymen to relieve them, and the resolute determination of the allies that they should not be relieved. On the morning of the 31st Soult's scattered and dismayed forces were in full retreat into France, followed by the allies, who succeeded in taking many prisoners and much baggage. These various combats are called "the battles of the Pyrenees."* The fighting had been of the hardest kind. In a private letter written just after the events Wellington said, "I never saw such fighting as we have had here. It began on the 25th of July, and, excepting the 29th, when not a shot was fired, we had it every day till the 2nd of August. The battle of the 28th was fair *bludgeon* work. The 4th division was principally engaged, and the loss of the enemy was immense. Our loss has likewise been very severe, but not of a nature to cripple us."† The entire loss of the allies, including the casualties of the pursuit, amounted to about 6200 men. "I hope," says Wellington, "that Soult will not feel any inclination to renew his expedition. The French army must have suffered considerably. Between the 25th of last month and 2nd of this, they were engaged seriously not less than ten times; on many occasions in attacking very strong positions, in others beat from them or pursued. I understand that their officers say they have lost 15,000 men. I thought so; but, as *they* say so, I now think more. I believe we have about 4000 prisoners. It is strange enough that our diminution of strength up to the 31st did not exceed 1500 men, although I believe our casualties are 6000."‡

But if all Wellington's orders had been properly obeyed by the officers in command of detached corps, if some of the Spaniards had been where they ought to have been, and if many events which ought to have been in the English general's favour had not turned out unfortunately, Marshal Soult must have surrendered at discretion, and scarcely a soldier of his army could have got through the mountain passes into France. General Hill overtook Soult's rear-guard in the pass of Donna Maria, took many prisoners, and then joined Lord Wellington on the heights above the pass. Soult was in a deep narrow valley, but, not being pursued, he halted in San Estevan. Three British divisions and one of Spaniards were behind the mountains which overlook that town, and the Spaniards that Sir Thomas Graham had detached from the siege of San Sebastian were marching to block up the exits from the valley. Wellington thought he had Soult in a trap: he gave strict orders to prevent the lighting of fires, the straggling of soldiers, and everything that might betray to the French the secret that the divisions of a great army were gathering round them, and he concealed himself behind some rocks whence he could clearly observe every movement of the enemy. Three drunken or marauding English soldiers destroyed the combination and saved Marshal Soult from a most terrible and inevitable disaster: these worthless fellows strolled down the valley, were surprised by four French gendarmes, and were carried to Soult in San Estevan. Shortly afterwards Soult's drums beat to arms, and the French columns began to move out of the town towards the French mouth of the pass. This was on the 31st of July. The way was steep and very narrow, the multitude was great, and the baggage and the wounded men, borne on their comrades' shoulders, formed such a long line of procession, that Soult's rear was still near San Estevan on the morning of the 1st of August; and scarcely had they marched a league from that town when they were assailed by a terrible fire from the skirmishers of our fourth division and some Spaniards who covered the heights on the right side of the deep valley. The French could scarcely reply to this hot fire; their troops and baggage got mixed, many of the men fled up the hills on the opposite side, and Soult, who rode to the spot, could hardly prevent a general flight and dispersion. As it was, many prisoners and much baggage were taken by the allies at every step. As the French advanced, the valley narrowed to a mere cleft in the rocks, and they had to cross a mountain torrent by a crazy narrow bridge. The Spanish generals Longa and Barceñas ought, in accordance with their instructions, to have been with their whole divisions at the head of this chasm and on the bridge; but there was nothing there but a single battalion of Spanish Caçadores, who were not capable of sustaining the French charge headed by General d'Erlon. Thus Soult got out of that *coupe-gorge*. But his perils and his losses were not yet over, for the whole of Reilles's division had yet to pass, and our hard-fighting, hard-marching light division was now close at hand. As the shades of evening were deepening in that deep chasm, the head of our light division, after marching for nineteen consecutive hours over forty miles of rough mountain-roads,* reached the edge of a precipice near the bridge of Yanzi, and saw below them, within pistol-shot, Reilles's division rushing along that horrid defile. A crash of musketry and rifles first told the French of the presence of their foes. A river flowed between them and the English; but the French were wedged in a narrow road with inaccessible rocks on one side and the river on the other—and at the same moment other light troops were coming up

* Or they are severally called the combat of Roncesvalles, the combats of Maya and Linzoain, the first battle of Sorauren, the second battle of Sorauren, and the combat of Donna Maria, the last having been fought on the 31st, in pursuing Soult through that pass.

† Letter to Lord William Bentinck, dated Lezaca, 5th of August, in Colonel Gurwood, Wellington Dispatches.

‡ Letter to Sir Thomas Graham, id.

* The day had been exceedingly sultry, the fatigue immense. Many men of the light division fell and died convulsed and frothing at the mouth. Others, whose strength and spirit had never before been quelled, leaned on their muskets and confessed that they were done. The whole column was in a state of exhaustion when its head reached the precipice.—*Captain Cooke, Memoirs.—Colonel Napier, Hist. of Penin. War.*

the pass from San Estevan to take Reilles's people in the rear. A British officer, an eye-witness, has thus described the terrible scene which ensued: "Confusion impossible to describe followed; the French wounded were thrown down in the rush and trampled upon; the cavalry drew their swords and endeavoured to charge up the pass; but the infantry beat them back, and several, horses and all, were precipitated into the river; some fired vertically at us, the wounded called out for quarter, while others pointed to them, supported as they were on branches of trees on which were suspended great-coats clotted with gore, and blood-stained sheets taken from different habitations to aid the sufferers."* Brave British soldiers could not fire at such piteous objects as these; they satisfied themselves with keeping possession of the bridge and with charging or firing at those who had still muskets and bayonets or sabres in their hands, and who were trying to force the passage. The evening was rapidly succeeded by dark night, and then, finding out a side path and climbing over rocks and mountains, the greater part of Reilles's forces escaped and joined Soult at Echalar. But they left behind them all their baggage and a great many more prisoners. Yet Lord Wellington was greatly and justly discontented with the result of this day's operations. Marshal Soult, who ought to have been his prisoner, rallied his shattered and disheartened divisions as best he could during the night, bringing his right wing at the rock of Ivantelly to communicate with the left of Villatte's reserve, which was found in position on the French side of the Pyrenees. On the following morning, the 2nd of August, Lord Wellington, who had come up towards this point with his fourth, seventh, and light divisions, fell upon General Clausel, who was commanding Soult's rear-guard, and who was in possession of an exceedingly strong position near the town of Echalar. General Barnes, with his single brigade, about 1500 strong, was the first to arrive at the foot of that hill, and, without waiting for the other divisions, Barnes rushed up the steep height under a tremendous fire of musketry and artillery, charged Clausel's 6000 men, and drove them from their position. Clausel's men were the same which had failed in the attack near Sorauren on the 28th, who had been thoroughly beaten on the 30th, and who had suffered so severely the day before this action at Echalar in getting from San Estevan. It was not in the nature of Frenchmen to stand such a succession of reverses and calamities: their spirit was evaporating like the late rains, and time, and effusion of new blood—an intermixture with other men, who still in their ignorance believed that the English were no soldiers and Wellington was no general, was necessary to re-invigorate them. On the same day, the 2nd of August, the French were dislodged from Ivantelly, a lofty mountain, and here, notwithstanding their position and their numbers, the work was done by Colonel Andrew Barnard with five companies of his riflemen, supported by four companies of the 43rd.*

Soult now drew closer to his reserves behind the Bidasoa, put some of his disorganised corps behind the line of his reserve, and called for reinforcements, and collected all the detachments and national guards that he could. Wellington had, on the 1st of August, directed Sir Thomas Graham to collect all his forces, to advance from San Sebastian, and bring up pontoons for crossing the Bidasoa; but very weighty considerations induced him to abandon this design of following Soult into France; and, therefore, after nine days of incessant motion, and ten serious actions, the two armies rested quiet in their respective positions.† The English flag again waved triumphantly in the pass of Roncesvalles, where it had been seen centuries ago with Edward the Black Prince, and in the pass of Maya, and in all the chief defiles; the British troops again looked down upon the plains of France, they had a firm footing on the skirts of that kingdom, and the foraging parties of the Spaniards often penetrated for miles beyond the frontier. The young Prince of Orange, who had now followed Wellington for two years, and who had a horse killed under him in one of the recent engagements, was the bearer of his lordship's dispatches to the British government.

In the interval of repose on the frontier, efforts were, however, made by the French to relieve San Sebastian, and these were met by an increase of activity and determination on the side of the allies to reduce that place and compel the 4000 French at Pamplona to capitulate. On the 19th of August —and not earlier—transports arrived from England with a good and sufficient supply of heavy guns and mortars, and with one company of royal sappers and miners—a species of force whose formation had been so long and so absurdly neglected by our government and by those who had presided over our war-department (a department too generally intrusted to orators or parliamentary debaters rather than to soldiers).‡ Admiral Sir

* Captain Cooke, Memoirs.

* In the course of the day Lord Wellington, who was still grieving that Soult should have escaped him, was nearly taken prisoner himself. He was standing near the hill of Echalar examining his maps, with only half a company of the 43rd as an escort. The French, close at hand, sent a detachment to cut the party off; and such was the nature of the ground that these Frenchmen would have fallen unawares upon his lordship if Serjeant Blood, a young, intelligent, and active man who had been set to watch in front, had not rushed down the precipitous rocks where he was posted and given the general notice. As it was, the French arrived in time to send a volley of shot after his lordship as he galloped away.—*Colonel Napier.*

† Id.

‡ On the 11th of February, 1812, Wellington had written to the Earl of Liverpool—"While on the subject of the artillery, I would beg to suggest to your lordship the expediency of adding to the engineer's establishment a corps of sappers and miners. It is inconceivable with what disadvantages we undertake anything like a siege for want of assistance of this description. There is no French *corps d'armée* which has not a *battalion* of sappers and a *company* of miners. But we are obliged to depend for assistance of this description upon the regiments of the line; and, although the men are brave and willing, they want the knowledge and training which are necessary. Many casualties among them consequently occur, and much valuable time is lost at the most critical period of the siege."—*Wellington Disp.*

Apparently, Lord Wellington had recourse to some Frenchmen or to some foreigners in the French service, who either had deserted or had been taken prisoners, for, on the 14th of February, 1812, or three days after writing the above letter to the Earl of Liverpool, we find him writing to one of his own generals in Portugal, to send him, in charge of a steady non-commissioned officer, ——— ———, the Ser-

George Collier landed both men and guns from his squadron to assist the besiegers; and great was the assistance derived from our active and intrepid sailors. After some intervening operations and two sallies made by the besieged, who were repulsed with the bayonet, on the 30th the breaches appeared practicable, and Wellington decided that the assault should be made on the 31st. On the morning of the 30th the French were seen in force at Vera, on the right of the Bidasoa, and near the opening of the along-shore road which leads to San Sebastian. The main strength of the covering army now consisted of 8000 Spaniards, posted on the heights of San Marcial, on the left of the Bidasoa. On the morning of the 31st, while the besiegers were waiting for the fall of the tide to commence storming, Soult put his relieving columns in motion: two divisions of the French forded the Bidasoa in front of the Spaniards, and ascended the strong heights with a great show of valour and confidence. The Spaniards let this column come on until it nearly reached the summit of San Marcial; but then they gave a shout and charged with the bayonet. The French instantly broke, fled down the hill, and continued their flight across the river and beyond it; and so panic-stricken and confused were they that many missed the fords and were drowned. In the afternoon the French laid down a pontoon bridge, passed over in greater numbers (it is said that about 15,000 crossed the Bidasoa), and made a general attack on the heights of San Marcial; but the Spaniards there were now supported by some divisions of the allied army on their flank and rear, and Lord Wellington came up from San Sebastian and rode along the Spanish line just as the French were coming on to this attack. The Spaniards received him with loud and joyous *vivas*, and then, full of confidence and enthusiasm, they rushed upon the French with fixed bayonets and again repulsed them and drove them down the slopes with terrible loss. The French continued to run for their lives, but wildly and without any attention to the voices of their officers, and the Spaniards pursued them with the bayonet in their reins. Some rushed into the deep water and were drowned; such numbers got wedged upon the pontoon bridge, that it was broken, swamped, and sank with most of those upon it. These rare Spaniards met with the praise they deserved, the British general saying in his dispatch that their conduct was equal to that of any troops he had ever seen engaged. During this attempt to force the direct road to San Sebastian, another corps of the French endeavoured to pass by another road to the left; but here they were met by a Portuguese brigade, by the brigade of General Inglis, and by our light division, who drove them back across the Bidasoa with loss and in a panic. This day's work cost Soult two generals of division killed, and about 2000 men in killed, wounded, and drowned. It was Soult's last effort for the relief of San Sebastian. But the same day witnessed a terrible loss of life among the besieging army. At eleven o'clock in the forenoon the assault took place, the operations being directed by Sir Thomas Graham in person, and the storm being led by the brigade of General Robinson, in the midst of an awful storm of thunder, lightning, and rain. The work would have been comparatively easier, or probably there would not have been any necessity to storm the town at all, if the besiegers had thrown shells into the town; but this, out of regard to the safety of the inhabitants and their property, and the lives and property of a number of Spaniards who were crowded in the place, Wellington positively refused to do; and he issued the strictest orders that not a shell should be thrown into the town. Nobly supported by a detachment of Portuguese under Major Snodgrass, the British got entire possession of the town, drove the French from their numerous intrenchments in the streets, took 700 prisoners, and made the rest fly up to the castle, which stands upon a rock above the town and above the sea near the end of the promontory. But 2000 brave fellows fell in this assault, or rather series of assaults, and of murderous street-fighting: Sir Richard Fletcher, the commanding engineer—an admirable officer, and one of the best of men—was shot through the heart; Generals Robinson, Leith, and Oswald were wounded; and a disproportionate number of officers were sacrificed, for the French, firing from rests and behind cover, picked them out. Through the accidental falling of a saucisson the great French mine, in the chamber of which there were 1200 lbs. of gunpowder, could not be fired. If this mine had been exploded, our first storming brigade must have been annihilated, and a large part of the town buried in ruins. If Wellington had respected the security of the inhabitants, no such thought was bestowed by the French general, who resorted to all the most destructive and fatal, and—to the town and the people in it—most perilous modes of defence. By the explosions of his infernal machines of all kinds the town was set on fire in various places and at one and the same time; and upon his retreat to the castle he kept firing down the streets, killing more of the inhabitants than of the soldiery, knocking their houses to pieces, and preventing them from attending to the conflagration. But, let the whole truth be told, and let it stand as a shame and a warning. Many of the troops, both British and Portuguese, who had behaved like heroes in the assault, behaved like beasts when it was over, bursting into the wine-cellars and getting drunk, and plundering the houses of the town instead of obeying their officers and persevering in their efforts to extinguish the flames

*geant-Major des Sapeurs* and *Adjutant des Travaux*, and ——————, a French miner. And, in a note to this last letter, Colonel Gurwood says that these men were afterwards employed in the new establishment forming called sappers and miners. The formation of this establishment must have been very slow, and the inattention of the home government must have been great, if more than eighteen months after this time only *one company* of sappers and miners could be sent out to San Sebastian.

and stop a conflagration which was threatening to leave San Sebastian a heap of smoking ruins, and even to consume these brutalised men in the stupor or madness of their drunkenness. These disgraceful excesses lasted through the night of the 31st of August and through the next day; nor was it until the 2nd of September that order was restored.* We would not plead the excuse that similar horrors had almost invariably been perpetrated whenever a town had been taken by storm, and that the French had in almost every instance of the kind carried these horrors to an excess, and exhibited a depravity far beyond what was witnessed here; but we would leave the guilt and the blame where they are due, and indignantly resent the charges of ruthlessness and barbarity brought by the gentle and merciful French against our noble commander-in-chief, and against men of nature's highest nobility like Graham, and Robinson, and Oswald, and the rest; charges which have been taken upon trust and which have been repeated not only by French but also by Spanish and even by some English writers. [Nor would we leave the British and Portuguese soldiers chargeable with a guilt they never incurred.] The charges are, that Wellington ordered shells to be fired into the town, and that the town was purposely set on fire by the British. Even at the time some Spanish newspapers, the organs of that anti-Anglican party who had caused and were still causing Wellington so much embarrassment, and who had repeatedly put in jeopardy the cause for which he was fighting in the Peninsula, insinuated or said openly that he had done all this, and that he had cared nothing for the excesses committed by the British and Portuguese soldiery. These men had lied in their throats before, and they have lied loudly since, but they never carried their power of lying farther than now! The town had been set on fire by the French modes of defending themselves; and, because Wellington and his generals would not set it on fire by throwing shells, 2000 brave men had been sacrificed. No effort was spared by our commanding officers or by our regimental officers to stop the excesses of the troops. Wellington was absent when the town was assaulted and carried;—he was encouraging the Spaniards on the heights of San Marcial, was seeing them drive the French into the Bidasoa, or was busied in sending his orders from post to post, from pass to pass, and, having quitted San Sebastian on the evening of the 30th or morning of the 31st of August, he did not return from Lezaca on the frontier until the 2nd of September; but Graham—a man as gentle and humane as he was brave—and the other officers in command acted up both to the letter and spirit of Wellington's instructions, and before Wellington reached the town every excess had ceased. The town was set on fire by the French in six different places before the assault commenced. Wellington's best defence was in his own manly, plain, and indignant language. The good fame of Sir Thomas Graham was as dear to him as his own. In writing to his brother, Sir Henry Wellesley, who was still residing at Cadiz as British ambassador, the commander-in-chief says, "You will more readily conceive, than I can describe, the feelings of indignation with which I proceed to justify the general, and other officers of that army, from the charge that they designed to plunder and burn the town of San Sebastian. I need not assure you that this charge is most positively untrue. Everything was done that was in my power to suggest to save the town. Several persons urged me in the strongest manner to allow it to be bombarded, as the most certain mode of forcing the enemy to give it up. This I positively would not allow, for the same reasons as I did not allow Ciudad Rodrigo or Badajoz to be bombarded..... Neither is it true that the town was set on fire by the English and Portuguese troops. *To set fire to the town was part of the enemy's defence.* It was set on fire by the enemy on the 22nd of July, before the first attempt was made to take it by storm; and it is a fact that the fire was so violent on the 24th of July, that the storm which was to have taken place on that day was necessarily deferred till the 25th, and, as is well known, failed. I was at the siege of San Sebastian on the 30th of August, and I aver that the town was then on fire. It must have been set on fire by the enemy, as I repeat that our batteries, by positive orders, threw no shells into the town; and I saw the town on fire on the morning of the 31st of August, before the (second) storm took place. It is well known that the enemy had prepared for a serious resistance, not only on the ramparts, but in the streets of the town; that traverses were established in the streets formed of combustibles, with the intention of setting fire to and exploding them during the contest with the assailants. It is equally known that there was a most severe contest in the streets of the town between the assailants and the garrison; that many of these traverses were exploded, by which many lives on both sides were lost; and it is a fact that these explosions set fire to many of the houses. ..... In truth, the fire in the town was the greatest evil that could befall the assailants, who did everything in their power to get the better of it; and it is a fact that, owing to the difficulty and danger of communicating through the fire with our advanced posts in the town, it had very nearly become necessary at one time to withdraw those posts entirely. In regard to the plunder of the town by the soldiers, I am the last man who will deny it, because I know that it is true. It has fallen to my lot to take many towns by storm; and I am concerned to add that I never saw or heard

* When a place is taken by assault, by a civilised and merciful enemy, it is usual to relieve or remove the infuriated storming parties and supply their place with other and cooler troops as soon as possible. At least as early as the morning of the 1st of September an end would have been put to the excesses of the British and Portuguese who had stormed, and who had witnessed the destruction of so many hundreds of their countrymen and comrades, if it had been possible to relieve them; but this possibility did not exist, for the other columns were on the frontiers, fighting hard at San Marcial and elsewhere, or guarding the mountain passes against Soult. In fact, on the 31st of August, the day San Sebastian was stormed, the whole of the left of the army was attacked by the French.

of one so taken, by any troops, that it was not plundered.* . . . . . If it had not been for the fire, which certainly augmented the confusion, and afforded greater facilities for irregularities, and if by far the greatest proportion of the officers and non-commissioned officers, particularly of the principal officers who stormed the breach, had not been killed or wounded in the performance of their duty in the service of Spain (to the number of 170 out of 250), I believe that the plunder would have been in a great measure, though not entirely, prevented." † And there are some circumstances that at least extenuate the conduct of the allied troops in the captured town. From the city of Vittoria onward, in all the country between the Ebro and the Pyrenees—a country of which the French had so long held an almost undisturbed possession—the allies had, in a variety of painful ways, been made sensible of the existence of a numerous and active French party, and of the prevalence of a most hostile feeling, not only to the English and to the Portuguese, but also to the Andalusians and the Spaniards from other provinces who were now marching under the orders of Wellington. The divided states of Italy never nourished greater jealousies or more rancorous antipathies to one another than did the inhabitants of the great Spanish provinces, or of the old kingdoms which had been gradually brought together under one sceptre, without any moral or physical amalgamation; and the feuds of the fifteenth century between English and Scotch were gentleness and affection compared with the hatred that raged between Spaniards and Portuguese in the nineteenth century. A poet who, after the event, corrected in plain prose the disproved vaticinations of his verse, has said that Lord Wellington had done wonders, had perhaps changed the character of a nation, and reconciled rival superstitions; ‡ but it was beyond the power of Wellington either to root out the mutual animosities of the Spaniards and Portuguese, or even to make the Spaniards of Guipuzcoa, or Biscay, or Navarre, cease to hate the Spaniards of Castile, or Leon, or La Mancha, or Andalusia. No other man than himself could so long have kept Portuguese and Spaniards in one army without some great and bloody catastrophe. It might be as much owing to these mad antipathies as to any sympathies or partizanship for the French that the inhabitants of San Sebastian aided and assisted the besieged; but it is an indisputable fact that they both assisted the French and fired upon the British and Portuguese besiegers! This was but a bad return for the mercy and magnanimity of Wellington and Graham, in sparing the town from bombardment, and in preferring to that measure the certain loss of many hundreds of men! After such a provocation, the marvel is, not that the storming parties broke open the wine-cellars of the inhabitants and plundered their houses, but that they did not cut their throats. Yet there was no massacre either of townspeople or of French prisoners, though the latter must have been taken with the "red hand." If some few of the inhabitants were killed or injured by fire-arms and bayonets, this was done by accident during the contest in the streets with the enemy, and not by design. As to the fact that the lives were saved of 700 French, taken in the very heat and fury of the storming, we have, though in a most disgraceful shape, the confirmation of these complaining Spaniards themselves, for they asserted, in the body of their complaints, that the allies had been over-kind to the enemy. "In regard to the charge of kindness to the enemy," said Wellington, "I am afraid it is but too well founded; and that, till it is positively ordered by authority, in return for the ordonnance of the French government, that all enemies' troops in a place taken by storm shall be put to death, it will be difficult to prevail upon British officers and soldiers to treat an enemy, when their prisoners, otherwise than well." But this bloody ordonnance, which had been recently issued by Bonaparte, was of itself calculated to madden any soldiery, and more particularly men who had taken a place by storm after such a frightful loss; and therefore the safety of the 700 French and the kindness shown to them are wonderful proofs of a generosity of nature and aversion to blood; and as such ought to stand as a set-off against the drunkenness and the pillage.* It also rests upon the highest authority, and upon the careful examination and evidence of General Robinson, who led the storming brigade, of General Hay, who commanded in the town immediately after the storm, and of other British officers commanding regiments, that

* "It is," added his lordship, "one of the evil consequences attending the necessity of storming a town, which every officer laments, not only on account of the evil thereby inflicted on the unfortunate inhabitants, *but on account of the injury it does to discipline, and the risk which is incurred of the loss of all the advantages of victory, at the very moment they are gained.* It is hard that I and my general officers are to be so treated as we have been by the 'Xefe Politico' and other unrestrained libellers, because an unavoidable evil has occurred in the accomplishment of a great service, and in the acquirement of a great advantage. The fault does not lie with us; it is with those who lost the fort, and obliged us at great risk and loss to regain it for the Spanish nation by storm." [*At the beginning of this war the place had been given up to the French in a dastardly or treacherous manner by a Spanish garrison. Nor was this the first time that the strength of San Sebastian had been valueless in Spanish hands: in* 1794 *the French republicans, after beating the Spaniards at Fuentarabia and all along that frontier, reduced the place in a few days, and without any siege-artillery.*]

"Notwithstanding that I am convinced that it is impossible to prevent a town in such a situation from being plundered, I can prove that upon this occasion particular pains were taken to prevent it. I gave most positive orders upon the subject."—*Letter to the Right Hon. Sir H. Wellesley, dated Lezaca, 9th October, in Wellington Dispatches.*

† Id. id. "Indeed," subjoins his lordship, "one of the subjects of complaint, that sentries were placed on every house, shows the desire at least of the officers to preserve order. These sentries must have been placed by order; and, unless it is supposed, as charged, that the officers intended that the town should be plundered and burned, and placed the sentries to secure that object, it must be admitted that their intention in placing these sentries was good."

‡ Lord Byron, notes to Canto 1. of Childe Harold.

* The French showed no such consideration or mercy for their British and Portuguese prisoners, of whom a good number had been taken in the unsuccessful assault of the 25th of July. After he had been driven from the town into the castle, Rey, the French general, kept the prisoners in the open yard of the castle-magazine "*sans blindages*," and many of them were killed and wounded by the fire of their own countrymen directed against that building. Rey also made the prisoners work under fire. We give these facts on no questionable or weak authority. Lord Wellington, in writing to Sir Thomas Graham on the 5th of September, four days before Rey capitulated and surrendered the castle, says, "I do not know that I have ever heard of such conduct, and the pretension founded upon it, viz. that we should not direct our fire against the place, is too ridiculous. I request you to send in to General Rey a protest against his keeping his prisoners in the yard of this magazine, '*sans blindages*,' and likewise against his making them work under fire."—*See Dispatches.*

both troops and officers did at first do everything in their power to stop the progress of the fire, which was set to the town by the enemy; and that many lost their lives in the attempt, owing to the fire of musketry kept up upon the roofs of the houses by the enemy in the castle.*

We have dwelt the longer upon this subject, because Spanish writers, both now and recently, have, with barefaced impudence, revived the exploded and disproved calumnies against our great captain and against the character of the British army and nation.

The ease with which the castle was taken from the French after the town had been carried showed how much the allies had sacrificed by not driving them out of the town by bombardment weeks before. The town was stormed on the 31st of August. On the 1st of September some near batteries were opened upon the castle from the town, and shortly afterwards a bombardment was commenced, for it would have been carrying humanity to absurdity to treat the fortress with the same gentleness as the town. On the 3rd Rey proposed to surrender upon terms which were inadmissible. On the 8th, when the castle was flying off in fragments from the fire of our batteries, Rey beat the *chamade* and surrendered. On the morning of the 9th the garrison marched out with the honours of war and laid down their arms. They still amounted to more than 1800 men and officers, but 500 of them were sick or wounded. Thus 2500 men in all were taken, but the allies in the course of the siege had lost nearly 4000 in killed and wounded.

On the 31st of October the 4000 French in Pamplona, having lost all hope of relief, surrendered prisoners of war to Lord Wellington's tried and steady friend Don Carlos de España, who had latterly commanded the blockading forces. There was nothing now in the rear of the allies to cause them any apprehension or to intercept their communications with the interior of Spain. But before the reduction of Pamplona—though not before that event had been rendered inevitable—Wellington called down part of his troops from the bleak mountain-tops and from the gloomy narrow passes, where, to their infinite discomfort, they had been encamped or hutted for more than two months, and led them a march or two forward upon French ground. The men, recently gloomy, looked as if they were going to a fair or a feast, as they trod down from the Pyrenees, and through the defiles of Roncesvalles, and the other passes which their valour had won, but which had given them but a hungry, wet, and cold reception. Early in October Lord Wellington moved his left across the Bidasoa and took possession of the French hills of La Rhune. Soult offered only a very slight resistance, for his army had not recovered its spirit, the reinforcements he wanted were beginning to be still more wanted by his master in Germany, and he had already decided upon a retrograde movement, and had fixed upon the river Nivelle for his line of defence. On the 10th of November the rest of the allied army were called down from their cold and cheerless positions in the highlands of the Pyrenees; and Lord Wellington having made his preparations to march in full force into France, all the troops soon began to descend into the valleys on the French side. Before taking this decisive step, Wellington issued an order of the day to all the troops of the various nations that followed his victorious standard. He told "the officers and soldiers to remember that their nations were at war with France solely because the ruler of the French would not allow them to be at peace, and wanted to force them to submit to his yoke."—He told them "not to forget that the worst of the evils suffered by the enemy in his profligate invasion of Spain and Portugal had been occasioned by the irregularities of his soldiers and their cruelties towards the unfortunate and peaceful inhabitants of the country;"—and that "to avenge this conduct on the peaceful inhabitants of France would be unmanly and unworthy of the allied nations." This proclamation was read over and over again in English, in Portuguese, and in Spanish; and his lordship made it the special duty of all officers to enforce these salutary orders. Nor was the proclamation ever left to remain as an idle piece of rhetoric; his lordship took incessant care to carry it into operation; he enforced the orders most strictly, and, whenever he found any part of his troops attempting to plunder the French peasantry, he not only punished by sharp and summary military law those who were caught in the fact, but he placed the whole regiment or brigade to which they belonged under arms to prevent further offence. It was difficult to convince the vindictive Spaniards and Portuguese, who had so long seen their own country plundered, and ransacked, and wasted by fire and sword, that they ought not to retaliate upon the French, who had attacked them without the shadow of a provocation. Discipline, however, works miracles, and the Portuguese troops, on the whole, behaved well in this as in other particulars. But the undisciplined part of the Spaniards, who had been a thorn in Wellington's side, a beam in his eye, and a perpetual source of anxiety or vexation ever since he set his foot on the soil of the Peninsula, could not be restrained in their revengeful and marauding propensities. Some excuse for them was, that their government had provided them neither with pay nor provisions, neither with clothes nor shoes. To the Spanish general Freyre Wellington said: "Where I command I declare that no one shall be allowed to plunder. If plunder must be had, then another must have the command. You have large armies in Spain, and, if it is wished to plunder the French peasantry, you may then enter France; but then the Spanish government must remove me from the command of their armies. . . It is a matter of indifference to me whether I

* Lord Wellington's second letter to Sir Henry Wellesley on this subject.

command a large or a small army, but, whether large or small, they must obey me, and, above all, must not plunder." At last he took the measure of moving back most of the Spanish troops within the Spanish frontiers.*

The peasantry dwelling near that frontier, and, indeed, the great body of the rural population of the whole of the south of France, between the Garonne and the Pyrenees, between the Rhone and the maritime Alps, and from the Mediterranean shore to the coasts on the Atlantic Ocean, were devout catholics and Bourbonists at heart; they had been borne down after some long and sanguinary struggles by the Jacobins who overthrew both altar and throne, but neither the propagandists of that sect nor the propagandists of the various sects, including the Bonapartean, which had flourished in France since the downfall of Robespierre, had been able to convert them to the modern philosophism, or to uproot their regard for the old dynasty. For some time the expression of their sentiments was subdued by the presence of Soult's army, and by that other army of imperialists which was made up of police-agents, public and secret, prefêts and sous-prefêts, intendants and sous-intendants, with their several staffs of commissaries and clerks, justices, tax-gatherers, commissaries-at-war, douaniers, and those other swarms of employés who all owed their appointments to the central Paris government, and who were all by interest, if not in principle, devoted Bonapartists. But as Soult retired, and as many of this host sought refuge behind the rear of his army, the peasantry began to give sundry signs of good feeling towards Lord Wellington and his army, as also to calculate upon the probability and the means of their taking vengeance upon their own countrymen, of the revolutionary parties, for the wrongs they had suffered, and for the blood of their relatives and friends which had been shed, during the Reign of Terror and since. The military conscription, the excess to which it had been carried, and the prodigious sacrifice of life to which it had led and was still leading, gave more vigour and keenness to the devotional and loyal feeling: the peasantry saw no end to these evils, no cessation to the processes by which their sons were torn from them to fight for the usurper they detested, and to be made food for cannon—*chair à canon.*†

* Colonel Gurwood, Wellington Dispatches.—General Sir Thomas Picton was a Welshman more peppery than Fluellin, and appears always to have been in a passion at somebody or something; but much cooler officers than he re echoed the sentiments he expressed as to the value of Spanish troops as co-belligerents in France. In writing to a friend in England, after the allied army had been for some time in the French territories, Picton says with his usual energy of expression: "The Spaniards, instead of being of any service to us in our operations, are a perfect dead-weight, and do nothing but run away and plunder. We should do much better without these vapouring poltroon rascals, whose irregular conduct indisposes every one towards us. The inhabitants of the country appear remarkably well-disposed, and I believe wish us success from their hearts as the only probable means of bringing about what they all most ardently sigh for—peace."—*Letter to Mr. Murryat in H. B. Robinson's Memoirs of Picton.*

† *Chair à canon*, flesh or meat for cannon, was the epithet commonly applied to young conscripts towards the end of this war, not merely in the unwilling south (where Bonaparte was wont to say that there were no Frenchmen), but throughout France.

If Wellington had not prevented the allies from marauding, and plundering, and maltreating the peasantry, self-defence and the common instincts of nature might have interfered with their passionate wish for the restoration of the Bourbons, and have turned them from friends or passive spectators into dangerous, deadly enemies. But the admirable discipline maintained, the care bestowed to see that their property and persons were protected, and that they were fairly paid for whatever they provided, soon removed nearly all fears and jealousies; and they came flocking to the English camp, with their poultry and vegetables, and oil and wine, as to a peaceful and friendly market. Many—men, women, and children—followed our army, and wished it success; and their wishes were still more loudly and enthusiastically expressed when they saw a prince of the house of Bourbon come and join Lord Wellington, and march with the *Drapeau Blanc* with the English advancing columns, to the true Bourbon tune of "*Vive Henri Quatre!*"

Soult now occupied a very strong position on the Nivelle, which had been carefully prepared for him beforehand: his right rested upon St. Jean de Luz, his left upon Ainhoe. On the 10th of November, Hill, issuing from the valley of the Baztan with the British right, attacked the French left on the heights of Ainhoe, beat it, and drove it towards Cambo, on the river Nive; while the centre of the allies, consisting of English and Spaniards, under Marshal Beresford and General Baron Alten, carried the works behind Sarre, and drove the remainder of the French behind the Nivelle. On the same day the allies crossed the Nivelle at St. Pé in the rear of the enemy, who upon this hastily abandoned their ground and works on the left of the Nivelle, and in the course of the night withdrew to their entrenched camp in front of Bayonne. Before engaging in the defiles of the Pyrenees, or entering upon those desperate enterprises, which had cost him so dearly, for relieving Pamplona and San Sebastian, Soult had marked out this entrenched camp, and given orders for its formation: it was partially completed before he withdrew from the line of the Nivelle; trenches were now digging, and redoubts were raising their heads, all bristling with a tremendous artillery, in part drawn from the great dépôt of Bayonne. Here the French certainly thought that they should be allowed some repose. Lord Wellington's head-quarters were established at St. Jean de Luz, on the right bank of the Nivelle; the allies went into cantonments between the sea and the river Nive, where their extreme right rested on Cambo. The enemy guarded the right bank of the Nive from Bayonne to St. Jean Pied de Port. But Lord Wellington, being straitened for room and supplies for his army, determined to cross the Nive and occupy the country between that river and the Adour. On the 9th of December, General Hill forded the Nive above Cambo, while the sixth division crossed at Ustariz, and the French were dislodged from their position

at Ville Franque. In the night all their posts were withdrawn to Bayonne, and on the 10th the British right rested on the Adour. On that same day Marshal Soult resumed the offensive, issued from Bayonne, and attacked the British left, which covered St. Jean de Luz and the considerable dépôt of stores which had been formed there for the use of the allies. Sir John Hope commanded the left; and he met Soult's spirited attack with perfect steadiness. The French, being superior in number, came on with great speed and fury: twice they succeeded in driving in the fifth division of the allies, and twice they were repulsed again, the first time by the ninth British and a Portuguese battalion, the second time by a brigade of the English guards. Night put an end to the desperate combat; and during that dark December night Soult withdrew most of his forces from the position in front of the British left, and made them glide off towards the British centre, in order to attack our light division with overwhelming numbers. But Sir John Hope, knowing or suspecting his design, moved part of his troops to their right to support the light division; and, on the morning of the 11th, the French discovered that their movement had been anticipated, and their chance lost of crushing the light division. Soult instantly made another change in his movements: Sir John Hope had been weakened by lending strength and support to the light division, and therefore the French marshal directed several columns to try another attack on our left. The necessary movement was performed with great rapidity, it was favoured by the nature of the intervening ground, and this time at least Sir John Hope was taken by surprise. The British troops and their allies were occupied in receiving their rations, and their fatigue-parties were employed in cutting wood for the cooks' fires, when "*En avant! En avant!*" (Forwards! Forwards!) and other French shouts were heard from the front, being answered by the corresponding cry of "To arms! To arms!" among the British. The heads of the French columns were close at hand, and the allies had barely time to run to their arms and ranks: yet the attack was gallantly withstood, and at the close of the day Soult had not gained the slightest advantage.* In these several affairs the excellent military conduct and romantic bravery of Sir John Hope excited the admiration of the whole army. In the commander-in-chief this warm admiration was mingled with friendly apprehensions. On the 15th of December he said, "I have long entertained the highest opinion of Sir John Hope, in common, I believe, with the whole world, but every day's experience convinces me more of his worth. We shall lose him, however, if he continues to expose himself in fire as he did in the last three days: indeed his escape then was wonderful. His hat and coat were shot through in many places, besides the wound in his leg. He places himself among the sharpshooters, without, as they do, sheltering himself from the enemy's fire. This will not answer; and I hope that his friends will give him a hint on the subject."*

The situation occupied by Soult gave him almost every facility for masking his movements, and concentrating the whole of his force upon any point of the allied position which he might choose to select for attack. His entrenched camp round Bayonne formed the centre of a circle, within which he might make any alteration in the disposition of his army without being checked or even observed by Lord Wellington. Finding that all his efforts to force the left wing of the allies were unavailing, and fancying that his repeated attacks in that quarter must have induced Lord Wellington to weaken greatly his right, he determined to move in that direction; and on the night of the 12th of December he concentrated his main force for an attack on the British right. Soult was slow in appreciating the promptitude and genius of his opponent, yet he ought, indeed, to have learned by this time to entertain a higher opinion of Wellington than to venture a movement which could be successful only through that general's neglect or want of skill.† The British commander had foreseen precisely what the famed French marshal would do, and had provided for it with his ordinary decision, and with the rapidity which a thoroughly disciplined army, well in hand, enables a general to use. In expectation of this attack, his lordship had requested Beresford to reinforce Hill, whose corps was more particularly menaced, with the sixth division, which crossed the river Nive at daylight; and he further reinforced Hill by the fourth division and two brigades of the third. But it was found on trial that, without these reinforcements, Hill could have withstood the attack. Having passed large forces through Bayonne and the entrenched camp during the night, Soult, moving along the high road from Bayonne, with 30,000 men, fell upon Hill's position, then held by 13,000 men, on the morning of the 13th. At first the massy columns of the French centre seemed to be gaining some ground; but they were soon fiercely repulsed. Soult then essayed an attack on Hill's right; and there, too, the semblance of a first success was followed by a repulse, defeat, and loss. "Hill," said Wellington, "the day is all your own!" Soult, in despair, drew off his remaining troops and retired into his entrenched camp. Nothing of importance occurred during the few remaining days of the year 1813, for the allied army had need of rest and of reinforcements; and it went into winter-quarters for five or six weeks—if so comfortable a name as 'winter-quarters' can be given to the positions and lodgings the troops occupied. The allies had lost between the 9th and the 13th of December alone

* Captain Batty, Account of the Proceedings of the Left Wing of the Allied Army.—The French had come on with the more confidence, from the notion that their surprise had created a panic. "Our soldiers, who had gone in front of our lines at Barouilles to cut wood, ran back in all haste to get themselves armed and accoutred. The French, seeing a number of men running to the rear, imagined that the allies were seized with a panic, and set up loud cheers of '*En avant! En avant!*' In a few moments, however, the whole left wing was formed in perfect order."—*Id. id.*

* Dispatches, letter to Colonel Torrens.

† H. B. Robinson, Memoirs of Picton.

650 in killed, 3907 in wounded, and 504 in missing; and in the combats which had preceded their passing the Nive their loss had been very considerable. But Soult's loss had been far more terrible; Wellington roughly estimated it at three times that of the allies. During all these late operations the troops had had to struggle against the worst weather and the worst roads. "I never," said the British general, "saw such weather, such roads, or such a country!" The total number of the wounded and the sick, and of men actually worn out by incessant fatigue and exposure to wet and cold, was large in the allied camps; and not only were the Spaniards and the Portuguese, but the British troops also, miserably supplied with comforts and clothing. Many of our men had no great-coats, thousands of them had no shoes! There were shoes and great-coats, and comforts of other kinds, in the magazines at Portsmouth, Plymouth, and other places; but through gross mismanagement they were not sent in time to the places where they were wanted; and where brave men were dying for the want of them. Everything that a general commanding in the field could do, and far more than ever British general did before, was done by Lord Wellington; but there were certain capital defects in our regulations at home, in our transport-service, and in other departments, which he could not remedy:—and to all this must, in fairness, be added, the immense drain which was making or had recently been made on our military stores, clothing, &c. by the Dutch, the Hanoverians, and other insurged patriots in Germany. Stern Picton sighed for 20,000 more British troops, with which he doubted not that Wellington might now march into the heart of France; but no reinforcement was sent.

While the grand allied army under Wellington had been gathering all these laurels, the badly-organised expedition which had been sent from Sicily and from the Balearic islands to the coast of Spain, and which had been under the command of so many generals in a short space of time, had done nothing to reflect honour on British arms. But this fault lay more with the British government, and the Spanish commanders and functionaries, and the bad composition of most of the auxiliaries or mercenaries which Lord William Bentinck had sent down from Sicily, than with the British generals who, one after the other, had the misfortune to command such troops and to serve under such disadvantageous and perplexing circumstances. There was failure—perhaps there was disgrace: but this great consideration is ever to be borne in mind—but for the presence of this allied force on the eastern coast and in Catalonia, Suchet, the most successful of all the French generals in the Peninsula, might have started from Valencia, have traversed the breadth of Spain, and either have joined Jourdan and King Joseph with 30,000 fighting men before the disastrous and decisive battle of Vittoria, or have joined Soult when he had forced his way back into Spain through the Pyrenean passes, and was hammering at the allies in order to force his way onward to Pamplona. It was not Mina with his guerrillas, it was not any disposable force the Spaniards had on foot, that could have prevented Suchet's movements anywhere between Valencia and Navarre. After the command of the allied forces in the East had been tossed from hand to hand like a shuttlecock, it was given to Major-General Sir John Murray, who was considered an officer of spirit and of considerable ability. Murray found that the *morale* of this heterogeneous *corps d'armée* was exceedingly bad, and that fierce jealousies and quarrels were raging between the British and Spanish soldiery, and between the latter and the Sicilian and Calabrian corps in our pay. Being, however, ashamed of the long inaction at Alicante, Sir John Murray, early in March of the present year (more than two months before Lord Wellington commenced his brilliant advance from his Portuguese cantonments), moved into the mountainous district of Castalla, drove Suchet's outposts before him, and placed his own advanced posts about Biar. By a corresponding movement the Spanish general, Elio, acting in the open country on Murray's left, got to Yecla and Villena, leaving an open gap between these two places. In April, Suchet took the field in force: on the 11th his general, Harispe, surprised the Spaniards at Yecla, beat them soundly, and killed or took 1500 of them. Other French divisions had entered the gap which Elio had left open to them, and so, on the very next day, an entire Spanish regiment, cut off and shut up in the castle of Villena without the proper means of defence, beat the *chamade* and surrendered. On this same day, the 12th of April, Suchet marched against the advanced post which Sir John Murray had established in the pass of Biar, drove it in, and captured two mountain guns. Then, rushing through the pass, but with only three divisions of infantry and two brigades of cavalry, Suchet, on the 13th, attacked Sir John Murray, who had chosen and occupied an excellent position in the mountainous country of Castalla. The French reached the upper slope of the mountain; but a close steady volley from the British 27th, and a bayonet-charge by the same regiment, drove them down again with considerable loss. Some of the Spaniards behaved well, and supported this charge of the 27th, which so disheartened Suchet that he made no second attempt, but retreated immediately through the pass of Biar, and thence by the road by which he had advanced. This was the first opportunity Suchet had had of seeing what could be done by the muskets and bayonets of a single British regiment. Just at this moment, owing to some absurd apprehensions on the part of Lord William Bentinck and our ministers at home, that Murat might invade Sicily with part of the Neapolitan army, and place that island in jeopardy, 2000 British troops were withdrawn and sent back to Sicily.* If Sir John

* These apprehensions were indeed absurd, and for more reasons

Murray was far too weak before, this draft and deduction must have made him, if not helpless, incapable of any further field operations in this part of Spain. Urged by the Spaniards, who made promises which they never kept, and anxious to get Suchet farther from his own line of operations, and out of the fertile and spiritless province of Valencia, Lord Wellington, in May, as he was beginning to move from the frontiers of Portugal, instructed Sir John Murray to embark his forces at Alicante, to convey them to the coast of Catalonia, and there to possess himself, if possible, of Tarragona, or some other maritime fortress, and then co-operate with the Catalan armies or insurgents. Doubting, however, the superiority of the French forces, and wishing, in any case, to make Sir John Murray's movements advantageous to the allies, Wellington instructed Sir John, in the event of Suchet's coming upon him in force before he should have captured a stronghold in Catalonia, to re-embark his forces with all possible expedition, return to Valencia, and there fall upon the French line on the Xucar, before Suchet, whose troops must have a long and fatiguing land-march, should have time to reinforce those lines.* In case of these last movements being made, a Spanish force, under the command of the Duque del Parque, was to approach the Xucar, and co-operate with Sir John Murray in his attack on the French lines. Sailing from Alicante on the 31st of May, Murray came to anchor off Tarragona on the evening of the 2nd of June. The troops were landed the next morning, and by the afternoon of the 3rd Tarragona was invested. The French garrison did not exceed 700 men; but they had abandoned and destroyed the extensive outer works, which would have demanded a great force for their defence, and they had improved the inner works, within the narrower compass of which their whole force was concentrated. Instead of attacking the place at once, Sir John fell upon Fort Balaguer, at some distance, which commanded the only road that leads from Tortosa (where the French had another garrison) to Tarragona. This fort was reduced, and the 80 Frenchmen who defended it were made prisoners. On the 6th, Murray opened two batteries upon Tarragona; on the 7th he opened a third battery; on the 8th there was a practicable breach, but he did not storm, waiting till another breach should be made in the body of the place, which was not assailed, by two heavy batteries, before the 11th, and by this time a French relieving army, composed entirely of veterans, was almost upon him. Suchet, as Lord Wellington anticipated, had quitted Valencia as soon as he learned that Murray was going from Alicante; he had weakened his lines on the Xucar, in order to carry a great force with him into Catalonia. He reached Tortosa on the 9th; but, finding that Fort Balaguer had surrendered, and that his direct road was thus cut off, he left his artillery at Tortosa, and with a division of infantry struck across the mountains, to reach Tarragona by a circuitous route. At the same time General Maurice Mathieu was advancing rapidly along the coast from Barcelona with a French division and artillery. But it should appear that all communication between Suchet and Maurice Mathieu was interrupted; that neither of them knew the force or intention of the other, or what the other was doing; that both these French generals wavered and began movements of retreat; that Suchet, not aware of the advance of Mathieu, feared to engage Murray without artillery; that Mathieu thought it unsafe to advance alone; and that, at one moment, Suchet, Mathieu, and Murray were all running from one another. Double spies, who took pay from both parties, told Murray that the French were coming from the east and from the west, and that the forces of Suchet and Maurice Mathieu when united would exceed 20,000 men. Upon this Murray, against the advice and violent remonstrances of Admiral Hallowell, determined to abandon the siege of Tarragona and to seek safety in an immediate embarkation. The general would consent to no delay; he preferred leaving his artillery behind him to staying to face the French;—and he embarked his forces with such unsoldierly haste that he actually left behind him nineteen pieces of artillery in the trenches. On the 13th, and again on the 14th, he threw his infantry on shore to protect the embarkation of some field-pieces, and in the hope of cutting off a body of the enemy which had now approached Fort Balaguer. But no offensive blow could be struck, and the movements excited the derision of the French. On the 17th Lord William Bentinck arrived from Sicily and took the chief command of this luckless army. Fort Balaguer was destroyed; and then, in conformity with Lord Wellington's in-

than one. Early in the year, when Murat was quarrelling violently with his imperial and most imperious brother-in-law, and was refusing to join him in the German war, overtures for a separate accommodation with England were made to Lord William Bentinck by or on the part of Murat. A certain Ricardo Jones, an Englishman by birth, but who had resided for so long a series of years at Naples as to be rather more of a Neapolitan than Englishman, was secretly sent to a rendezvous appointed by Lord William (the island of Ponza), to propose the conditions on which Murat would declare for the allies and against Bonaparte. These secret conferences, indeed, did not, for the present, lead to any arrangement; but before the 2000 British troops withdrawn from the eastern coast of Spain reached Sicily, it had become evident that Bonaparte must be beaten by the allies in Saxony; and hence, and from other affronts received (because he could not do with a weak and defective cavalry what he had done in former days with the veterans who had perished in Russia), Murat was again devising how he might best make terms with his neighbours the English in Sicily, and be admitted a member of the great European confederacy. And this moment the Calabrians and the inhabitants of other provinces were deserting their homes and flying over to Sicily to escape the French tyranny, to breathe the air of liberty under the old Bourbons, and to implore them and the English to undertake an expedition. An infernal act of treachery had provoked this emigration. General Jannelli, a worthy associate of Manhes, fearing to proceed openly against a Calabrian named Capobianco, the chief of a vendita or lodge of Carbonari, captain of the Urban militia, and a young man possessing property, courage, and great popularity among his countrymen, invited him to a public dinner, received him with smiles, drank to him at table, and then, when the dinner was over, threw his gensdarmes upon him, and had him brought before one of Manhes's military tribunals, which instantly condemned him to death.—*Generale Pietro Colletta, Storia di Napoli.*—*Private information collected in the country, and from some persons who were engaged in these transactions.*

* "You tell me," said Lord Wellington to Murray, "that the line of the Xucar, which covers Valencia, is too strong to force; turn it then by the ocean, assail the rear of the enemy, and he will weaken his strong line to protect his communication; or he will give you an opportunity to establish a new line of operations behind him."—*Dispatches.*

structions, Bentinck led the disheartened forces back to Alicante, to act with the Duque del Parque upon the Xucar. A Spanish corps under General Copons, which had been led into danger by Sir John Murray, who requested its co-operation, was left in a perilous predicament by Murray's precipitate retreat, of which, it is said, he had given General Copons no notice whatever. This Spanish corps, however, escaped into the mountains. At the close of the war Sir John was tried, in England, by court-martial. He was acquitted of all intentional disobedience of orders, but found guilty of abandoning artillery and stores which he might have carried off. His conduct was attributed to an error in judgment, and his sentence was merely that he should be admonished; and this sentence, gentle as it was, was never inflicted.*

On reaching Alicante Lord William Bentinck immediately advanced and joined del Parque, who was true to his appointment, but who had not been able to bring with him so great a Spanish force as had been expected. But laurels grew nowhere for this army; there was no longer any necessity for fighting on the Xucar, as, in consequence of the great battle of Vittoria, the French withdrew their posts, and cleared out of Valencia early in July. Suchet drew his troops into Catalonia, leaving, however, strong garrisons in Murviedro, Denia, Peniscola, and other places, some to the south, and some to the north of the Ebro. Bentinck followed the retiring French, crossed the Ebro by flying bridges, and invested Tarragona on the 30th of July. But before ground was broken Suchet advanced to the relief with more than 20,000 men. Lord William Bentinck, who, at first, had been deceived into the belief that he might trust to the Spanish troops, was convinced by this time that such confidence would be misplaced and dangerous; and, considering that his other forces were not sufficiently strong to contend with Suchet's veteran army, he fell back upon Cambils. Upon this Suchet relieved and removed the French garrison, destroyed the works, together with a part of the town of Tarragona, and retreated behind the Llobregat. This was in the middle of August. The allies now entered the desolate city, and made the convenient port of Tarragona the rendezvous of the British fleet. Early in September Bentinck advanced to Villa Franca, and pushed forward to Ordal a mixed corps of British, Sicilians, Calabrians, and Spaniards. On the night of the 12th and 13th the French surprised and defeated this advanced corps, took their four guns, killed, wounded, or captured about 1000 men, and drove the rest in confusion back upon Lord William Bentinck's main body. On the following day Suchet, in force, drove the whole of the heterogeneous allied army from Villa Franca. The French marshal then retired again to the line of the Llobregat. Shortly after these operations Lord William Bentinck returned to his political and diplomatic duties in Sicily. He was succeeded in the command by General W. Clinton, who found this allied army of the east in and near Tarragona, doing nothing and incapable of doing much; and Clinton, like every one of his predecessors, soon became very desirous of quitting the command of it. But Lord Wellington, whose expectations from this quarter had always been *very* moderate, and who was satisfied that Clinton would do the most that could be done, requested him to remain, and wait the successful progress of the war on the side of the Pyrenees. Clinton repaired the defences of Tarragona, and towards the end of September he advanced to Villa Franca, making a display of force which imposed upon the French and made them believe that he was far stronger than he really was. Once Suchet attempted to surprise him; but he failed completely. In the month of December, upon intelligence that some German battalions near Bayonne had deserted from Soult to Wellington, and still more in consequence of the universal rising of the people in Germany against Bonaparte, Suchet was obliged to disarm all his German regiments, and to send them, well guarded, into France. At the same time some of Suchet's Italian battalions were recalled to Italy to assist in stopping the Austrians in the passes of the Alps, and some of his best French soldiers were drafted off to fill the frightful gaps which had been made in Bonaparte's imperial guards on the field of Leipzig and in other battles in Germany. Still, however, after every deduction, Suchet retained in Catalonia a force in every way superior to that of the allies under Clinton and the Spanish generals who had engaged to co-operate with him, but who, for the most part, preferred the pursuit of little plans of their own. When Clinton proposed to invest Barcelona the Spaniards refused to assist him; and the year closed without any exploit.

In other quarters nearly every day of this year had been a day of crisis. On his return to Paris, on the night of the 18th of December, 1812, Bonaparte found that conspiracies had broken out even in his capital during his absence in Russia; that in many parts of France the people had testified great joy at the several times falsely reported news of his death; that discontent or absolute disaffection had shown itself in different directions, and among various classes; and that some of his marshals and generals were not exempted from the suspicions of his secret police. The senate and the *corps législatif*, however, seemed as submissive as ever; and with the aid of their votes, tongues, and pens he proceeded to recruit his wasted army by fresh conscriptions, and to restore his finances by fresh and unprecedented taxes. To the few who ventured to murmur he said that he had been beaten only by the elements and by unforeseen accidents; that the hundreds of thousands that were at rest under the snows of Russia had acquired as much glory for the country as the always successful armies of former days; that, if he did not now

* Colonel Napier.—Major M. Sherer.—Wellington Dispatches.—Letters of Lord W. Bentinck, General W. Clinton, &c.

meet the Russians on the northern frontiers of Germany, the sacred frontiers of France would be invaded by Russians, Prussians, Austrians, and the armies of all Europe; that he had not forgotten his craft, and would still beat the enemy at a distance if he were properly supported; and, finally, that he could do better without the French than the French could do without him. The new conscriptions were enforced with the utmost rigour; the militia or national guards were drafted into the skeleton battalions of the regular army; some of the guards and other troops were, as we have seen, immediately recalled from Spain; the sailors of the useless French fleets were regimented and sent to serve on land—no possible means were neglected to swell the military force, and to enable the foiled conqueror of nearly all Europe to retrieve his fortunes by one tremendous and decisive campaign. And to such an amount were his forces swollen that, in the year 1813, Bonaparte had (counting all his troops, in all quarters, and of all services) from 700,000 to 800,000 men under arms. Out of this number he collected in Germany, early in the spring, an army of 350,000. But not even the French, with all their alacrity and proneness for the military profession, can be turned into good soldiers in a few months. This army could not be compared to that which had perished in Russia and in Poland; the veteran regiments lost their character through the large intermixture of conscripts and militia, and many of the new battalions were not much better than any common untried militia corps. The cavalry, which requires a long and careful training, was very defective: the pride of the French cavalry, which Murat, the most brilliant of cavalry generals, had so often led to victory, was no more, and, what was next in consequence to this arm, Murat now refused to quit Naples to take the command of it. After many jealousies and quarrels the rupture between the two brothers-in-law was completed by the late Russian disasters. Bonaparte vilified the military conduct of Murat during the retreat from Moscow, and, forgetting how speedily he himself had abandoned the wreck of that army, he accused Murat of having quitted the army too soon and in a dastardly manner. He treated the hero of a hundred battles, whose head and body were seamed with wounds, as a poltroon; and he contrasted his conduct during the flight from Moscow with that of Eugene Beauharnais, the viceroy of Italy, who had, indeed, conducted himself admirably on that fatal retreat. The crowned son of the innkeeper, who had carved out his own fortune with his sabre, always considered the son of the guillotined Marquis de Beauharnais as a courtly young man who had owed his fortunes to his mother Josephine, and to his own suppleness and submissiveness of behaviour. As an Italian potentate Murat had long been jealous of his neighbour the viceroy of Italy; but to compare that viceroy with him as a soldier was to inflict an insult which his Majesty of Naples could not bear. Some furious correspondence between the emperor and his brother-in-law * was succeeded, on the part of Murat, by overtures for a friendly correspondence with the English in Sicily, which was soon afterwards commenced by Murat, who hoped that, by a timely defection from the Emperor of the French and a treaty with the allied powers of Europe, he might secure to himself and his descendants the Neapolitan throne. The absence of his person and prestige would have been felt on the plains of Saxony. But Murat's wife, Carolina Bonaparte (who most of all the family resembled her brother Napoleon), made use of her great influence over the weak and undecided mind of her husband; and Marshal Ney, police-minister Fouché, and other Frenchmen wrote argumentative and flattering letters to prove that the fate of King Joachim was inseparably linked with that of the Emperor Napoleon, and to declare that the whole French army desired to see him among them, while the French cavalry was impatiently demanding their old heroic leader. Yielding to all these and other influences Murat went into Germany; but it was with a doubting head and an unwilling heart. There was also a visible shyness among many of the veteran officers, and more particularly among such as had gained titles, decorations, great estates, and abundance of money. Many of these were getting on the verge of old age, and all wished to enjoy the fruits of their labours and dangers. One of this class had exclaimed, with a coarse oath, as far back as the campaign of 1809, which saw Marshal Lannes and many other officers of the highest rank numbered with the slain—"This little rascal will never stop until he gets us all killed—all!"† Bernadotte gave to the Emperor

* Bonaparte, in the fury of his passion, wrote a letter to his sister Carolina, in which he told her in plain terms that her husband, Murat, was an ungrateful scoundrel, a liar, traitor, and (in politics) a fool; said that he was unworthy of his close family connexion with him, the emperor, &c. To this Murat replied with equal passion, "The wound on my honour is inflicted, and it is not in the power of your majesty to heal it. You have insulted an old companion in arms, faithful to you in your dangers, not a small means of your victories, a supporter of your greatness, and the reviver of your wandering courage on the 18th Brumaire. Your majesty says that, when one has the honour to belong to your *illustrious* family, one ought to do nothing to hazard its interests or obscure its splendour. And I, sire, tell you in reply, that your family received from me quite as much honour as it gave in uniting me in matrimony with Carolina. A thousand times, though a king, I sigh after the days when, as a plain officer, I had superiors, but no master. Having become a king, but finding myself in this supreme rank tyrannised over by your majesty and domineered over in my own family, I have felt more than ever the need of independence, the thirst of liberty. Thus you afflict, thus you sacrifice to your suspicion the men most faithful to you and the men who have best served you in the stupendous road of your fortune; thus Fouché has been immolated by Savary, Talleyrand sacrificed to Champagny, Champagny himself to Bassano (Maret), and Murat to Beauharnais—to Beauharnais, who has with you the merit of mute obedience, and that other merit (more gratifying to you because more servile) of having cheerfully announced to the senate of France your repudiation of his own mother. I can no longer deny to my people some restoration of commerce, some remedy for the terrible evils inflicted on them by the maritime war. From what I have said of your majesty and of myself, it results that our mutual old confidence and faith are gone. Your majesty will do what you most like, but whatever may be your wrongs towards me, I am still your brother and faithful brother-in-law—Joachim."—*Generale P. Colletta, Storia di Napoli.*

We know, upon other authority, that a letter quite as pungent was written and sent; but from what we know of poor Murat's literary acquirements (he could never spell either French or Italian, or speak even his own language with tolerable grammatical correctness), we much doubt whether he could have written this letter himself. It was said to be perfectly well known in a certain circle at Naples who it was that composed the stinging epistle for him.

† Bourienne.

of Russia a list of disaffected French officers, and this list included the names of Massena, Augereau, and several other marshals.

On the 23rd of March the *corps législatif* declared to their emperor in a most flattering address that all that they and the French nation had done or could do for him was too little; they thanked him for the sacrifices which he had called upon them to make for the preservation of his dynasty; and they promised him an unlimited assistance—*une assistance sans bornes*. Bonaparte in his reply told the president and messieurs les députés that the French had entirely justified the opinion he had always had of them; that he had been called by Providence and the will of the nation to constitute the great French empire; that his march had been gradual, uniform, analogous to the spirit of events and the interests of his people; that in a few years more his great work would be completed and consolidated; that all his designs, all his enterprises, had but one object, the prosperity of the French empire, which he wished to remove for ever from English law or dictation; that the world must be astonished at the rapidity and tranquillity with which his recent and immense losses had been filled up, and would judge thereby of what efforts the French would be capable if the necessity should ever occur of their defending their own territory or the independence of his crown; that he was soon going to put himself at the head of his troops and confound his enemies; and that in no negotiation and in no case whatsoever would he permit the integrity of the French empire to be put in question, or listen to any proposition for surrendering any of the conquests which France had made. He concluded with promising them a grand show and solemnity. "As soon," said he, "as the cares of war will allow us a moment of repose, we will call you back to this capital, together with the notables of our empire, to be present at the coronation of the empress, our well-beloved spouse, and of the hereditary prince, the King of Rome, our very dear son. The thought of this grand solemnity, at once religious and political, moves my heart! I will hasten the epoch in order to satisfy the desires of France."

Bonaparte had ever been jealous of any extensive delegated authority: he had not appointed any regency in 1812 on starting for the hazardous Russian campaign; but the recent conspiracy of General Malet, together with some other embarrassing circumstances, and the artful plan of pleasing and flattering his party among the Austrians, now determined him to organise a government in Paris which might supply his personal absence; and to appoint his wife, Maria Louisa, regent. Upon his demand, the senate, on the 2nd of February, issued its consultum; and on the 30th of March Bonaparte conferred the regency on the Emperor of Austria's daughter. This certainly gratified and duped many of the French. Could it be expected that the Emperor Francis would join the enemies of his son-in-law, or assail a country actually governed by his own child, and to the throne of which his own innocent grandchild was heir?

On the 15th of April Bonaparte quitted for the last time his favourite palace of St. Cloud. On the evening of the 16th he was at Mayence, where he inspected the troops and had an interview with several of the German princes of the Confederation of the Rhine. By the 25th he was at Erfurt, where, in 1807, he had dazzled and fascinated the young Czar, and had conferred with him on the mighty project of dividing Europe into two empires, with Alexander on the throne of the one and Napoleon on the throne of the other.

The Emperor Alexander had lost little time in putting his armies in the track of the fugitive enemy. He took the field himself in the very midst of that horrible winter, and flew in sledges over the snow from Petersburgh to Wilna, where, on the 22nd of December, 1812, his now concentrated army and his hordes of Cossacks saluted him with the most enthusiastic hurrahs. From Wilna the Russian army advanced in two grand divisions, the one taking the direct road by Warsaw, the other taking the road by Königsberg and the northern provinces of Prussia. The majority of the Poles now received Alexander as a deliverer; the Prussians, with so many wrongs to avenge upon the French, welcomed the Russians with transports of joy; and such was the national enthusiasm and the rage against Bonaparte that no attempts of the Prussian king and government could possibly have prevented or delayed the junction of the Prussian with the Russian troops. General Yorck, who commanded the 20,000 Prussians who had been sent to serve as a contingent force in the invasion of Russia, had behaved with rare sincerity and moderation. He was serving against his will and against the will of his sovereign, he was serving against the dearest interests of his country; and, when the retreat from Moscow became a *débâcle*, he was so placed, in the line of retreat, that if he had only moved his corps the French loss must have been still more frightfully increased, while if he had turned his arms against them, and had fallen upon them in their confusion—as many of his officers and nearly all his men wished him to do—not one out of every ten of the French fugitives that afterwards rallied and made head in Germany would have escaped. But Yorck remained true and steady to the treaty which bound his master to the French, until the moment when his sovereign revoked his orders, and declared that treaty to be broken by Bonaparte. The French still occupied Dantzic, Glogau, Stettin, and other Prussian fortresses on the Oder; they had 30,000 men near Posen, and a strong garrison in Berlin. Frederick William was in a manner besieged in his own capital, and most of his troops were scattered in the midst of French cantonments and formidable French garrisons. Notwithstanding, on the 22nd of January his Prussian majesty suddenly quitted Potsdam and

repaired to Breslau, where he could give the hand to the advancing Russians, and correspond directly, or confer personally, with the Emperor Alexander. Even before his departure became known the Prussian students and the secret political societies had begun to preach a national crusade against the French, and to animate the great body of the people as well as the troops with their own patriotic enthusiasm. It was clear that the battle of Jena and the fate of the loved and mourned Queen of Prussia would soon be avenged.

After an interview with the Czar, Frederick William sent to Bonaparte to propose an armistice, the conditions of which should be that the French should evacuate Dantzic and all the Prussian fortresses they occupied on the Oder, and retire behind the Elbe into Saxony, in return for which the Emperor Alexander would stop the march of his victorious armies and remain behind the Vistula. But this proposition was indignantly rejected by the Emperor of the French, who had learned nothing from misfortune, and who would not see his own increasing weakness. On the 28th of February, or as soon as he learned the rejection of his proposition by France, Frederick William concluded a treaty of alliance offensive and defensive with Russia. This treaty, being ratified at Kalisch, became the basis of the *Sixth Coalition* against France. By the treaty Prussia engaged to furnish 80,000 men, without counting her *levées en masse;* and Russia promised 150,000 men. Austria was invited to join the league, which as yet proposed little more than the liberating of all Germany; but the court of Vienna, though it increased its armies, and collected an imposing force in Bohemia, close to the frontiers of Saxony, professed a desire to remain neutral. It was, however, known to the French that Prince Metternich was again corresponding in a very friendly manner with the English government. They had taken the surest if not the honestest method for acquiring this information—they had stopped one of Metternich's couriers and opened his letters. Even after this Austria offered her mediation; but Bonaparte would hear of no cession of territory on his part either in Germany or in Italy; and, as for Spain, although he had nothing left there save Suchet's diminished *corps d'armée*, he still insisted that his brother Joseph should be king.

The Russians now blockaded Dantzic, and advanced from the Vistula to the Oder, where they were joined by the Prussian general Bulow and his veterans. Eugene Beauharnais fled before the allies; and he was sorely molested on his retreat by the Prussian insurgents and pulks of Cossacks. On the 4th of March, Berlin was evacuated by the French; even Dresden was evacuated on the 27th of March; and, after having reinforced some of the French garrisons left in the countries from which he had fled, Beauharnais rallied behind the Elbe with about 40,000 men. But every day brought some fresh proof of the detestation in which the French were held throughout Germany—brought some unquestionable evidence that the fire was at last kindled in the great Teutonic heart. Fifty, a hundred insurrections broke out simultaneously; and day and night the cold March air was filled and warmed by the patriotic songs of the German students, who had thrown away their pens and books for swords and muskets, and who were calling upon all classes—upon every man or youth of the Germanic breed—to follow their example, and aid in expelling the oppressors and demoralisers of their country. Körner's 'Men and Cowards,' and 'Song of the Sword,' wrought more miracles than the 'Marseillese Hymn.' Germany had slept and dreamed for an unseasonably long time, but her wakening was sublime and full of hope. Ten thousand Cossacks under Tettenborn, aided by the insurgents, swept clear of the French the whole of Pomerania and Mecklenburg, and then inundated the country on the Lower Elbe. This carried the flames of insurrection into other states and populous cities. On the 12th of March the French authorities fled from the insurgent citizens of Hamburg, who had been reduced to a state of despair, and almost of beggary, by the finishing hand of that greatest of plunderers and freebooters, Marshal Davoust. Denmark, the old ally and servant of France, was isolated, and in consequence adopted a system of armed neutrality—in which she was not wise enough to persevere. Beauharnais repulsed the Russian division of Wittgenstein, dispersed, on the 5th of April, a corps of observation established at Magdeburg, threatened the road to Berlin, and stopped for some days the advance of the allied van. After this check, however, the allies advanced and occupied Leipzig. Beauharnais had been rapidly reinforced by troops from all parts of France and from Italy; and now, on the 25th of April, when his stepfather arrived from Paris, the line of the Elbe was defended by a force far superior (numerically) to any that the Emperor Alexander and Frederick William had near to it. The natural march of Russia lies eastward; in advancing from her western frontier her movements have always been, and must long continue to be, somewhat slow and uncertain. As soon as he reached his army Bonaparte determined to resume the offensive, hoping to strike a grand blow before the allies should have time to collect their forces in one great head, and by a single battle to recover Leipzig, Dresden, Berlin. Some of the Russian generals, in command of divisions which had been too widely scattered, were taken by surprise; other commanders, both Prussian and Russian, were too far in the rear to know of the rapid approach of Bonaparte, who, on the 2nd of May, fought and won—but not without immense sacrifices—the battle of Lutzen. On the 21st he attacked the Russians and Prussians again, and obliged them to retire from the well contested field of Bautzen. But in both these affairs Bonaparte had been on the very verge of a defeat: the two victories led to no decisive result; the allies retired

in good order, losing few prisoners and no guns. Bonaparte bitterly complained of this; but his generals observed to one another that these were no longer the days or the troops of Marengo, Austerlitz, or Jena, when one battle decided the fate of a war. On the 1st of May, in a bloody combat which preceded the general action at Lutzen, Marshal Bessières was slain; many old companions in arms perished both at Lutzen and at Bautzen; and two days after the latter battle, in another engagement with the retreating allies, Bonaparte's favourite aide-de-camp, General Duroc, was laid low, being struck and frightfully mangled by a cannon-ball. This time, at least, the feelings of humanity overpowered the stern Man of Destiny. Duroc was his old and most faithful companion—Duroc was one of the few men who were personally attached to Bonaparte, without regard to loss or profit, or good or evil fortune, and one of the few to whom Bonaparte was personally and sincerely and affectionately attached. It was a superstition too, both at the French court and with the French army (where such notions were anything rather than uncommon), that there was a sympathy or mysterious connexion between the fate of Duroc and the fortunes of his master. The dying man was carried from the field where he fell to the house of a clergyman near the spot. Napoleon went to see him, and was deeply affected. Nor did he speedily recover the command of himself: to the aides-de-camp and other officers who came pressing round him for instructions, he said, with a hollow voice, "Put off everything till to morrow!" It was the only instance in which he refused or neglected to attend to the military reports brought to him.*

On the 14th of June, Great Britain made herself a party to the coalition, or to the treaty concluded between Russia and Prussia.† Some English officers of the highest rank repaired to Germany and to the head-quarters of the allies, and abundant assistance was promised. The best present aid we could give was to find full employment for the large body of veterans still left in Spain. This was understood by the allies; but Lord Wellington surpassed all the expectations they had formed of him, high as those expectations indubitably were.

The allies withdrew both from Leipzig and from Dresden; and Bonaparte entered the fair capital of Saxony. He now consented to an armistice, which was to extend from the 5th of June to the 22nd of July. Austria still professed goodwill, and an anxious wish to mediate; and Metternich himself hurried to Dresden, to proffer his good offices, and to act with the whole weight and authority of the cabinet of Vienna. He proposed that the French should entirely evacuate Germany, and that the Rhine should be the boundary of the French empire in that direction. The successive revolutionary governments of France, and Bonaparte himself, had repeatedly declared that the Rhine, the Alps, the Pyrenees, and the seas, were the natural boundaries of France; Metternich did not ask him to give back Savoy in the Alps, or his vast conquests and annexations beyond the Alps; the only point he insisted upon being the renunciation of everything beyond the Rhine. This would have left France far too powerful, and in fact more powerful than she had been with her extended German frontier; but Bonaparte arrogantly and resolutely refused either to give up the ground he had occupied beyond the Rhine, or to abandon the Confederacy of the Rhine, which was nothing more than a French combination against the independence and security of Austria, Prussia, and all Germany. He had annexed the country as far as Hamburg and Lübeck to the French empire; he had made new French departments of it; and he declared it to be a fundamental law of the French empire, and his own fixed and unalterable principle, that such annexations of territory should never be rescinded; that what once had become French must for ever remain French. To Metternich's remonstrances he replied with indecent rage. He evidently thought to terrify this minister as he had terrified or bewildered Cobentzel, the Austrian diplomatist, after his first splendid victories; but the times and the men were very different; and nearly every fact and circumstance at all connected with the case induces the belief that Metternich not only despised his wrath, but equally enjoyed the presumption and the obstinacy which made him neglect his last hope of salvation. True to his old practice, when Bonaparte found that insolence and bullying would not do, he tried the effects of cajolery and temptation. He would not think of offering or promising to give back to Austria her large and rich possessions in Upper Italy; but he tempted her with the promise of Dalmatia and all the poor and rugged Illyrian provinces, hinting that they might be extended, both inland and along the sea coasts, at the expense of Austria's ancient foe, the Ottoman empire. The offer was mean to the extremity of meanness; but what we know of the *animus* of Vienna statesmen or politicians forces us to entertain some doubt as to the effects which would have been produced if, in addition to the Illyrian provinces, he had offered to give up Lombardy and Venice to Austria. Spurning the contemptible bait, Metternich replied that things had come to that pass that Austria could no longer remain neutral; she must either be with France or against France; that Germany had been long enough tormented by these wars, and it was time she should be left to rest and to

* A. Vieusseux. Life of Bonaparte.

† On July the 8th a convention, known by the name of the Convention of Peterswalden, took place between Great Britain and Russia. On September the 9th a triple treaty of alliance between Russia, Austria, and Prussia was ratified at Toplitz; and on the 3rd of October a preliminary treaty of alliance between Great Britain and Austria was signed at the same place.

The court of Denmark could not yet free itself from its French toils; and on the 10th of July, when the French had gained the battles of Lutzen and Bautzen, when the star of Bonaparte seemed again to prevail, and while the congress of plenipotentiaries were assembled at Prague, a reciprocal treaty of alliance and guarantee between France and Denmark was ratified at Copenhagen. It could not but happen that the Danes should be made to pay afterwards for this conduct of their government. But there was more than this:—on the 3rd of September, when Bernadotte and his Swedes, far away from their own frontiers, were advancing with the allies into the heart of Germany, Denmark declared war against Sweden!

national independence. Such, however, was the awe in which some of the advisers of the European sovereigns still stood of the mighty means and military genius of the ruler of the French, that conferences for a peace were resumed at Prague, in Bohemia, Bonaparte engaging to prolong the armistice till the 10th of August; nor was the unmanly and now irrational diffidence fully dissipated until the news of Wellington's great achievement at Vittoria was carried through Europe and across the mountains of Bohemia. The diplomatists of the allied powers then sounded a higher note; the armistice expired on the 10th of August, and Austria joined the allies.

Months before the declaration of Austria the English government had sent very important aids into the north of Germany; it called upon his majesty's old and not unattached subjects the Hanoverians to rouse themselves into action and join the common cause; it furnished with a liberal hand money, arms, ammunition, stores, clothing, &c., not only to the Hanoverians, but to the Prussians, and also to the Swedes, who were about to commence operations from the southern shores of the Baltic. Lord Castlereagh's brother, Sir Charles Stewart (now Marquess of Londonderry), was dispatched to the seat of war, charged, on the part of his sovereign, with all the correspondence relating to the Prussian, Swedish, and Hanoverian armies. Sir Charles assuredly performed the difficult duties of his mission with great firmness and ability, and it now seems to be generally acknowledged that it was chiefly he who kept Bernadotte, the Crown Prince of Sweden, true and steady to the coalition. Sir Charles had especial letters of authorisation to Bernadotte; during the natural doubts and vacillations of that extraordinary Frenchman, that soldier of fortune and enthroned man of the revolution, he hardly ever quitted him; and it was considered that to Sir Charles Stewart, in a great measure, was owing the presence of Bernadotte and his brave Swedish army on the decisive field of Leipzig. The Hanoverians flew to the arms which were offered to them by England with enthusiasm; Brigadier-general Lyon was appointed to command them and the troops of the Hanseatic towns. A regency was formed; and shortly afterwards the Duke of Cambridge repaired to the country. In addition to our immense supplies of military stores, our government allotted 2,000,000*l.* sterling to sustain the operations of Bernadotte and his Swedish army, and 2,000,000*l.* more was given as a direct aid to Russia and Prussia. At the same time 500,000*l.* was granted to Russia, in order that she might give equipment and efficiency to her fleet. Upon these largesses Russia undertook to raise her force in the field to 200,000 men, and Prussia to raise hers to 100,000. Even now, but for English money and English credit, and the promptitude of our manufactories in producing arms and all the materials of war, the allies would have failed in their campaign.

A series of battles was fought about Dresden on the 24th, 25th, and 27th of August, between the Austrians and Prussians on one side and the French and their German and other auxiliaries on the other. Bonaparte was decidedly successful, and on one occasion at least the Austrian generals were guilty of some of their old absurdities in dividing their forces, or they pursued that line of conduct which still leaves a doubt in many minds whether they were traitors or only incurable fools. But, in rashly pursuing the allies into the mountains of Bohemia, Vandamme, with a corps of 30,000 men, was cut off and surrounded, and was finally made prisoner at Culm, with about 8000 of his men. Oudinot was beaten at Gross Beeren by the Swedes and Prussians commanded by Bernadotte. Ney, who was sent to replace Oudinot, only succeeded to his misfortunes, being soundly beaten in the battle of Dennewitz, which was fought on the 6th of September, in the neighbourhood of Berlin. The Prussian Blücher, too, was now taking vengeance for all he had suffered in and after the campaign of Jena. On the Katzbach, in Silesia, he routed the French opposed to him, and dislocated Bonaparte's base of operations. Of all the allied generals Blücher was the most active, energetic, and daring. It was now he obtained from the army the name of "Marshal Forwards;" for he was ever forward, and almost always fighting. As a consequence, he was sometimes exposed to checks and losses; but on nearly every occasion the hero could say that his misfortunes arose not so much from his going too fast, as from the rest of the allies going too slow. The month of September passed in desultory warfare, attended with very long marches and countermarches, which the young French conscripts had not stamina to support. Bonaparte's armies lost both strength and ground on every side; and his German allies and auxiliaries began to forsake him. Even where princes and governments would have kept their un-German and ruinous compacts with him, they were mostly prevented by the determined spirit of their subjects, who had learned to sing Körner's 'Song of the Sword,' and who had caught the Teutonic flame. The King of Bavaria made a separate peace with Austria; the King of Saxony and ex-Grand-Duke of Warsaw was more steady, but his Saxon troops, like the rest of the German auxiliaries, began to desert from the French. At last, after a painful struggle between pride and necessity, Bonaparte turned his back to the allies, and began his retreat upon Leipzig with a dispirited army. He was closely followed by Russians, Austrians, Prussians, and Swedes. At Leipzig he determined to make a final stand. "Give me but one victory," said he, "and Germany may yet be saved!" He fought two bloody battles at Leipzig, but neither of them was a victory for him. On the 16th of October the first battle took place: it was fought gallantly on both sides, but the allies had now a great superiority in numbers, and the French were repulsed and driven close upon the ramparts of the city.

On the 18th the second battle was fought: the French divisions soon lost ground, 10,000 Saxons raised the patriotic shout for Germany, left them in a body, and went over to the allies. After this nothing remained but flight; and even for flight it was too late an hour. Bonaparte made his dispositions to effect his retreat towards the Rhine; but, while his army was filing out of Leipzig, on the morning of the 19th, by a long narrow bridge, or rather a succession of bridges, the allies, after a desperate struggle with the French rear, burst into the town, and, the bridge being blown up to prevent the allies from pursuing those who had already passed over it, 25,000 Frenchmen, caught in the town as in a trap, were compelled to lay down their arms and surrender as prisoners of war. The retreat from Leipzig was almost as disastrous as the retreat from Moscow. The French army was completely disorganised. Bonaparte was, however, able to fight his way at Hanau, through the Bavarians, his late allies, who now attempted to oppose his passage back to France, and to keep him at bay until the Russians and Prussians should have time to come up and fall upon his flanks and rear. The affair of Hanau took place on the 30th of October; and, if the Bavarians had been somewhat stronger and more active, the war must have ended here with the destruction or capture of the Emperor of the French. On the 1st of November Bonaparte was at Francfort, and, in a vain attempt to keep up an illusion in France, he wrote to his empress-queen and regent, saying that he sent her twenty colours taken by his armies in the battles of Hanau, Leipzig, &c. "It is an homage," said he, "which I love to render you. I desire that you may see in it a mark of my great satisfaction with your conduct during the regency which I have confided to you." But he could find no rest at Francfort or at any other place on German soil. At last he reached the Rhine, and passed over the 70,000 or 80,000 men, who were all that remained to him out of the army of 350,000 with which he had opened the campaign in the month of May. Having placed this fragment of the Grand Army on the left bank of the Rhine, he set out for Paris, where he arrived late on the evening of the 9th of November.

Although there had been sundry jealousies, suspicions, disagreements, and collisions of policy, interests, and projects, the allies had visibly improved upon their former coalitions, and had conducted this campaign with more unanimity and spirit than had yet been witnessed. The course of the war was marked with many singular and striking incidents. General Moreau, the hated rival of Bonaparte, who had been so long living in an uncomfortable exile in the United States of America, was invited by the allied sovereigns to join their armies, and to assist, with his military genius and experience, in overthrowing the tyrant of his country and the oppressor of Europe. Moreau's ardent republicanism had been much cooled by time and experience, and by what he had seen of the working of that system of government in America; his wife had continued to be a passionate Bourbon royalist, and she is said to have lost none of her great influence over the mind of her husband—a weak mind in all matters unconnected with his profession. Moreau arrived from New York at the seat of war in the month of August, as hostilities after the armistice were recommencing, and adopted the title of aide-de-camp to the Emperor Alexander. His career in his new capacity was very short: in the battle near Dresden, fought on the 27th of August, while in earnest conversation with the Emperor of Russia on the progress of operations, he was struck by a French cannon-ball, which, passing through the body of his horse, carried away both his legs. During the surgical operations which followed he smoked his cigar and displayed the greatest coolness and fortitude. Three days after the battle he wrote a laconic and very characteristic letter to his wife, in which were these well-known words: "*Ce coquin de Bonaparte est toujours heureux* —That rogue Bonaparte is always lucky." A French officer attached to his person and his fortunes finished the letter, and assured Madame Moreau that the doctor had just told him that, if all went on as it was now going, the general would be able, within five weeks, to travel in a carriage; but poor Moreau died the very next day (on the 1st of September).

On the 26th of August, the day before Moreau lost his legs at Dresden, there perished on the Lower Elbe one who had done far more than he for the allied cause. Theodor Körner, the young, gallant, and spiritual patriot and poet, the Tyrtæus of this German war, fell with his carabine in his hand, in the midst of a band of German students. His comrades removed his body and buried it under a tree; and for a mark and present monument they cut his name upon the bark of the tree. But the little pool of blood became a well-spring of patriotism; his death was envied even more than it was regretted by his enthusiastic young countrymen; and his war-songs and his invocations of liberty and independence became consecrated in the popular mind.

About 80,000 men whom Bonaparte had left behind him in Magdeburg, Stettin, Dantzic, and other Prussian fortresses, all surrendered to the allies, a little sooner or a little later. Dantzic held out the longest; but even that strong garrison capitulated on the 24th of December. During their precipitate and most disorderly retreat, the French, nearly every time they were attacked in any force, surrendered by regiments or by whole divisions at a time. Their military *morale*—except among the Imperial Guards and some few veteran regiments whose force had not been wasted in the Russian campaign—was either completely gone, or had never been acquired. Bonaparte, at the high tide of his triumphs, had never seen even the worst-commanded of the Austrian armies reduced to such a plight! At

almost every step the light troops of the allies and the keen Cossacks captured prisoners, guns, stores, and other *attirail*. More than once Bonaparte himself narrowly escaped falling into the hands of the bearded spearmen from the Don and Volga. In one day 50 more pieces of artillery were discovered and captured; and others were buried in the earth by the men who could no longer drag them on or defend them. As they went on they blew up their caissons, making the mountains of old Germany re-echo as with the successive explosions of volcanoes. Of the *corps d'armée* of Marshal Marmont, composed of the best French troops, only 3000 remained on the 28th of October. Colonel Sir Hudson Lowe, who had come into Germany to assist General Sir Charles Stewart, and who rendered good service to the allies, accompanied "Marshal Forwards" in his hot pursuit of the French, and transmitted to Sir Charles some brief but striking accounts of the destruction and misery he saw on his way. The sufferings of the French were indeed extreme. "For an extent of nearly fifty English miles, from Eisenach to Fulda, carcasses of dead and dying horses, without number; dead bodies of men, who had either been killed, or perished through hunger, sickness, or fatigue, lying on the roads or in the ditches; parties of prisoners or stragglers, brought in by the Cossacks; blown up or destroyed ammunition or baggage-waggons, in such numbers as absolutely to obstruct the road, sufficiently attested the sufferings of the enemy; whilst pillaged and burning towns and villages marked at the same time the ferocity with which he conducted himself. ..... The dead and dying were frequently mixed together, lying in groups of six or eight, by half-extinguished fires on the road-side."*

The enormous losses of this campaign, being superadded to the wholesale destruction of the Russian retreat, and to the vast sacrifices of life which the route at Vittoria and Soult's battles with Wellington in Spain and among the Pyrenees had cost the French people, and the rapid approach of the grand allied army on one frontier, while Wellington was threatening them on the other frontier, now caused a very general discontent, and gave encouragement to that disaffection which had begun to manifest itself in so many quarters at the beginning of this disastrous year. So long as victory and conquest followed the standard of their emperor, so long as the national vanity was elated, and the expense of the war supported by the countries into which it was carried, the great body of the nation could, with a wonderful facility, reconcile themselves to the tremendous loss of lives and of limbs; but defeat, reverse, disgrace quickened their domestic feelings, made them ask for their brothers and their children, and rendered, for the first time since the Revolution, the war odious in their sight. They had previously borne nearly twenty years of almost incessant war, and every year, every separate campaign, however glorious or successful, had witnessed the immolation of immense numbers; and all this they had borne with a light heart and with very little murmuring—*Nos enfans sont morts sur les champs de la victoire et pour la gloire de la France;*—but one single year of disaster had changed their tone, and now it was, *Nos moyens, nos frères, nos enfans sont sacrifiés à l'ambition d'un tyran.* The suddenness of the change is, in itself, a full proof of its cause and origin. At first the senate renewed their professions of entire devotion to the person and dynasty of the emperor, and affected to treat his recent disasters as reparable, and as attributable to anything rather than to Napoleon the Great. On Sunday the 14th of November, five days after his return to Paris, the august senators waited upon him in the palace of the Tuileries, with an address of felicitation or congratulation. The senator who delivered the address (it was Lacépède, the naturalist) spoke not of the 200,000 men who had been killed, maimed, or made prisoners in Germany, but only of the great danger to which the person of the emperor had been exposed. "Sire," said the president, "the efforts of the enemies of France have been seconded in vain by the defection of your allies, and by unexampled treasons, by extraordinary events, and by sad accidents; your majesty has surmounted all; you have fought for peace!" An anathema on the allies for refusing peace to the Emperor of the French on his own extravagant terms, at Dresden or at Prague, was succeeded by the assurance that all the peoples of the Continent stood in greater need of peace than the unconquerable French; that if the enemies of France would not listen to the cry of more than 150,000,000 of souls, and consent to treat for peace, or, if the allies should seek to impose disadvantageous conditions upon France, then their false hopes would all be destroyed, then the French people would show, by their self-devotion and their sacrifices, that no nation ever better knew its duties towards their country, their honour, and their sovereign! From all that was said in this senatorial and congratulatory address it might be fancied that the allies were not upon the frontier, and that their emperor had returned not conquered, but a conqueror. But the senators had become little more than court lacqueys; the farce they played was laughed at, and it could not be repeated outside of the walls of the palace. The legislative body—as a body—had for a length of time been almost as servile as the senate; but there were some fiery and impatient spirits in it, who remembered the days of the republic, and who were emboldened by the fallen fortunes of its destroyer, and by the popular discontent, to despise the imperial decree which made them a dumb legislature, and to shake the tribune once more with their ominous voices. After so long a silence, their speech was startling:—new Mirabeaus seemed rising from the grave. They appointed a committee to draw up a report on the state of the nation; Raynouard,

* Marquess of Londonderry, Narrative.

Lainé, Gallois, and two other members who had a character for independence, were of the committee. The report which they laid before the legislative body, on the 28th of December, expressed a desire for peace consistent with the honour and welfare of France, and a wish to know what steps the emperor had taken to attain so desirable an object; and it ended by saying, "While the government will take the most effective measures for the safety of the country, his majesty should be entreated to maintain and enforce the entire and constant execution of the laws which ensure to the French citizens the rights of liberty, property, and security, and to the nation the free exercise of its political rights." The legislative body, by a large majority, ordered the report to be printed. This was a language which Napoleon had not been used to. He immediately ordered the doors of the hall of the legislative body to be closed and guarded by soldiers, and the copies of the report to be seized at the printer's. On the 31st an imperial decree adjourned this bold-speaking legislature. On the following day there was, as usual, a grand court levee, and among those who repaired to the Tuileries in their embroidered coats to wish the emperor "a happy new year" was a deputation or a group of members of the *corps législatif*. Bonaparte addressed these members in a most violent and coarse speech, not unaccompanied with menacing gestures. "Messieurs," cried he, as soon as they approached him, "you might have done a great deal of good, and you have done nothing but mischief! Eleven-twelfths of you are good men, the rest are factious! What do you hope for by putting yourselves in opposition to me? Do you hope to seize the power of the state? What are your means? Are you the representatives of the people? No! I am the representative of the people! Four times have I been called to power by the nation, and four times have I had for me the votes of five millions of French citizens! I have a just title, and you have none! You are nothing but the deputies of the departments of the empire! I alone am the representative of the nation! What could you have done in the present circumstances, when the thing to be done is to repulse our invading enemies? Could you have commanded armies? Would you have had strength enough to bear the weight of the factions? They would have crushed you, and you would have been annihilated by the Faubourg St. Antoine and the Faubourg St. Marceau! Would you have been more powerful than the Constituent Assembly and the National Convention? Where are those statesmen now? What has become of the Guadets and the Vergniauds? They are *all dead*, and your fate would soon have been the same as theirs. How have you dared to vote such an address? In a moment when the enemy (Wellington) has broken through one of our frontiers, can you seek to separate yourselves from me? Do you not know that it is against me alone that the allies are waging war? But they know that if I fall the French nation will be helpless. ..... Your committee has acted in the spirit of the Girondists. Your M. Lainé is a conspirator, an agent of England, with which country he is in correspondence by means of the advocate Desèze;—the rest of you are factious! I will keep my eye on M. Lainé; he is a rogue. ..... Although I have received from nature a strong and proud character, I felt the want of consolation. I have sacrificed my passions, my ambition, my pride, for the good of France! I expected some gratitude, some sacrifices, some consolation from you; and you vote me this scandalous committee report. You have coupled an atrocious irony with reproaches. How can you reproach me with my misfortunes? I have supported them with firmness and honour, because I have a strong and proud character, and if I had not had that pride of soul, I should not now be seated on the first throne of the universe! ..... My throne is in the nation, and I cannot be separated from it without a fatal injury—for the nation has more need of me than I have of the nation!" After much more passionate declamation of the same sort, he said, addressing himself rather to the rest of that crowded audience than to the *corps législatif*, "But in three months we shall have peace; our enemies will be driven from our territories, or I shall be dead! We have more resources than you imagine. Our enemies have not conquered us, and they never shall conquer us; they will be driven back faster than they came." He then dismissed the deputies, telling them to go back to their departments, and there tell the people that their emperor was sincerely desirous of peace, and that a peace without dishonour would be secured by victory within three months.

Although some men had reappeared in their secret sessions, who both felt that the imperial throne was not worth three months' purchase and who now wished its overthrow,* the senators incurred no such reproaches. They voted and decreed whatever was bidden. They had already passed a decree for a new conscription of 300,000

* Talleyrand, who had been so grievously insulted, had not only been invited back to the senate, but had been named a member of its special committee; and in this capacity he had with his usual adroitness put forward the absolute necessity of an immediate peace, and that too upon conditions which it was well known the Emperor of the French would not assent to. From the moment he arrived at Paris all eyes and thoughts were fixed upon him. "Qu'en dit M. Talleyrand? or, What does M. Talleyrand say about matters?" was the question of everybody; but it was a question which the cautious, astute statesman was in no hurry to answer. When all countenances were twitched and convulsed with excitement and passions of various kinds, he preserved the Dead Sea calm of his own; and when all tongues were wagging from morning till night, and from night till morning, he was more taciturn than he had ever been. Nothing could take him off his guard, nothing excite him: he met men of all parties, and stood their eager scrutiny and sharp interrogatories without betraying his own deep, fixed thoughts, and without committing himself in any way. A few bons-mots was all that could be got out of him. It was, we believe, at this period that he met the very inquisitive M. de ———, who squinted frightfully, or, as the French idiom expresses it, saw crookedly (*voyait de travers*). "Well, how do you think things are going on now?" said the querist. "*Tout comme vous voyez, Monsieur,*" replied Talleyrand. But all this while Talleyrand's wit and genius were planning the foundations of a peace, with or without Bonaparte, and the restoration of the Bourbon dynasty, if there should remain no alternative but *that*, or the chances of a prolonged war, or of the dismemberment of France, or a return of a Reign of Terror, with its Jacobin Clubs and its guillotines.

men, including all those who had escaped the conscriptions of former years; and they had nearly doubled the taxes. But the people were worn out by the tremendous sacrifices they had already made, particularly since the Russian catastrophe: their newly found repugnance to the horrors of war continued, even to the evaporation of their patriotism; and, although Wellington and the English had a firm footing within their southern frontier, and although Russians, Prussians, and Austrians were rushing towards, or had fairly crossed, their other frontiers, they made it impossible in many departments to raise either the men or the money required: and in some quarters, where the Bourbon royalism and the spirit of Catholicism were still strong, the people threatened insurrection. The Vendée was on tiptoe, and waited but for the signal; the populace of Avignon, of Marseilles, and of other cities and towns in Provence were athirst for blood and vengeance,—were little less ferocious than had been the Jacobin bands of Jourdan Coupe-Tête, when they perambulated that country in 1793 to butcher every man or woman that preferred the Catholic church to the Temple of Reason, and the dethroned king to the best of republics. All parties and factions had been and were alike fierce and vindictive. It was in the unchanged nature of Frenchmen that they should be so. The twenty years which had rolled away since the Jacobin atrocities had not carried away with them the passionate desire of retaliation; they had carried many of the sufferers to their graves, but the children of those sufferers survived; they saw in many instances the destroyers of their parents possessed of the little family property, and self-interest, filial affection, and a deep-rooted religious fanaticism all urged on these men of the South to acts of vengeance and violence. Some of their worst deeds were not committed now, but at a later period, after the final overthrow of Bonaparte at Waterloo; but enough was now done to mark the fierce character of the people, and to show that in them or from them the falling emperor could have no hope. Those excited men of the South would even have hailed with joy the project of dissevering for ever their provinces from the rest of France.

Bonaparte had said before this that, rather than give up Holland, he would sink it under the sea. But by this time nearly the whole of that country was freed from his intolerable dominion. Several previous attempts had been made; and at the beginning of the present year, when all the consequences of the Russian campaign were known, an extensive insurrection had been planned at Amsterdam in favour of the long expelled Prince of Orange. The confederates had opened some secret communications with England, and were confident of support from that quarter. But the violence of the French in enforcing the conscription in the Dutch provinces, in order to increase the army with which Bonaparte was to meet the allies in Germany, drove the people into premature insurrection, and disjointed the good plan which had been framed. At the Hague, Rotterdam, Oud-Beverland, and other places, the mob, without any previous concert, rose upon their oppressors, destroyed the parish-registers necessary for the enrolment or conscription lists, took the town of Leyden, and hoisted there the flag of their old stadtholder, amidst enthusiastic and incessant shouts of "Orange Boven!" This spontaneous and premature popular insurrection was quenched in blood. But when news arrived of Bonaparte's defeat at Leipzig, and of his ruinous retreat thence, the Amsterdam confederates, and other bands of patriots, resumed their labours. At first they proceeded with great caution and secrecy; but on the 15th of November, when a portion of the grand allied army was close upon their frontiers, the people of Amsterdam rose in a body, hoisted the Orange colours, and proclaimed the sovereignty of that House. The French authorities thought proper to quit the city; and on the next day a proclamation was issued, in which twenty-four Dutchmen were called upon by name to assume the temporary administration of affairs. On the evening of the 16th the confederates at the Hague received intelligence of all that had been done at Amsterdam, and a corresponding demonstration was made forthwith in that city. The confederates appointed the zealous Orangist Count Styrum governor of the Hague in the name of the Prince of Orange; and the new governor issued a proclamation in the name of his prince announcing the happy change. So completely had the country been drained of its native troops and resources during the three years and a half that it had been annexed to France, that Count Styrum and the confederates could scarcely muster 1000 Dutch soldiers; and they had no arms, ammunition, accoutrements, military stores, artillery, or horses. Of money, as a matter of course, there was none left: the exigencies of Bonaparte had demanded immense supplies, and the French functionaries had carried away with them every stiver that was left. The proceedings of the patriots were the more courageous, as the French were in possession of all the fortresses and strong places of the country, and as General Molitor had a French corps 4000 strong in Utrecht, only twelve leagues from the Hague. But, though chilled by some tardiness and reservation on the part of Russia, Prussia, and Austria, the confederates relied upon prompt aid from England; and their hopes were not disappointed. They sent deputies over to London to tell the Prince of Orange that his nineteen years of exile were over, and to invite him back to assume the government. Favoured by wind and weather, this deputation reached the British capital —where they excited a fresh joy and exultation— on the 21st of November. By the 25th the Prince of Orange had embarked in a British man-of-war; and he proceeded to his native country with the assurances of the British government that every necessary aid should be given to him, whether in

troops or arms, money or military stores. The prince entered the city of Amsterdam on the 1st of December, in the midst of popular rejoicings; and he forthwith assumed the title, not of Stadtholder, but of Sovereign Prince of the United Netherlands. The present aid sent to him by the allies amounted to some 300 Cossacks; but a more valid support soon arrived from England and from other quarters, and then the French were easily driven out of the open country and all the weaker fortresses. In their reverses the French committed many shameful outrages. Some of them fled into Belgium; but others threw themselves within the formidable walls of Bergen-op-Zoom. Measures were promptly adopted for the formation of a Dutch army, and within the short space of four months 25,000 men were raised, armed, and equipped.

Before this time the Danish government had been made to rue its bad policy in concluding the last treaty with the French, and in declaring war against the Swedes, which was tantamount to a declaration of hostilities against the whole European alliance. From the north of Germany Bernadotte found leisure to march against the Danish frontier; and he took with him a force far superior to any that the royal Dane could show in the field. The Swedes presently overran Holstein, surrounded the Danish army, and reduced its commander to sue for an armistice. The armistice was granted, but only upon the hard conditions that the Swedes should continue to occupy Holstein and part of Sleswig, and be free to reduce some remaining fortresses within those limits.

It had been hoped that the patriotism of the Swiss, who had been robbed by the French of Geneva, the canton of Vaud, and the great Alpine pass of Mont Simplon, and who had suffered other and more intolerable evils (though, *because* they were stronger and braver than their neighbours, the Swiss had suffered much less than other people from the Gallic domination), would have induced them to anticipate the conduct or follow the example of the Dutch. But after the battle of Leipzig, and as part of the allied armies was coming within sight of the Rhine and of their frontier, an extraordinary diet was summoned to deliberate on the best means of keeping the flames of war out of their country. This diet, which met in November, ordered some Swiss militia to guard or watch the frontiers on the Rhine, and at the same time issued a proclamation asserting the absolute neutrality of the nineteen cantons. This proclamation was communicated to Bonaparte and to the allied sovereigns, with the expressed hope or wish that both the belligerent parties would respect the neutrality, and not seek to pass troops through any part of the Swiss territories. This would have covered France on her eastern and most vulnerable frontier, and would have shut out the allies from some of the best of their combined movements of invasion. The Emperor of the French, who had never respected such neutrality, seems to have deluded himself with the hope either that the allied sovereigns would be more scrupulous than he, or that, if they attempted to pass through Switzerland, the march of their forces would be opposed, and the Swiss, with their traditional, hereditary antipathy to Austria, would join the French. But, if such were really his hopes, he was sadly deceived. The allied sovereigns were determined not to be stopped by the proclamation of the diet; they offered indeed to guarantee the neutrality of the cantons; but they insisted on their troops crossing through part of the Swiss territory in order to enter France in the most advantageous manner. They urged that the conflict in which they were engaged was no ordinary war for separate interests and aggrandizements, but a rising of Europe in arms to free herself from the intolerable ambition of one man, who would not allow other nations to remain at peace or to be masters of their own territories. They admitted that the Swiss, of all the peoples of Europe, had perhaps the least reason to be dissatisfied with Napoleon; it was upon this consideration they were not called upon to take up arms against him; but, on the other hand, it must be expected and demanded from them that they should not oppose the allies who were advancing in their own defence to obtain peace by force of arms and upon the soil of France, since peace could not be gained from Napoleon in any other way. On the 19th of December a conference took place at the advanced posts of the allies, now not far from Basle; and Count Bubna, the Austrian commander, told the Swiss deputies that his troops would assuredly enter the Swiss territory on the following day, and proceed to France by the shortest road, adding that it now depended on the Swiss whether they would oppose them and be treated as enemies, or allow them to pass and be considered as friends. In the latter case Bubna engaged that the greatest regard should be paid to Swiss property of every kind, and that the soldiers of the allies should maintain the strictest discipline. The Swiss authorities immediately entered into a convention with the Austrian generals, by which the march of the allies was to be regulated. At the same time Count Capo d'Istria, as envoy from the Emperor Alexander, and M. Lebzeltern, as envoy from the Emperor Francis, reached Zürich, where the Swiss diet was sitting, and delivered a note from their sovereigns, which proved the death-note of Bonaparte's Swiss mediatorship. "The Act of Mediation," said the two emperors, "having been the work of a foreign influence, inimical to the rest of Europe, is incompatible with the principles of the great European confederation, and the allied powers, without pretending to interfere in the internal affairs of Switzerland, cannot any longer allow that country to remain under the tutelage of the French empire." The true Swiss pride had long been wounded by this imposed state of tutelage: instantly nine of the old cantons, with Zürich at their head, named deputies, who, on the 29th

of December, declared that the Bonapartean act of mediation was dissolved, and then addressed an invitation to all the other cantons, old or new, acknowledging their independence, and the integrity of their respective territories, as at present constituted, and urging them to send deputies without delay to meet them at Zürich, and to concert and establish with them a new federal pact for the whole of Switzerland. Except by Berne, Freyburg, and Solure, who wanted to get back the territories which had been dependent upon them, and who demanded that the old federal pact of the thirteen cantons should be re-established as it existed before the French revolution and the interference of Bonaparte, all the cantons accepted the invitation, and sent their deputies to Zürich.* Thus the eastern as well as the southern and northern frontiers of France were left open to the allies; and beyond the Alps and the Apennines the irritated Murat was ready to raise his standard of defection, with a plan of campaign concerted to deprive his brother-in-law of the whole of Italy and its resources. At the close of the year 1813 little was left to Bonaparte except what the French call *un beau désespoir*.

Our imperial parliament, assembling much earlier than usual, met and discussed this great crisis of the civilised world, some time before the Emperor of the French addressed his refractory *Corps Législatif*. On the 4th of November the session was opened by the prince regent in person. After a brief allusion to the king's continued indisposition, the speech from the throne, which was unusually long, and which had been composed with very unusual care, passed to the subject of the great and splendid successes with which his majesty's arms and those of his allies had been blessed in the course of the present year. It noticed the now prosperous state of British commerce, which no effort of the enemy had been able to crush. It then dwelt upon the decided conviction which now happily prevailed throughout so large a portion of Europe, that the war in which the allied powers were engaged against the ruler of France was a war of necessity, and that his views of universal dominion could be defeated only by combined and determined resistance. The grand rising of the Germanic people was hailed as one of the happiest and most promising of events; and it was safely predicted that public spirit and national enthusiasm would triumph there, as they had done in Portugal and in Spain, which had set the example to the oppressed nations of the continent. The speech then proceeded to unfold, in general terms, the views of policy entertained at this juncture by the British government and its allies, and to urge the necessity of our continuing our vast efforts until the struggle should be over, and the opportunity offered of restoring the blessings of peace. After attributing the long and far-extended war to the insatiable ambition of the ruler of France, the prince regent said, "Still, no disposition to require from France sacrifices of any description inconsistent with her honour, or just pretensions as a nation, will ever be on my part, or on that of his majesty's allies, an obstacle to peace."

The speech was received with universal assent and joy; the voice of opposition was charmed into silence, or into open and hearty concurrence; so much unanimity had not been seen in parliament for a very long time; in both houses the addresses were carried without the slightest opposition. Statesmen who had long been in the shade, and who had so often and so violently differed with the present and the preceding ministry, especially as to the conduct of the war and the management or mismanagement of our foreign alliances, now came forward to offer their enthusiastic congratulations, to recommend, by their own high personal examples, the spirit of unanimity, and to support the government in its demands for the great finishing effort to be made by the country. Lord Grenville quitted his beautiful retreat at Dropmore, and his then matchless plantation of cedars and pines, and appeared in London busy among the busiest, and in the House of Lords all radiant with joy. His consanguinity seemed to entitle him to share in some of the triumph which would have been awarded to William Pitt, if Pitt had lived to see these days of exultation and glory. Lord Grenville's speech was one of the most eloquent and most statesmanlike of all that were delivered in parliament at this crisis. He correctly ascribed the long successful career of the French to that uniform system of separation and disunion by which they dissevered and alienated those continental powers, which, had they rightly understood their mutual interests, would have been allied and fastened together twenty years ago by one common and indissoluble bond for the defence of their freedom and independence. The Marquess Wellesley was equally warm in his congratulations on the events which had changed the destinies of Europe. "Nothing," said the marquess, "can be now more true than the last words which that great statesman Mr. Pitt delivered in public —'England has saved herself by her firmness, and has saved other nations by her example!'" The premier, Lord Liverpool, though little given to oratorical displays, or to any other display, delivered a speech full of glowing passages, and of gratitude for the past and of hope for the future. The lamentable failures and disjunctions of former coalitions were known to the whole world; he need not dwell upon them. "But why did the present coalition differ from the preceding ones? What was this new life which gave so irresistible an impulse to the present confederacy? It was the feeling of national independence, that noble sentiment which impels all men to stand before the liberties of their country! This feeling, which first arose among the nations of the Peninsula, had given the war a new character. There had been

* A. Vieusseux, Hist. of Switzerland, from the irruption of the Barbarians to the present time. London, 1840.—State papers, manifestoes, &c. issued during 1813-14.

before wars of kings and of governments, but none like this war, between nations, between peoples! And all our principles of policy and prudence must have been belied if the issue of the present confederacy had not been very different from that of any of the former coalitions."

In the House of Commons even Mr. Whitbread, who had so often called upon the government to renounce its war policy, joined his voice in applause and thanksgiving, and declared that never did a more favourable opportunity present itself for us to exert our whole strength. He particularly recommended that an immediate and effectual assistance should be sent to the brave Dutch. But in this house the most eloquent speech was delivered by Mr. Charles Grant, jun. (now Lord Glenelg), who praised Lord Wellington particularly for this—that by an undaunted and intrepid spirit, the sure proof of a genius conscious of its resources, he had been enabled to defy the public opinion as to the invincibility of the French. Wellington had never sunk under the weight of the enormous fame which had been made to surround Massena, Marmont, Jourdan, Soult, and the other great French marshals, and he had successively foiled or vanquished them all. Mr. Grant drew a vivid picture of the grand allied armies as now existing, and as now advancing, with victory perched on every banner—of nobles, and kings, and princes, the royalty and the aristocracy of Europe, fighting in the ranks; of crowds of accomplished captains, of men full of patriotism and heart, instead of armies heartless in the cause, generals corrupt or incapable, sovereigns and princes blind alike to their fame and to their true interests! Lord Castlereagh, with a not unbecoming national pride, detailed some of the exertions which England had made in the course of the present year. When the grand campaign of the allies began in the North, every party was poor, and needed immediate supplies of money; the great arsenals and storehouses of Europe were still in the hands or under the control of the enemy, the military magazines of Prussia were his, the magazines of Russia had been nearly exhausted by the immense demands of the preceding year, and thus arms, ammunition, &c., were as much wanted as money. The British government had lost no time in supplying these wants; and in several cases ministers had taken the whole responsibility upon themselves, and had made large disbursements without the previous vote of parliament. Independently of the glorious services of our own army in the Peninsula, independently of the direct aid that had been given to Spain and Portugal, indirect aid had been afforded to the Spanish and Portuguese armies to a great extent. It frequently occurred that they were in utter want of military stores and equipments; and in many instances the necessities of those armies had been supplied from our own commissariat. The aid which had been granted to Spain alone during the last year, in money, stores, &c., amounted to about 2,000,000*l.* sterling. During the last two years, Portugal had received in the same way 2,000,000*l.* For Sicily, 400,000*l.* had been voted; for Sweden, who had well earned the money, 1,000,000*l.* There had been paid in subsidies to the great allied powers nearly 4,000,000*l.* Russia had received 2,000,000*l.*, which had enabled her to join the common cause with so immense an army; and the aid given to Prussia had enabled her to double the amount of the force for which she originally pledged herself, or to throw into the field 200,000 men. Austria, upon taking the field, had been accommodated with bills of credit of 1,000,000*l.* sterling, together with 100,000 stand of arms and a large quantity of military stores. In the mere article of small-arms, in addition to the great expenditure and waste of our own army, we had, in the course of the year, sent 500,000 muskets to Spain and Portugal, and 400,000 to other parts of the continent, as subsidiary aid. Wherever a government, or a people had stepped honestly forward, and had asked for assistance, it had been promptly given by England. This promptitude, and this display of our prodigious resources, which, after so many years of war, were found to be greatest, most matured, and best systematised when they were most needed, had encouraged the friends and dismayed the enemies of Britain. It was not to be supposed that the war even now could be terminated without further exertions on the part of England; nor would his lordship calculate that the expenditure of the next year would fall below the standard of this year. In round numbers he estimated the sum necessary for military expenses on the continent for the year 1814 at 10,000,000*l.*, namely, 4,000,000*l.* for the Peninsula, and 6,000,000*l.* for Germany, &c. During the year, the entire British force under arms, in all parts of the world, exceeded 230,000 men; yet, notwithstanding our heavy losses in the Peninsula and among the Pyrenees, the sacrifice of human life was but a small per centage on the whole. Lord Castlereagh now intimated, in very general terms, that perhaps it would be expedient to employ for a short time from 15,000 to 20,000 British troops in Holland. To meet this contingency, and other exigencies of the service which might arise, he did not recommend any actual increase of our armed forces, but merely proposed a bill to allow a number of men from the militia regiments, in no case exceeding three-fourths of any regiment, to volunteer into the line on payment of an additional bounty to each man. These militiamen were to be accompanied by their own officers, to whom encouragement was to be given for their volunteering, in military rank, pay, half-pay, pensions, &c. It had, indeed, been for some time past chiefly from our regular militia that our line had been fed and reinforced; and some of the best materials of Lord Wellington's army had been volunteers from our well trained and steady militia regiments. Lord Castlereagh's proposal was assented to almost by acclamation. In exposing the fatal consequences

of any inconclusive transitory peace with Bonaparte, Lord Castlereagh exhibited the unprecedented amount of French prisoners who were now in the hands of England and her allies, and who would be liberated and restored to the enemy by the conclusion of any peace. This now obstructed force might of itself be sufficient to prevent the tranquillity of Europe. The mass of prisoners—sailors and soldiers—in England alone, was immense; and it was principally through the necessity of guarding these dangerous, ingenious, and often turbulent captives that our government was obliged to take care not to reduce the militia too much.

It was resolved at the same time not to decrease, but rather to increase, the naval forces of Great Britain; and that 140,000 seamen and 31,000 marines should be employed for the ensuing year. They had turned their attention rather tardily to that quarter; they had been obliged to send a very large fleet into the Baltic, and to scatter their ships in almost every sea, and in all the four quarters of the globe; but now ministers had adopted schemes for sweeping the American flag from the ocean. There were some faint attempts at opposition, some niggardly strictures on the expenses we were incurring, and on the greatness of the sums paid to the allied governments or spent in the Peninsula; but these murmurs found no echo in the country, which was excited by victory and comforted by the conviction that the fall of the greatest enemy it had ever known was now close at hand. Those who lived in London, or in its neighbourhood, in the years 1812 and 1813, can never wholly forget the popular enthusiasm which prevailed, as month by month, and, at last, week by week, some tidings of a fresh victory obtained by Wellington, or Kutusoff, Wittgenstien, Bulow, Blücher, or Schwartzenberg, reached the metropolis—can never forget the scenes presented at the illuminations and rejoicings for the battles of Salamanca, Vittoria, and the Pyrenees. The hearty English shouts and hurrahs of that million of voices still ring in our ears; we still see the captured glittering French eagles as they were displayed to the public gaze in Downing Street; and, although thirty long years have passed since then, our heart can still beat and thrill at the sight, even as it then did under a boyish breast; and cold and un-English is the heart that, with the same recollections, has not the same feelings.

The parliament had been assembled early, with a view to a long prorogation. It was, on many accounts, not advisable that a popular assembly should continue publicly debating the great question of war and peace during the last critical stages of the war; but what was of still more importance was, that ministers should be relieved, for a short season, from their parliamentary attendance and toils, and be so enabled to devote an exclusive attention to the last act or the last scenes of Bonaparte. The great business in hand was to terminate the war; there would be time to deal with other business afterwards, when men's minds would be less agitated. The Commons had voted all the supplies and subsidies proposed, and they had already dispatched all the most pressing questions relating to home affairs. The state both of public and private business appeared to admit of an unusually long adjournment, without any inconvenience or risk to any interests; and, besides, a recent act gave the crown power, in case either of prorogation or adjournment, to re-assemble at any time both Houses, within the space of fourteen days. Upon the 26th of December Lord Castlereagh moved the adjournment of the House till the 1st of March, 1814; and a similar motion was made by ministers in the House of Lords. In both places some strong objections were taken. It was said that the adjournment was for much too long a period, and that the proposition ought to be rejected with indignation; that ministers, after obtaining from the generosity of parliament all that they asked for, wished to gag its mouth and prevent its deliberations; that before the 1st of March arrived the condition of Europe might be wholly changed; that England was now standing foremost in these mighty scenes of war and negotiation, yet the ministers of the crown wanted to act the whole of the grand drama without the assistance of parliament. The ministerial motion was, however, carried in both Houses without a division; and thus the government was enabled to devote its whole attention to the arduous task in hand.

A.D. 1814. The last act of the drama was played off with wonderful rapidity. We shall adhere to the course we have lately followed, and give precedence to the operations in which Lord Wellington and the British army were immediately engaged, for these events appertain most to English history. The operations of this comparatively small army had lost none of their importance and not an atom of their glory, by being brought into comparison with the mightier masses of the allies gathered on the Rhine and the borders of Switzerland. Wellington and his army, moreover, were at the beginning of the year farther advanced on the soil of France than any of the allies. Instead of sending reinforcements, which they might very well have done after the passing of Lord Castlereagh's militia volunteering bill, our government thought it proper to recall some of Wellington's battalions, with some of his best officers. Thus, at the close of 1813 they had recalled Sir Thomas Graham in order to send him into Holland, to take the command of the British forces gradually collecting there. They appear to have contemplated a still greater reduction of the noble little army which had revived all the lustre of our military fame, and given to it a new illustration; but, if they ever seriously entertained this unwise project, they yielded to the remonstrances, or rather to the plain, straightforward, unceremonious statement of facts made to them by our great captain. It was necessary to the character of his army that Wellington should remind ministers of what it had

done; and this he did in his usual frank manner: "By having kept in the field, in the Peninsula," said his lordship, "about 30,000 men, the British government have now for five years given employment to at least 200,000 French troops of the best Napoleon had, as it is *ridiculous* to suppose that either the Spaniards or Portuguese could have resisted for a moment, if the British force had been withdrawn. The armies now employed against us in France cannot be less than 100,000 men, indeed more, including garrisons; and I see in the French newspapers that orders have been given for the formation at Bordeaux of an army of reserve of 100,000 men. Is there any man weak enough to suppose that one-third of the number first mentioned would be employed against the Spaniards and Portuguese if we were withdrawn? They would, if it was still an object to Bonaparte to conquer the Peninsula; and he would succeed in his object. But it is much more likely that he would make peace with the powers of the Peninsula, and then have it in his power to turn against the grand allied armies the 200,000 men, *of which* 100,000 *men are such troops as those allied armies have not yet had to deal with.*"* His lordship not only took nothing and allowed nothing to be taken from the French people among whom his army was cantoned, but he also disbursed considerable sums for maintaining a police in the country, which must otherwise have been exposed to lawless excesses and to a temporary anarchy, as the Bonapartean authorities had all fled, and no French civil authorities had succeeded them.

Bonaparte hoped that by dictating a treaty to the weak-minded Ferdinand, he might bring to his assistance in the threatened interior of France the whole of Suchet's army, with all the French garrisons remaining in Valencia and Catalonia; that by restoring the old dynasty he might induce the belief that he gave up for ever all thoughts of the Peninsula, or—failing in this—that he should have the advantage of seeing the sudden return of the Bourbon prince followed by a fierce social war between the Royalists, the clergy, and the monks on the one hand, and the Cortes and the Liberales on the other. Fully aware of the advantages to be derived from suddenness and secrecy, Bonaparte sent to the weak and spiritless captive of Valençay one M. de Laforest, who had formerly been ambassador at Madrid, but who now travelled under the feigned name of M. Dubois. This emissary reached Valençay and concluded his negotiations before the English or the Spanish Cortes knew anything of the matter. There was, however, some demur on the part of the poor Bourbon prisoner of state. Laforest, in the name of his master, demanded that Ferdinand should concert means for getting the English entirely out of the Peninsula. Ferdinand felt that this would be no very easy or grateful task: he represented that he could make no treaty, that he could take no measures, without the consent of the Spanish regency; that he was ignorant of the real state of his own country, as during the five years and a half he had been kept in France he knew nothing more of the state of affairs than what he read in the French newspapers. Laforest said that those newspapers had exhibited the true state of things; but it was scarcely possible that Ferdinand should be so dull as to believe him. The secret ambassador employed the arguments which Bonaparte put into his mouth; and, absurd and monstrous as they were, these arguments were certainly calculated to work deeply into the mind of a despotic prince who could have no notion of any form of government except absolute monarchy. Laforest told him of the daring and democratic tendencies of the Cortes, who had been enabled, by the assistance of British arms, to assemble and keep together. Great Britain, he said, being almost a republic herself, and being eager to swallow up the Spanish commerce and colonies, had encouraged Jacobinism and anarchy in Spain, in order to destroy both the monarchy and the nobility, and erect a weak dependent republic. This state of things could not but be distressing to France, the near neighbour of Spain, and therefore it was that the Emperor Napoleon was so anxious to prevent it, by restoring Ferdinand, and concluding a previous treaty of amity and alliance with him. At last the captive prince consented that one of the Spanish noblemen in France should negotiate a treaty with M. Laforest. The Duque de San Carlos was immediately dispatched by Bonaparte to Valençay; and on the 11th of December (1813) a treaty was concluded and signed. It stated that the Emperor of the French recognised Ferdinand VII. and his successors as kings of Spain and of the Indies; that the Emperor of the French recognised the integrity of the Spanish territory as it existed before the war, and would deliver up to the Spaniards such provinces and fortified places as the French still occupied in Spain; that Ferdinand VII. obliged himself to maintain the integrity of his territory &c., and to make the English evacuate all provinces and places in or belonging to Spain immediately; that the two contracting powers bound themselves to maintain their maritime rights against England, &c.; that all Spaniards who had adhered to King Joseph should re-enter upon the honours, rights, and privileges which they had enjoyed under him, and upon all the property of which they might have been deprived by the Cortes, and that all prisoners on both sides should be immediately sent home. [This last clause, if it could have been executed, would have given to Bonaparte, at the critical moment, many thousands of veteran troops, whereas he had few or none of that description of force to give back to Spain.]* Ferdinand now addressed a letter to the Spanish regency, this

* Dispatches; Letter to Earl Bathurst, dated St. Jean-de-Luz, December 21st, 1813.

* Ferdinand also bound himself to pay annually to his father, Charles IV., the sum of 30,000,000 reals; and in case of his father's death, an annuity of 2,000,000 reals to the ex-queen, his mother.

being the first communication which he had knowingly been permitted to hold with his own country since his entrapment at Bayonne. Of the Cortes, the representatives of the nation, he took no notice; and it was evidently his wish, and the counsel of his brother Don Carlos, his uncle Don Antonio, and the other Spaniards who surrounded him, that the Cortes should cease to exist. Some rational doubts may be entertained as to some subsequent parts of these mysterious transactions, for they are told on one hand by partisans of Ferdinand, who wish to save the character and enhance the patriotism and political penetration of their king, and they are related on the other hand by disappointed, enraged Liberales, who maintain that their prince, or king, was a drivelling idiot, capable of trick and cunning, but incapable of patriotism or any other magnanimous feeling. According to one party, he knew, through Madame de Talleyrand and the light of his own reason, that the downfall of Bonaparte was a certainty; and, even without this consoling knowledge, he would have preferred remaining in his captivity and exposed to the old fate of dethroned and imprisoned kings (with which, they say, he was more than once menaced), to returning to the Spanish throne with dishonour to himself, or danger or dishonour to the Spanish nation. According to the other extreme party, he still believed in the irresistible destiny of Bonaparte; he would even now have consented to a matrimonial alliance with the Bonaparte family; and he cared not to what dishonour he sunk himself and his country, provided he could only return to reign, to re-establish the Inquisition, and to take a bloody vengeance on the men who had revived the ancient and free institutions of Spain. But the story, as told by Ferdinand's apologists, is sufficiently base. The Duque de San Carlos, who had negotiated the treaty, was made the bearer of it, and of Ferdinand's royal letter to the Regency. And the Duque was secretly instructed by the king to inquire into the spirit of the Regency and Cortes, and if he should find them devout, loyal men (and not tainted with infidelity and Jacobinism), he was then to let the Regency know—but in the greatest secrecy—that his royal intention really was that the treaty should be ratified, if it could be done without injury to the good faith which Spain owed to her allies, and without injury to the public weal. Should the Regency be of opinion that the treaty might be ratified upon an understanding with England temporarily, and until his return to Spain should be effected, upon the supposition that he (without whose free approbation it could not be complete) would not ratify it when at liberty, but declare it to have been constrained and null, then and in that case he wished the Regency so to ratify it, because the French could not reasonably reproach him, if, having acquired information concerning the real state of Spain, which had been withheld from him in his captivity, he should refuse to confirm the treaty. But, continued these Jesuitical instructions, which were meant to dupe the Spanish Liberales as well as Bonaparte, if the Duque de San Carlos should, upon his diligent and secret inquiry, find out that the Regency and the Cortes were really infected with infidelity and Jacobinism, then he was to reserve his explanations, and simply demand from them the ratification of the said treaty; for, if such were the principles of the governing party in Spain, the sooner the king returned to curb it the better, and the ratification of the treaty by them would not prevent his majesty from continuing the war against the French, if the interest and *good faith* of the Spanish nation should require it. But this last reserved intention of King Ferdinand was to be kept profoundly secret, close in the deepest recesses of the Duque de San Carlos's Spanish heart, lest through any babbling or *treachery* it should be made known to the French government.

The duque travelled from Valençay under a feigned name, as M. de Laforest had travelled to that place, Ferdinand being apparently quite as anxious as Bonaparte that his mission should not be suspected by the English. The duque took the eastern road, entered Spain by Catalonia, and, with the treaty of Valençay and the royal letter in his pocket, he arrived secretly at Suchet's head-quarters, on his way to Madrid. It is said that this arrival had the immediate effect of paralyzing the Spanish *corps d'armée* of General Copons, who had promised to co-operate actively with General Clinton, but who was now fully informed by some of Suchet's people, or by the Duque de San Carlos himself, that amicable arrangements had been entered into, which would render equally unnecessary the presence of Clinton's and Wellington's armies, and any further campaigning or fighting on the part of any of the Spanish generals. It is added, that, but for the promptitude with which the Cortes quashed the worse than duplex treaty, General Copons, regardless of the safety of Clinton and his army, would have concluded a separate armistice with Marshal Suchet. The Spanish regency was now a nullity, as the Cortes, with their one chamber or house, had made themselves an executive as well as legislative body, and had monopolised all the powers of government. When San Carlos made the treaty known, he found that the Cortes were not so very anxious for the return of their sovereign, and that they would not ratify the treaty either with or without the mental reservation which Ferdinand recommended. On the 8th of January the regency, at the bidding of the Cortes, replied to his most Catholic majesty, that they were happy to hear of his good health and noble sentiments; that they and the Spanish people were very faithful, loyal, and affectionate; that they would continue to make the greatest sacrifices to see him placed upon the throne of love and justice which they had prepared for him; but that for the present they must content themselves with declaring that he was the beloved and desired of the whole nation. And then followed their abso-

lute rejection of the treaty. It was their duty, they said, to put him in possession of a decree passed by the Cortes on the 1st of January, 1811. And this decree, which they enclosed in their answer to Ferdinand, was that by which the Cortes enacted that no treaty concluded by the king during his restraint and captivity could be recognised by Spain. Bonaparte, who was now as eager to withdraw the remnant of his troops from Spain as ever he had been to send his armies thither, released Generals Palafox and Zayas from the donjon of Vincennes, and sent them to Valençay, to persuade Ferdinand to exert himself in order to procure an immediate armistice between Suchet and the Spanish generals. Don Pedro de Macanaz had arrived before, and the canon Escoiquiz soon followed Palafox and Zayas: the canon had apparently the same mission as the two generals, and, as a churchman, he might be eager for the restoration of his king, as the most probable means of putting an end to the war which the Cortes were madly waging against church property and ecclesiastical dignitaries. M. de Laforest, who continued at Valençay, now proposed to the assembled Spaniards, that they should all exert themselves in working out the wishes of King Ferdinand and of the Emperor Napoleon for a general suspension of hostilities, "humanity requiring that all useless expenditure of blood should be avoided." Marshal Suchet had been appointed by the emperor his commissioner for executing the evacuation of the Spanish fortresses and territory; Suchet had full powers to treat for an armistice, and it therefore depended solely upon the Spanish government to expedite this business and put an end to the horrors of war, which had so long desolated their country. The generous emperor, too, was quite ready to release all his Spanish prisoners; the generals and officers should travel post, the common soldiers should be marched to the frontier, and be delivered up as fast as they arrived. Could Spaniards who loved their king and country hesitate? Macanaz and Escoiquiz assented to all that the French diplomatists said, and Palafox undertook to go into Spain and there endeavour to accomplish his wishes. This was before the Duque de San Carlos had reached Madrid, or before any intelligence had been received from him. Ferdinand therefore gave Palafox a duplicate of the duque's commission, in case any accident might have befallen that *incognito* envoy upon the road; and also a letter, in which he, the king, expressed his belief that the regency would have ratified the treaty before Palafox's arrival at Madrid. But at the same time Ferdinand gave Palafox secret instructions to see the English ambassador at Madrid, and tell him, in the king's name, that the treaty was a hoax. Palafox arrived safely at the Spanish capital, but his journey was useless. On the 28th of January the regency, or rather the Cortes, replied that they must refer his majesty to their former letter and to the decree therein contained; that an ambassador extraordinary and plenipotentiary had now been named on his majesty's behalf, to attend a congress (the congress of Chatillon), in which the allied powers were about to give peace to Europe; that in that congress the Spanish treaty would be concluded; that it would soon be ratified, not by the regency, but by his majesty himself in his royal palace of Madrid, &c.

Lord Wellington had been vexed by these transactions; but he had not been taken by surprise. He had clearly foreseen that Bonaparte would adopt some measures of the sort in order to get back Suchet's army, and to excite disturbances in Spain. He had obtained information respecting the mysterious journey of the Duque de San Carlos, of the treaty of which he was the bearer, and of the papers connected with it: he knew perfectly well of Palafox's expedition; and he expected that Bonaparte would make a second effort, and meet the wishes of the Cortes by withdrawing his troops from Spain without exacting any conditions. But he was indignant at the conduct of General Copons in concealing what he knew of the Duque de San Carlos' arrival and the nature of his mission, and in making no report to him. His lordship knew better than any man that the irreconcilable pretensions of the Liberales and royalists must sooner or later plunge Spain into an anarchy; but he hoped to have done with the war before this great storm could break out in his rear.

As soon as his lordship could get his supplies, and could put his army in motion, he commenced a series of operations intended to drive Marshal Soult, not only from his entrenched camp under the walls of Bayonne, but also from all the country on the left of the Adour. Early in February, in spite of the badness of the weather and the roads, he, by a succession of brilliant movements and partial engagements, drove Soult before him, making him abandon the Bidasoa altogether, quit his entrenched camp and cross the Gave d'Oléron, an affluent of the Adour. On the 27th of February he fell upon the marshal's army concentrated at Orthez, routed it, and pursued it to the banks of the Adour. In this battle of Orthez the allies had 277 killed and about 2000 wounded or missing; but the French loss was very great in the battle, and still greater in the retreat, for the fresh conscripts deserted in masses, throwing away their arms, and flying like a rabble. On the 1st of March Wellington's head-quarters were at St. Sever, beyond the Adour. Through the victory of Orthez and this rapid advance, the French garrison in Bayonne was left to its own resources, and the high road to the important city of Bordeaux—a city teeming with royalists and counter-revolutionists—was thrown open to the allies. Sir John Hope, with a division of the army, immediately invested Bayonne; and Marshal Beresford was detached with two divisions to occupy Bordeaux. On the arrival of Beresford the mayor and most of the inhabitants of Bordeaux, of their own accord, proclaimed Louis XVIII. As the allied powers had not yet pledged themselves to support

BAYONNE.

the Bourbon cause, or not to treat with Bonaparte as the ruler of France, Lord Wellington had most particularly and emphatically instructed Beresford not to originate nor encourage any rising of the Bourbon party; on no account to encourage hopes which might be disappointed, or to excite insurrectionary movements which might be put down and avenged with blood, if the allied sovereigns should eventually negotiate a peace with the present ruler, and leave Bonaparte on the throne of France. In all directions the same delicate regard was paid to the future safety of the French royalists, nor was any encouragement given to them as an active counter-revolutionary party until Bonaparte had abdicated the throne and taken his departure to the island of Elba. A general insurrection of the south would have facilitated the work in hand, and would have given great satisfaction to the Bourbon princes and their agents, who for some time past had constantly surrounded and importuned the British general, and who had not unfrequently complained that he was injuring their cause by throwing cold water upon the loyal enthusiasm of the French; but it suited not the political morality of Wellington to commit the lives and fortunes of these royalists before he knew that they would not be abandoned by the allies. And yet, while Wellington was pursuing this line of conduct, and while the headlong French royalists were blaming him for not protecting them from the consequences of their own rash conduct, Marshal Soult and General Count Gazan issued a turgid and insulting proclamation, accusing the British commander of fomenting revolt and civil war in France; of seeking to obtain, by means of intestine factions, those advantages which he could not gain by the sword. And this, too, was said when the sword of Wellington had cut his way from the frontiers of Portugal far into the interior of France, unaided, unsupported, but thwarted or impeded by an infinitude of causes which would have broken the heart or have turned the brain of almost any other commander. This disgraceful proclamation, which could still deceive thousands of Frenchmen remote from the scene of action, did, indeed, go to prove the justness of a remark which his lordship had made long ago, when the system was in its perfection—that it was impossible for people in France to know the truth, the whole system of Bonaparte's government being based on trickery and deception.

On the 18th of March Lord Wellington advanced his victorious army to Vic Bigorre, and Soult retreated to some good positions at Tarbes. It was thought that the French marshal would stand and fight a general battle here, but he did not, continuing, on the 20th, his retreat towards Toulouse, where he arrived on the 24th. The main object of Soult's movements was to facilitate a junction with Marshal Suchet, who, through the imbecility of King Ferdinand and the want of activity and daring in Copons and the other Spanish generals in the east, had been allowed to withdraw 14,000 men from Catalonia, in addition to another force, of from 8000 to 10,000, which he had previously detached into France. Seeing that nothing could be gained by keeping him, while there was a chance of gaining much by releasing him, Bonaparte ordered Ferdinand to be let loose from his pleasant prison bower at Valençay, and whisked across the Pyrenees. The captive king reached Perpignan on the 22nd of March, and there agreed with Suchet to allow him to withdraw, not only the forces he had in the field, but also the garrisons he had in the fortresses of Catalonia, which garrisons were all blockaded

by Spanish troops, and very near the capitulating point. But the Cortes had previously resolved that these garrisons should not be allowed to return to France with their arms; and they referred the question of the king's unwise agreement with Suchet to Lord Wellington, who declared, in the strongest manner, that the said garrisons in Catalonia, or any other French force whatsoever, ought to be allowed no capitulation, except on the condition of their being prisoners of war. From 15,000 to 18,000 Frenchmen were shut up in these garrisons; they were not conscripts, but, for the most part, veteran troops, with a spirit as yet unbroken by any decisive defeat; and, if Suchet could have united his whole force and have brought it to join Soult on the Garonne, the enemy must have been too strong for Wellington, whose forces were much weakened by the blockade of Bayonne and the occupation of Bordeaux. Suchet, however, had already detached 10,000 men into France, and he was allowed to move off with the 14,000 disposable men he had in the field. From the defiles of Catalonia, where he ought to have been crushed or reduced to the plight of Dupont at Baylen, Marshal Suchet marched across the broad isthmus which joins France to the Pyrenees and to Spain; but it was the beginning of April before he reached Narbonne, and then he halted. He had still a very long march to perform before he could join Soult. And, as part of the Austrian army, which had poured into France through Switzerland, had reached Lyons, and had established its outposts considerably to the south of that great city, he may have had some apprehension that they would interpose in force between him and Toulouse. Besides, it is evident that he had never had any great desire to place himself under Soult's orders, or to unite the unbroken veterans he had saved to the broken and disorderly army which could stand nowhere.

Soult, as we have seen, arrived at Toulouse on the 24th of March; on the 27th Wellington was close to him, in front of Toulouse; but the broad, deep, and rapid river Garonne flowed between them, the best passages were defended by French artillery, and the English pontoons and other means of carrying over troops, cannon, and stores, were very defective. It was therefore the 9th of April before Wellington got the allied army to the right bank of the Garonne. On the 10th was fought the bloody battle of Toulouse. This has been held to have been a useless display of heroism, and unnecessary waste of human life; but the British general knew not the events and causes which had rendered the combat unnecessary; and in fighting he had one grand object in view, which was to beat and scatter the army of Soult before it could be joined by Suchet, and to prevent that union of the two marshals which might have revived the hopes of the abdicating emperor, and have brought him down to the South to try another throw of the dice. If this had happened, and if the Austrians had not moved forward from Lyons with much more rapidity than they usually employed, the weakened army of Wellington would have been exposed at least to the chances of a defeat, and of a long and disastrous retreat. Soult now occupied another entrenched camp of a very formidable description, on the eastern side of the city of Toulouse, on a range of heights between the river Ers and the great canal of Languedoc. He had redoubts and entrenchments, and tremendous *têtes de pont* both on the river and on the canal, which must both be crossed by the allies. Although Bonaparte had made very large drafts upon Soult's army of the South to strengthen his own army in Champagne, the marshal had pretty nearly an equality of numbers, while in artillery he had a great superiority. According to the best calculation which has been made, Soult had not less than 42,000 men, while Wellington had, in British, Germans, and Portuguese about 30,000, and in Spaniards about 15,000. Nearly the whole position was bristling with Soult's guns; and many of these were so placed in battery on the summits of hills that they could make a plunging fire into the ascending attacking columns. Moreover, there were many strongly built houses, which had been fortified and crammed with *tirailleurs*: and there were scattered villages, strong stone walls separating the vineyards and orchards, and a multiplicity of streamlets, and of trenches cut for the purposes of irrigation. All the roads, too, were detestable, some of them knee-deep with mud or soft slippery clay, which was far more disadvantageous to those who had to march considerable distances to get to the attack than to those who were fixed and stationary, and who had to meet the attack behind prepared and fortified lines.* Most fortunately the 18th hussars, under the immediate command of Colonel Vivian, had attacked and defeated a superior body of French cavalry, had driven them through the village of Croix d'Orade, had taken about 100 prisoners, and had given the allies possession of an important bridge over the Ers. As day dawned on the morning of the 10th of April (it was Easter Sunday, the holiest of all Sabbaths, a day of peace and reconciliation, and the church-bells of the distant villages were calling the devout peasantry to matins and early mass) the columns of the allies began to move to their various points of attack, and to one of the fiercest and deadliest scenes that war can present. Marshal Beresford moved first with the 4th and 6th divisions, who crossed the Ers by the bridge of Croix d'Orade, gained after some hard fighting possession of the village of Montblanc, and then attacked and carried some heights on Soult's right, and the redoubt which had been intended to cover and protect that flank: but the French were still in possession of four other redoubts, and of the entrenchments and fortified houses, from which they could not be dislodged without artillery—and to drag heavy guns up those

* It had rained pitilessly for many days; and the rain, besides making the bad roads worse, had swelled the river Garonne, had delayed the passage of the allied army, and had given Soult the more time to complete his defences.

TOULOUSE

steeps and along those execrable roads was work that must require great time, and the exertions of men as well as horses. Nearly at the same moment that Beresford fell upon Soult's right, Wellington threw forward the Spanish division of General Freyre to fall upon Soult's left. At first these Spaniards were repulsed, and, being panic-stricken by the destructive fire of the French redoubts, and then being charged by French bayonets, they staggered, wavered, and began a flight down the hills, which might have been attended with very fatal consequences; but one Spanish regiment, the Tiradores de Cantabria, got well under the French entrenchments, stood as firm as a rock, and then the British light division, coming up at the charging pace, rallied the Spaniards who had given ground, and advanced with them to the attack with an irresistible fury, and with a contempt of wounds and death. General Mendizabal, who was in the field as a volunteer, General Espeleta, several chiefs of corps, and officers of the staff were wounded, and the men were mowed down by whole ranks at a time; but there they stood on the brow of that bloody hill until Wellington was enabled to reinforce them, and until Beresford had made sure of the victory by breaking, crushing, and turning the French right. Beresford had been obliged by the badness of the roads to leave his artillery in the village of Montblanc; and, notwithstanding all the exertions that were made, some time elapsed before the guns could be brought up. During this trying interval Beresford's two divisions were exposed to the hottest fire of Soult's batteries; but the men sheltered themselves as best they could behind the redoubt they had captured. As soon as his artillery arrived (it was about the hour of noon), Beresford continued his movement along the ridge, and carried, with the single brigade of General Pack, the two principal redoubts, and all the fortified houses in the enemy's centre. The enemy made a desperate effort from the side of the canal of Languedoc to regain those redoubts, but they were repulsed by the British bayonets with considerable loss; General Taupin, who had led them on, was slain; and, Beresford's sixth division continuing its movement along the ridge of the heights, and the Spanish troops making a corresponding movement upon the front, the French were soon driven from the two redoubts and the entrenchments they had on their left; and the whole range of heights, which Soult and his engineer officers had taken such pains to fortify, remained in the undisturbed possession of the allies and of Marshal Beresford. The ground not admitting of the operations of our cavalry, they had no opportunity of charging the retiring foe, who withdrew with some confusion across the canal of Languedoc into the town of Toulouse, which Soult at one time thought of defending. Victory could not be gained upon such ground, and in the teeth of so many strong works, without great loss: 600 of the allies lay dead on the field, about 4000 were wounded; Colonel Coghlan of the 61st was killed in the attack on the heights, General Pack was wounded, Colonel Douglas of the 8th Portuguese regiment lost his leg, and many brave officers were maimed and disabled. There is the usual difficulty in striking the balance of loss: Soult confessed to 3200 in killed and wounded; and, as his people had fought in good part under cover, and had not

contended long after they had lost their redoubts, fortified houses, and entrenchments, it is probable that his army suffered somewhat less than the allies. Our loss fell the heaviest on Marshal Beresford's sixth division; for, although his fourth division had been exposed on their march along the French front to a galling fire, they were not so much engaged as the sixth. Other divisions of the army were not engaged at all. But Picton, with his fighting third division, got his Welsh head heated, and committed an act of imprudence, engaging in earnest where he had been ordered only to make a feint, and storming a tremendous *tête de pont* which he had been ordered to observe. In the repulse sustained at this point a good many of the fighting men were laid low, Major-General Brisbane was wounded, and Colonel Forbes of the 45th was killed. Before the hour of *Ave Maria* the allies were established on three sides of Toulouse, and the French were driven by Sir Rowland Hill from their exterior works in the suburb on the left of the Garonne within the ancient walls of the town.*

On the night of the 11th Soult evacuated Toulouse by the only road which was yet open to him, and retired by Castelnaudary to Carcassonne. He left behind him in the town 1600 wounded men, three generals (Harispe, Baurot, and St. Hilaire), various pieces of artillery, large quantities of ammunition, and stores of all descriptions. All these were taken by the allies. On the 12th Wellington entered Toulouse, to the infinite joy of the inhabitants, who were thus relieved from the dread of a siege. His lordship found the white flag of the Bourbons flying, and all the authorities and a large proportion of the inhabitants wearing white cockades and scarfs. The mayor had quitted the town with Soult's army, but his *adjoint*, with a numerous deputation, presented an address to his lordship, requesting him to receive the key of the good and loyal city, in the name of "Our dear King," Louis XVIII., who had become the dearer through twenty years of cruel suffering; and also to accept on his own account the boundless gratitude which the people of Toulouse felt for his lordship's grand, generous, and (in history) unparalleled conduct. Lord Wellington told them, as he had told the people of Bordeaux, that the only wish of the government he served was, and ever had been, a peace founded upon justice, and the independence of Europe; that he had every reason to believe that ambassadors of the allied powers were still engaged in negotiating such a peace, "if it were possible to obtain it from the actual government of France;" that he saw that the city of Toulouse, like a great many other towns of France, contained persons who were anxious to throw off the yoke and to assist in the restoration of the House of Bourbon, but that they must judge for themselves whether, after the information he had given them, it would be prudent for them to declare against the existing government. If they should declare in favour of the Bourbons it would be his duty to treat them as allies so long as the war lasted; but he must remind them that, if the allies should make peace with Napoleon, it would not be in his power after such peace to give them any more assistance or protection. But the people of Toulouse had already committed themselves by hoisting the white flag, and they were now knocking the statue of Napoleon from its base and pulling down and destroying the eagles and other emblems of the imperial government; and in the afternoon of that day the English Colonel Cooke and the French Colonel St. Simon arrived from Paris, with the news that the allies had entered the French capital, that a provisional government had been established in the name of Louis XVIII., and that Bonaparte had abdicated at Fontainebleau as far back as the 4th of April, or six days before the battle of Toulouse was fought. From Lord Wellington's head-quarters Colonels Cooke and St. Simon proceeded to those of Marshal Soult. They had a good ride for it, as Soult's army had gone off at such speed that they had marched twenty-two miles in the first night. They were furnished with intelligence and with documents of the most undoubted authenticity, but the French marshal said he could not think himself justified in submitting to the provisional government, as he had received no orders or information from the Emperor Napoleon. All that Soult would do was to propose an armistice. In a polite and delicate letter, written on the 14th, Lord Wellington excused himself from accepting the armistice, unless the marshal should previously acknowledge the provisional government of France. It seemed still imperative to prevent the junction of Soult and Suchet, whose two armies might become the *noyau* of a civil war in France in favour of Napoleon's pretensions for his son the King of Rome, or in favour of Napoleon himself. That daring, desperate man had not yet quitted France; his act of abdication might not be very binding upon one who had never been bound by any act or treaty; he was not a prisoner, but still surrounded by many of his devoted guards; by the route traced out for him to go to the island of Elba, he must traverse the southern provinces and approach Suchet's army—and might he not join it? Thus the same reasons which induced the British general to give battle at Toulouse still continued, and were, perhaps, strengthened by the information he now possessed on the real state of affairs; and therefore it was that he refused the armistice and made his preparations for pursuing Soult. On the 16th and 17th the allied army marched towards Castelnaudary and Carcassonne. On the 16th Lord Wellington dispatched another officer, who had been sent from Paris, to Marshal Soult with fuller information; and in the course of the 17th General Gazan came down from Soult's head-quarters to inform his lordship that the marshal had at length acknowledged the provisional government. Gazan also presented a letter from Soult himself, who stated that he had received orders from Marshal Berthier

* Wellington Dispatches.

to stop all hostilities and conclude a friendly convention with Lord Wellington. This convention was settled and signed on the 18th, and a line of demarcation was drawn between the two armies. The head-quarters of Wellington remained at Toulouse. On the next day Marshal Suchet concluded a like convention. On the 21st Lord Wellington, by general orders, congratulated his gallant army on the near prospect of the termination of their toils and dangers, and thanked them "for their uniform discipline and gallantry in the field, and for their conciliating conduct towards the inhabitants of the country."

On the 14th of April, four days after Soult's defeat at Toulouse, and when the allies were in possession of that city, and the French were flying from it, General Thouvenot, who commanded in Bayonne—who had once been aide-de-camp and chief of the staff to Dumouriez, but who had become one of the most resolute and fiercest of all the Bonapartists—chose to make a desperate sortie upon the unprepared allies, who had received the intelligence from Paris, and who believed that the beleaguered French, who for some time had been very inactive, had the same information, and would feel the inutility and barbarity of shedding more blood for a cause that was now lost. The real state of affairs at Paris had been communicated to Thouvenot by General Sir John Hope the day before, and, judging of other men by his own generous nature, Hope evidently could not conceive that the French general could be capable of what must now be considered a base surprise, a savage spite, and a wilful shedding of blood. As the works of the siege had not commenced, there were neither guns nor stores upon the ground to tempt the sortie. The investing forces were quiet in their positions and cantonments, and many of them were buried in sleep, and dreaming of a speedy return to their own countries, when the French, long before it was daylight, sallied from the citadel of Bayonne in great strength, rushed upon the village of St. Etienne, and upon the allied pickets in the centre, and gained some momentary advantages, bayoneting the surprised men, killing Major-General Hay, and wounding Major-General Stopford. Sir John Hope, ever foremost when there was danger, mounted his horse, and galloped up in the dark to direct the advance of more troops to the support of the pickets. He was presently surrounded, his horse was shot under him and fell, he received two very severe wounds, and before he could extricate himself from under his horse he was made prisoner. For some time the opponents could only distinguish each other's ranks by the flashing of the muskets. The fighting was very severe; but it was terminated by British bayonet charges: the French were driven back, the little ground which had been lost was all recovered, and by seven o'clock our pickets were re-posted on their original points. But between killed and wounded and taken the allies had lost 800 men.* It was, under the circumstances, scarcely a consolation to know that the French had suffered at the least as severely.* This was the last affair of the war; but the battle of Toulouse was the last real battle, and the winding-up of Wellington's war-doings with Soult. It was, as we have shown, a remarkable combat; but the most remarkable part of the story yet remains to be told—the French claimed, and to this day most pertinaciously and loudly claim, the victory! Our brief account of the battle is derived entirely from the dispatches and private letters of Lord Wellington, who never exaggerated an advantage or concealed a reverse, even when concealment, utterly impossible here, might have been practicable; who never spoke of his victories except in a brief, quiet manner; who never spun a rhetorical sentence in his life about his own exploits. On no former occasion, not even after the great battle at Vittoria, which the French themselves are compelled to admit was a complete and decisive victory, had his lordship spoken more decidedly as to his having beaten the enemy. In a private letter to General Sir John ope, written six days after the battle, he said, "We *beat* Marshal Soult on the 10th, in the strong position which he took up to maintain his position in Toulouse. The 11th was spent in reconnaissances towards the road of Carcassonne, and in the arrangements to be adopted for shutting him in Toulouse entirely. The 11th, at night, he evacuated the town, and marched by the road of Carcassonne." Before sunset on the 10th the allies had carried all the positions that it was necessary to carry, and Soult was driven into Toulouse, where he could not venture to stay much more than twenty-four hours. It has been well said, "Did Marshal Soult fight this battle to retain possession of the heights which he had fortified, and which commanded the town? If so, *he lost them.* Did he fight to keep possession of Toulouse? If so, *he lost that.*" † We have Marshal Soult's own words for the fact that he did intend to keep possession of the heights, to fight a battle for them, and to keep possession of Toulouse, cost him what it might; and we have also his own

* Among the killed, besides General Hay, there were Colonel Sir H. Sullivan and Captain Crofton of the Guards.

* General Thouvenot's conduct was throughout that of a savage. The capture of Sir John Hope, and the knowledge that he was very severely, if not mortally, wounded, carried affliction to the bosom of every man who had been serving under him. Major-General C. Colville, who succeeded to the command, sent a flag of truce to request that Hope's friend Colonel Macdonald might be admitted into the fortress to see him and carry him assistance. Thouvenot had the brutality to refuse the request. Afterwards General Colville had some hope that Captain Wedderburn and some other friends with assistance might be admitted, though only upon the condition of their not returning. We believe that these hopes were not realised until the moment when Thouvenot found himself compelled to submit to the provisional government, and to act in conformity with Soult's convention. It was the embarrassing destiny of Louis XVIII. to be obliged to honour and reward some of the greatest rogues that had sprung from the Revolution, or that had struggled most desperately to keep Bonaparte upon the throne. Thus, on the 27th of June following, the restored Bourbon king was made to confer the cross of St. Louis upon Thouvenot, and to confirm him in his command at Bayonne. In this case, as in thousands of other cases, the royal favour was rather worse than thrown away. As soon as Bonaparte returned from Elba, Thouvenot broke his oath of allegiance to Louis, and declared for the emperor. Yet in ninety-nine out of every hundred French books relating to the history of the war, we find Thouvenot applauded to the skies as a brave and honourable man and true patriot, the climax of whose fame was his bloody and useless sally from Bayonne!

† Lord Burghersh.

words for the other fact, that after he had fought the battle he found that he had lost the heights, that he could not keep the town, and that nothing was left him but a quick retreat.* And, if a quick retreat, and the loss of 1600 prisoners, of three general officers, and of cannon and stores, are good proofs of victory, Soult's victory of Toulouse may remain unquestioned. Some French officers who were present in the sternly contested battle, and who had too much soldierlike feeling to claim the honours of victory for a signal defeat, have left upon record their frank confessions that, though their positions were admirable, and though their troops defended them heroically, the battle was beyond contradiction lost by Marshal Soult. According to M. le Colonel la Pène the battle was considered as lost as soon as Marshal Beresford carried the first redoubt or fort on the French right, which first achievement was performed very early in the day. "This irreparable loss," says the French colonel, an eye-witness and a combatant, "was a thunderstroke to us! We could not at first believe in so great a misfortune: we saw all of a sudden our hopes destroyed, and we abandoned the prospect of a victory which before seemed so certain." Thousands of the combatants, officers and men, French and English, Spaniards and Portuguese, are yet living to bear testimony (if truth be in the French portion of these survivors) to the scrupulous veracity of Lord Wellington's dispatch; and there are living many hundreds upon hundreds of the inhabitants of Toulouse who saw from the windows and the roof-tops of their houses (the great part of which commanded an uninterrupted view of the scene of carnage) how the battle began and how it ended, how redoubt was carried after redoubt, position after position, how the French abandoned all the heights, and rushed into the town, which was commanded by those heights, and how they fled, at the dead of night, from Toulouse, by the only road upon which there was any chance of escape. But, notwithstanding all this evidence, the French continue to claim the honours of Toulouse; the government of his present Majesty Louis-Philippe has given its countenance to a project for erecting on the heights which Wellington conquered a pillar or column to commemorate the glory of Marshal Soult and his army on the 10th of April, 1814; and, for aught that we know to the contrary, the said column, by this time,

"Like a tall bully, lifts its head—and lies."*

We now turn to the military operations in other parts of France. Of his old army the Emperor of the French had upon the Rhine no more than 70,000 or 80,000 men to oppose to the allies, who advanced upon that frontier with 160,000 men, and who had numerous reinforcements coming on in rapid advance through Germany. The new conscription remained very unproductive, and such of the conscripts as were brought in, being for the most part beardless boys, were of small present value in war. From Italy not a man nor a musket could be drawn, for Murat had joined the allies, and, with the Austrians, was overpowering Eugene Beauharnais. No assistance was to be expected from any other part of Europe: since the overthrow of the Danes by Bernadotte, Bonaparte had ceased to have an ally. Some of his counsellors and advisers—some of the ex-Jacobins—spoke

* On the 7th of April, just three days before Wellington attacked him, Soult wrote to Suchet, "I am determined to fight a battle near Toulouse, whatever may be the superiority of the enemy's force. For this purpose I am fortifying a position which rests on the canal and the town, and which will afford me an *entrenched* camp capable of being defended whether the enemy attack from the side of Montauban or from the side of Castelnaudary. I hear the allies have entered Paris. This great misfortune confirms my determination to defend Toulouse *at all risks*; for the preservation of this city, which contains establishments of all kinds, is for us of the *very greatest importance*." On the very evening of the battle he wrote again to Suchet, to tell that marshal, not that he had gained a victory, but that the battle had completely overset all his determinations. "The battle," said Soult, "which I announced to you has taken place to-day. It has been most murderous. The enemy suffered horribly, but have *succeeded in establishing themselves* in the position which I had occupied on the right of Toulouse. I do not think that I can remain long in Toulouse. It may even happen that I may have to fight my way out." And again, on the morning of the 11th, while his army was making its preparations to fly by night, Soult, whose self-love would have induced him to conceal or colour over his lamentable reverses to a rival in fame, and to a man he hated as he did Suchet, if such deception could then have been practicable, wrote to his brother marshal:—"As I intimated to you in my letter of yesterday, I find myself under the *necessity* of retiring from Toulouse, and I am *even afraid* of being forced to fight for a passage by Baziège, where the enemy has sent a column to cut me off from that communication. To-morrow I shall take a position at Villefranche [*twenty-four miles, be it observed, from Toulouse*], for I hope the enemy may not be able to prevent my passing. Thence I shall make for Castelnaudary [*fifteen or sixteen miles farther*]: if I shall be able to stop there, I will do so; if not, I shall take a position at Carcassonne." Carcassonne was twenty-six miles farther still, or at the respectful distance from Toulouse of sixty-five or sixty-six miles!

When an army marches twenty-two miles in one night, it is not retreat, but flight. It remained for the acuteness of French philosophy to discover in such a flight the evidence and proof of a victory. Nor was this flight or retreat, rapid and headlong as it was, undisturbed by the allies. Soult was closely pursued, his rear-guard was repeatedly attacked; and he confessed himself at the time that in every attack it was worsted. He says that he reached Castelnaudary on the 13th, and that he was about "to continue his movement," when he received intelligence of the political events at Paris, and relaxed his efforts. But what effort could he make, what movement could he continue, except that movement of rapid retreat which he had begun on the night of the 11th?

* In these remarks on the French pretension to victory we have been aided and guided by a recent and very able article in the Quarterly Review on the battle of Toulouse. Our account of the battle is based entirely on the Wellington Dispatches. The most recently written French account of the battle that we have read is that of M. de Capefigue. In general we have found this writer, who is certainly no Bonapartist, less rancorous and prejudiced against England than the vast majority of his writing confraternity; but even Capefigue clings to the Toulouse fable as if the honour and salvation of France depended upon it. He seems, however, to be sensible that plain prose and circumstantial statements will not do, for he takes refuge in a rhapsody of prose-poetry. "The 10th of April, sad but glorious date for Toulouse! The cannon roars; Lord Wellington attacks the French entrenched on a line of three leagues. Marshal Soult leads with him generals of the first order, Clausel, d'Armagnac, Rey, Villate; he is alone, Suchet has not joined him. It is a day of manœuvres [*there were no manœuvres at all, for none were necessary, the allies merely marching up to attack the enemy's fixed positions*]; the losses on both sides are considerable, some of the French lines are carried [*all their positions were carried*]; the ground is littered with the dead. On the morrow, the 11th, the allies under Lord Wellington recommenced the battle. [*The allies did nothing of the sort, for the battle was finished on the 10th, and Soult, by lying close in Toulouse, gave Wellington no opportunity of attacking him, humanity and good policy alike forbidding his lordship to bombard the city, or even to make an assault upon the town, where friendly or peaceful citizens might have been exposed to as much danger as the Bonapartist troops.*] During three days Marshal Soult intrepidly defends his entrenched camp at Toulouse. [*He was driven from that entrenched camp in one day, the 10th; on the second day there was no fighting for the reason aforesaid, and on the third day he was at Castelnaudary, thirty-nine or forty miles from Toulouse.*] He only evacuates his positions step by step, and on account of the news which reaches him from Paris. [*Soult tells us himself that the Paris news had no effect upon him nor his movements until he reached Castelnaudary, and the positions had all been evacuated three days before that.*] This battle, which took the name of Toulouse, is one of the most glorious *souvenirs* of Marshal Soult: it has created a military confraternity between him and the Duke of Wellington."—*L'Europe pendant le Consulat et l'Empire. Paris*, 1840.

of the marvellous things which had been done by the population in 1792-3, when France was invaded by the Prussians, and recommended levies *en masse*. But he felt the difference which existed both in the spirit of the French people, and in the spirit and number of the allies (things altogether different now from what they were in the earlier days of the Revolution). He had always spoken contemptuously of popular risings, and had always adhered to the opinion that no insurgents, no levies in mass, could stand against regular armies, if those armies were not commanded by absolute fools or traitors. And his utterly despotic and military form of government had gone far to diminish the capability of the population in this respect, and to break the springs of the national character. The people too, from the habit of long possession, had ceased to dread that the fruits of the Revolution would be torn from them; they no longer thought that the restoration of the Bourbons of necessity implied the restoration of church property and the property of the aristocracy—a dread which made a large part of the population rush to arms in 1792. Besides Bonaparte detested any direct appeal to the democracy, and had even declared that such appeals must renew the Reign of Terror and all the atrocities of Jacobinism. His brothers and other friends have claimed for him the merit of preferring to lose his throne to the giving of any countenance to or the deriving any assistance from that fierce and obscene faction; but the truth is, that he knew that, if he encouraged the Jacobins to-day, they would destroy his throne and his system to-morrow; and, although he denied their efficacy as a defensive army against the disciplined legions of the invaders, he did not question their capability of effecting an internal revolution. Their principles still extended far and wide: they had been kept down only by a thoroughly organised tyranny served by an immense military force which no longer existed. It was not out of regard to France or to humanity, but out of regard to self, including therein his system, which was part of himself, that Bonaparte spurned the idea of appealing to the people for a levy *en masse* or an alliance with the Jacobins, which two things meant nearly one and the same thing. "On this occasion," says a recent French writer, "the imperial court showed a distrust which was not felt by the old dynasties: it was by exciting their peoples to insurrection that the allied sovereigns had destroyed our armies; and it was only by following their example that we could now hope to resist them. But Napoleon had an extreme repugnance against all means or this sort; the only prince that was the elect of the people, was also the only one at this moment that feared to trust the people. It was not until the departments of the east were invaded by Schwartzenberg that the 'Moniteur' coldly announced that the people *en masse* were called to arms. And thus this measure had no results whatever." *

* Editors of 'Histoire Parlementaire.'

Even that old militia, the *Garde Nationale*, was an object of suspicion, particularly in Paris. Its ranks might easily have been filled to a very large amount; but Bonaparte dreaded that it would then assume a democratic form and revolutionary spirit; that the men of the faubourgs St. Antoine and St. Marceau, with all those classes or orders of men who had made it so terrible in the days of Marat and Robespierre, would become a part of the organization, and give to it their own sans-culottic character. It was not until the 8th of January that the desperate Emperor could be induced to think of re-organising and increasing the national guard of Paris; and even then the great precautions he took in order to exclude the faubourg men and all the poorer classes had the effect of keeping down the numbers, and of giving to the corps the appearance of an anti-popular or distinct and privileged body. According to the imperial desire, it was to be 30,000 strong, or more; but the men were to be chosen only among such as were believed to be the friends of order, which meant the friends of the established government. And provisorily this national guard was composed only of 10,000 or 12,000 men, selected for the most part from among the *employés* of government, the officers and servants of ministers, the court tradespeople, the public notaries, and, in short, from among all those classes who directly or indirectly depended upon the existing government. The emperor himself took the first command of this civic corps: the second command he gave to old Marshal Moncey, who was too old, dull, and submissive to give him any cause of umbrage; and, that all sans-culottic tendencies might be checked, he appointed to the command of the several regiments or legions into which the corps was divided a set of men who belonged to the old aristocracy of France, but who had returned from exile to enter his service, and to depend upon him for their bread. Among these commanding officers there was a Count de Montesquieu, chamberlain to the emperor; a Count de Montmorency, equerry; a Brancas, a Biron, and other men with court employments, and with names the most aristocratic and the most dissonant to the ears of the faubourgs. In the days of the Jacobin ascendency and the republican enthusiasm the national guards named their own officers, choosing daring men of their own condition and stamp; but now all were appointed by the emperor. None of the materials of the corps were the same; but it was not to be expected that, composed even as the present corps was, those seigneurs of the old régime could have the same sympathy with the men that was possessed in the liberty-and-equality days by Usher Maillard, Mademoiselle Theroigne, Brewer Santerre, Henriot, and other sans-culottic commandants of the old force. If such a *garde nationale* as this could not be formidable to the imperial throne and established order of things, neither could it be formidable to the invaders of France. Moreover, such was the want of arms, or

such the want of confidence even in this selected corps, that very few muskets were distributed to the men. Some of them received carbines without bayonets, some mustered fowling-pieces of their own; but the far greater part of the men of the twelve legions, even when called out to be reviewed in the Champ de Mars, were armed only with swords and pikes. This continued to be the case until the middle of March, when the victorious allies were getting close to Paris; and, if they procured, by various means, an abundance of muskets and ammunition then, it was rather in spite of than in consequence of Bonaparte's orders.

The repeated declaration of the allies that they were not waging war against the French people, but solely against the ruler of France, had also a great effect in many quarters. Most men began to hope that, by submitting to the chastisement or even to the expulsion of Bonaparte, they might be allowed quietly to preserve and enjoy the good things they had got either from him or from the Revolution; and those who had gotten most were most disposed to indulge in this hope. Even his hosts of *employés* had calculated before now on the probability of their keeping their places under some other master. Among the old soldiers, whose trade was war, and who were fitted for no other occupation, among his Imperial Guards in particular, and among the young students in the military colleges, who had had their imaginations inflamed by the triumphs that were now past, and who had been taught to look to the profession of arms and the chances of war as the surest means of obtaining fame, rank, and riches—there was an abundant and glowing enthusiasm for Bonaparte; but at this moment it would have been difficult to find the same feeling anywhere else. "There was," says the republican historian Mignet, "neither that despair nor that impulse of liberty which carry people to stern resistance; the war was no longer considered as national, and the emperor had put all the public interest in himself alone, and all his means of defence in mechanical troops."* Something might have been expected from the natural instinct of patriotism, and more from the military spirit and national pride of the French; but these sentiments were not strong enough to make the people insurge as one body against the invaders, especially as they had not been provided with arms and the other means necessary to render an insurrection available. Just before quitting Paris Bonaparte ordered the formation of twelve regiments of *tirailleurs*, to be composed of volunteers, by the enrolment of men of all ages, from twenty to sixty. These regiments were to enjoy the honour of being attached to the *young* Imperial Guard; but the time allowed was short, the volunteering zeal was slow, and the twelve regiments were never completed. On the 23rd of January the emperor received in the palace of the Tuileries the oaths of fidelity of the officers of the new Parisian *Garde Nationale*. "I am about to depart," said he; "I am going to fight the enemy, and must leave to you all that is dearest to me—the empress and my son!" On the same day he again conferred the regency on Maria Louisa. Poor Joseph, the fugitive ex-king of Spain, was named lieutenant of the emperor in Paris. As far as warlike matters were concerned, one of Napoleon's old grey coats, or one of his old cocked hats, would have had more influence than poor Joseph. On the 25th of January the emperor quitted Paris to put himself at the head of his army, which was now collecting in Champagne, in the plains of which the two armies of Schwartzenberg and Blücher were on the point of effecting their junction. It is not easy to estimate the actual force which Bonaparte headed at the end of January and the beginning of February. From the ingenious way in which French writers arrange their narratives, and suppress details about junctions and reinforcements, it is made to appear that Bonaparte contested the interior of France, and defended the approaches to his capital for two months, with only the 70,000 or 80,000 men whom he withdrew from the Rhine. But this is ridiculous. Soult's army alone must have supplied 40,000 or 50,000 men; other troops (and some of them veterans) were drawn from other quarters; some of the fugitives from Holland rallied in Belgium, and followed the imperial eagle; several garrisons were reduced, and, apparently, very nearly the entire garrison of Paris (at all times a strong one) was removed to the scene of action, the city being left to the national guards. We would not reduce such military fame as Bonaparte acquired in this remarkable campaign; but we would remove his exploits from exaggeration and fable, and bring them within the limits of credibility and fact. After deducting from the preposterously exaggerated French estimates of the numbers of the invaders, and after adding a great many thousands of men to their estimate of the force which Bonaparte opposed to the allies, the facts will still remain that their force, though far more scattered, was numerically far superior to his, and that the defence he made was brilliant, and even marvellous. The genius of the man seemed to revive in his despair. Some of the best tacticians have considered this campaign as that in which he made the most remarkable displays of his military combinations and fertility of resources, and accuracy and rapidity of movement; and, in its character as a defensive war, the campaign of 1814 will probably be estimated by military historians as equal, or perhaps superior, to those offensive wars in Italy which had been the foundation of all his fame and of all his power. Now, too, he displayed, as he had done then, the greatest intrepidity or fearlessness, exposing his person in nearly every affair, in the hottest fire, and in the closest and most terrible parts of the fight.

Long before they approached the Rhine (on the 9th of November, 1813) the ministers of the allied powers, then apparently acting under Austrian influence, put forth a diplomatic note declaring that

* Hist. de la Révolution Française.

the coalized sovereigns were unanimously agreed as to the weight and consequence which France, as a nation, ought to hold in Europe, and were ready to leave her in possession of what she called her natural limits—the lines of the Rhine, the Alps, and the Pyrenees. And nearly a month after this (on the 1st of December, 1813), when Bonaparte had ordered a new levy of 300,000 conscripts, the allied powers issued at Francfort a declaration or manifesto, repeating their offers of peace, upon condition that the French should remain quiet and satisfied with those natural limits, which were wider and enclosed more territory than had ever been possessed by any of the kings of France. Caulaincourt, who in 1805 had played so important a part in the seizure of the Duc d'Enghien, who was now Duke of Vicenza, and who had succeeded Maret, Duke of Bassano, as Bonaparte's minister for foreign affairs, was sent to the head-quarters of the allies, but without any conditions upon which they could treat. The chief object of Caulaincourt's mission was, in fact, to sow jealousies and dissensions among the members of the coalition; and an attentive examination of the complicated history of the times will prove that he was not altogether unsuccessful, although his success fell far short of his master's expectations. "Only detach Austria," said Bonaparte, "and all will yet be saved." Consequently it was to the Austrian minister that Caulaincourt principally addressed himself. He offered to Metternich, as the price of an armistice, some of the chief fortresses in Italy, and some of the fortresses which the French still held in Germany. But the Austrian minister would not listen to the proposition; and all the allied armies continued their advance. The sovereigns, however, agreed that a congress should be held at Chatillon-sur-Seine, where the representatives of Bonaparte might treat with their ambassadors, and settle, if possible, the firm basis of a peace. Though they now spoke somewhat less distinctly, they seemed still to offer "those natural limits," which France ought never to be allowed to possess. On the 5th of February, this congress commenced its deliberations at the place appointed. Russia was represented by the Count Rasomowski; Prussia, by the Baron Humboldt; Austria, by Count Stadion; England, by Lord Castlereagh; and France, by Caulaincourt.* These plenipotentaries continued to assemble and hold long and repeated conferences until the middle of March; the demands of the allies and the concessions of Bonaparte fluctuated according to the various turns and events of the campaign; but during the whole of this period military operations were never for one moment suspended. At first the demands of Caulaincourt were very high; as his master lost ground in the field, his tone was lowered; but never, until the very last moment, when Bonaparte was absolutely vanquished, and when a vast portion of the French nation was declaring for the Bourbons, did Caulaincourt offer such concessions as would have reduced France to her proper dimensions.

Without alluding to the army of Lord Wellington, which had held its ground in the south for months, the northern and eastern frontiers of France were broken through weeks before Bonaparte quitted Paris to take the field. Towards the end of December, Prince Schwartzenberg crossed the Rhine near Basle, and, traversing Switzerland with all the gentleness he had promised, invaded Alsace; other Austrians followed, crossing the Rhine near Basle and Schaffhausen; and some of the allies marched through Soleure, Bern, and Vaud to Geneva, and thence by the valley of the Rhone towards the great French city of Lyons. The Russian army of General Wittgenstein crossed the Rhine near Rastadt on the night of the 1st of January, and spread its pulks of Cossacks far into France. Blücher, defeating Marshals Marmont and Victor, threw his Prussians and the troops of the late Confederation of the Rhine across that river, at three different points lower down the river, between Coblentz and Manheim. The French abandoned an entrenched camp and nearly all their fortresses on the left bank of the Rhine without a struggle; but, as most of these troops were kept together by marshals and officers of reputation, they must either have joined Bonaparte's army or have assisted him by joining those detached corps which were scattered over a wide surface of country to distract the attention of the allies or to secure communications. By the middle of January one-third of France was invaded. At a distance from the grand army under Bonaparte we trace three distinct armies; that of Marshal Soult, who was to keep Wellington in check; that of Marshal Augereau, who was to defend the line of the Rhone, and, if possible, to cover the city of Lyons; and that of General Maison, who was to find employment in Belgium to the forces under Bernadotte. Except the forces of Soult, it is not easy to say what was the strength of those separate armies. It appears that at one moment Augereau alone had 18,000 or 20,000 men in the neighbourhood of Lyons.

Bonaparte's first great object in taking the field was to throw himself between the armies of Schwartzenberg and Blücher, to prevent their junction and defeat one of them before the other could get to his assistance. This was his old and unvaried plan of operation, and his rapidity and the nature of the country now rendered it, for a short time, rather successful. The great river valleys (the Marne and Seine) through which the foremost columns of the allies were advancing into the heart of France, were separated by a broad tract of country, hilly in many places, and tolerably well furnished with military roads branching off right and left, and leading to either valley. On the 27th of January he gave the allies the first serious check they had received, by surprising and defeating a vanguard at St. Dizier. On the 29th he fell upon Blücher, near Brienne.

* Lord Castlereagh was assisted by his brother, General Sir Charles Stewart (the present Marquess of Londonderry), and by Lords Aberdeen and Cathcart.

The military college of Brienne, where Bonaparte had received his education, was close in sight, and was occupied by "Marshal Forwards" as his head-quarters. The battle, which commenced at a little after three in the afternoon, lasted till midnight, the latter part of it being carried on within the burning town of Brienne, which the French had bombarded in order to drive out the Prussians. That night Bonaparte, from the château of Brienne, penned one of his bulletins in the old style, and sent it off to Paris. He said that he had beaten Blücher, which was true; but he added that he had taken 15,000 prisoners and 40 pieces of cannon, and this was false; for he had scarcely captured 100 prisoners, and he had not taken a single gun. On the following day, about the hour of noon, the battle was renewed, by Bonaparte attacking Blücher, who had retreated to La Rothière, at the distance of only three or four miles from Brienne. Blücher gave way, and retreated three or four miles farther; but in the meanwhile General Yorck, with a Prussian division, got in Bonaparte's rear, and retook St. Dizier, where the French had been successful on the 27th; the Russian general Wittgenstein, supported by the Bavarian Wrede, defeated and drove in the cavalry destined to cover Bonaparte's movements, and the Prince Royal of Wirtemberg, with a part of Schwartzenberg's army, was in full march to join Blücher. Suddenly, instead of continuing his retreat, Blücher resumed the offensive, and columns, not only of Austrians, but of Russians, Prussians, and Bavarians, were seen approaching. Bonaparte had the river Auve behind him, and only one narrow bridge by which to cross it: in such circumstances, and in presence of an enterprising enemy, he apprehended fatal consequences from a retreat, and preferred risking a general action, with a force decidedly inferior to that of the allies. The French centre was still at La Rothière, and the name of that village has been given to the battle, which began on the morning of the 1st of February, and lasted nearly twelve hours, but terminated in the defeat of the French. The sudden and scarcely accountable inaction of the Austrians, just at the critical moment, left open the only road by which Bonaparte could retreat. Crossing the Auve, abandoning Brienne, and leaving sixty pieces of cannon behind him, he retired towards Troyes, the old capital of Champagne, where he was joined by his old imperial guard. His reinforcements scarcely did more than make up the great numbers he had lost in the battles of Brienne and La Rothière; and, in spite of all his exertions, Schwartzenberg had effected his junction with Blücher. If these two chiefs had kept together, and had advanced straight upon Paris, the war would have been terminated in a fortnight; but they separated almost as soon as they joined, Schwartzenberg advancing upon Troyes, and Blücher taking his road on La Fère-Champenoise, thus to threaten Paris by two several routes. On the 5th of February Yorck made himself master of the town of Chalons-sur-Marne, and manœuvred on Bonaparte's flank, while other corps of the allies cleared nearly the whole of the plains of Champagne, whereon the French had boasted that they would give to the barbarians of the north some such signal defeat as their ancestors had given in those very regions to Attila and his hordes. These operations made it impossible for Bonaparte to maintain himself at Troyes; and on the 6th of February he abandoned that city, and went in pursuit of Blücher. On the 7th the van of Schwartzenberg's army entered Troyes, where the inhabitants hoisted the white flag, and shouted "Long live Louis XVIII." By moving off by a lateral road, and by marching with admirable rapidity, the French emperor overtook a part of Blücher's army on the 10th, near Champaubert, attacked it in flank, defeated it, and took about 2000 prisoners. On the 11th Bonaparte was still more successful at Montmirail; but, while he was maltreating Blücher, Schwartzenberg, pressing onward by the line of march he had chosen, kept slowly but steadily advancing upon the French capital; nor did he stop, as Bonaparte expected he would do, upon learning the reverses of the Prussians. Nothing in the broad valley of the Seine could oppose a valid resistance to Schwartzenberg's columns: Sens was taken, and Nogent, and Montereau, and Pont-sur-Seine, where Bonaparte's mother had a magnificent villa. Leaving Blücher, Bonaparte now posted after Schwartzenberg. On the 17th he came up with Schwartzenberg, in the valley of the Seine, near Nangis, and gained some trifling advantages over him. The French emperor, having been joined by Victor and Oudinot, was now at the head of 80,000 men, all in one compact body, while Schwartzenberg's forces, according to the incurable habit of Austrian generals, were marching in disjointed bodies, with long intervals between. The effect of their numerical superiority was thus lost; and on the 18th, when Bonaparte with his 80,000 men attacked the Prince Royal of Wirtemberg, whom Schwartzenberg had left with only 20,000 men to defend the important post of Montereau, the French gained a victory. This last affair made a good many people cry *Vive Napoleon* who had been just shaping their mouths to cry *Vive Louis XVIII.*; and it had a great effect in re-animating the spirit of the French soldiery. It became the cry of the camp, "One more affair like this of Montereau, and the invaders must retire beyond the Rhine." But, in sober truth, this affair was little more than a bloody skirmish. Bonaparte had succeeded by bringing a quadruple force against one portion of Schwartzenberg's army; and he was still surrounded by forces far superior to his own. Schwartzenberg, however, thought it expedient to re-unite his army to that of Blücher, from which it ought never to have been disunited. Moving by a shorter road, or at a quicker pace, Bonaparte fell upon Blücher before Schwartzenberg could join him, and on the 22nd of February gave him another

serious check. On the 24th the French attacked Schwartzenberg separately, and obliged him to retreat beyond Troyes. Bonaparte re-entered that ancient city, and issued a terrible proclamation against those who had cried *Vive Louis XVIII.*, or who had worn the cross of St. Louis or the white cockade, or who had assisted the allies in any way. "Every Frenchman," said the proclamation, "that has worn the signs or the decorations of the ancient régime is declared a traitor, and as such shall be judged by a military commission, and condemned to death. His property shall be confiscated to the state." One active royalist, the Chevalier de Goualt, was seized, tried, and executed within two hours; and died with the shout of *Vive le Roi!* But again the emperor found that he could not maintain himself in Troyes. No sooner was Blücher freed from his presence, than he drove the French under Marshal Macdonald before him, and continued his advance upon Paris. There was a great deal more of this see-saw work, which would scarcely be intelligible without minute and very long details; and there were not fewer than ten more battles and affairs fought on various points; but the result of the whole was that, in spite of his own promptitude and skill, and the many blunders of his adversaries, Bonaparte was over-matched by the odds against him, and was compelled to leave the road to Paris open to the allies. By a bold movement, intended to alarm them for their communications, he placed himself in the rear of the whole allied army, and was there joined by some considerable reinforcements; but the allies pressed on to his capital all the same, and their advance was now favoured not only by the indifference or the inertness of the population, but also by the encouragement and advice given by many French royalists. Marshal Marmont, who had glided between the army of Schwartzenberg and the capital, and who had collected about 20,000 regular troops, made a faint attempt to defend the heights in front of Paris; but he was driven back under the walls of that city. In vain did Joseph Bonaparte issue stirring proclamations—the great mass of the people of Paris were now not to be stirred by anything. Such enthusiasm as there was was left almost entirely to the military students of the Polytechnic school, who mounted batteries upon Montmartre, and displayed abundant courage. But on the 30th of March Schwartzenberg's army took possession of the whole line of defence which protected Paris on the north-eastern side. The empress-regent had fled from Paris to Blois some time before; and on the afternoon of this day Joseph, the emperor's lieutenant and commander-in-chief of the national guard, was nowhere to be found: he had been accustomed to rapid flights in Spain, and he had fled after the empress-regent. Marshals Mortier and Marmont now asked for an armistice, and this led to the immediate capitulation of Paris. On the 31st the Emperor Alexander and the King of Prussia, who had been with Schwartzenberg's army ever since the battle of La Rothière, entered the capital of France amidst the acclamations of the Parisians, and a wondrous waving of white handkerchiefs, and a shouting of *Vivent les Alliés! Vivent les Bourbons!* The French writers, who consider these demonstrations as very dishonourable to the national character, pretend to assert that the cries were raised only by the perverse aristocracy of the Faubourg St. Germain, and that the white handkerchiefs, emblematic of the Bourbon flag, were waved only by some antiquated chevaliers de St. Louis and other old women of that description; but those who heard the sounds and saw the sight declare that so loud a shouting could not have been raised by a few hundreds of voices; that the white handkerchiefs were displayed in every street and from the windows of almost every house; and that women of the poorer class were making a little fortune by selling white ribands to cut up into cockades, even as in the days of Camille Desmoulins great profits had been made in the Palais Royal by vending ribands, red, white, and blue, to make the tricolor and true republican cockade. That night, as on the preceding night, when the wounded French filled the streets, the theatres of Paris were all open, and were about as full as usual: but this, say the French writers, was entirely owing to the order and management of the police, who wanted to keep the desperate citizens quiet, and to prevent any further useless waste of life and limbs. Bonaparte now came flying back to the relief of the capital; but he came too late: Paris was already in the undisturbed possession of the allies; and, since the courage of the military youth had been extinguished on Montmartre, not a sword had leaped from its scabbard for him or for his dynasty. At Fontainebleau he met the columns of the garrison which had evacuated Paris. He affected great astonishment, and greater indignation against Marshal Marmont; but no man in his senses thought that Marmont, with his diminutive force, and with no popular support, could have done more than he had done. Several of his old generals now told him the unpalatable truth that he ought to abdicate, as the conferences at Chatillon had been broken up, and as the allied sovereigns declared that they would no longer treat with him. He hurried into the gloomy old palace of Fontainebleau, which not long since had been the prison of the pope, and shut himself up with his maddening reflections.

Meanwhile the counter-revolution went on in Paris, and in other towns in France, at the charging pace. Many preparations had been made for it while he was contending against the allies in Champagne and in the valleys of the Seine and Marne. On the 21st of February the Comte d'Artois, who had been the first of the royal family to emigrate, arrived at Vesoul with the rear-guard of the grand allied army, and issued a proclamation, telling the French people that the day of their deliverance was at hand; that the brother of their king had arrived among them; that there should be no more tyranny,

no more war, no more conscriptions; and this proclamation, being sent to Paris, had been printed at a private press, and pretty widely distributed. On the 12th of March the Duke of Angoulême had entered Bordeaux—the first city which openly declared for the Bourbons—and had been received with transports of joy. On entering Paris the Emperor Alexander went straight to the mansion of M. de Talleyrand, and there, for the present, took up his abode. On the next day the King of Prussia, Prince Schwartzenberg, Prince Lichtenstein, Count Pozzo di Borgo, and some other generals and diplomatists of the allies assembled in Talleyrand's house and opened conferences with him and the Emperor Alexander. There could no longer be any doubt as to the proper answer to be given to the question which had been so incessantly asked throughout Paris in the months of December and January—*Qu'en pense M. de Talleyrand?* Talleyrand now thought that it was the end of the end. He readily agreed with the allied sovereigns that it would be insanity to treat with Bonaparte, and that the best assurance of peace for Europe and the greatest blessing for France would be the immediate restoration of the Bourbons, with a mild and limited form of government. Many Frenchmen of rank or celebrity, who had been invited to the meeting, as the Duke Dalberg, the Abbé de Pradt, the Abbé Louis, General Buernonville, &c., assented to the opinions of Talleyrand. On the next day, the 1st of April, a proclamation in the name of the Emperor Alexander, and a proclamation from the municipality of Paris, were posted side by side, on the walls of the city. The imperial scroll emphatically declared that the allied sovereigns, though ready to grant the most favourable conditions of peace to the Bourbons, would no longer negotiate with Napoleon Bonaparte or with any member of his family. The paper of the municipality, which was duly signed by all the members of the general council, declared that the free expression of opinion had too long been kept down by tyranny and military force, but that now the magistrates of the people would be traitors if they did not give utterance to the voice of their conscience and proclaim to the French nation that all the evils which oppressed them were attributable to one single man. It concluded with the solemn declaration that they, the municipals, abjured for ever all obedience to the *usurper* in order to return to their *legitimate masters*. On the same day, the 1st of April, the senators assembled under the presidency of M. de Talleyrand, and proceeded, with a rapidity equalling that of some of their emperor's late marches, to pronounce and decree that Napoleon Bonaparte, in consequence of sundry arbitrary acts and violations of the *Constitution*, and by his refusing to treat with the allies upon honourable conditions, had forfeited the throne and the right of inheritance established in his family; and that the people and the army of France were freed from their oaths of allegiance to him. A provisional government was then formed, consisting of Talleyrand, Dalberg, Buernonville, and some others.* On the invitation of the provisional government all the members of the *Corps Législatif* who chanced to be in Paris assembled in their House or Chamber on the 3rd of April, assented to the decree of the senate, and, "considering that Napoleon Bonaparte had violated the constitutional pact," and "adhering to the act of the senate," they recognised and declared "the *déchéance* of the said Napoleon Bonaparte, and the members of his family." This done, the members went in a body to present the homages (*les hommages*) of the *Corps Législatif* to the Emperor of Russia and the King of Prussia. On the same day the High Court of Cassation sent in their act of adhesion to the provisional government, and in the course of the following day nearly all the civil authorities and corporate bodies followed the example. On the 4th of April, Marshal Marmont, being freed from his oath to the emperor, accepted the invitation of the provisional government and engaged to place the troops which remained to him (about 10,000 or 12,000 men) "under the flag of the good French cause." But most of Marmont's troops either deserted immediately, or ran to join their emperor at Fontainebleau. Before taking his decisive step Marmont had bargained with Prince Schwartzenberg that the life and liberty of his late master should be guaranteed by the allies, and that his future residence, in some safe but circumscribed country, should be fixed by the allied sovereigns; and he had sent copies of his correspondence with Schwartzenberg and the provisional government to Bonaparte, on the night of the 3rd. Early on the morning of the 4th, before Marmont had given any orders to his troops, Marshals Ney, Berthier, Lefebvre, Oudinot, Macdonald, and Bertrand waited upon Bonaparte. Ney, who was deputed to speak for them all, recommended an immediate abdication. Maret and Caulaincourt were present, and could not deny that this step was no longer a matter of choice. "Is this the advice of the generals?" said the fallen emperor. "Yes, Sire," replied Ney. "Is it the wish of the army?"—"Yes, Sire," was Ney's answer. Bonaparte immediately retired and signed an act of abdication. But, as in this act there was a reservation in favour of the rights of his son and of the empress, all the marshals and ministers present were convinced that it would not do. Marshals Ney and Macdonald, however, agreed to accompany Caulaincourt to Paris with this act. They there met the answer they expected—the coalized powers could not accept the conditions introduced in that act, being already officially engaged not to treat with any member of the family of Napoleon Bonaparte. The Emperor Alexander put forward the proposition about the island of Elba, with the retention of the imperial title, a large annual allowance from France, &c. It was Marshal Ney that transmitted this proposition to Fontainebleau, with the recommendation that it should immediately be accepted. Bonaparte ap-

* Hist. Parlement.

peared willing to accept what was offered; but he delayed signing an unconditional act, in order to gain time. He was not without hope of working upon the feelings of his father-in-law, the Emperor Francis; he had not yet received any answer to various applications he had made to that sovereign; the forces which Suchet had withdrawn from Spain were still intact; Soult's final catastrophe at Toulouse had not yet happened; the British troops had met with a bloody check at Bergen-op-Zoom; Bernadotte had shown some shyness in advancing against his native country; Carnot was holding out stoutly in Antwerp; the war was not wholly finished either in Holland or in Belgium; and in Italy Eugene Beauharnais, though worsted, was not yet crushed;—something might yet turn up, and desperate men grasp at desperate hopes. But the Emperor of Austria remained inflexible; every courier that reached Fontainebleau brought bad intelligence, both as to the troops in the field and as to the temper of the inhabitants, who, in many parts of France, seemed to be settling down quietly under the Bourbon government; the allies became impatient; Alexander, who was playing the magnanimous part, intimated that a longer delay might lead to harsher terms, and at last, on the 11th of April, Bonaparte signed a second act, in which he "renounced unconditionally, for himself and his heirs, the thrones of France and Italy." The Emperor Alexander's proposition that he should retain the title of Emperor, with the sovereignty of the island of Elba and a revenue of 6,000,000 francs, to be paid by France, was then agreed to by the Emperor of Austria and the King of Prussia. The bargain was concluded without the very necessary assent or signature of the provisional government of France, or of Louis XVIII., whose restoration had now been fully settled. England herself was no party to the treaty; but she afterwards gave her consent to it. It is said that, during his stay at Fontainebleau, Bonaparte had repeatedly talked of suicide, and that the night after signing the unconditional act of abdication he attempted to poison himself with opium. The last fact, at least, seems to be very doubtful; but it is worth observing that it is most seriously insisted upon by some of those who most admired the man and his deeds. It was now expected that he would quit at once the scene of his humiliation, and hasten to Elba; but he lingered in that old French palace nine days longer. During this interval he received, with other black news, the intelligence not only that Soult had been beaten by Wellington, but that both Soult and Suchet, like the rest of his marshals, had sent in their adhesion to the provisional government. Finally, on the morning of the 20th of April, the dethroned emperor took an affectionate leave of his old guard, or of all that remained of it, and of such of his generals as had remained at Fontainebleau, and then began his journey towards the south of France, accompanied by a very strong escort of French troops, and attended by four commissioners appointed by Russia, Prussia, Austria, and England. As soon as he got into the regions of the south he found that his strong escort and the presence of the allied commissioners were very necessary to the preservation of his life. At Avignon, and in several other towns of Provence, he was exposed to popular outrages and menaces, which had the humiliating effect of making him disguise himself in a foreign uniform. At Orgon the people hanged him in effigy. At last he arrived at Fréjus, the very port that received him on his return from Egypt and his lucky escape from the English cruisers fourteen years ago. Here he shut himself up in a solitary apartment, which he traversed with impatient steps, sometimes pausing to watch, from a window overlooking the sea, the arrival of the vessel which was to convey him from France, as it then seemed (but not, as we believe, to him), for ever. A French frigate and a brig had come round from Toulon; but he preferred embarking on board an English man-of-war to sailing in the French frigate under the Bourbon flag. The 'Undaunted,' Captain Usher, was placed at the disposal of the British commissioner Sir Niel Campbell; and in this ship Bonaparte embarked at eleven o'clock at night, on the 28th of April, under a salute of twenty-one guns. "Farewell to Cæsar and his fortune!" exclaimed the Russian commissioner Schuwaloff. This Russian, and Count Truchses Waldberg, the Prussian commissioner, returned to Paris; but General Baron Kohler, the Austrian envoy, and Sir Niel Campbell, accompanied Bonaparte on his voyage, and afterwards remained on the island with him. During the voyage he recovered his spirits, and was very talkative. He spoke disparagingly of the troops and of nearly all the generals of Austria, Russia, and Prussia; but he paid a high compliment to the fortitude, bravery, energy, and activity of "Marshal Forwards." "That old devil, Blücher," he said, "gave me most trouble. He was always ready to fight again. If I beat him in the evening, there he was again next morning! If I routed him in the morning, he rallied and fought again before night!" He insisted that the English, availing themselves of their own strength and of the weakness of the restored Bourbons, would pursue a very selfish policy, and extort from Louis XVIII. some commercial treaty and other concessions disadvantageous to France and ruinous to her commerce and manufactures. "These Bourbonists," said he, "are poor devils. . . . . I mean to say they are *Grands Seigneurs!* They are very glad to get back to their forfeited estates, and to draw their rents; but, if the French people see *that*, they will become discontented, and *the Bourbons will be turned off in six months.*"

It was on the 4th of May that the 'Undaunted' arrived off Porto-Ferrajo, the humble capital of his miniature empire. But Bonaparte did not land until the following morning, when he was received with as much state and parade as the poor island authorities could manage. On surveying

his new dominions from the summit of one of the highest hills, whence the sea was visible all round him, it is said that he shook his head with affected solemnity, and exclaimed, in a bantering tone, "*Eh! Il faut avouer que mon île est bien petite!*" But, besides the little island and the surrounding sea, the fair coast of Tuscany, whence his race had originally sprung, was distinctly visible, and separated only by a narrow channel, with two rocky islets between, as if for stepping-stones to some mighty giant to pass from the continent to the isle, or from the isle to the continent. And, standing on the heights of Elba as the sun goes down, the greyish-blue hills of Italy appear so near, that one might almost fancy he could throw his cap upon them. Italy, and more particularly the nearest part of it, abounded with partisans, or with people who, on the whole, had received more good than evil from Bonaparte. If the allies had taken the map of the world, and had carefully studied it for the purpose of finding a place where the most dangerous of men should have the most opportunities of corresponding with his friends both in France and Italy, and should have the best means and facilities for attempting new mischief, they could not have found a place so suitable as the island of Elba.

On the 9th of April, eleven days before Bonaparte quitted Fontainebleau, Maria Louisa, with her son, quitted Blois to place herself under the protection of her father, the Emperor of Austria. About the same time the provisional government and the senate drew up and published the sketch of a constitution, which was to be accepted by Louis XVIII. They declared that the French people freely (*librement*) called to the throne of France Louis XVIII., brother to the last king, Louis XVI., and after him the other members of the house of Bourbon, &c. The first signature to this document was that of Talleyrand; but it was followed by those of a good many of the most determined partisans of Bonaparte, who had cared little for a constitution so long as he was emperor. It should appear that the great constitution-maker Sièyes was not consulted: his name is not on the list; but he had previously written a letter to declare his adhesion to the *déchéance* of Napoleon. On the afternoon of the 11th of April, the day on which the emperor signed his unconditional act of abdication at Fontainebleau, Louis's brother, the Count d'Artois, arrived in the neighbourhood of Paris. On the 12th they gave him a grand reception in the capital. Talleyrand delivered the address of welcome. The prince replied, "Nothing is changed in France; there is only one Frenchman more come among you." The sincere enthusiasm, however, was chiefly confined to the Count d'Artois's own retinue and the denizens of the aristocratic faubourg of St. Germain; the lower order of people seemed to be moved by curiosity and astonishment rather than any other feeling; and it was not without a painful surprise that some of the French, who wished well to the prince and to the cause of his ancient race, saw the procession closed by a squadron of grim Cossacks. The Duke of Angoulême came on from Bordeaux, where he had met with a truly enthusiastic reception; and, quitting his rural retirement in England, the amiable and pacific Louis XVIII. prepared to embark for the continent. He was conducted into London by the prince regent, and by many thousands of applauding Englishmen. On the 24th of April he embarked at Dover in a royal yacht, commanded for the occasion by the Duke of Clarence. The authorities, and even the people of Calais, gave him what seemed to be a cordial welcome; and they afterwards cut the form of the sole of his foot in the stone at the pier-head upon which it was said he had first stepped on landing in his beloved and loving France: but all this was hollower than the cavity they cut in the stone; and the wits of Calais and other parts of France were soon seen laughing over the foot-mark, and wondering what business a king of France could have with so big a foot. On May the 3d, two days before Bonaparte made his solemn entry into Porto-Ferrajo, poor Louis, who had been happier with his books and chosen friends in his English country-house, made his solemn entrance into Paris. The scene is said to have passed off in perfect order and decorum. On the preceding day he had published a declaration respecting the future constitution of France, in which he fully recognised the rights of the country to a free form of government, and signified his approbation of the basis of the constitution as framed by the senate and the provisional government; but in which he intimated, with perfect reason and justice, that many of the articles contained in that very hasty sketch of a constitution bore the appearance of precipitation, and could not, in their existing form, and under present circumstances, become the law of the state. Hence arose the interminable and bitter quarrel about '*la Charte octroyée par le roi*,' and '*la charte exigée et faite par la nation Française*.'

As new actors came upon the scene, many old ones departed from it, some to go into retirement or exile, and some to go into the grave. Among those who went the last way was Josephine, Bonaparte's first wife, who had certainly done much to aid him in his first rise. She died on Sunday the 26th of May, in her house of Malmaison.

On the 30th of May the allied powers of Great Britain, Austria, Russia, and Prussia signed at Paris a treaty of peace and amity with France, as represented by her restored monarch. The treaty secured to France the integrity of its boundaries as they existed on January 1, 1792; and it even granted (in order to improve and strengthen these boundaries) certain augmentations of territory on the side of Germany, on the side of Belgium, and on the side of Italy. The contracting parties agreed that an increase of territory should be given to Holland; that the lesser German states should be independent, and united by a Germanic federal league; that Switzerland should continue to enjoy

its independence under the government it had chosen; and that Italy (beyond the limits of the Austrian dominion, which was to be restored) should be composed of sovereign independent states. Of the two great stumbling-blocks, the Cape and Malta, which had been thrown in the way of previous negotiations with England, the Cape of Good Hope had been secured to the British crown by a separate treaty with Holland; and by this present treaty of Paris the island of Malta and its dependencies were admitted as belonging of right to Great Britain. But on her part Great Britain bargained and agreed to give back to France all the colonies, factories, &c., possessed by her in 1792, with the exception of Tobago, St. Lucie, and the Isle of France; and at the same time she bound herself to restore several islands and colonies to Spain, who was incapable of keeping them. Pondicherry was of course given back (to become, if time and accidents should serve, a *foyer* of intrigue, insurrection, and war); and France was to enjoy all the facilities of commerce with our Indian empire which the British government granted to the most favoured nations, only binding herself on her part not to erect any fortifications in the establishments restored to her in that country. Her former rights of fishery on the bank of Newfoundland, &c., were all to be restored as they were by the peace of 1783. Portugal, our ally, was to give up to France all that she held of French Guiana, &c. The materials in the naval arsenals, and the ships of war surrendered by France by the convention signed with the allies in April, were to be divided between France and the countries in which such arsenals, ports, &c., were situated. As the best test they could offer of their moderation, as the best proof they could give of the sincerity of their repeated declarations that they meant no ill to France, that they waged war not against the French people but only against Bonaparte, the allied powers agreed that their armies should evacuate the French territories, and that the French prisoners of war should all be restored as soon as possible. And by the beginning of June France was completely evacuated by the foreign armies, and left to manage her own affairs. As far as regarded France, the arrangements of this treaty of Paris were considered as final; but there remained to be made other settlements of the most extensive and complicated kind; the greater part of Europe required re-organization, and her past misfortunes and bitter sufferings demanded some preconcerted defences and guarantees for the future: and it was therefore agreed, in a special article of the treaty of Paris, that all the powers engaged in the late war should send plenipotentiaries to a congress to be holden at Vienna, for the object of completing the pacific dispositions of the present treaty, and of preventing, as far as human policy could, the recurrence of war and devastation.

When the allied sovereigns fancied they had completed their work at Paris, the Emperor of Russia with his sister, and the King of Prussia with his two sons, come over to visit the prince regent in London. They were accompanied and followed by uncountable counts, barons, dukes, princes, marshals, and generals, out of whom the English populace instinctively selected for their heartiest welcome brave old Blücher and Platoff the Hettman of the Cossacks. Their reception by prince and people was as honourable and flattering as it well could be, and such continuous shows and spectacles and feasts were given as London had never before witnessed.

A few words must suffice for the inferior and dependent operations of arms, and for the re-establishment of the old governments of the continent. First for Holland and Belgium:—Bernadotte, with a mixed army of Swedes and Germans, reached Cologne in Germany, and pushed forward some troops into Holland, to reduce some of the strong fortresses which the French still held, and to co-operate with the weak English force under Sir Thomas Graham. Several of these places surrendered upon summons; but, on the 7th of March, Graham, in attempting to carry by escalade and storm the formidable works of Bergen-op-Zoom, was repulsed with a lamentable loss. The French game was, however, up in that country; and the corps of General Winzingerode soon pushed forward into Belgium as far as the field of Waterloo. There was nothing in that country that could long oppose the allies; and the citizens of Brussels and the Belgian people generally seemed to testify a gladness for any change which should disconnect them from France, and put an end to the conscription. In the mean time the restored Prince of Orange, who now assumed the royal title, offered a new constitution to the Dutch nation, which was accepted at Amsterdam on the 28th of March, in an assembly of representatives, by a majority of 458 votes against 25. On May the 2nd, the States General of the United Provinces met at the Hague, and took the oaths to the new constitution. When Belgium was entirely freed from French troops, the country was left under the military government of the Austrian General Vincent; and at first it was imagined that the Emperor Francis would reclaim these old hereditary dominions of his house. But Austria had had quite enough of these distant and disconnected and generally discontented subjects; and had resolved to give up all Belgium rather than involve herself in fresh troubles by asserting her old sovereignty. The Belgians, if left to themselves, were far too weak to resist their neighbours the French; and therefore it was conceived by the allies that the best thing that could be done for Europe and for Belgium itself would be to unite that country to Holland, under the mild and constitutional government of the house of Orange. If this union could have been perfected, a strong barrier would have been raised against France, and two peoples would have been made one, whose interests, in many respects, coincided (the Dutch having shipping and colonies, having very little agriculture,

and being a very trading nation,—the Belgians having no shipping, no sea-ports, no colonies, but being a manufacturing people with a flourishing agriculture and a rich soil, and having scarcely any outlet either for their manufactures or for their produce); but, unhappily, the two peoples were different in religion, different in character and manners, and widely and almost hostilely separated by inveterate prejudices and antipathies. But it is much easier to blame the allies for what they did than to suggest anything better that they could have done. The Belgian people, correctly speaking, had never had a nationality; such turbulent independence as they had once possessed had been effete and effaced for many ages; and their country was, and still remains, in spite of guarantees and family alliances, open to French ambition, as being weak and helpless. In the beginning of August Belgium was evacuated by the Prussian and Russian troops, whose places were supplied by English troops, or by Germans in English pay. In the month of August the Sovereign of the Netherlands made his arrangements with the Prince Regent of England, resigning all the rights of the Dutch to the Cape of Good Hope, but getting back Demerara, Essequibo, Berbice, the immense island of Java, the rich island of Sumatra, and nearly every one of the colonies and settlements we had taken from them, whether in the West or East Indies, except the settlements in Ceylon.

The magnanimity which was shown to France was not extended to her weak ally Denmark. The conduct of that court nearly all through the war had been calculated to leave hostile feelings in the mind of England and of other powers. Denmark was to be punished for her obstinate adherence to Bonaparte, and Sweden was to be rewarded for the exertions she had made in the common cause at the critical moment. To bring the Frenchman Bernadotte into the field and to keep him there, the allies had promised to annex Norway to his dominions. The fortunate Gascon had himself pretty well secured the fulfilment of this promise by conquering a good part of Denmark in the autumn of 1813, and by imposing his own convention. The Norwegians, who had not been consulted, preferred retaining their old connexion with Denmark, or rather, they rallied round Christian Frederick, the Hereditary Prince of Denmark, who aimed at a separate sovereignty, and proclaimed their entire national independence. They sent an envoy to London, to endeavour to procure the countenance of our government; but the envoy was told that our engagements with the allies would not admit of any measures in favour of the independence of Norway; and shortly afterwards our Gazette informed them that the necessary means had been ordered for blockading the ports of Norway, unless that country submitted. The King of Denmark, having no power to oppose the will of the allies, and evidently no satisfaction at the proceedings of Prince Christian Frederick, disavowed the latter, and strongly condemned them in a letter to the Norwegian patriots. Bernadotte, on the other hand, solemnly promised the people of Norway the full enjoyment of their very popular municipal institutions, and of a free representative constitution, with the right of taxing themselves, &c. The Norwegian patriots, however, flew to arms, and put their old crown on the head of Prince Christian. This brought across their fiords, and among their mountains, Bernadotte and a veteran Swedish army accustomed to conquest. The struggle was very short, and not at all sanguinary; the Norwegians were not all of one mind, but of many minds; there was a considerable party for the Swedes, and a still greater party who felt that they had not the means of contending against them, and who thought that Bernadotte's offers, which he repeated while fighting, were good and liberal, and would leave them a better government than they had enjoyed during their annexation to Denmark. And thus, when their inexperienced little army had been defeated in some petty actions, and had got itself surrounded by the Swedes, Prince Christian resigned the crown which he had worn about two months, and the Norwegian notables, on the 14th of August, signed a convention with Bernadotte, who therein agreed to accept the very free and very democratic constitution which had been framed by the Diet of Norway, and to bury in oblivion the resistance which had been made to him. At a general diet of the nation, a great majority voted (on the 20th of October) for the union of Norway with Sweden, with the proviso and condition that their constitution should be punctually observed.

As some continental gratification to the royal family of England, Hanover, their ancient home, was somewhat enlarged, and raised to the titular dignity of a kingdom under the rule of his Britannic Majesty; but with the Salic bar to the succession when it should fall to a female. To this country too a form of a constitution was given —not a model, perhaps, of perfection, but not altogether unsuited to the condition of the people.

In Italy Murat had striven hard to keep his crown on his head, as his brother soldier of fortune was keeping his. He also hoped to extend his dominions, by procuring the annexation of territories incomparably richer and far more submissive than Norway; but he had neither the steadiness and wisdom of the Gascon, nor was backed like Bernadotte by a warlike people. Almost immediately after his return from Leipzig, he sent over with a flag of truce a young Neapolitan nobleman, the Marchese di ——, to confer with Lord William Bentinck in Sicily. Awaiting more ample instructions from his government, Lord William agreed to an armistice, with a limited renewal of commercial intercourse; and, to the infinite joy of the Neapolitan people, several English merchantmen, laden with colonial produce and British manufactures, put into the port of Naples and discharged their cargoes. At the same time, Murat secretly sent another most confidential

agent to Vienna to conciliate that court, and to propose a truce in Italy, which might enable the Austrians to cross the Alps and fall upon Eugene Beauharnais in Lombardy. The offer was tempting, for the recovery of Lombardy and Venice was ever the object nearest the heart of the Emperor Francis, his government, and army. As early as the end of December, 1813, Count Neiperg (whose fortune it afterwards was to become the husband of Bonaparte's widow, Maria Louisa) arrived at Naples, with powers from the Emperor of Austria to conclude a treaty and league with Murat. And on the 11th of January, 1814, the Duca di Gallo, Murat's Neapolitan minister for foreign affairs (and the old diplomatist who had negotiated for Austria, with Bonaparte, the sad treaty of Campo Formio), concluded a treaty, by which the Emperor Francis recognized the sovereignty of King Joachim in the states he actually possessed (states which had belonged to the husband of the emperor's own sister, Caroline of Austria), and King Joachim recognised all the ancient rights of the emperor to Lombardy and the other states in Upper Italy. The active part of this strange, precipitate agreement was this:—The emperor was to throw 70,000 men into Italy, Murat was to advance to the Po and to the Adige with 30,000 Neapolitans; and the two armies in conjunction were to reduce Mantua and all the strong fortresses in Upper Italy, and drive Beauharnais and the last of his Frenchmen beyond the Alps. By a secret clause in the treaty, Murat was to be rewarded by a good slice cut out of the States of the Church.—Having once made up his mind, Murat knew no rest until he began the work. Two divisions of his Neapolitan army were hurried forward to take possession of Rome and Ancona; but the French General Miollis kept possession of the castle of Sant' Angelo, in Rome, in the name of the Emperor Napoleon, and General Barbou did the same with the fortress of Ancona; and neither general would give credit to Murat's assurances that he was only playing a part to dupe the Austrians and serve the common cause of Frenchmen. That king, with a crown that tottered the more he tried to fix it, came up with greater forces; but he shrunk from firing the first shots at his own countrymen, and, leaving a division to blockade Barbou, and some troops in Rome to watch Miollis, he continued his journey towards Bologna. His sincerity at the moment, or his intention to abide by the Austrian treaty, seems to be proved by the fact that all the French generals, and very nearly all the French officers in his service (many of them old companions and close friends), deserted from him and went and joined Beauharnais. But no other proof was required than the insults he had received from Bonaparte, and his inward conviction that the doom of his brother-in-law was sealed. He vacillated most miserably afterwards; and even now he showed that his weak head was incapable of getting through the dilemma into which the course of events, not less than his own impatience, had thrust it; but, in the beginning of 1814, Murat was as seriously bent upon wreaking his vengeance on the Viceroy Eugene, and as surely calculated on preserving and aggrandising his dominions by co-operating with Austria, as a man of his impressible and vacillating turn of mind and bewildered intellect could be bent upon anything. Barbou soon surrendered in Ancona through want of provisions; Miollis evacuated the Roman citadel for the same cogent reason; and some other French garrisons capitulated upon condition of being allowed to return into France with the honours of war. Florence, Leghorn, and Ferrara were occupied by Neapolitan troops. At this moment, or rather a day or two before the entrance of Murat's division into Leghorn, Lord William Bentinck, who was going from Sicily with his Anglo-Sicilian army to drive the French out of Genoa, lay-to off the port of Leghorn, landed some troops in the suburbs, and treated that town with a short and very useless cannonade, which wounded an old woman and made a few dents in the walls. Lord William, the ally of Austria, was almost the ally of Murat, but his Neapolitan majesty was agitated and alarmed at the appearance of this Anglo-Sicilian armament, and he sent orders to his general to put Leghorn in a state of defence, to keep a good look out against any surprise, and to repel force by force if Bentinck should use any. His anxiety became the greater as, owing to contrary winds or some other circumstances, our men-of-war and transports continued to lie for two or three days in Leghorn roads. It was a strange alliance! Murat suspected and feared Bentinck, both Bentinck and the Austrian generals suspected, if they did not fear, Murat, and it was not with unmixed satisfaction that the Austrians saw Bentinck's armament welcomed on that Italian coast by the mass of the people. Yet they were all to co-operate and to act upon a combined plan of movements. Marshal Bellegarde, who had found little or nothing to oppose his passage, was now on the Mincio with 45,000 Austrians, Murat was on the Po with 22,000 Neapolitans, and with General Nugent's Austrian corps of 8000 serving under him, while on Murat's left, and on the other side of the Apennines, Lord William Bentinck, having landed his troops, was on the mountains of Sarzana, near Genoa, with from 8000 to 10,000 men—about as motley an army as ever had been seen, composed of Sicilians, Calabrians, Italian free corps, and Italian insurgents, Greeks, Albanians, and Croats, mingled with English. To oppose to these three several armies Eugene Beauharnais had in the plains of Lombardy a mixed army of French and Italians, from 50,000 to 60,000 strong, and several fortresses of the first order. His spirit rose and fell according to the varying nature of the intelligence he received of Bonaparte's defensive campaign in the interior of France; but he was steady to the cause, and made the best use of his good news, and after the victories obtained over the

allies at Nangis and Montereau he issued magniloquent proclamations to the Italian people, to show them that their fate must still depend on Napoleon. On the other side Marshal Bellegarde was calling upon the Lombards to return to their allegiance to their ancient, kind, and forgiving sovereign the Emperor Francis; Lord William Bentinck, with a zeal that was not justified by the circumstances of the case or by the orders of his government, was proclaiming nothing less than the Independence of Italy; and Murat was wondering how these conflicting proclamations would operate upon the Italians and upon his own interests. The embarrassment of all parties, but most of all that of Murat, was increased by a notable incident, which created more excitement among the peasantry and the popular masses throughout Italy than ten thousand proclamations of independence, or any other kind of proclamation or manifesto could have done. Having nothing to hope from his further detention, Bonaparte, on the 22nd of January, sent an order to Fontainebleau that the Pope should leave that place the next day and return to Italy. Pius VII. set off accompanied by an escort, and was taken by slow journeys back to his native country, where he was received by all the populace and by the devout Catholics of all classes with rapturous joy. Murat, who had occupied Rome and Ancona, and other parts of the papal states, and who calculated upon keeping some of that territory, was thrown into consternation by the news of this arrival and enthusiastic reception, which was not communicated to him officially, but which he gleaned merely from the loud-sounding popular voice. At first he thought of stopping the old pontiff on his journey; but he shrunk from the danger of this experiment, and felt that it was not his arms that could shut out from the Eternal City that feeble and aged priest, who was carried forward by the irresistible opinions of the Italian people. On arriving at a bridge on the river Nura, in the state of Parma, Pius, surrounded and followed by a countless multitude, met the advanced posts of the Neapolitan army, and saw the greater part of those soldiers quit their ranks, fall down on their knees before him, and implore his passing blessing. Murat had instructed his general Carascosa to wait upon his holiness, to offer him all respect and reverence, but at the same time to attempt to persuade him to remain for the present at Parma or Piacenza. But the old pontiff would not be moved from his fixed purpose. He said he was going onward, not to the city of Rome, but to the little town of Cesena, his birth-place; and thither he would go with God's blessing, though he went on foot. Carascosa wrote to his master, who was then at Bologna, to tell him that the poor old pope was more formidable than an army, and to implore him not to think of offering any resistance, but to yield to public opinion. Murat's Neapolitan ministers also advised him to take advantage of the religious enthusiasm, and to declare at once for the pope and the people. Such a course might have been attended with consequences very favourable to Murat, but, as a beginning, it was necessary that the pontiff should take Murat into his favour and confidence, and agree with him as to the measures to be adopted; and this Pius never for one moment thought of doing. The pope saw Murat at Bologna, and conferred for some time with him, but he entered into no arrangement either verbally or in writing; he asked nothing but to be allowed to continue his journey to his native town, and by the route—along the ancient Æmilian road—which he had chosen. The king of the armed host would fain have made him take another road, through Tuscany, but he durst not enforce this wish; and the pontiff travelled along the road made by the consuls of old Rome, escorted from town to town by thousands of the people. Thus he reached Cesena, where he remained until the allies had finished their work in France and Bonaparte had taken up his residence in Elba.

The news of the temporary reverses of the allies which reached Beauharnais reached Murat also, and very evidently shook his infirm purpose. He was, however, called forward to the field by Bentinck and Bellegarde, and the Franco-Italic army of the viceroy threw him into a rage and hastened his advance, by crossing the Po and falling upon Nugent and Carascosa, and capturing some Neapolitan troops. Nothing that followed deserves the name of a battle; but there were some sharp skirmishes under the walls of Reggio, at Borgoforte, at the bridge of Sacca, at Sandonnino, and two or three other places in the Lombard country about the Po, the Mincio, and the Taro; and in these combats the Neapolitans, sometimes by themselves, and sometimes in conjunction with the Austrians, beat the Italian and French troops of Beauharnais. In the affair at Reggio the Neapolitans displayed considerable alacrity and bravery; but, unhappily, the blood they shed was Italian blood, like their own, the viceroy's troops opposed to them there being nearly all natives of Upper Italy. Murat was seen to grieve at his very successes; and he could hardly be brought to look upon the field when Beauharnais put forward in battle order native French troops commanded by old French generals, who had been in earlier life his friends and his own brother-officers. Murat had at once too much heart and too little head to steer through the dilemma in which he was; he was doubly incapacitated for going through with the part which his old comrade Bernadotte had played so successfully. Eugene Beauharnais was beaten and in full retreat, and the Austrians were threatening Milan, and the Neapolitans were pressing forward upon Piacenza, when, on the 15th of April, Marshal Bellegarde announced to Murat that the allies had captured Paris, that the French government had been wholly changed, and that the Viceroy Eugene had agreed with the Austrians for a suspension of hostilities in Italy. On the same day a French officer, a friend, who had been sent into France by Murat to obtain an accurate know-

ledge of what was passing there, returned to his employer, who then had his head-quarters close to Piacenza. The dismal news this Frenchman brought might prove that Murat had been so far right in his calculation as to have chosen the stronger party, and to have declared against his brother-in-law at the very nick of time; yet the fearful catastrophe gave him sorrow and not joy; he turned deadly pale, and was for a time quite unmanned. He quitted his army, returned to Firenzuola, and thence to Bologna again.

Before this news arrived it was evident that Beauharnais could not maintain himself, and that the dominion of the French beyond the Alps was at an end. The viceroy had no money and hardly any resources, for Italy had been drained by his stepfather: the peasantry of Lombardy were welcoming back the Austrians; popular insurrections were breaking out on both sides; and the liberal party among the nobility and citizens (not wholly uninfluenced by Bentinck's flags and proclamations) were aspiring to independence and a constitution. When Bonaparte's abdication became known, everywhere these movements increased in rapidity and boldness. The government of the viceroy and the entire French system in Lombardy were broken up in a day. The people of Milan, reinforced by the people of Pavia and other towns, and by the peasantry of the neighbourhood, rose in a mass, broke the statue of Napoleon, tore down all the eagles, and murdered in the streets his chief minister Prina, who had been a harsh taskmaster, and inexorable in enforcing the conscription and the heavy taxation. The nobles and citizens of the liberal party then named a provisional government, to act, not in the name of the Emperor of Austria, the old sovereign of the country, but in the name of the free and independent Lombard nation; and this rapidly improvised government, composed chiefly of enthusiastic, inexperienced, and inexpert men, drew up the plan of a constitution, as if it had been a sonnet or a madrigal, dispatched ambassadors with it to the allied sovereigns, and sent the first copy of it to Lord William Bentinck, who was considered as its sponsor. Eugene Beauharnais, whose own life was threatened by some of the insurgents, hastened to conclude a convention with Bellegarde: the French troops in his service were allowed to return to France; his Italian troops were to remain quiet in the country they occupied until the grand alliance should give further orders; and upon this, without returning to Milan, Beauharnais travelled through the passes of the Tyrol, and repaired to Munich to seek (and he found it) an hospitable and a tranquil asylum with his father-in-law the King of Bavaria.

Lord William Bentinck, having landed his troops in the Gulf of Spezzia, began to move rapidly forward upon Genoa on the 7th of April. On the banners of his Italian legion were inscribed, in large letters of gold, or in rich silk embroidery, the magical words "INDIPENDENZA DELL' ITALIA," an inscription which produced a great excitement among some of the higher classes of the Italians, but which conveyed no meaning to the poor Genoese mariners and peasantry. He had expected to find a weak garrison; but, while his armament had been loitering on the coast, Beauharnais and the French commander in Piedmont had thrown 4000 or 5000 men across the Apennines to strengthen Genoa and cover the approaches to it. The country between La Spezzia and the city of Genoa is very rough and difficult: a bold range of mountains slope precipitously to the Mediterranean; the road runs partly along a narrow ledge over the sea, and partly across the mountains, or through deep, steep, and wooded defiles. But Beauharnais's people made but a feeble resistance, yielding pass after pass, and post after post, till they were driven close under the walls of Genoa, where they took up a very strong position, having their left covered by the strong forts of Richelieu and Tecla, and their right by the village of San Martino and the sea, and having in their front a country thickly covered with villas and hamlets, communicating with each other by narrow lanes enclosed by stone walls. In this position they were attacked at daybreak on the 17th of April. Bentinck's Italian legion, aided by his Calabrians and Greeks, carried the two forts on the enemy's left in good style: the attack on their right was made by the mixed division of Major-General Montresor and the English division of Lieutenant-General Mac Farlane. The French officers knew what had passed at Paris; the struggle, never very hot, did not last long,* and the retreat into the town was precipitate. By the hour of noon Bentinck's forces had taken up a position close to the most assailable part of the city; and Sir Edward Pellew's squadron anchored in the roads. On the next day, the 18th, a capitulation was signed, by which the French were allowed to evacuate Genoa. Lord William Bentinck, who had certainly held out the prospect of the restoration of the old republic, allowed some of the Genoese aristocracy and notables to establish a provisional government according to the ancient plan. All this and much more Lord William did inconsiderately, and on his own liberal impulse; but it was afterwards imputed to him and to the British government as deliberate treachery, as well by others as by some of the Genoese citizens who could ill urge any such complaint, since, if it had been meant for deception, they had never been deceived, or, at least, had never done anything to obtain a claim upon Bentinck's conditional promises. The banners announcing the independence of Italy, and the intimation about the restoration of the separate independence of their own republic, had not weaned them from their French predilections, or had not roused them to a single exertion in favour of the allies. When Beauharnais's forces were beaten, they were glad to open their gates to

* Only one of Bentinck's officers was seriously wounded. This was the brother of the officer who had played among the conspirators at Messina the part of General Manhes's aide-de-camp. He lost his leg.

his lordship; but it was out of no affection to the cause, nor owing to any expectations which he had held out to them, but solely to save their city from bombardment.* A few days after the departure of the Viceroy Beauharnais, Marshal Bellegarde advanced with a part of the Austrian army to Milan, displaced the independent provisional government, which had no hold on the affections or passions of the people, and proclaimed the restoration of the legitimate sovereignty of the Emperor Francis; and, except among the nobility (and they were much divided in opinion and in feeling, while many of them were passive or indifferent), except among the body of advocates, professors, men of letters, and a few of a superior class of merchants, not only the Milanese, but also the people of the rest of Lombardy, applauded all that Bellegarde did. The Austrian general, Count Bubna, then marched into Turin, the capital of Piedmont, and declared the intention of the allies to restore that country and Savoy to the King of Sardinia; and, on the 20th of May, his Sardinian majesty entered Turin, and established his government on the old basis. Not one member of the Continental coalitions had adhered more steadily and faithfully to his engagements, or had suffered more severely from them. The allies had resolved that he should now receive some reward, and that the territories of the Genoese republic, which joined Piedmont, and which shut that fine and productive country from the sea, should be united to his dominions. As soon as he was informed of the proceedings which Lord William Bentinck had taken, or had permitted, at Genoa, Lord Castlereagh wrote to express his regret, and to state that the separate existence of Genoa could not be preserved, it being the resolution of the allies that Genoa should make part of the dominions of the King of Sardinia. Few, very few, of the Genoese complained of this at the time; and, in the course of a very few years, the last murmur of discontent had almost died away, the Genoese people having found that they, as well as the Piedmontese, were gainers by the incorporation. It would have been well for the future prospects of Italy if the King of Sardinia had gotten more, and the Emperor of Austria had gotten less. In addition to his old possessions in Lombardy, Francis laid his hand upon Venice, which had only been his for a short period, and by virtue of a foul treaty with France, and upon other cities and states which had never been his at all, as Brescia, Cremona, Guastalla, Parma, Piacenza, &c.

Murat, agitated by doubt and dread, suspecting his new ally Austria, and knowing that he was suspected by her, distrusting most of his Neapolitan generals, and alarmed at the Carbonari, who were crying for a constitution, and at the plots and movements of the royalists, who were calling for the restoration of King Ferdinand, returned rather hastily to Naples, withdrawing his garrison *from* the Castle of St. Angelo at Rome, but reinforcing his garrison at Ancona, and leaving some of his troops beyond the frontiers of the States of the Church. On the 24th of May the pope made his solemn entrance into Rome, and restored the old ecclesiastical government. The popular joy was extatic.

Few of these restored governments were good, but that of Spain was the worst of them all, though probably not worse than the regimen of the Spanish Cortes and Liberales would have been, if circumstances and the temper of the army and people had allowed them to continue in possession of their power. Between them and the royalists and religious bigots it was a question of force, and the bigots and the royalists proved the stronger. On entering Spain towards the end of March, Ferdinand took up his quarters within the strong walls of Gerona, where the Liberales could not touch him. But it was evident by this time that few of the Spanish generals would obey the orders of the Cortes, and that the great body of the army looked to the king as having the sole right of command over them. The peasantry and the mass of the people, whether in towns or in the country, received him with transports of joy. He was joined by General Elio, one of the most devoted of all the royalists, and one who had great influence with the army. By the advice of Elio, who apparently feared Mina and one or two other guerrilla chiefs who had professed more reverence for the Cortes than for the king, he deviated from the route by which he was expected to advance on his way from Gerona. For some time he made no stay except in walled towns. He went to Zaragoza, and from Zaragoza to the fortified city of Valencia. Here he remained a considerable time, and hither most of the Spanish grandees and many of the archbishops and bishops flocked to welcome him, and to conjure him to overset the Cortes and the constitution, which threatened alike the throne, the church, and the nobility. General Elio had already promised the assistance of 40,000 Spanish soldiers devoted to their king and their church; other

* The poor Liberals and Constitutionalists of Milan had, perhaps, more reason to complain of the illusory nature of Bentinck's bright flags and bright hopes than the Genoese; though it should appear that, even if Bentinck had never held out any hope at all, and had never put *Indipendenza dell' Italia* on his banners, their own enthusiasm would equally have committed and duped them. They certainly were not left long in a state of error as to the intention of the allied powers and the nothingness of Lord William's vapouring. Shortly after entering Genoa, General Mac Farlane crossed the Apennines, and went on to Milan. A deputation from the provisional government and the Milanese patriots waited upon him. In the number were several interesting men: there were Count Gonfaloniere (who, since then, has lain so long in a horrible Austrian state prison), the late Ugo Foscolo, the poet, Hellenist, and critic, the late Cavalier Giuseppe Pecchio (so well known and so much respected in England, where he ended his life, as his friend, Ugo Foscolo, had done a few years before him), and other individuals distinguished by their rank, wit, and attainments. The general could not receive them in a public capacity, and told them so. They asked him for his opinion as a private English gentleman, and begged him to state frankly whether he thought that it would enter into the views of the British government to countenance the motto on Lord Bentinck's standards, or to give support to the independence of Lombardy? The general frankly told them that he thought nothing of the kind; that he believed that it had long been determined in the allied councils that Austria should be restored to her old rights of dominion in Upper Italy; that without this contract Austria would not have taken the field against Bonaparte; and that, however much Englishmen might desire to see Italy united, free, and independent, the British government could certainly never oppose (as she never could have prevented) the arrangements which had been made.

assurances were given, and the one general wish and demand of these nobles and priests, and of generals, soldiers, and citizens, was that he should proclaim himself absolute king, as his father had been before him, re-establish the inquisition, and crush the Cortes and the Liberales altogether. It was but by following the sense of his nation, which he saw manifested in the strongest manner, that Ferdinand determined to do what he did. If he had pursued a contrary course, many of the royalist party would even then have set up his brother Don Carlos; for it was not merely the passion of loyalty and the enthusiasm of religion that animated many of these Spaniards; they had seen in their conflicts with the Cortes that their rank, their consideration, their property, their very lives would be committed if the Liberales should prevail, and they had not been Spaniards if they had not thirsted for revenge for the evils or insults they had already suffered at the hands of the constitution-makers. The Cortes wrote to Valencia to entreat his majesty to proceed to Madrid, and complete the happiness of Spain by swearing to the constitution. At the same time they made a very empty show of supporting that constitution and their own authority by force of arms; and proceeded to regulate the royal household in an indiscreet and insulting manner, and as if their own little household gods were not tumbling about their ears. But seventy members seceded at once, and sent a deputation to present a memorial to the king, in which they solemnly protested against the measures of the Cortes as having been carried by force and intimidation, and professed for themselves and for their constituents a boundless loyalty and attachment to their ancient laws and institutions. At last, on the 4th of May, after the king and the infantas had heard *Te Deum* in the cathedral of Valencia, in the midst of 20,000 burning wax tapers, and in presence of a miraculous chalice, a royal declaration came forth, in which it was stated, in the name of Ferdinand, that the Cortes had never been legally convoked, that they had excluded the states of the nobility and clergy, that they had despoiled him of the sovereignty, attributing it nominally to the nation, for the purpose of appropriating it to themselves; and finally, that it was his Majesty's intention not only not to swear to the constitution they had made, but to pronounce that constitution null and void. A comparison—and by no means an irrelevant one—was drawn between the constitution manufactured by the Cortes and the constitution of 1791, manufactured by the French legislative assembly. Ferdinand, however, declared that he abhorred and detested despotism, and that, as soon as circumstances would permit, or as soon as order and the good usages in which the Spanish nation had lived should be restored, he would consult with the procuradores of Spain and of the Indies in a Cortes legitimately assembled. And this last declaration was considered by some as equivalent to a promise of giving a free constitution to Spain. On the next day he took his departure from Valencia for Madrid. He travelled slowly and by short stages; the concourse of people was so great that the road from Valencia was lined with them; their joy and their shouts were everywhere the same. On the night of the 11th of May General Eguia, as fierce a royalist as Elio, seized all the liberal members of the Cortes that he could find in Madrid and threw them into prison. The whole body fell helpless, unresisting, and unlamented by the people. On the 12th of May Ferdinand entered his capital, and was received with demonstrations of popular joy and enthusiasm, inferior in degree only to what had been displayed by the Italian peasantry and the populace at Rome on the arrival of the pope. Except by the knife and stiletto and in private revenge, blood was not shed now; but scaffolds were soon erected in more than one city of Spain.

The Duke of Wellington (he had received this rank from the Prince Regent) hastened to Madrid as soon as his numerous occupations would allow him, in order to mediate between the infuriated parties, and to bestow some good advice on the restored king and government. He arrived at the Spanish capital on the 24th of May. He was very well received by the king and his ministers, but he confessed his fear that he had done very little good by coming. He found that nothing could be more popular than the king and his measures, as far as they had gone to the overthrow of the Cortes constitution; and that, though some thought it an unnecessary and impolitic measure, the arrest of the Liberales was liked by the people at large. The duke, as well as his brother the British ambassador, Sir Henry Wellesley, who had waited upon Ferdinand at Valencia, and General Whittingham, who had escorted him from Zaragoza, strongly recommended, not that Ferdinand should swear to the wild, democratic, and impracticable constitution established, but that he should hasten to frame and recognise one better suited to the country, to the habits and opinions of the Spanish people, and to the laws and customs of the Spanish monarchy. To the Duke of San Carlos and others, Wellington urged the necessity of the king governing on liberal principles:—but in writing to Lord Castlereagh he said, "The fact is, that there are no public men in this country who are acquainted either with the interests or the wishes of the country; and they are so slow in their motions, that it is impossible to do anything with them." *

On the 11th of June the Duke of Wellington was again with his army, which, with the exception of some divisions previously embarked for the purpose of carrying war into the interior of the United States of America, was collected at Bordeaux, in order to evacuate France according to the treaty of Paris. On the 14th of June he issued his farewell general orders to those gallant troops, congratulating them upon the recent events which had restored peace to their country and to the world, and upon the great share which the

* Dispatches.

British army had in producing these events, and on the high character with which the army would quit France. He declared that, though separated from them, he should never cease to feel the warmest interest in their welfare and honour; and that he would be at all times happy to be of service to those to whose conduct, discipline, and gallantry their country stood so much indebted. His Grace arrived in London on the 23rd of June, to meet with an enthusiastic and grateful reception which has never been surpassed. Parliament was sitting, having re-assembled, according to a second prorogation, on the 21st of March. On the 28th of June, his Grace's various patents in the peerage, as baron, viscount, earl, marquess, duke, were read in the House of Lords by the clerks; and the duke then for the first time took the oaths and his seat. Lord Chancellor Eldon then rose; and, pursuant to their lordships' previous order, gave the thanks of that House to Field-Marshal the Duke of Wellington for his eminent and unremitting service to his Majesty and to the public. On the 1st of July his Grace attended in the House of Commons, and he received the thanks of that House, through the Speaker, Abbot. The sum of 500,000*l.* was afterwards voted to be laid out in the purchase of an estate for his Grace, to be a lasting token of the national gratitude.

The legislative measures of this short parliamentary session are of little historical importance. The budget of the year was laid before the House of Commons on the 13th of June. The whole amount of supplies exceeded 75,600,000*l.* The session was closed on the 30th of July by the Prince Regent in person. The autumnal session presented no matter of great interest. It was opened on the 8th of November by the speech from the throne, which was again delivered by the Regent in person; and on the 2nd of December the Houses adjourned till the 9th of February next. In the month of August the Duke of Wellington proceeded to Paris as ambassador of Great Britain to Louis XVIII.

A.D. 1815.—The great Congress of Vienna began to assemble at the opening of the year; and in the month of January the Duke of Wellington repaired thither. Our parliament re-assembled in February. The opposition, which had already expressed a strong and indignant disapprobation of the forcible transfer of Norway from Denmark to Sweden, now censured with equal severity the annexation of the worthless old republic of Genoa to the dominions of the King of Sardinia. With less questionable reason, and with a generous English feeling which did them honour, they took up the case of two Spanish refugees of the liberal party who had taken refuge in Gibraltar, and had there, in an unprecedented and monstrous manner, been delivered up to the authorities of the King of Spain by our temporary deputy governor, General Smith. Parliament had got over these matters, and was discussing subjects of home policy, regulating the reduction of the militia, &c., as if all fears of war were over, when England and Europe were startled, as at a thunder-clap, by the intelligence that Bonaparte had escaped from his narrow insular empire to repossess himself of his old French empire. On the 6th of April, a message from the Prince Regent was delivered to each House, communicating the information that events which had recently occurred in France—events which threatened consequences highly dangerous to the tranquillity and independence of Europe—had induced his royal highness to give directions for the immediate augmentation of our land and sea forces, and to lose no time in communicating with our allies for the purpose of forming such a concert as might effectually provide for the general and permanent security of Europe. On the following day the Earl of Liverpool rose in the Lords to move a corresponding address to the Regent. His lordship affirmed that our negociator at Paris, Lord Castlereagh, had expressed a strong disapprobation of the treaty concluded by the allied sovereigns with Bonaparte, but that, the representations of those sovereigns having at length convinced him of its necessity or expediency, he (Lord C.) had consented to accede to it in part, namely, as far as concerned the possession of the Isle of Elba by Bonaparte, and the sovereignty of the Duchies of Parma and Piacenza conferred on his wife Maria-Louisa. On the same day, in the House of Commons, Lord Castlereagh, who had been personally engaged in many of the previous transactions, explained how it was that the disturber of Europe had escaped. It had never, he said, been the intention of the allied powers, who accepted his unconditional act of abdication, to consider or to treat Bonaparte as a prisoner, or to exercise a system of police or espionage with respect to him. They relied on the treaty of Fontainebleau, and upon the apparent determination of the French people to have done with him for ever, and to adhere to Louis XVIII. Bonaparte was invested with the sovereignty of the island of Elba; a certain number of troops had been allowed to collect round him, as the island had been and might again be exposed to the descents of the Barbary corsairs; and he had had a sort of naval equipment under his flag, which the British officer on that station had no power of visiting. This was also the case with the naval officer of Louis XVIII. Colonel Campbell, who had been one of Bonaparte's conductors to Elba, had indeed been suffered to remain between that island and Leghorn; but his visits had latterly been discouraged by Bonaparte; and a sort of English vice-consul, who resided on the island, was put under the surveillance of two gendarmes at the time Bonaparte was making his preparations to invade France. Mr. Whitbread vehemently opposed a renewal of war by England, or what he termed "commencing a new crusade for the purpose of determining who should fill the throne of France." He even recommended that we should renew with Bonaparte the treaty which had been concluded with Louis XVIII. Only 32

members voted with him, while 220 voted against him. The ministerial address to the Regent was carried in both Houses without any division upon it; and the nation at large felt as strongly as parliament that nothing was left for England to do but to draw the sword again, and never sheath it until Bonaparte should be consigned to some safer place than Elba. The parliament continued sitting till the battle of Waterloo falsified the sinister prophecies of those who had voted against the new war, because it would be as long as the last. Subsidies, or aids in money given under other names, were voted to a large amount, and the budget of the year was raised to very nearly 90,000,000*l*.

The astounding news of the flight from Elba was announced to the diplomatists of Europe sitting in congress at Vienna by Talleyrand. There was no hesitation there as to what was to be done. The representatives of the allied sovereigns immediately agreed to join their forces again, in order to frustrate Bonaparte's attempt, and to maintain entire the treaty of Paris. On the 13th of March the ministers of the eight powers * assembled at Vienna, including the ministers of the King of France, signed a paper, by which they declared Napoleon Bonaparte an outlaw, a violator of treaties, and a disturber of the peace of the world, and delivered him over to public vengeance (*vindicte publique*). The Duke of Wellington, who was immediately called upon by the Emperor of Austria, by the Emperor of Russia (who was also at Vienna), and by the plenipotentiaries and generals of all nations there assembled, to assist in drawing up a grand plan of military operations, announced to his government that all that had occurred in France since Bonaparte's return had augmented "the eagerness of the different powers to put forth the general strength for the common protection." † At the same time his grace announced that it would be quite impossible for these allied powers to make an effort adequate to the occasion unless they should obtain the aid of English money. With proper assistance, and with an efficient British force co-operating with the allies, he was quite confident that the contest would be "a very short one, and decidedly successful." "Nothing," he said, "could be done with a small force; the war would linger on and end to our disadvantage. Motives of economy, then, should induce the British government to take measures to bring the largest possible force into action at the earliest period of time." It was upon this wise calculation that Lord Liverpool's government made its prodigious financial effort; and that it agreed to furnish all the British troops it could spare, and to pay for other troops that should make up the force supplied by Great Britain to 125,000 men. Austria agreed to furnish 300,000 men, Russia 225,000, Prussia 236,000, the various states of Germany 150,000, and Holland afterwards agreed to furnish 50,000. On the 23rd of March, Austria, Russia, Prussia, and Great Britain concluded the treaty of Vienna, confirming the principles of the Treaty of Chaumont, which they had agreed to on the 1st of March, 1814, after the breaking up of the congress at Chatillon, and by which they bound themselves to make no separate peace, and to conclude neither cessation of hostilities nor any convention whatever except by general consent. On the morning of the 29th of March, four days after signing this treaty, the Duke of Wellington left Vienna, in order to examine the military state of affairs in Belgium, which country, as of old, was quite sure to be the first battle-field. He arrived at Brussels on the night of the 4th of April; and, rapidly as he had travelled, he had found time to observe the condition and spirit of several bodies of the allied armies. A strong Prussian corps, which had been left at Aix-la-Chapelle, was "very *content*" at the prospect of another brush with Bonaparte. As early as the 5th of April the Duke announced that, after having placed 13,400 men in the fortresses of Belgium, he could assemble 23,000 men of good English and Hanoverian troops, 20,000 Dutch and Belgian troops, and about 60 pieces of artillery; but, as it was understood that Bonaparte, who had not arrived at Paris until the 20th of March, would not commence his attack until he had collected his whole force, every exertion was made to raise this allied force in Belgium to an equality with his in the shortest space of time possible; and the incredible labour of correspondence to quicken the preparations and the march of Dutchmen, Prussians, Hanoverians, Austrians, and armies of nearly all the nations of Europe, including some of the slowest, fell principally upon Wellington.

The essential points of the famous escapade from Elba are soon told. If Bonaparte had ever gone thither with the intention of stopping, he had changed his mind in a very short time. He had not been one month in the island ere he commenced a secret but most active correspondence with his friends both in France and Italy. This correspondence became still more active as his friends and agents reported to him the return of the French prisoners of war from Russia, Poland, Prussia, Saxony, England, Spain, &c., and related that the temper of these veterans was unchanged, that their devotion to glory and to their emperor was as great as ever. Several of these returned prisoners, men as well as officers, passed over from time to time to Elba, to offer their services to enter his guard, and to speak of the attachment of their comrades to their old chief, and of their contempt for the Bourbon king, who could not mount a horse, and who was a great discourager of the military profession, as he wanted nothing but peace. To these men the camp had, indeed, become a home; and they could not but regret the leader who had so long led them from victory to

* The eight powers were Austria, Spain, France, Great Britain, Portugal, Prussia, Russia, and Sweden. The ministers for Great Britain were the Duke of Wellington, Lords Cathcart and Clancarty, and Sir Charles Stewart. Those for France were Talleyrand, the Duc de Dalberg, M. Latour du Pin, and the Count Alexis de Noailles.

† Dispatches.

victory, affording them free quarters, with the incidental privileges of plunder, a constant change of scenery and excitement, and pleasant cantonments in the finest cities of Europe.* It was in their nature to forget easily both the comrades who had perished and their own occasional hard sufferings; and the national confidence and the pride of many victories made them cherish the belief that, if *they* had been in France in 1814, Napoleon would not have been beaten by all the odds against him. They also gave implicit credit to the assertion that the emperor had been betrayed by some of his marshals, and embraced the corollary, that, with less wealthy and pampered and more faithful generals, he was likely to succeed in a new trial. This, too, opened the brilliant and tempting perspective of a new cast of promotions, orders, titles, &c. And what was there to get or to hope for from Louis XVIII.? Besides these selfish considerations, there were certainly higher motives of action: many of these men were enthusiastically attached to the military glory of their old master, and were eager above all things to wipe off the disgrace of defeat from their country. In the vain hope of keeping matters quiet by making as few changes as possible, Louis XVIII. had retained in his service nearly all the men that Bonaparte had left in employment, and many of the subordinate agents of the police, post-office, and other departments were in Napoleon's interest. It was the same with most of the municipal authorities, at least in the centre and in the north of France. Even in the standing army few of Bonaparte's officers had been changed, and men like Ney and Davoust were left at the head of these forces. Although Louis XVIII. had abilities, information, liberal views, and excellent intentions, the emigrants and other royalists who surrounded him, and the civil government which their importunities had forced upon him, were at once imbecile and extravagant, weak (as they had no hold on the people), and yet revengeful; and, after the departure of Talleyrand for Vienna, nearly everything went wrong, and, though no acts of tyranny were committed, many petty spites were indulged in. Moreover, the weak government of King Louis, surrounded from the first moment of its existence by treachery and by plots, had no instruments wherewith to operate; the police, from which it expected information, was in the interest of Bonaparte; the officers and people who managed the telegraphs were in the interest of Bonaparte; the magistrates upon whom it depended for the suppression of cabal and sedition were (at least in a great part of France) in the interest of Bonaparte; the troops upon which it counted for the suppression of insurrection were almost to a man devoted to Bonaparte; and, when the government could no longer be kept ignorant that something was preparing, the police protested that it was but a bagatelle, a mere fit of impatience and uneasiness which would soon pass off under gentle treatment. It is said that long before the close of the year 1814, the *initiated* named the month and almost the very day on which the emperor would return. Some of the old republican party, including men who had conspired against him, now joined the Bonapartists, and invited Napoleon to return. The brothers, sisters, and other relatives of Bonaparte, all rich, and one of them (Murat) still powerful, promoted the widely spread plot, for they all felt that by his fall they had either been reduced to obscurity or left without any prop to their adventitious greatness. Murat's wife was incessantly telling him that Austria would never abide by her treaty with him, that all the members of the grand alliance were determined to restore King Ferdinand, that, unless the throne of Napoleon could be re-established, his throne of Naples must fall, and leave him and her and her children, not only without a kingdom, but without a home; and at the proper moment, when the weak mind of Murat was oscillating like the pendulum of a clock, Napoleon himself wrote to tell him that the lion was not dead, but only sleeping! Murat prepared for the *réveiller*. Except the cardinal-uncle Fesch, Louis Bonaparte, the ex-king of Holland, and Eugene Beauharnais, the ex-viceroy of Italy, every living member or connexion of the Bonaparte family appears to have been actively engaged. Madame Hortense, sister of Beauharnais, wife of Louis, and ex-queen of Holland, was very busy, and, as she had been allowed to remain in Paris, she had many means of being useful, and her house became a principal rendezvous of the party. She sent messages and secret agents to her brother in Bavaria; but Eugene would not be moved, and he remained quiet with his wife and father-in-law in Munich. Lucien Bonaparte, though he had incurred so much disgrace, though he had been obliged to seek a refuge in England, was very eager for his brother's restoration, and, as a professed liberal and constitutionalist, he undertook to manage the liberal and constitutional parties.

It was on the 26th of February, 1815, that Napoleon embarked with a body of about 1000 men, composed of some of his old guards who had followed him to Elba, of some Italians and Elbese, some Corsicans and others, comprising about 200 dragoons and about 100 Polish lancers, with saddles, but without horses. On the 1st of March he landed at Cannes, a short distance from Frejus. The Provençals neither welcomed him nor attempted to oppose him. There were no king's troops in the neighbourhood. He hurried through Provence, into Dauphiny, "the cradle of the Revolution;" and there the people began to flock round his standard. Still no troops joined him, and he felt uneasy. On the 5th of March he issued two exciting proclamations, one to the French people, and the other to the army. It was in the latter that he said that his soldiers had not been beaten, and that he and they had only been betrayed; that in his exile he had heard the complaining voice of his army, and that he had arrived once more among them to renew their glory, and to put down foreign

* A. Vieusseux.—Fleury de Chaboulon, Mémoires.

interference. After reminding them of the victories of Ulm, Austerlitz, Jena, &c., and bidding them come and range themselves under the banner of their old chief, he said, "Victory shall march at the charging step. The eagle shall fly from steeple to steeple, till she perches on the tower of Notre Dame!" This proclamation produced an immense effect. As he approached Grenoble, he met for the first time some regular troops. They were a battalion of infantry, which had been sent forward from that city to stop his march; but a short parley on the road ended in their joining him. Just outside the walls of Grenoble, the 7th regiment of the line, commanded by M. Charles de Labédoyère, an officer of noble birth, and one who had been promoted by Louis XVIII., but who had recently set out from Paris with the determination to break his oath to that king, set up a joyous shout, rushed from their ranks to hug and kiss their old comrades, who had come from Elba, crying "Vive l'Empereur!" and joined him. General Marchand, who commanded the strong garrison within the walls, shut the gates, and would fain have done his duty; but his men joined in the cry of "Vive l'Empereur," and, when Bonaparte blew open one of the gates with a howitzer, all the soldiers did what the 7th regiment had done just before them. Next morning the civil authorities of Grenoble renewed their allegiance. Bonaparte had now an enthusiastic veteran army of nearly 7000 men. With this force he descended the mountains of Dauphiny, and appeared within sight of Lyons on the 10th of March. The king's brother, the Count d'Artois, was in that city, and was ably and honestly assisted by Marshal Macdonald, who could not throw his oaths to the wind; but the troops and the populace at Lyons followed the example at Grenoble, the prince and the conscientious marshal were obliged to fly for their lives, and Bonaparte entered that second city of France in triumph. The rest of the march to Paris was a triumphant one. All along the road the emperor was joined by soldiers, in detachments, battalions, or entire divisions, who tore the white cockade fron their caps, trampled upon it, and mounted the tricolor. The Bourbons were abandoned by the whole army; yet still, except in Grenoble and in Lyons, the people gave few or no signs of enthusiasm: many fled out of the way, and the majority of those that remained on the line of march seemed to be bewildered, and to be wondering what would come next. Louis XVIII. was now waited upon by Marshal Ney, whom he had favoured and honoured, but who apparently apprehended that the command of the troops that still remained under the white flag would be given to Macdonald, or to Marmont, or to some other marshal equally averse to perjury and treason. Ney, with a profusion of protestations, volunteered to take the command, to intercept the invader; and, on getting what he wished, and on kissing the king's hand at parting, he swore that within a week he would bring Bonaparte to Paris in an iron cage.* "Adieu, marshal; I trust to your honour and fidelity," was the reply of the confiding and duped Louis. The marshal went to Lons-le-Saulnier, and joined the emperor with his entire force! Nothing now remained to Louis but some battalions under Marshal Macdonald, who posted himself at Melun, between Paris and Fontainebleau. On the 19th of March, Bonaparte slept in the old palace of Fontainebleau, where he had signed his act of abdication in the preceding month of April. The next morning he resumed his easy march for the capital. Instead of disputing his passage, Macdonald's people trampled on their white flags and cockades, shouted "Vive l'Empereur," kissed, hugged, and joined. Macdonald, with a few officers, escaped to Paris. He found the Tuileries deserted: Louis XVIII. had fled at midnight for the fortified town of Lille, near the Belgian frontier, and most of his ministers and courtiers had fled many hours before. The Royalists wept and tore their hair, but they were helpless; the mass of the population of Paris seemed totally indifferent; there was no armed force within the city upon which any dependence could be placed. About twelve hours after the king's departure, or at noon of the 20th, a great troop of half-pay officers, with their swords drawn, with two pieces of cannon, and a detachment of cuirassiers, reached the Place de Carrousel, shouting "Vive l'Empereur!" and demanding to mount guard at the palace with the national guards. There was no resisting this demand, and, in the gardens of the Tuileries, in the courts, and at the gates of the palace, national guards, wearing the white cockade, were mixed with these half-pay desperados wearing the tricolor cockade. Shortly after this, there arrived at the Tuileries, from all quarters of Paris, new personages, ex-ministers of Bonaparte, councillors of state, chamberlains in their imperial court costume, comptrollers of the household, court valets in their old livery, cooks, and butlers, who resumed their services as tranquilly as they could have done if Bonaparte had only been absent on a short journey or campaign, and as if his court and household had been kept in a state of readiness for his return. Ladies appertaining to the imperial court now began to arrive, and to fill the *salons* of the palace; and the very ushers and pages were already at the doors of the several apartments, to maintain the strict imperial etiquette. At half-past nine, on the night of the 20th—a foggy and rainy night—a tremendous noise announced the arrival of the emperor, a troop of lancers galloped through the principal gate, a low mud-covered carriage stopped, Bonaparte in his grey great-coat stepped out, a number of generals and officers took him on their shoulders, and carried him up to the state apartments, while the soldiery and a part of the mob rent the air with cries of "Vive l'Empereur!"†

* Ney admitted on his trial that he had said these words.

Paris. From the Seine, below the bridges.

Thus far all had seemed to go well, but the triumph was soon damped by sundry little circumstances. It was impossible not to see that, with the exception of some of those faubourg mobs, which he hated and feared, the people of Paris were silent, lukewarm, cautious, or averse. Then came brother Lucien with his tail of constitutionalists and liberals, including Carnot and *Fouché*, protesting that the promises and pledges he had given must be kept, that the French people must have more liberty than they had enjoyed under the empire or under the restoration, that France could no longer do without a free constitution, and, finally, that the liberals would do nothing for him unless he granted a new constitution. Bonaparte said that there would be time for making a good constitution hereafter, when he should have dissolved by victories the European confederacy against him; that now every thought ought to be given to the means of raising money and troops, the casting of artillery, the manufacturing of arms, ammunition, &c., in order to put him in condition to scatter the armies of the allies. But the liberals stuck to their point; the constitution must come first, their exertions in his cause afterwards: and, accordingly, though sorely against his will, Bonaparte proclaimed a sort of constitution, under the very unpromising title of "*Acte Additionnel aux Constitutions de l'Empire.*" The liberals, who had expected to be allowed to make the constitution themselves, were grievously offended; and those among them who were sincere in their constitutionalism declared this *Acte Additionel* a poor defective thing, although it was known that Carnot, and that great and unwearied maker of constitutions, the Abbé Sièyes, had been consulted by the emperor in its confection. Substantially the *Acte* was much the same as the *charte* which Louis XVIII. had given (*octroyée*) in 1814.* On the 4th of June, three days after Bonaparte, his great officers of state, marshals, generals, &c., had taken their oaths to this constitution at a grand celebration, called a Champ de Mai, but held in the Champ de Mars, and in the month of June, the two new Chambers opened their session. The Chamber of Peers, appointed by the emperor himself, and composed principally of men who owed their rank and fortune to him, at first seemed disposed to be as submissive as the Senate had formerly been. The Chamber of Representatives showed at once a very different disposition, raising the voice of criticism and censure which the man of the people had never been able to bear. Their session was a very short one; and the first serious business the two Houses or Chambers did was to pronounce the dethronement of Bonaparte. Before that crisis arrived, he bitterly reproached his brother Lucien and others, for advising and forcing him to give this constitution, and to call these Chambers together. After eleven weeks' sojourn in the capital, matters stood with him much as they did when he arrived; he could count confidently on the devotion and bravery of his old army, but he could not hope that the rest of France would do much for him. His distress, or doubts, were increased by the dismal news which came howling to him from beyond the Alps. Murat, instead of waiting for his *mot d'ordre*, had thrown off the mask as soon as he learned the departure from Elba, had rushed towards Upper Italy like a madman, had been beaten by the Austrians, aban-

* There were to be an hereditary Chamber of Peers appointed by the Emperor, and a Chamber of Representatives elected, not by the citizens directly, but by the electoral colleges of France. The Representative Chamber was to be renewed by election every five years, and was to possess the exclusive right of voting taxes, &c. Ministers were to be responsible, and judges irremovable. Property was declared inviolable, and all subjects were to have the right of petitioning.

doned by his own army, and put to an ignominious flight from his kingdom of Naples, many weeks before Bonaparte was ready to commence operations on the frontiers of Belgium. Bonaparte afterwards declared that the blind precipitation of Murat in 1815 did more mischief to his cause than Murat's defection in 1814 had done. But this was not true.

On the night of the 11th of June, just a week after the opening of the two Chambers, Bonaparte quitted Paris to open the campaign. His countenance, which had long been clouded, brightened as he sprung into his travelling carriage, and as he said, or as he is reported to have said, "*Je vais me mèsurer avec ce Villainton*" (I am going to measure myself with this Wellington). He had assembled an army of about 125,000 men, chiefly veteran troops, of whom 25,000 were cavalry, and 350 pieces of artillery. With this force he advanced to the Belgian frontier on the 14th of June, and on the very next day the stern conflict began.

In the meantime, the Duke of Wellington had raised his force in the field to about 76,000 men, of whom not near one-half were British. Knowing that his adversary would bring with him a tremendous artillery, Wellington had applied for 150 British pieces; but so miserably had he been supplied by our government, and by those who kept the keys at Woolwich, where there were guns enough to cannonade the world, that, when he united all his English pieces with those of the Dutch and German under him, he found he had only some 84 pieces. The duke's head quarters were at Brussels, the capital of the country, which it was Bonaparte's first great object to gain, and the possession of which would have given the French immense advantages, moral and political, as well as military. On the duke's left lay Marshal Blücher with the Prussian army, estimated (after the junction of Bulow's corps) at about 80,000 men. The old marshal was well supplied with artillery, his government having sent him 200 cannon; but unluckily his artillerymen were not very good, and he had to complain of the manner in which his guns were served when the French fell upon him. Blücher's head-quarters were at Namur. The two armies were, of necessity, spread over a wide extent of country. The Duke of Wellington's had to preserve its communications with England, Holland, and Germany; to be near enough to connect readily with the Prussian army, and to protect Brussels. Blücher's army had to preserve its communications with the country in his rear and on his left, through which the reinforcements of the grand allied armies were to advance; he had to give the hand to Wellington, and at the same time he had to watch a long extent of frontier; and on that north-east frontier of France there were many strong fortresses, which enabled Bonaparte to mask his movements, and to attack wherever he chose, without letting his attack be foreseen by his enemy. In front of the extended lines of the British, and their immediate allies, the Hanoverians, Brunswickers, &c., there were, besides country bye-roads, no fewer than four great roads (paved roads, proper for the passage of artillery, and for all military purposes); and it was *because* there were all these roads leading from the French departments of the north, and the fortresses on the French frontier, and *because* the Duke of Wellington could not possibly tell or

BRUSSELS. From near Port d'Anderlecht.

foresee by which of these roads the French might choose to advance, that part of his forces were widely spread, in order to watch them all, while the remainder of his army was kept in hand, in order to be thrown upon whatever point the attack should be made against. These men were every way better in and round Brussels than they would have been if bivouacked and cantoned on the high roads; and the artillery was also better there, for of this arm Wellington had not to spare;—it was needful that he should have it all on the field of battle, and, embracing all the possible lines by which the French might attack, the British general had, where it stood, the best means of moving it rapidly to any one of them. If the guns had been collected on one point, and the enemy had attacked at another, the guns could not have been so easily moved. If, as some commanders might have done, he had kept his troops marching and countermarching from point to point, he would very uselessly have wasted the strength and spirit of the troops before the day of battle arrived. Concentration of force is the finest of all things in war, in its proper place; and several of the continental armies, and especially the Austrian, had been, and continue to be, deservedly censured for their practice of extension in line, and separation of parts. But there are cases in which the idea of concentration is an absurdity; and certain English writers, destitute of military study, and incapable of comprehending the simplest principles of the military art, have taken up the old criticism against the Austrian generals, and have applied it to a case to which it is utterly inapplicable. If, as he had once hoped, the Duke of Wellington had been enabled to commence operations by acting on the offensive, then he would have attacked Bonaparte on the French frontier in one or two condensed masses; and then Bonaparte, not knowing where the attack would be made, must have had his army stretched out in lines along that frontier, having merely reserved to himself (as Wellington did) the best plan and the best means of concentration when and where the attack should be made. But the duke had not received from England the accession of strength which he had calculated upon; the grand army of Prince Schwartzenberg was still somewhere in Germany; and, with none but Blücher to co-operate with him, and with forces which, if united, would not have exceeded by 30,000 men the army which Bonaparte had actually in the field, it would, indeed, have been rash to attack a frontier covered with numerous and well garrisoned fortresses, or to invade France, where an army of reserve was collecting to support the army on the frontier. We trust that these few words will enable the reader to understand the absurd charge, that the Duke of Wellington was not only out-manœuvred and out-generaled, but actually taken by surprise—an ignorant piece of babble which has been recently and very ably exposed, but which every patriotic and well-informed writer ought to continue to hold up to scorn and derision, until the fallacy is utterly exploded, and left only in French books, where the truth in such matters is never to be expected.*

It was on the 15th of June that Bonaparte crossed the Sambre, and advanced upon Charleroi. At sunset, on the preceding evening, all had been quiet upon the frontier, and nothing had been observed at the Prussian outposts. As the foremost of the French columns had been put in motion as early as two or three o'clock in the morning, they fell suddenly upon these outposts just as day was dawning. The outposts fell back, and then a report was sent to the Duke of Wellington, who gave his orders for holding his troops in readiness to march. But it was not as yet sufficiently clear that Bonaparte intended the attack upon Charleroi to be a serious one, and that he really intended to open his road to Brussels by the valley of the Sambre. The duke, therefore, waited until correct intelligence from various quarters proved, beyond the reach of a doubt, that the advance upon Charleroi was the real attack. It was useless to move, and he had determined all along not to move, until he got this certain and full assurance; and the information could not be obtained before the event happened, that is, before the first French columns, advancing by the valley of the Sambre, were swelled to a great army—an operation which requires rather more time than is taken in the writing of a critical or rhapsodical sentence for a book.† Now that it was time to put his army in motion, Wellington put it in motion to his left. The orders for this memorable march were not decided upon in a scene of merriment and festivity, and at midnight, but in the duke's hotel, and at about five o'clock in the afternoon. These orders must have reached most of the corps by eight, and probably all of the corps by ten o'clock at night. It is quite true that the duke did go to a ball that evening, and that many of his officers went as well as he, because their business of the day was done, and because their presence was not required for such details as packing up of baggage, &c. The duke's being at the ball was a proof of his equanimity at the most critical moment of his whole life. The Duchess of Richmond's ball was a gay one, and Wellington and his officers present at it were as cheerful as any part of that gay company. About midnight the general officers were quietly warned, and quietly disappeared from the ball-room; and among them the brave Duke of Brunswick, who was still avenging the hard fate of his father. Shortly after, the younger officers were summoned from the dance, but without any bustle. By this time the troops were mustering, and before

* See an admirable memorandum on the battle of Waterloo, by Sir Francis Head, in 'Quarterly Review,' No. cxliii.; and a very able article on the life of Blücher, and the operations of Waterloo, in the same publication, No. cxl.

† The certain and deciding information was brought to Brussels by the Prince of Orange, who had so often "gone the pace" for the British general in the Peninsula. It was about three o'clock in the afternoon, and the prince found the duke at dinner at his hotel, about a hundred yards from his quarters in the park, which he had taken care not to quit during the morning, or even during the preceding day. The Prince of Orange was soon followed by the Prussian general Mufflin, who brought accounts of the French ors., &c.

the sun of the 16th of June rose, "all were marching to the field of honour, and many to an early grave." * Before they moved there had been some hard fighting. In the course of the 15th, Bonaparte had established his head quarters at Charleroi, and Blücher had concentrated the Prussian army upon Sombref, occupying the villages of St. Amand and Ligny, in front of that position; and Marshal Ney, continuing his march along the road which leads from Charleroi to Brussels, had attacked on the evening of the 15th, with his advanced guard, a brigade of the army of the Netherlands, under the Prince of Weimar, and had forced it back to a farm-house on the road, called Quatre Bras, from the local circumstance that the road from Charleroi to Brussels and the road from Nivelles to Namur intersect each other, and form, as it were, four arms or branches at that point. But the Prince of Orange had immediately reinforced Weimar's brigade, and had kept the farm-house as if it had been a fortress. This was the work of the 15th. The time which would allow Ney to bring up his main body, would also allow Wellington to bring up his, or, at least, a sufficient part of it to checkmate the French marshal. But, early on the morning of the 16th, the Prince of Orange pushed back Ney's advanced guard, and recovered some of the ground between Quatre Bras and Charleroi which had been lost on the evening of the 15th. At about half-past two in the day, General Picton came up to Quatre Bras with the 5th division, and he was soon followed by the Duke of Brunswick's corps and the Nassau troops. Some hours before this, the Duke of Wellington had ridden across the country to confer with Blücher, at Bry, about five miles from Quatre Bras. At that time Ney was not in strength in front of Quatre Bras, nor was Bonaparte in strength in the immediate front of the Prussians at Ligny. But the French, having all the advantages which are inseparable from offensive movements, massed their columns of attack quickly in Blücher's front; and, at the same time, Ney gathered his strength near Quatre Bras. The game to be played was now opened. Bonaparte was to crush the Prussian marshal, while Ney drove back the English duke. As the Prussian corps of General Bulow had not joined, Blücher was attacked by a force numerically superior to his own; and after making a most desperate resistance, particularly in the villages of St. Amand and Ligny, and after displaying the greatest personal bravery, he was compelled to quit his position at Sombref. With a frightful loss, but still with perfect order, the Prussians retired in the course of the night upon Wavre. The French, who had suffered severely, did not pursue. But, in point of fact, there could be no pursuit, as the French did not know for some hours that there was any retreat: the Prussians had not ceased fighting until it was dark night. At daylight, on the following morning, it was easy to see that they were gone; but it was not until the hour of noon* that Bonaparte ascertained what route Blücher had taken, and ordered Grouchy to pursue him with 32,000 men. In the meantime, Ney had failed in his attacks upon Wellington at Quatre Bras. At a little after three o'clock on the afternoon of the 16th, the French marshal, who had concentrated nearly 40,000 men, commenced his attack with two heavy columns of infantry, a large body of cavalry, and a numerous and well served artillery. At that moment there were not more than 19,000 of the allies at Quatre Bras, and of these only 4500 were British infantry. These last forces, and the Brunswickers, were, however, not to be broken by any charge or by any mode of attack; and Ney, after repeated efforts, was repulsed. The third division, under General Alten, now came up, and joined Picton's unflinching fifth. Ney made another grand attack upon the left, but he was again met by impenetrable, immovable squares of infantry, and was again repulsed. Ney then tried the right of the position of Quatre Bras, and advancing under cover of a little wood, and attacking in great force, and with wonderful impetuosity, he cowed some of the worst of Wellington's contingents that were posted on that right; but, just as the Belgians were giving way, General Cooke came up, and joined battle with some of the English guards, and the French were once more repelled. They gathered thickly in the little wood near the farm-house; but now the Duke of Wellington sent General Maitland and his brigade to clear that wood, and it was presently cleared, and the French were seen retreating in great confusion. The conflict had been tremendous, the loss on both sides very great; but the British commander had completely repulsed Ney's very superior force, and had succeeded in his present great object, which was to prevent Ney from turning Blücher's right, and thus throwing himself between the Prussians and the British. The two great battles fought on this day were only preludes to the greater massacre at Waterloo; yet at Ligny Blücher had lost, in killed and wounded, from 11,000 to 12,000 men, and Wellington had lost at Quatre Bras 2,380 in wounded, and 350 in killed.†

* Major M. Sherer.—This gallant officer, who seems to be in general very correct, follows the widely spread error (which Lord Byron has in a manner consecrated in verse), that the duke's marching orders were decided upon at the Duchess of Richmond's ball. We know that many persons present at that ball believed this to be the case; but the contrary is proved by the writer in the 'Quarterly Review,' who has evidently had official sources of information, and whose account we have followed. The old story is, moreover, at variance with the duke's memorandum, for the deputy quarter-master general, of the 15th of June.—*Quart. Rev.* No. xc.—*Col. Gurwood, Wellington Dispatches.* We also gather, from the latter valuable repertory, that the duke's stay at the Duchess of Richmond's ball must have been but short; for at half-past nine in the evening we find him writing to the Duke of Berri, and at ten to the Duke of Feltre (General Clarke), who had remained steady to the Bourbons. In the earlier part of the same day, the duke had written a letter to General Sir Henry Clinton, and a very long letter, in French, and on the always difficult subject of strategy, to the Emperor Alexander.

* "The enemy made no effort to pursue Marshal Blücher. On the contrary, a patrole which I sent to Sombref in the morning (of the 17th), found all quiet; and the enemy's videttes fell back as the patrole advanced."—*Wellington's Dispatch to Earl Bathurst.*

† The Duke of Wellington's returns in Dispatches.—This loss in killed and wounded was made up entirely of British and Hanoverians.

The result of the two battles of Ligny and Quatre Bras was wha

On the following morning, the 17th, the Duke of Wellington made a retrograde movement upon Waterloo, corresponding to the movement of Marshal Blücher upon Wavre, and in accordance with the plan and combinations which had been previously agreed upon by him and the Prussian marshal. He retired leisurely by Genappe to the excellent ground which he had chosen, and which many days before he had most attentively examined. Perhaps the field of Waterloo had an additional recommendation to the attention of Wellington, as it had once been selected by the great Duke of Marlborough as a battle-field, and as Marlborough had been prevented from gaining a great victory there wholly and solely by the stupid obstinacy of the Dutch field-commissioners. Although the retiring from Quatre Bras was made in the middle of the day, the French did not attempt to molest the march, except by following with a large body of cavalry, which was brought up from the right, or from the part of the army which had been engaged the day before against the Prussians at Ligny. A body of lancers charged the rear of the English cavalry, and were charged in their turn gallantly, though ineffectually, by our 7th hussars, who could make no impression on the front of their column, in the defile of Genappe; but, when these lancers, elated with success, debouched on a wider space, in front of Genappe, the Earl of Uxbridge (Paget) charged them with the first regiment of Life Guards, and fairly rode over them. There appears to have been no more fighting on the road. Marshal Ney was waiting to be joined by all the forces of Napoleon which had fought Blücher at Ligny, except the 32,000 men under Grouchy, which had been ordered by the emperor to follow the Prussians, and on no account to quit them. This junction took place in the course of the day and night of the 17th. Deducting Grouchy's 32,000 men, and about 10,000 for the killed and wounded on the 16th at St. Amand and Ligny, and making a liberal allowance for stragglers and loiterers, patroles, &c., Bonaparte must thus have collected in front of Waterloo about 78,000 men. The night of the 17th, during which Wellington's men lay upon the wet earth, or among the dripping corn-fields, was a dreary night, with heavy rain, thunder, and lightning, and violent gusts of wind. They longed for the morrow. It came at last; but Sunday, the 18th of June, was but a dull day (meteorologically); for, though the rain ceased, and the natural thunder gave place to a thunder of artillery almost as loud, and far more continuous, the sky was overcast with clouds, through which the sun rarely broke. The position which the duke had taken up was in front of the village of Waterloo, and crossed the high roads from Charleroi and Nivelles; it had its right thrown back to a ravine near Merke-Braine, which was occupied, and its left extended to a height above the hamlet of Ter la Haye, which was likewise occupied; and in front of the right centre, and near the Nivelles road, the troops occupied the house and gardens of Hougoumont, which covered the return of that flank; and in front of the left centre they occupied the farm of La Haye Sainte.* "By our left," continues the Duke of Wellington, "we communicated with Marshal Prince Blücher at Wavre, through Ohain; and the marshal had promised me that, in case we should be attacked, he would support me with one or more corps, as might be necessary."† In the rear of the British centre was the farm of Mont St. Jean, and a little farther behind the village of that name. [The French often call the battle of Waterloo the "Massacre of Mont St. Jean."] Wellington's force united in this position was 72,720 men. Of this number, including the King's German Legion, who merited to be classed with English troops, 36,273 were British, 7447 were Hanoverians in British pay, and partly commanded by British officers, 8000 were Brunswickers, and 21,000 were Belgian and Nassau troops, mostly of an inferior quality. Many of the troops, British as well as foreign, had never been under fire before this campaign; some of them were little better than raw recruits; the prime of the British army of the Peninsula had been detached to North America, and had not yet returned; and the beggarly government of Lisbon, though at one time it had promised large aid, had not been able to send so much as a battalion of those Portuguese troops which had become under Wellington very nearly as good as our own; and the British government, though disappointed in their expectations of contingents and auxiliaries from Germany, had not thought proper to advance the small subsidy of 200,000*l.*, which the duke calculated would be enough to bring him a good Portuguese force. The enemy's troops were veterans, almost to a man; and there were at least 100,000 soldiers of the same quality behind them in France. Bonaparte had collected his 78,000 men on a range of heights in front of the British position, and not above a mile from it: his right was in advance of Planchenois, his line crossed the Charleroi road at the farm of La Belle Alliance, his left rested on the Genappe road. Behind the French the ground rose considerably, and was skirted by thick woods: in the rear of the British and their allies the old forest of Soignies "waved above them her green leaves." Early in the morning, when Bonaparte mounted his horse to survey Wellington's position, he could see comparatively but few troops. This induced him to fancy that the British general, with whom

is stated in our text, but lies of the first magnitude were thought necessary to keep Bonaparte's cause up and alive in Paris; and Marshal Soult, in a dispatch to Marshal Davoust, now war minister, did not scruple to announce that the Emperor Napoleon had beaten both Wellington and Blücher, and had completely separated their two armies—had separated them beyond the hope of ever uniting again in his front. "Wellington and Blücher," wrote Soult, "saved themselves with difficulty. The effect was theatrical: in an instant the firing ceased, and the enemy was routed in all directions." It was announced that the Emperor Napoleon would enter Brussels on the 17th! Another dispatch, published in the Moniteur, said, "The noble lord must have been confounded! Prisoners are taken by bands; they do not know what has become of their commanders; the route is complete on this side; and we hope to hear no more of the Prussians for some time, even if they should *ever* be able to rally. As for the English, we shall now see what will become of them! The emperor is there!"

* Dispatch to Earl Bathurst. † Id.

he had come to measure himself, was eager to avoid the strife, and had beaten a retreat. General Foy, who had served a long while in Spain, and who knew by experience rather more of the British general than his master knew, is said to have replied, "Wellington never shows his troops; but, if he is yonder, I must warn your majesty that the English infantry, in close fighting, is the very devil! (*que l'infanterie Anglaise en duel est le diable!*)" When that infantry began to work, Bonaparte exclaimed to some officers near him, "I could never have believed that the English had such fine troops!" Yet this was but a confession of wilful ignorance, for, although he had not himself seen them in battle since the days of pigtails and powdered heads, starch and stupidity, or since the siege of Toulon, he ought by this time to have learned what British troops were from the reports of his marshals, generals, and soldiers, who had measured themselves with them and Wellington in the Peninsula. Soult—for that honourable man was among the marshals who had broken their oaths to Louis XVIII., and taken the new ones to Napoleon—was and had been for some weeks constantly at his elbow; but Soult was also of the class of those honourable men who could resort to any fiction or subterfuge rather than confess the honest truth that they had been beaten. Soult, however, is said to have added his warning to that of Foy, or to have told his master that his victory would not be an easy one. But, whatever were the warnings, it seems quite certain that Bonaparte began the battle with a confident assurance of success; for he knew his own superiority in artillery and in numbers to Wellington, and he had run into the mistake (the greatest mistake committed by any one party during this brief war) of believing that Marshal Blücher, dispirited by the loss he had suffered at Ligny, would continue his retreat in order to avoid Grouchy, and would not rally anywhere near enough to support Wellington, or to renew his communications with him.

Soon after ten o'clock on this Sabbath morn a great stir was observed along the French lines, and particularly near the farm of Rossome, where Bonaparte then stood with his famous Old Guard. Columns of infantry were seen forming; the cavalry were moving about; the parks of artillery were brought forward with great noise and shouting. And presently a furious attack was made upon the post at Hougoumont, on the right of Wellington's centre. Hougoumont, with its farm-house and garden, was occupied by a detachment from General Byng's brigade of Guards, who maintained the post throughout the day, notwithstanding the desperate and repeated efforts of large bodies of the enemy to obtain possession. This first attack upon the right of Wellington's centre was accompanied by a very heavy cannonade upon his whole line. This cannonade was kept up nearly throughout the day, being intended to support the repeated attacks of cavalry and infantry, occasionally mixed and occasionally separate, which were made along the whole line of the allies, from right to left, from left to right. Wellington had not half the number of guns which Bonaparte brought forward; but such guns as he had were admirably served; and the advanced batteries of our centre, firing case-shot, committed a fearful havoc upon the French columns which successively attacked Hougoumont and the brave detachment of Guards there stationed. The incessant roar of cannon on both sides, for so many

CHATEAU OF HOUGOUMONT.

hours, gave to the combat a peculiar and awful character. There was no manœuvring either on the part of Bonaparte or on the part of Wellington: the object of the British general was to maintain his positions till the arrival of some Prussian corps should enable him to quit them and crush his enemy; the object of his adversary was to drive him from those positions, and to crush him before Blücher should be able to send a single battalion to his support. And to this end Bonaparte kept repeating his attacks with heavy columns of infantry, with a numerous and brilliant cavalry, and with his immense artillery. From each attempt his columns returned shattered and thinned; but fresh columns were formed and hurled against the same or some other part of Wellington's line. The repulses were numerous, the glimpses of success brief and few. In one of their attacks the French carried the farm-house of La Haye Sainte, as a detachment of the light battalion of the German Legion which occupied it had expended all their ammunition, and the enemy occupied the only communication there was with them. But before they yielded that farm-house those brave Germans were, to a man, either killed or wounded; and, as the French gave them no quarter, they all died. Bonaparte then ordered his cavalry to charge the British infantry in squadrons and in masses—to charge home—to charge again and again—and to find out some way through those ringing muskets and those hedges of glittering bayonets! But this was work beyond the power even of his steel-clad cuirassiers or of his long-armed Polish lancers: our infantry formed in squares, and the best of those horsemen bit the dust. At times the French cavalry were seen walking their horses about our infrangible squares as if they had been of the same army. Some of their regiments gave proof not only of great bravery, but also of rare perseverance. All their efforts, however, were unavailing; and their perseverance, and the dogged determination of Bonaparte in throwing them forward so repeatedly to do what they were clearly incapable of doing, ended in their almost total destruction. Their *coup de grace* was hastened by a magnificent charge of British cavalry. This force had hitherto been very little more than a spectator of the fight: it had suffered somewhat from the incessant French cannonade, but all the horses that were not wounded were fresh and vigorous—and there were horses there of the true high English breed, and riders on them whom no continental cavalry could hope to stand against. At the proper moment the Duke of Wellington called up Lord E. Somerset's brigade of heavy cavalry, consisting of the Life Guards, the Royal Horse Guards, and the 1st Dragoon Guards, and directed them to charge the already crippled and disheartened cavalry of Bonaparte. These splendid regiments absolutely rode down and rode over their comparatively feeble opponents; horses and men fell at their shock; the cuirassiers, whose breastplates had glittered in so many battles and victories, disappeared from the world as a corps, and became a thing that had been—they were completely cut up. When Lord E. Somerset's brigade returned from their charge, they brought with them about 2000 prisoners and an imperial eagle. After this almost total destruction of his cavalry, and after the frightful reduction of his columns of infantry, Bonaparte was, if not as good as beaten, at the least put into a condition from which Wellington could have had nothing to apprehend, even though no Prussians had come up. Except the Guards, every part of the French army had been engaged, repulsed, and frightfully thinned. Not a point of the British position had been carried—not a single square had been broken; and, though our loss in killed and wounded had been great, some of the Duke's troops had not yet been engaged at all, and all were full of heart and of confidence in their great leader.* Such was the state of the battle at about seven o'clock in the evening, when General Bulow's Prussian corps, advancing by Frischermont upon Planchenois and La Belle Alliance, began to engage upon the French right. And now was the crisis. Bonaparte called forward his Guard, which he had kept in reserve, to make a last desperate effort on the British left centre, near the farm of La Haye Sainte. He led it forward in person to the foot of the allied position; but there he turned aside, and took shelter behind some swelling ground: the Guard moved onward and left him there. He ought to have gone on with it, and to have died with it; but he neither headed it nor followed it; nor did he during any part of this day expose his person freely in the mêlée of battle, as he had done in the spring of 1814 in the battles of Craonne, Arcis-sur-Aube, and in other affairs. Marshal Ney went on with that great forlorn hope, and, unluckily for himself, was not killed. The Guard advanced in two massy columns, leaving four battalions of the Old Guard in reserve, or near to the spot where Bonaparte sat on his horse rigid and fixed like a statue. They moved resolutely on, with supported arms, under a destructive fire from the British position. They were met by General Maitland's brigade of English Guards, and General Adams's brigade, which were rapidly moved from the right, and over the brow of the position by the Duke of Wellington in person, who formed them four deep, and flanked their line by artillery. When within fifty yards from this British line, the French Guards attempted to deploy; but the close fire upon them was too terrible;

* General Clausewitz may be taken as a competent and as an unprejudiced authority. If he had prejudices, they were not likely to be in favour of Wellington and against Blücher. Clausewitz was chief of the staff to the third corps of the *Prussian* army. He knocks on the head the nonsense, that has been circulated by incorrect and incompetent writers about Wellington's having exhausted his reserves in the action. He enumerates the tenth British brigade, the whole division of Chassé, and the cavalry of Collaert, as having been little or not at all engaged—and to these he might have added two entire brigades of light cavalry.

General Clausewitz also expresses a positive opinion, that, even had the whole of Grouchy's force come up at Waterloo (which it could not do, and which it was prevented from doing by Bonaparte's lamentable mistake about Blücher, and by the positive orders he had himself given to Grouchy) the Duke of Wellington would have had nothing to fear pending Blücher's arrival.—*General Clausewitz, as cited in Quarterly Rev., No. CXL., Art. Life of Blücher, &c.*

their flanks were enveloped by some of our Guards; they got mixed together in a confused mass; in that mass they were slaughtered; they were broken; they gave way down the slope of the hill in irretrievable confusion. There was no more fighting; that Grand Army of Bonaparte—the last of all, and the most desperate of all—never again stood nor attempted to rally anywhere: all the rest of the work was headlong, unresisted pursuit, slaughter of fugitives who had entirely lost their military formation, and capture of prisoners, artillery, and spoils. The army was destroyed, as an army, before the pursuit began; its organization was lost with the defeat of the Guard: if it had not been so, the pursuit by the Prussians could not possibly have been such easy duty—there could not have been so perfect a *débacle*. As the broken Imperial Guard, or all that remained of it, reeled away from the British position, and as Bonaparte, after having cried, in the accents of agony and despair, "They are mixed! they are mixed!" was spurring to the rear, as the blaze of Bulow's cannon on the right of the French became visible, and as Marshal Blücher joined in person with a corps of his army to the left of the British line, by Ohain, Wellington moved forward his whole line of infantry, supported by the cavalry and artillery, headed it himself, and swept away all before him. "This attack," he says, "succeeded in every point: the enemy was forced from his positions on the heights, and fled in the utmost confusion, leaving behind him, as far as I could judge, 150 pieces of cannon, with their ammunition, which all fell into our hands." In the meanwhile the Prussians had got into a bloody struggle, principally at the village of Planchenois. This village had been stormed and re-taken three several times; the French had nowhere fought more desperately, and, before they were completely driven out, the Prussians sustained a terrible loss in killed and wounded. At a farm-house, called "Maison Rouge," or "Maison du Roi," at a short distance behind the farm of La Belle Alliance, the Duke of Wellington and Marshal Blücher met. The old Prussian, in the manner of his country, embraced and hugged his victorious partner. Here Wellington gave orders for the halt and bivouac of his own fatigued troops, and handed over the task of further pursuit to the Prussians. Blücher swore he would follow up the French with his last horse and his last man. He started off immediately with two Prussian corps, who, as they took their departure, received three cheers from the English army. "The Guard dies, but does not surrender!" was a self-flattering fiction which the French afterwards recorded in prose and in rhyme, in pictures and all manner of ways; but these flying Guards really surrendered in heaps; and one of the first hauls Blücher made was the capture of sixty pieces of cannon belonging to the said Imperial Guard. These guns were taken so near to the field of battle as the village of Genappe, and with them were captured carriages, baggage, &c. belonging to Bonaparte himself. The moon had risen, and in broad moonlight the Prussians kept up the chase. The French, when they could not run fast enough along the paved causeway, slipped off it on either side, and ran across fields, and into woods, where many were found afterwards, dead or grievously wounded. The wounded, several days after the battle, continued to be picked up in these places and to be carried into Brussels, where they were humanely attended by British surgeons. The high road, says General Gneisenau, resembled the seashore after some great shipwreck; it was covered with cannon, caissons, carriages, baggage, arms, and wreck of every kind. In some of the villages along the high road the fugitives attempted to rest for a time, and now and then—infantry of the line, Imperial Guards, Polish lancers, cuirassiers, artillerymen, dragoons, all mixed together—they even made a show of maintaining their ground; but the beat of the Prussian drum, or the sound of the Prussian trumpet, threw them into fresh panics, and away they went, or, staying, suffered themselves to be knocked down in heaps like cattle. At one place 800 of them were dispatched. The loss of the enemy in this flight was even beyond that on their retreat from Leipzig; and they did not cease flying until they had passed all their frontier fortresses. They then dispersed all over the country, selling their arms and horses, and running to their homes. In the retreat, and in the three battles they had fought within three days, the French lost in killed and wounded more than 30,000 men; but, what was of still more importance, their spirit was beaten out of them, and that army was indeed too thoroughly broken up ever to join again.

In the meanwhile the British and their allies, by the same broad moonlight, were counting their dead and picking up their wounded, or rather they were making a beginning; for those sad occupations occupied not only that night, but the whole of the following morning. The loss had been immense, and in some corps almost unprecedented. The British and Hanoverians alone had 2432 killed and 9528 wounded in the battle of Waterloo. These numbers being added to the losses sustained at Quatre Bras on the 16th, make a total of near 15,000 men put *hors de combat*, in an army of about 36,000 men! If we deduct some 4000 or 5000 men of this army who were not actually engaged in either of the two battles, we shall find that one-half of this army was killed or wounded. The loss in officers was quite proportionate to the loss in men; more than 600 officers, British and Hanoverians, were killed or wounded at Waterloo alone. General Picton, who had been badly wounded at Quatre Bras, and who had concealed his hurts, was shot through the brain early in the battle of Waterloo, as he was leading his division to a bayonet charge. General Sir William Ponsonby, who commanded that brigade of heavy cavalry which did such execution upon the French, was killed by a Polish lancer: his relative, Sir Frederick Ponsonby, was shot through the body

by a Frenchman, was ridden over by the charging cavalry, and was speared, as he lay bleeding and helpless on the ground, by a savage Polish lancer; but he miraculously recovered, and lived to charm all those who knew him for many years after. Colonel de Lancey, Wellington's excellent quarter-master-general, was killed by a cannon-shot in the middle of the action. The Earl of Uxbridge, General Cooke, General Halkett, General Barnes, General Baron Alten, Lieutenant-Colonel Lord Fitzroy Somerset, and the Prince of Orange, were all among the wounded, and most of them were severely wounded. Lieutenant-Colonel the Hon. Sir Alexander Gordon died of his wounds soon after the battle. The gallant Duke of Brunswick had perished on the 16th at Quatre Bras, fighting at the head of his Black Hussars. The officers of several foreign nations, who came to volunteer their services to the Duke at this crisis, were not respected by the balls and bullets: the Austrian General Vincent was wounded; and Count Pozzo di Borgo, who was then both a general and a diplomatist to the Emperor Alexander, received a contusion.* Of Wellington's staff there was hardly an officer but was hit. At one moment he had no officer near him to carry an immediate order, except a young Piedmontese gentleman of the family of di Salis. "Were you ever in a battle before?" said the Duke.—"No, Sir," replied the young officer. "Then," said the Duke, "you are a lucky man; for you will never see such another." †

The war was finished. A few words must comprise all we can say about the movements of Grouchy, which have been so absurdly misrepresented and falsified. When Blücher withdrew from Ligny, Bonaparte drew not only the incorrect conclusion that he would continue his retreat like one who acknowledged himself to be beaten, but also the equally incorrect conclusion that he must retreat by Namur, by which means he must lose his communication with Wellington. But Blücher was neither beaten nor dispirited; and, instead of going to Namur, he went to Wavre, even as preconcerted with the British commander. Bonaparte likewise expected that Grouchy and his 32,000 men would accelerate Blücher's retreat, would throw the Prussians into confusion, and effectually prevent their thinking about their English allies. The orders given to Grouchy were imperative; they left nothing to the discretion of that general; he was to follow Blücher, to get on his skirt, and stick to it; if Blücher should *rally*, he was to fight him: the emperor himself would give an account of Lord Wellington. The whole of this plan was founded upon ignorance and presumption; but Grouchy was not to blame. This general was not ordered to move until after the hour of noon of the 17th. On the morning of the 18th, as the battle was beginning at Waterloo, he came in sight, not of Blücher's whole army, but of the third corps of that army, consisting of 16,000 men; and this single corps, admirably commanded by General Thielman, and well posted on the banks of the little river Dyle, defended the passage of that river at Wavre, and gave Grouchy and his 32,000 men full employment for several hours, and thus enabled Blücher to move off to his right, in order to keep his appointment with Wellington. The Prussian Thielman is entitled to as much fame as any single general officer that fought on this memorable day. Grouchy, indeed, effected the passage of the Dyle towards evening—not at Wavre, but at Limales—but it was now too late for his purpose; he could no longer have a chance of dividing the Prussian army, or of forcing Blücher to concentrate his force and abandon his great ally. Blücher, in fact, was already giving the hand to Wellington at Waterloo; he had thrown himself between Grouchy and Bonaparte; so that, even if he should crush or dislodge Thielman, Grouchy could have no possible means of joining his emperor. [From the ground where he stood to the French positions at Waterloo was a march of thirteen or fourteen good English miles; it was already twilight, and his troops were fatigued, so that the distance alone must have prevented his joining his master in time to be of any use, even if Bulow and Blücher had not stood between.] But Thielman was neither crushed nor dislodged during the whole of the 18th: he kept his position during the night, protecting both the flank and rear of the Prussian army, guarding one road which led upon Brussels, and finding Grouchy full employment; and with his unequal numbers he continued the struggle for some hours on the 19th, when the French grand army was no more. Nor was it until Vandamme had turned Thielman's right flank, that that sturdy and worthy follower of Blücher abandoned Wavre, and began an orderly retreat on Louvain. He knew he had nothing more to do at Wavre; he knew that nothing was left to Grouchy and his corps but a precipitate retreat, for he had received from the field of Waterloo a very satisfactory account of all that had been done there on the 18th. The news reached Grouchy a little later, and then that marshal fell rapidly back upon the frontier of France, conducting his retreat in a manner which did honour to him as a general.

The first man that carried to Paris the news of his irretrievable disaster was Bonaparte himself. Leaving his brother Jerome on the frontier to try and rally some of the remains of the army, he flew to the capital, where he arrived during the night of the 20th, to find that his chamber of representatives was now far more hostile to him than the *corps législatif* had been on his flight from Leipzig. To Caulaincourt he said that the army was, indeed, lost; that it had performed prodigies, when a sudden panic seized it and ruined all; that Ney had conducted himself like a madman, throwing away all the cavalry; that there was nothing more to be done! When he recovered a little more

* Dispatch to Earl Bathurst.
† Quart. Rev., No. CXL.

composure, his first thoughts were how he could break up the constitution he had sworn to on the 1st of June; how he could get rid of the two Chambers, and seize the absolute and undivided power of a dictator. The Chambers, anticipating his blows, declared their session permanent, and demanded his abdication. Lafayette, who had been once more brought upon the scene by circumstances which he had not helped to make, and over which he had no more control than the maker of an almanac has over the tempest which blows, or the sun which rises and sets, made an oration in the style of 1791, applauded the civism and patriotism of the national guards of Paris, and induced the representatives to declare that any attempt to dissolve them should be high treason. Lucien Bonaparte appeared before the House, and harangued and pleaded for Napoleon; but there was no army now, as on the 18th Brumaire, to second Lucien's eloquence, and make the members jump out of the windows, as at St. Cloud; and so Lucien made no impression on the assembly. The House of Peers lagged a little behind; but not for long. The peers, though all Bonapartists, concurred with the representatives in the fact that it was only one man that stood between France and peace; but many of them would have substituted Napoleon II. for Napoleon I., or would have declared the son of Maria Louisa Emperor of the French, with his mother for regent. Lucien, Charles Labédoyère, Count Flahault, Marshal Davoust, and Carnot strongly supported this project in the House. Davoust, as war minister, read a report of the military resources of the country, and Carnot, following him, endeavoured to prove that the report was a true one, and that France was still able to defend itself against the armies of Wellington and Blücher, which were already on their panic-stricken frontier, and against all the armies of Europe. But here Ney, who had just arrived, full of rage and despair, interrupted Carnot, and gave the lie direct both to that ci-devant Jacobin republican and to Marshal Davoust, exclaiming, "That is false! That is false! You are deceiving the peers and the people! Wellington is coming! Blücher is not beaten! There is nothing left but the corps of Marshal Grouchy! In six or seven days the enemy will be here!" The peers were all aghast. At this moment Joseph and Lucien Bonaparte, Labédoyère, Flahault, and others entered the House in full dress, and with plumed hats on their giddy heads: they came from the Tuileries; they came to announce the *voluntary* abdication of Napoleon I., and to proclaim Napoleon II.; and they shouted, "The emperor is politically dead! Long live Napoleon the Second!" But Ney's stern truths still filled the House, and prevented the echoes which might have followed this proclamation of the little King of Rome. Most of these peers, whose patents were not a month old, shook their heads, and said it could not be: some referred to the declaration of the allied sovereigns, that they would never treat with a member of the Bonaparte family; and some directly opposed the proposition. Upon this, Charles Labédoyère fell into a transport of fury, and threatened them all with destruction. In reward for his treason at Grenoble, Bonaparte had promoted this young colonel to the rank of lieutenant-general, and had made him a peer. Labédoyère had, therefore, not only much to lose, but much to fear from the return of the Bourbons. The peers cried shame, and called him to order; but nothing could stop him. "Napoleon," he cried, "has abdicated, but only on condition of his son succeeding him!" He said that, if the Chambers would not acknowledge the son, then the father ought to keep the sword in his hand, surrounded by the soldiers; and he proposed—in the language as well as in the spirit of the Reign of Terror—that every Frenchman who quitted the standard of Napoleon should be declared infamous, that his house should be razed to the ground, and that not only he but his family also should be proscribed. "Then we shall have no more traitors to the emperor!" So said Labédoyère in 1815. "Cut me off a hundred thousand more heads of aristocrats, proscribe all the rest, and burn their houses to the ground, and we shall have no more traitors to the republic!" So said Marat in 1792. After uttering these gentle propositions, Labédoyère rushed out of the Chamber of Peers and returned to his master to recommend him to crush the two chambers with a military force, seize the most obnoxious and most active members, summon all the soldiery round him and retire towards the Loire, to try another struggle in central France. Lucien, too, had advised his brother to dissolve the chambers; and Carnot and others joined Lucien in remonstrating against his abdication, and in representing that the cession in favour of his son must remain a nullity. But Napoleon signed the act of abdication, in favour of his son Napoleon II., on the 22nd of June; and he determined to abide by it, or at the least to give up a hopeless struggle. He knew better than his poetizing brother the real state of affairs; he knew that the Chamber of Representatives could not be dissolved like the Council of Five Hundred; he knew that the great majority of the peers would now make common cause with the representatives, and that the two chambers united would be far too strong for him. He had a much livelier sense than Lucien could have of the field of Waterloo, and, though he should collect another army, he knew that the armies of all Europe were marching against him; that, while Wellington and Blücher were on the north-eastern frontier, the Austrian general Frimont was marching through Switzerland and Savoy to attack on that frontier, that Prince Schwartzenberg was now ready to pour enormous forces across the Rhine, and that the Emperor Alexander was not far off with 200,000 Russians. The allies could have put 800,000 men into France before the end of the month of July! After his abdication Bonaparte retired to Malmaison, where his wife Josephine had died.

The Chamber of Peers set up a provisional government, consisting of Caulaincourt, Quenett, Grenier, Carnot, and Fouché—a most strange jumble of men and principles. Fouché, who had ten times more craft, cunning, and ability than all his four colleagues put together, had seen clearly, ever since the battle of Waterloo, that the restoration of the Bourbons was an inevitable necessity; and he shaped his course accordingly, not at all despairing of enjoying as much pre-eminence under Louis XVIII. as he had ever enjoyed under Napoleon. Minister of police, minister of the interior, or minister for foreign affairs, Fouché was ready for anything. He at once got himself named president of this commission of government, and took the entire direction upon himself, treating Carnot like an obstinate old fool, and the rest of them as nobodies. This strange provisional government, which assumed to itself all the powers of France, must have been more hateful and humiliating to the fallen emperor than all the rest of his disgraces; yet still he lingered at Malmaison for nearly a whole week, and until the advance of Wellington and Blücher rendered his further stay impossible.

The British and Prussian armies met with hardly any the feeblest resistance on their march upon Paris. On the 1st of July, Wellington took up a position a few short miles from the capital, with his right upon the heights of Richebourg, with his left upon the Forest of Bondy. Blücher crossed the Seine at St. Germain as Wellington advanced; and on the 2nd of July the right of the Prussian army was at Plessis-Piquet, its left at St. Cloud, and its reserve at Versailles. Two days before this, while the Duke of Wellington was at Etrées, five commissioners were sent to him from Paris by the provisional government to negotiate a suspension of hostilities. These negotiators began with asserting that Bonaparte's abdication had virtually put an end to the war. The duke told them that it was impossible for him to consider the whole transaction of the abdication in any other light than as a trick; and that he could not stop his operations with a view to any benefit likely to result from such an arrangement to the object the allies had in view in the war. Fouché's commissioners then said that they had every reason to believe that Napoleon had quitted Paris; and, in case he had not, they proposed various schemes "*in order to get rid of him.*" One of their schemes was to seize him and send him to England; another, to hand him over to his father-in-law the Emperor of Austria. To this Wellington replied that *he had no authority to settle such schemes; that he was quite certain that, if Napoleon was sent to England, the prince regent would keep him to be disposed of by the allies by common accord, and that he had no reason to doubt that the Emperor of Austria would do the same.* He further told these French commissioners that, if they really intended to dispose of Bonaparte in that way, *they had much better send him at once to Marshal Blücher or to the English head-quarters.* The Frenchmen then said that it was *probable* he was gone to Rochefort to embark for America, or that he would go as soon as he should hear of the near approach of the allied armies, and before they could send to Paris; and they asked the duke whether in that case he would stop his operations. The duke told them that Paris contained other dangerous men; that besides Napoleon there were his adherents, the declared enemies of the allies, and that before he could stop his operations he must see some steps taken to re-establish a government in France which should afford the allies some chance of lasting peace. They then begged to know what would satisfy the allies upon this point. The duke told them he had no authority even from his own government, and much less from the allies, to discuss this subject; that all he could do was to give them his private opinion, and that this opinion was that the return and re-establishment of Louis XVIII. was a *sine quâ non.* He added that he wished, as a private individual, that the French themselves would recall the king, as it would not then appear that the measure had been forced upon them by the allied armies. In the same private capacity, he expressed his conviction that Louis XVIII. would consent to the responsibility of ministers, and to other constitutional and administrative reforms which the French people desired. While the duke was talking, he received Louis XVIII.'s proclamation, dated Cambray, the 28th of June, countersigned by Talleyrand. He handed the paper immediately to the French commissioners, pointing out to them the king's promise to make the very alterations in his administration which they had proposed. The commissioners took objection to certain paragraphs in the proclamation, wherein Louis announced the intention of punishing some of those concerned in the plot which had brought back Bonaparte, &c. Although not named as yet, the commissioners, the provisional government, and all France must have understood that Marshal Ney and Labédoyère were included in this traitorous category; and that the government of Louis XVIII. reserved to itself the right of bringing them to condign punishment. The commissioners saw the royal proclamation four days before the capitulation of Paris. To their remarks on the avenging paragraph the Duke of Wellington had nothing to say; and they themselves really appear to have said or thought very little about it. We call attention to the paragraph only in order to prove that the provisional government and Marshal Davoust perfectly well knew the intention of Louis XVIII. with regard to Ney, Labédoyère, and others, three or four days before they concluded the convention of Paris with Wellington and Blücher, a convention in which the case of those traitors was not provided for in any way. Before he left them the commissioners asked categorically whether the appointment of a regency to conduct the affairs of the French government in the name of Napoleon II. would be likely to satisfy the allies, and stop his grace's advance upon Paris?

or whether the allies would be satisfied if some other prince of a royal House were called to the French throne? [It is well known that a certain party already, and, indeed, long before this crisis, entertained the notion of giving the crown to the Duke of Orleans, now Louis Philippe.] To the first of these queries Wellington answered "Certainly not:" to the second he said that it was impossible for him to answer such loose questions.* On the following day, the 30th of June, those commissioners returned to the Duke's head-quarters to assure him, in positive terms, that Bonaparte was really gone; and to demand upon that ground alone an immediate armistice. Wellington said he was not unwilling to agree to an armistice upon the following conditions:—1. That he and Marshal Blücher should halt in their present advanced positions, and not advance nearer to Paris; 2. That all the French troops should retire from Paris to the country behind the Loire; 3. That Paris should be held by the national guards of the town, until the king should order otherwise. The commissioners said that the provisional government could not or would not send away the forces beyond the Loire; upon which the Duke told them that he would not consent to suspend hostilities as long as a soldier of that army remained in Paris. "In fact," writes his grace to the British government, "if they were to restore the king, and his majesty were to return to Paris, the troops remaining there, his majesty would be entirely in the hands of the assemblies and of the army, who cannot be considered in any other light than as the creatures and instruments of Napoleon."† This army in and round Paris, counting shattered and disorganised corps, fugitives from Waterloo, and all, was estimated by the provisional government at 40,000 men. It probably amounted to 30,000; and, obeying the impulses of Labédoyère and other desperate officers, it had declared for Napoleon II. Louis XVIII., who had been obliged to quit Lille, his first place of refuge, and to repair to the city of Ghent, in the rear of the allied armies, now followed the Duke of Wellington's recommendation, and came on towards Paris. On the 1st of July Marshal Davoust wrote to the British commander-in-chief on the subject of the armistice; but the marshal did not yet adopt the terms without which Wellington had determined not to suspend his movements for a single hour. He and Blücher had, therefore, advanced, as we have seen, almost to the suburbs of the French capital. In taking up his positions on the left bank of the Seine, on the 2nd of July, the army of Napoleon II. offered some resistance to old Blücher; and there was even some hard fighting on the heights of St. Cloud and Meudon, and in the village of Issy; but the country people remained neutral, and the Prussian corps of General Ziethen surmounted every obstacle. On the 3rd of July, at three o'clock in the morning, the French renewed the attack, and attempted to recover the village of Issy; but they were repulsed with considerable loss. No attempt was made to check the approaches or molest the positions of the British. The provisional government and Marshal Davoust now yielded to necessity, and to the terms which the Duke of Wellington had proposed to their commissioners three days before, with this important addition, that the city of Paris, the heights of Montmartre, and all its other defences, were to be put quietly in the possession of the British and Prussian armies. They saw that Paris was now open to the allies on its vulnerable side, that a communication was established between the two allied armies on opposite sides of the Seine, by a bridge which Wellington had established at Argenteuil; and that a British corps was likewise moving upon the left of the Seine towards the bridge of Neuilly; and, therefore, they sent out a flag of truce, desiring that the firing might cease on both sides of the Seine, and that negotiations might be opened at the palace of St. Cloud, "for a *military* convention between the armies, *under which the French army should evacuate Paris.*" * Officers accordingly met on both sides at St. Cloud; and on that night the *military* convention was concluded by three French officers, one English officer, and one Prussian officer; and on the following day it was approved by the Duke of Wellington, by Marshal Blücher, and by Davoust, who acted on the part and in the name of the French army, and the ratifications were exchanged. On the same day, and almost before his signature to the deed was dry, the Duke wrote to his government, "This convention decides all the military questions at this moment existing here, *and touches nothing political.*"† The French troops, as by this agreement bound, had all evacuated Paris by the 6th, and had begun their march towards the Loire. Labédoyère is said to have gone with them, or to have followed them beyond the Loire. But Marshal Ney fled from Paris in disguise on the 6th, with a passport, given to him by Fouché, under a feigned name. This is proof enough that Ney did not consider himself included in the convention or capitulation. When he so fled, he knew, in common with all Paris, the articles of that capitulation; he knew that there was not one of them which could in any way shield him against the government of Louis XVIII.; he knew what the Duke of Wellington had said to the commissioners on the 30th, when he handed them the copy of the king's proclamation, which so clearly announced the intention of punishing some of the Bonapartist plotters; he knew that the provisional government had introduced no article, clause, or paragraph, to

* See the Duke of Wellington's long Dispatch to Earl Bathurst, dated the 2nd of July.
† Id.

* Dispatch to Earl Bathurst, dated the 4th of July. The reader should remember the date of this dispatch, and the definition of the convention here given by the Duke of Wellington. The dispatch fully shows that the Duke of Wellington did at no time consider the convention or capitulation of Paris as touching anything political, or as preventing Louis XVIII. from bringing Marshal Ney, Labédoyère, and others to trial.
† Id.

shield him and others in his predicament; he knew that the Duke of Wellington could never have agreed to negotiate upon such a subject; and therefore it was that he, alike conscious of his guilt and of his danger, fled in an ignominious manner from Paris the day before the allied armies took possession of that city. At the moment he fled, Louis XVIII., whom he had betrayed, with the addition of so many exasperating circumstances, was at St. Denis, only eight miles from Paris.
